The third argument against the bill is that it invades private property rights. Of course it does. Private property rights have been limited by the broad public interest since the age when nomads organized into the first tribe. It is a basic tenet of our legal system that for every right there is a duty, and for centuries it has been recognized that the operation of specific types of private property must meet certain publicly-determined standards.

In New York City, for example, the so-called invasion of private property rights dates back to the New Amsterdam city ordinance which prohibited the keeping of pigs in the front gardens of private homes. Precedents for equal access to shelter date back to the Middle Ages when, under Anglo-Saxon law, innkeepers were prohibited from turning away anyone seeking a night's lodging regardless of race, color, creed, national origin, destination, time of night, size of parry, or any other consideration. This principal was adopted into New York State law in 1895 when discrimination on the basis of race, color, creed or national origin was barred in all places of public accommodation, such as hotels, restaurants, bowling alleys, theaters, resorts, swimming areas, and so forth.

The city council law passed last year requiring all landlords to install central heating is one of the most recent examples of our acceptance of the public interest prevailing over private property rights.

Indeed, our history proves that whenever an issue of public interest appears to conflict with private property rights, the decision almost invariably has been made in favor of the public interest. And in virtually every case, owners of private property have discovered that their private interest is best served by adhering to the higher ethic of the public interest.

The bill we are considering today is in effect a simple declaration that housing—one of mankind's most basic requirements—is a matter of prime public interest and therefore should conform to our recognized public policy. The public policy pervading our entire fabric of laws requires that each of us be treated on his merits and not denied access to needed facilities because of ancient group labels or prejudice.

It should be clearly understood that this law will not intrude upon an owner's legitimate right to require satisfactory credit ratings of any prospective tenant or buyer, or to make certain that the applicant meets every reasonable objective test of general desirability as a tenant or buyer. These assurances, which real estate operators properly feel are necessary to insure a sound business operation, will in no way be affected by this bill. The bill only stipulates that the operator engaging in selling or renting residential property for a profit shall not refuse access to the property to whole groups or individuals on the essentially irrelevant grounds of race, color, or creed.

Fourth, it is of course obvious that no law can regulate neighborly love, nor can we legislate enlightened attitudes. A law can, however, establish a clear standard of public policy—an ethical climate—which will have a leavening and educational effect. But this argument in the city of New York is a rather academic one. Our city is noted for the fact that people can live in adjaeent apartments for years without even knowing each other's names. This law is not concerned with one's choice of friends; it states merely that housing should be available to all on the basis of ability to pay and their general acceptability as qualified tenants or purchasers.

I am therefore persuaded that when vague fears and premonitions are laid aside, the objections to the law simply do not withstand analysis. I further believe that there are many members of the real-estate industry who sympahize with the principles of this legislation, and who will readily comply with the law once it is passed. For then it will affect all members of the real-estate fraternity equally.

Most businessmen do not feel that it is their responsibility to do the social pioneering for the community. But when an issue such as this has been debated and resolved by legislative action, the average businessman, as a responsible member of our society, adheres to the public policy of our community as expressed in its laws. I am confident that when the Sharkey-Brown-Isaacs bill becomes law, the very men and organizations whose reservations and critical views you have heard today will rise to their responsibility and will be in the forefront of a broad effort to implement it responsibly and effectively.

Saved by the House

EXTENSION OF REMARKS
OF
HON. JACKSON E. BETTS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. BETTS. Mr. Speaker, it is distressing to see some of the reactions in the press to those who voted against the so-called school construction bill. In a Sunday edition one writer referred to them as culprits. It is always interesting to note that if a Congressman's vote is agreeable to some group, he is a statesman; if not, he is a culprit, a politician, or a turncoat. The fact of the matter is that the votes against the school bill were just as high minded and conscientious as those of the proponents. I resent being referred to as a culprit for opposing bureaucracy and the evils of Federal control over the minds of youngsters through the device of a school construction bill.

One of the Nation's great newspapers, the Cleveland Plain Dealer, has plainly and simply stated the situation in a recent editorial entitled "Saved by the House," as follows:

The Nation has been saved by the House of Representatives from the folly of having the Federal Government embark on a program of Federal aid for school construction. As it did 2 years ago, the House first amended the bill by providing that no Federal money could go to school districts which practiced racial segregation, then killed it.

The vote was closer than it was 2 years ago, and the bill was nearer enactment, since this year it had been approved by the Senate, while last year it was not considered

by that body. The savings to the Federal Treasury will be $1½ billion over the next 5 years and nobody knows how much might have been sought for school aid in the future.

The States, we are convinced, are capable of handling their own school building programs. We hope they will be far enough along in their construction projects next year so that there will be no excuse for again attempting to transfer the responsibility to Washington.

A Challenge to the Building Industry

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. DONOHUE. Mr. Speaker, it is regrettably becoming more and more apparent that recent home building is pricing the middle income earner out of the market.

While there have been and are some practical factors increasing the tendency toward this unfortunate development, they are not by any means unsurmountable and they present a challenge, as well as an opportunity, to the home-building industry to sensibly overcome them.

The middle income group by far presents the greatest purchasing potential and, therefore, the greater potential for reasonable profit to the industry.

Let us hope that in their own interest, as well as the national interest, they will concentrate their attention upon restoring this great market so that more and more American families may be given the opportunity to own their own home.

A most enlightening article on this important subject, written by Sylvia Porter, appeared in the May 24, last, issue of the Worcester, Mass., Telegram, and I am pleased to include it at this time.

The article follows:

GONE: THE MEDIUM-PRICED NEW HOME

(By Sylvia Porter)

It's official: The American builder has practically slammed the door on the lower-middle income housing market.

This is the market from which builders made their spectacular mass profits in the first postwar decade and from which they could be making spectacular mass profits today.

The elimination of this huge income group, therefore, explains why the number of houses being built so far in 1957 is at an 8-year low and many volume leaders in this crucially important industry in our land are screaming for more Government help.

GOVERNMENT REPORT

The Commerce and Labor Departments have just released a survey on the price of the average 1-family house built in 1956. What was true last year is even more true today. Specifically:

There has been a collapse in the building of houses to sell under $12,000.

Last year, only 7 percent of the 1,093,900 privately financed new houses were built to sell under $7,000, against 11 percent in this range in 1954; only 10 percent were built to sell between $7,000 and $10,000, down from 15 percent in 1954; only 12 percent were built to sell from $10,000 to $12,000, against 19 percent 3 years ago.

Simultaneously, there has been a tremendous rise in the percentage of houses built to sell from $15,000 to $20,000 and up.

The number of new homes costing more than $20,000 jumped from 10 percent of all residential construction in 1954–56 to 18 percent last year. In the $15,000–$20,000 range, the percentage was 26 percent last year, up a full 10 percent in the short period.

MORE EXPENSIVE HOUSES

Average price of a new 1-family house in 1956 was $14,500 and the average is close to or perhaps above $15,000 by now.

In many areas, even this price means only a stripped-down house.

Why is the industry shutting the door on its own prosperity? Why is it building only a picayune few hundred thousand homes in the $7,000–$12,000 class at a time when it is authoritatively estimated over 5 million families are eager to buy a house in this range? Why is it concentrating on the more-house-for-more-money theme when this obviously limits the market to those who have more-money-for-more-house?

TREND NOT NEW

Of course, one reason is "tight money"—the difficulty of getting a mortgage for a lower-priced house and the climbing costs of mortgages. In a credit pinch, the house-buyer with cash to put down and a good credit reputation is clearly favored. But that's not the sole reason.

Actually, the trend dramatized in the Government's new report started long before this tight-money period and was gaining power throughout the easy-money days of 1955.

The other reasons are:

The soaring cost of land since 1950. Builders can't or won't put up lower-priced houses on higher-priced land.

The zooming costs of materials and manpower. Builders have done little to offset these costs which are rising every year.

BUILDING CODES

The outmoded building codes fostered by communities which resist an invasion of lower-cost houses. Maybe the builders can't do much about the codes, but they certainly haven't tried hard to do much.

The archaic practices of so many in the industry itself. What advances have been made in building techniques in recent years are minor.

An enormous demand for housing is being forced to go unsatisfied. In fact, today's underbuilding in the lower-middle income field could lead to another housing explosion in the sixties.

Upgrading of housing is fine. Elimination of the mass market for housing is deplorable.

Hon. Nat Patton

SPEECH
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PATMAN. Mr. Speaker, our former colleague, Nat Patton, who has recently passed away, has left many friends in the House of Representatives who served with him in this body. Congressman Patton was a genuine person; he was affable and congenial; he had the best interest of the people at heart and as a Member of Congress he was always working to make our country greater and our people happy and prosperous. He was patriotic and a great American.

Congressman Patton left surviving him a widow who is also very popular in Washington and many people of his congressional district—a fine and great woman—and 4 wonderful children—2 boys and 2 girls who spent the years in Washington with the Congressman.

The passing of Congressman Patton is a great loss. I extend sympathy to his surviving widow, his children, grandchildren, and other loved ones.

The Members who served with him have pleasant memories and recollection of Congressman Patton.

The Limitations of Monetary Policy

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. REUSS. Mr. Speaker, the current issue of Business Week, dated July 27, 1957, contains the following interesting editorial on the limitations of monetary policy in meeting today's inflationary pressures:

[From Business Week of July 27, 1957]

WHEN THE OLD ANSWERS DON'T WORK

What to do about rising wages and prices? How to maintain stability without endangering explanation?

These questions are being asked in almost every country of the free world. They all suffer from a common complaint—the breaking out of inflationary pressure. There are, to be sure, differences in the degree of inflation. To paraphrase George Orwell, it is a case of all countries being equal, but some countries being more equal than others.

This worldwide problem has been subject to a variety of prescriptions. In general, however, there has been a common trend toward reliance on orthodox monetary policies as the chief means of combating the inflationary spiral. Little use was made of monetary management before and during World War II, but now it is once more in favor, so much so that the United Nations' World Economic Survey bluntly observes that "it may not be inappropriate to ask whether the pendulum may not by now have swung too far in the opposite direction."

Certainly, the evidence to date suggests that though monetary policy has slowed down economic expansion, it has not impeded the climb of wages and prices. It is also clear that excessive demand, which is regarded as the traditional stimulus of inflation, is not the main cause of the pressure now being felt. It is difficult to find the common germ for the current outbreak, but in a large number of cases it appears to stem from the fact that wages are rising faster than output.

There is growing doubt that this unorthodox type of inflation can be successfully defeated by the orthodox weapons of fiscal and monetary policy. The U. N. report, for example, questions whether "credit restraints, however essential they may be in the short run, can in themselves provide an adequate long-term answer to the need for maintenance of higher inventories, or the

expansion of key bottleneck industries, or for increasing the mobility of resources."

A sizable body of opinion, both here and abroad, fears that dependence on orthodox policies, if pressed too far, might halt inflation only by inducing deflation. This has resulted in a search for ways and means of supplementing our present arsenal of anti-inflationary weapons so as to achieve stability without the risk of engendering a decline.

So far we have not had many positive—or acceptable—supplements or alternatives to present policies. Almost all countries reject the use of wage and price controls, which have proved so ineffective in the past. But the recognition that governments have a political responsibility for maintaining economic prosperity should lead to a reexamination of their economic powers to do so.

The very act of questioning present policies represents a forward step. Now that we have reached the point of discovering that we don't know all the answers, we are on the road to asking the right questions.

Postal Employees Pay Raise

SPEECH
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. BAUMHART. Mr. Speaker, under leave to extend my remarks, I welcome this opportunity to comment on H. R. 2474, the long-overdue postal pay raise bill which we have just overwhelmingly passed by a bipartisan vote of 379 to 38.

I am certain that, in retrospect, we will find no reason to doubt the wisdom of our balloting today, for we have approved legislation designed to cushion 500,000 civil servants against continued advances in the cost of living, with an across-the-board annual raise of $546 per employee.

Many of us had hoped that this remedial legislation would advance to the floor through conventional channels. Our committee system can be relied upon, in most instances, to bring to our chamber bills like this which have strong public sentiment behind them and deserve to be debated fully. We were urged two months ago to sign a discharge petition to force a pay raise bill out of our House Committee on Post Office and Civil Service. But, like many of my colleagues, I refrained from such a step because I felt that we owed it to our colleagues on that important committee to give them adequate time to consider and report out a sound bill. Only when it appeared that continued forbearance would play into the hands of opponents of this much-needed legislation, did I add my name to the discharge petition.

We heard many well-motivated objections to H. R. 2474 in our debate, but they were found to hold little weight when compared with the overriding merits of the postal worker's case. We realized that we could not expect to provide full wage parity for the postal worker; he had been overlooked too often in the past for us to give him his full due. Instead we have come up with a blanket increase which will serve to ease the pinch of inflation on the postal employee and his family, without adding an irresponsible amount to the 1958 budget.

To those who criticize our actions as being inflationary, we can justifiably point out that civil employees should not be singled out to hold the line against inflation while other segments of the population demand and receive protection against the cost-of-living spiral. We can also refer our critics to many areas of the 1958 budget request which we have been able to trim of fat and waste, in amounts far greater than the cost of this pay raise. Then, too, we can reasonably expect a pay raise will effect tangible reductions in costly personnel turnover, and will substantially improve employee morale and efficiency.

Our postal establishment has made great strides in meeting the service needs of 48 million homeowners. Increased productivity has enabled the Post Office Department to provide the finest service in the world with fewer employees than it had 5 years ago, despite unprecedented increases in mail volume to be handled and households to be served. This record has been compiled by our postal employees even in the face of inflationary pressures which have forced many of them, their wives and their children, to take part-time jobs in a vain effort to make ends meet.

The $546 pay increase voted today will not solve the problems of these families, but will bring some measure of relief. At the same time it will free many postal workers of financial anxieties which unconsciously keep them from achieving optimum efficiency.

Much remains to be done, however, if we are to pay more than lipservice to the need for a constantly improving postal establishment. Action should have been taken long ago to revise our postal rates upward from their unrealistic levels. Postal careers should be made more attractive to qualified people through revision of our pay levels in a way that more closely relates salary to efficiency and responsibility. As confident as we are that we have done the right thing in voting for this pay raise, we should now finish the rest of the job.

Status of Forces Treaties

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. HAGEN. Mr. Speaker, I submit herewith for the attention of the membership the comments of two representative newspapers regarding the status-of-forces treaties and like agreements. They are an editorial from the Tulare, Calif., Advance Register of July 13, 1957, and an editorial from the Bakersfield, Calif., Californian, of July 22, 1957:

The editorials follow:

[From the Tulare (Calif.) Advance-Register of July 13, 1957]

STATUS-OF-SERVICES TREATIES

There is considerable feeling here, there and everywhere over the case of Army Specialist William S. Girard, whom the Supreme Court has ruled may be tried for murder in Japan.

Girard, you recall, shot and killed a Japanese woman who was picking up metal in a location over which Girard had been placed on guard.

There are a number of basic things to be remembered in this case. It isn't unusual; it's just received more publicity, and as soon as it became prominent other similar cases sprang up in Algiers and elsewhere.

Furthermore, the Status of Services Act, which covers the situation, not only in Japan, but in some 49 other countries, is not new. It's been on the books and in effect for years. It's a very complicated document, actually a series of treaties, and difficult to change. In fact, there are indications that foreign reaction would have been dangerously angry had the Supreme Court ruled the other way.

We think things need overhauling.

It is probably true that the United States needs formal understandings with other nations covering troubles into which our soldiers, just like average men everywhere, get themselves. In this day, when we must have friends and bases everywhere, that need is even more important.

And we can see, too, that, if a soldier, or any other American, gets into trouble while off duty, or while off limits or of purely a civil nature, there may be a point for jurisdiction of foreign courts.

But when a soldier, on an assigned duty to stand guard over something or somebody, has the misfortune to kill a national of that country, we are ready to raise a point. We feel somehow that we are letting that man down when we fail to back him up in performance of his duty.

There's a hue and cry in Congress about revision of the Status of Services Act. There's danger that hot and heavy political partisan wrangling might do more harm than good. Girard is in Japanese hands now and that can't be undone.

But what we need is a calm and collected study of the documents that caused the situation and then possible changes, achieved along formal, diplomatic channels.

[From the Bakersfield (Calif.) Californian of July 22, 1957]

PRESIDENT BACKS AGREEMENTS

President Eisenhower has swung the full weight of his prestige, experience, and authority in support of the status-of-forces agreements that govern the control of American servicemen overseas. These agreements specify the jurisdiction of local law-enforcement officials and courts in cases involving United States servicemen abroad, and since the beginning of the case of William Girard in Japan, they have been under heavy fire.

Mr. Eisenhower has declared that the proposals now before Congress to abrogate the status-of-forces agreements will serve to jeopardize our foreign alliances and endanger the Nation's security. He pointed out that our troops are stationed on foreign soil for two vital purposes, to assist our allies to withstand attack by an aggressor and to maintain our own defensive perimeter. "No longer does anyone suggest," he said in a statement on the matter to House Republican Leader JOSEPH MARTIN, "that we can withdraw behind the boundaries of 'Fortress America.' I can think of no legislative proposal that would so threaten the essential security of the United States."

The President observed that the status-of-forces agreements were concluded under a previous administration and had been

sustained by custom and usage in the succeeding years. Other observers have noted that until the Girard case arose, there was no dissatisfaction with them and thousands of cases had been settled fairly and with no protest.

The Supreme Court, in its recent ruling, has sustained the constitutionality of the status-of-forces agreements, a point that critics have attempted to obscure unduly. Beyond a few perennial isolationists and others of similar ilk, there has been a general appreciation of the meaning and necessity of the arrangement.

The President is aware of the motives behind the attack on the agreement. He is also aware of the necessity to keep the agreements in order to maintain the safety and morale of our Armed Forces in their overseas stations. The record of the cases handled under the agreements in one that supports soundly the belief that justice is done under them. He has pointed out the undesirable results that will accrue from the misguided efforts to eliminate these important agreements. Congress will undoubtedly heed the warning of the President and avoid being led into error.

Partial Victory

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, June 28, 1957

Mr. NORBLAD. Mr. Speaker, the Portland Oregonian of July 16 carried a most significant editorial on the decision of President Eisenhower and the CAB to include Portland as a coterminal with Seattle on Pan American World Airway operations over the polar route from the west coast to Europe. It is gratifying to know that all of Oregon will now have a direct connection with Pan American flights on the short route to Europe.

However, Mr. Speaker, the Oregonian is justifiably concerned over the delay on the part of the CAB to certificate Pan American to operate through Portland on the route from California to the Orient. The newspaper editorial points out that if Portland is important enough to have Pan American service to Europe it likewise should be vital enough traffic center to have Pan American service to the Orient.

Mr. Speaker, under leave to revise and extend my remarks, I ask unanimous consent to include in the RECORD the Oregonian editorial Partial Victory.

The editorial follows:

[From the Portland Oregonian of July 16, 1957]

PARTIAL VICTORY

The decision of President Eisenhower and his Civil Aeronautics Board to overrule a CAB examiner and designate Portland as a coterminal with Seattle on over-the-pole flights from the west coast of Europe is of the utmost significance to the future of this community. Much more was involved here than the slight inconvenience Portland's Europe-bound travelers would have suffered had the President and the CAB accepted the examiner's recommendation that Seattle be the sole terminal in the Northwest.

We are on the threshold of a new era in air travel. The transition is now being made from piston-engined, propeller-driven airliners to jet-powered planes. Jet airliners will fly at very high speeds and altitudes, making them best suited for long, nonstop flights. The result of this will be a remaking of the air map of the world, with major cities becoming jet airliner terminals, while lesser cities will be served by networks of feeder airlines using slower turboprop or piston-engined planes better suited to short-haul service.

The real question at issue here was in which category Portland belongs. Representatives of the Portland Chamber of Commerce and Oregon's congressional delegation fought vigorously to win recognition of Portland's right to main-line status. Officials of Pan American World Airways and Trans World Airlines reaffirmed their belief before the CAB that this city has a promising traffic potential for intercontinental flights.

The final ruling is a victory for Portland and for Pan Am, and a disappointment for TWA, which won't be allowed to stop at either Portland or Seattle on its transpolar flights originating at Los Angeles and San Francisco.

There is more work to be done, however. Pan American also has pending before the CAB a request for permission to fly the great circle route from the west coast to the Orient, again using Los Angeles, San Francisco, Portland and Seattle as coterminals. The CAB examiner in this case has given a favorable recommendation, with the proviso that Portland and Seattle be eliminated as stopping places. But if we are important enough to deserve direct jet air service to London, we surely are important enough to be on the main line to Tokyo. If our community spokesmen can join with Pan American representatives to win this battle, too, then Portland will be established definitely as a first-magnitude dot on the New World air map.

We Must Persevere Toward Disarmament With Guaranties

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. DONOHUE. Mr. Speaker, there is no objective more important to the peace and security of the world than a disarmament agreement, with realistic guaranties, between the United States and Russia.

I am pleased to enclose a very timely editorial on this vital subject which appeared in the May 27, last, issue of the Worcester, Mass., Telegram.

The article follows:

NEW OPPORTUNITY FOR DISARMAMENT

President Eisenhower has properly strengthened Harold Stassen's arm in seeking to win from the Russians at least a first step toward eventual disarmament. He told Stassen to go ahead with negotiations before the London session of the United Nations disarmament subcommittee on the premise that disarmament is feasible and possible.

The President made it clear that he believes it folly to give up all hope of eventual disarmament, regardless of discouragements, in view of the dangers of an atomic war.

The fact that the London talks are renewing today is evidence that hope still exists for disarmament, at least on a limited basis. The Soviet has never shut the door completely on discussion of President Eisenhower's dramatic proposal for aerial inspection—a plan offered at the July 1955 Big Four Conference at Geneva.

Indeed, Russia and the United States in recent weeks have even discussed possible areas which might be opened first for aerial photography. True enough, the Soviet offers so far have been heavily balanced to give the Russians a strong advantage—but at least Moscow is still willing to talk about the open skies idea.

It should be remembered, also, that Russia once outlined an inspection system with control posts at large airports, harbors, and highways. Secretary of State Dulles is convinced that the open skies or some form of mutual inspection program, is possible.

It is easy to dismiss disarmament talks as wholly unrealistic, and to consider the goal an ideal impossible to attain. But, fortunately, Russia apparently realizes that an atomic war would destroy the world, including the Soviet Union. With that thought, Russia may be as anxious to achieve genuine disarmament as is the United States. Anyway, it would be absurd not to try to do so. The President's firm backing of Stassen should now be helpful.

Ambassador Presents Israel's Record

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following letter to the editor of the New York Herald Tribune, written by Israeli Ambassador Abba Eban, as it appeared in the New York Herald Tribune of July 26, 1957:

AMBASSADOR PRESENTS ISRAEL'S RECORD

To the NEW YORK HERALD TRIBUNE:

It is not easy to write calmly of Dr. Hocking's assertion in your July 20 issue that Israel was the aggressor in the armed conflict of 1947–48 and that the documented facts leave no doubt on that point. The truth is that the Arab Governments were the self-confessed and internationally recognized authors of that warfare; and this—the opposite of Dr. Hocking's astonishing thesis—is proved by all the documented facts. In these circumstances, Dr. Hocking's assault upon my country's honor is a painful offense to international courtesy and to objective truth.

Arab aggression against the people—and later the State—of Israel in 1947–48 has been established by confession of Arab leaders; by determination of United Nations organs; and by the confirming judgments of leading governments, including the United States, whose historic view on this matter contradicts that of Dr. Hocking at every point.

There were two phases in this aggression. The first began on November 30, 1947, on the morrow of the United Nations recommendation for partition. The Arab governments had said that they would go to war to prevent the fulfillment of that international policy. They kept their word. Terrorism, bloodshed and siege swooped violently down upon our community and threatened to engulf it. Our people fought desperately to save their lives, their homes and families, and their newly

recognized right of nationhood from brutal extinction. The Secretary-General of the Arab League had warned: "This will be a war of extermination and a momentous massacre that will be spoken of like the Mongolian massacre and the Crusades." The partition line, declared the Palestine Arab representative in the General Assembly, "shall be nothing but a line of fire and blood." In pursuit of these threats, which were reiterated in the General Assembly on November 29, 1947 (A/PV.128), the Arab States sponsored the mobilization and training of a "liberation army" to wage war against our towns, villages and communications. The Arab governments published communiques about the progress of their invasion, and promised that it would take on a more violent fury when the British Mandate expired May 14, 1948.

They were faithful to this threat. When British rule ended, the armies of five Arab States crossed their frontiers with the avowed aim of destroying the state of Israel. They made no attempt, as Dr. Hocking does, to conceal their responsibility. Their frank confessions are to be found in the verbatim records of the Security Council of May 15–25, 1948. These have somehow lost their places amongst Dr. Hocking's documented facts. So also has the statement of the Secretary of the Palestine Arab Higher Committee, Mr. Emil Ghoury, who looked back upon the havoc and failure of the war, and summoned the Arab governments to aid his kinsmen. He declared on September 15, 1948:

"I do not want to impugn any one but only to help the refugees. The fact that there are these refugees is the direct consequence of the action of the Arab States in opposing partition and the Jewish state. The Arab States agreed upon this policy unanimously and they must share in the solution of the problem."

Nor shall I readily forget sitting opposite Mr. Jamal Husseini in the Security Council in the spring of 1948 and hearing him declare in full candor that the Arabs "have never concealed the fact that we [the Arabs] began the fighting." (S/PV.287.)

If, in the face of these documented facts, all available to public scrutiny, Dr. Hocking can speak of Israel's aggression he clearly reveals himself as an advocate of no ordinary daring. His letter draws special attention to the period between November 1947 and May 1948. He writes that this "is a little-known period of our current history. Its importance, however, is out of proportion to its extent—it contains the key to all that has followed."

Your readers who have read Dr. Hocking's categorical statement that Israel's guilt is established by the documented facts, will rub their eyes in amazement when they now read the unanimous words of the United Nations Palestine Commission on the armed conflict which had raged during the key period beginning November 1947:

"Arab opposition to the plan of the assembly has taken the form of organized efforts by strong Arab elements, both inside and outside Palestine, to prevent its implementation and to thwart its objectives by threats and acts of violence, including repeated armed incursions into Palestine territory. The Commission had had to report to the Security Council that powerful Arab interests, both inside and outside Palestine, are defying the resolution of the general assembly and are engaged in a deliberate effort to alter by force the settlement envisaged therein" (A/532).

So much for the period between November 1947 and May 1948. There are also documented facts about the second phase of the aggression which took the form of an official invasion by the five Arab armies. The international verdict on this phase is to be found in the report of the United Nations acting mediator to the General Assembly of November 25, 1948. I quote from the official summary record (A/C.1/SR.213):

"The Arab States had forcibly opposed the existence of a Jewish State in Palestine in direct opposition to the wishes of two-thirds of the members of the assembly; nevertheless, their armed intervention had proved useless. * * * The [Mediator's] report was based solely on the fact that the Arab States had no right to resort to force and that the United Nations should exert its authority to prevent such abuse of force."

On July 15, 1948, the Security Council ruled that the action of the Arab States in refusing a prolongation of the truce had brought about a threat to international peace and security. This was the first determination of such a threat in the history of the United Nations.

In delivering these verdicts the organs of the United Nations were fully supported by the information available to member states. As the Arab armies converged upon Israel in the third week of May 1948, the voice of the United States rang out in clear and resonant rebuke. At the table of the Security Council, the American delegate, referring to Arab statements about intervention in Palestine, went on to say:

"Their statements are the best evidence we have of the international character of this aggression. * * * They tell us quite frankly that their business in Palestine is political and that they are there to establish a unitary state. * * * Therefore, here we have the highest type of evidence of the international violation of the law: the admission by those who are committing this violation." (S/PV 302.)

Interpreting the declarations of Arab governments, the United States representative ironically paraphrased them as follows:

"We are there only for the purpose of overwhelming the provisional government of Israel; we are going to overwhelm the status quo by power and we are going to determine an international question ourselves." (S/PV. 307.)

Continuing, the United States delegate said:

"An existing, independent government cannot be blotted out in that way. * * * The Arab States are taking the only course that can be taken to blot it out—and that is marching in with their armies and blotting it out. That is a matter of international concern."

Referring to the Arab claim that their operations were aimed at the maintenance of peace, the United States delegate said:

"This is equivalent in its absurdity to alleging that these five armies are there to maintain peace while they are conducting a bloody war." (S/PV. 302.)

These are the documented facts about the bloodshed which convulsed our country in the period between November, 1947, and May 1948. There are no others—and Dr. Hocking speaks of none. All these documents prove Arab responsibility for this savage warfare with its ghastly legacy of rancor and suffering. I must assume that Dr. Hocking was not aware of the confessions, determinations, and verdicts which I have quoted here; for any other assumption raises implications which I prefer not to face. In the light of this evidence, what a fearful mockery of justice it is to charge a friendly state with undoubted guilt for the aggression of which it is the certified and internationally acknowledged victim. It matters little that men's opinions differ. But it matters greatly if they do not tread gently and humbly in the ways of truth.

These memories of the Arab aggression a decade ago are grievously relevant today, when these governments refuse to liquidate their state of war. The censure and dismay of world opinion attaches, not as Dr. Hocking writes, to Israel, but rather to the refusal of Arab nationalism to suffer a small neighboring people to pursue its life and destiny in peace.

ABBA EBAN,
Ambassador of Israel to the United States and to the United Nations.
WASHINGTON, D. C., *July 23, 1957.*

Letter From Hon. Carroll D. Kearns, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. FULTON. Mr. Speaker, it is a pleasure to submit the letter of my good friend, Congressman CARROLL KEARNS, which was sent in accordance with my request, so that the Congress might know of the excellent results of his tour of the Far East to conduct the United States Air Force Symphonic Band at various places in this theater of the world.

Congressman CARROLL KEARNS is to be greatly complimented for the time and effort he has given in going to the Far East as a representative of the American people. This mission has further cemented friendships with the peoples of the Far East by speaking our common language of music.

Congressman CARROLL KEARNS, of Pennsylvania, deserves the thanks of every Member for raising the respect and confidence of the peoples of the Far East in the Congress of the United States, which reflects to the credit of every Member as well as to the people of America.

The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 23, 1957.

The Honorable JAMES G. FULTON,
House Office Building,
Washington, D. C.

DEAR JIM: Thanks for your willingness to put in the RECORD the itinerary of my recent tour of the Far East. You will find it attached to this letter. I am sure you will agree that this tour of 21,840 miles in 18 days was one which would tax any one of us physically.

I only wish that every Member of Congress could have been privileged to share my great experience in representing in a small way the great cultural ties that exist between the United States and the Far East.

The United States Symphonic Band, under the direction of its capable conductor, Col. George S. Howard, played to over 400,000 people in the Far East and cemented a bond between those countries and ours that can never be evaluated in dollars and cents.

As you know, we lived through the trying days of the Girard case and many other adverse situations in the Far East, but in every instance we were able to form a tie through our cultural relationships that could not be realized by means of any other avenue of approach.

This proves to me that music rather than guns will ultimately be the common lan-

guage of all nations, not only in the Far East, but also on the continent of Europe and in the Near East.

Sincerely yours,

CARROLL D. KEARNS,
Member of Congress.

New Secretary From Connecticut

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to pay tribute to the newest member of President Eisenhower's Cabinet, Secretary of the Treasury Robert B. Anderson, of my hometown of Greenwich, Conn.

Mr. Anderson yesterday became the first Connecticut man to be appointed to a Cabinet post since President Franklin D. Roosevelt named a resident of Stamford, Conn., Homer E. Cummings, as his Attorney General in 1939.

I join with my fellow residents of Connecticut in congratulating Mr. Anderson on the high honor bestowed upon him, and wish him well in the complex job before him.

The following feature story in the Stamford Advocate of July 29, 1957, presents a candid picture of the new Secretary of the Treasury at home. I commend it to your reading:

GREENWICH FAMILY IS PROUD OF DAD, NEW TREASURY CHIEF

(By Marion Campbell)

Robert B. Anderson, of 1 Deer Park Court, Greenwich, had an appointment at the White House today.

He was home in Greenwich over the weekend, preparing to fly to Washington late Sunday with his wife, Mrs. Ollie Rawlings Anderson, and their 2 sons, James Richard, 20, and Gerald, 16.

"Bob" Anderson wanted his family there today, when he was sworn in as Secretary of the Treasury.

Sitting in his Deer Park library, under a picture painted by President Eisenhower, Secretary of the Treasury Anderson made it clear what he likes best about his new post.

"It's an honor to serve," he said, "particularly with President Eisenhower." Reluctant to discuss policy, Secretary Anderson did describe some of the scope of his new post, held first by Alexander Hamilton.

Already a highly successful businessman, and veteran of State posts in Texas, Mr. Anderson has previously served in Washington as Secretary of the Navy and later as Deputy Secretary of Defense, in 1953–55. He and his family came to live in Greenwich nearly 2 years ago, when Mr. Anderson had left the Government to serve as president of Ventures, Ltd., of Toronto.

As Secretary of the Treasury, the Greenwich resident becomes the first Connecticut man to hold a first-rank Cabinet job since the late Homer Cummings of Stamford left President Franklin D. Roosevelt's Cabinet as Attorney General, in 1939.

GOOD GOLFER

A serious-faced, big man with a good golf score and a sharp hunting eye to his credit, Secretary Anderson smiled a bit over some of his new duties. He's in charge of the Customs Bureau, for example, a department he knows as a foreign traveler.

The new Treasury Chief mentioned the narcotics squad, Alcohol Tax Unit, and the Secret Service, which, under the Secretary of the Treasury, guards the life and safety of the President. The Coast Guard too now is operating under the control of the Greenwich resident; also the Internal Revenue Department, and the Bureau of Printing and Engraving.

Even as Secretary Anderson was sworn in today, the Bureau of Printing and Engraving was turning out new dollar bills bearing his signature. Before he has been in office long, the bills will be circulating through Connecticut and the rest of the Nation.

"I'm coming up to Greenwich to spend weekends, as often as I can," the Secretary explained. He and his wife plan to have her remain at 1 Deer Park Court while their son, Jerry, finishes his year at Brunswick School. The older son, "Dick" is studying at Columbia University this summer and will enter his senior year at Williams College, Williamstown, Mass., in the fall.

A member of the Greenwich Country Club, Secretary Anderson had played a quick game of golf there Saturday "before I wind up some things." In their sports clothes, the Secretary and Jerry, who had been playing tennis, were settling down for a chat in the library. Pretty Mrs. Anderson, without interrupting a pleasant tribute to the really beautiful Connecticut countryside, threw her two men a glance.

"Yes, I guess I better change my shirt," murmured her husband. Mrs. Anderson stayed to describe how she and the Secretary of the Treasury operate as a united family.

Mr. Anderson runs his business and she runs his house, Mrs. Anderson said.

"I won't tell him how to run the Treasury," she said. "But I guess I do manage things around the house. My boys always say:

" 'Mother says and dad agrees.' "

Mrs. Anderson decorated the Deer Park house, and both designed and decorated a home at Vernon, Tex., which the Andersons plan to sell now.

LIKE GREENWICH

"We like Greenwich very much," the Andersons said.

The Secretary's library is lined with guns, books, and pictures of people who like him. Signed inscriptions from such political figures as Senator LYNDON JOHNSON and Speaker of the House SAM RAYBURN, from Secretary of Defense Wilson and Admirals Nimitz and Halsey, attest the reputation that goes with Secretary Anderson as he begins his new job, nominated by a Republican President and approved unanimously by a Democratic-controlled Congress.

Upstairs Mrs. Anderson keeps a corridor wall filled with private pictures of family events and old friends and a trophy case of multicolored ribbons awarded the former Texas lawyer by foreign governments.

She, Jerry and Dick are proud of the new Treasury Secretary, Mrs. Anderson said.

"But then, we've been proud of him for a long time—in many ways." Pointing to a picture taken shortly after they were married, the former Ollie Rawlings said, "You know, he graduated from the Texas University Law School with the highest average ever made there. Maybe somebody's beaten it since. But I don't think so."

Air Fares a Bargain

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 8, 1957

Mr. O'HARA of Illinois. Mr. Speaker, I am indebted to Mrs. Margaret Gregory for calling my attention to an editorial in the Chicago Sun-Times of July 2, 1957, which by unanimous consent I am extending my remarks to include. Mrs. Gregory is one of the most efficient persons in public contacts that I have ever known. She is private secretary to the vice president of the American Airlines.

On one New Year's Eve a constituent of mine was stricken and required immediate hospitalization. Mrs. Gregory was contacted at her home at a time when most people were making merry with the New Year's Eve festivities. She willingly dropped everything and did not cease in her task of helpfulness until arrangements had been made for a passage on a plane from a city off the main line to the hospital, and this at a time of great traffic pressures. There are many similar incidents that have been brought to my attention. This is the sort of public service, in both civil and official spheres of activities, that makes our democracy work, and I am sure my colleagues will agree deserves recognition.

The editorial follows:

AIR FARES A BARGAIN

As costs of everything from autos to zippers continue to rise, it is out of the ordinary to run across something that costs virtually as much as it did 15 years ago. C. R. Smith, president of American Airlines, calls our attention to the fact that since 1942 airline fares have increased only 0.2 percent.

Since 1942, the Consumer Price Index has gone up 66.7 percent. Smith says rail fares have increased 39 percent, which does not include increases up to 20 percent on first-class fares on six eastern railroads and 5 percent on coach fares granted in 1957. Bus fares have increased 25.4 percent.

Although rail fares have increased, the air fares are still competitive. We recently had occasion to check fares from Chicago to San Francisco, where the American Society of American Newspaper Editors meets next week. Round trip pullman fare (with a roomette) costs $227.76. By air coach on a scheduled airline, the fare is $196.96 and by first-class nonstop the fare is $239.91.

Airline costs have soared in the past 16 years as better planes became available. In 1941 a DC–3 cost $125,000. One of American's jets to be delivered in 1959 will cost $5 million.

The airlines are seeking an increase in rates. Smith believes a proposed 6 percent is insufficient. American Airlines proposes

that some special discounts, such as the family fare, be reduced or eliminated.

The airlines may be able to make out a good case for fare increases; but in the long run, like most competitive businesses, they can't charge more than the traffic will bear. People would use other forms of transportation or the cheaper unscheduled airlines. On the other hand, as long as the public has the money and the will to afford swift air transportation, the companies should not be unduly penalized for having created the demand.

Grip on the Purse Strings

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. MINSHALL. Mr. Speaker, the Cleveland Plain Dealer has long been known for its outstanding and excellent editorial comment. The one that appeared on Monday, July 29, 1957, again demonstrates the careful, analytical approach to a matter presently being considered by this Congress. I supported and voted for this bill in the Government Operations Committee, of which I am a member, and certainly hope that the House will give its approval to this important piece of legislation. The editorial follows:

GRIP ON THE PURSE STRINGS

While the Korean war was being fought, Congress included in its budget for fiscal 1953 an appropriation of $12,500,000,000 for guns, tanks and other equipment. The war ended in 1954, but even this year the Army was spending money from that $12,500,000,000 appropriation.

Maybe it sounds wonderful that the Army should make the money last that long. But the point is that Congress, which controls Federal purse strings, had nothing to say about the way the money was spent after it was appropriated, although conditions had changed with the end of the war.

The example is but one of many that could be cited—for the present total of unspent carryover appropriations is now estimated by the Comptroller General at more than $70 billion.

A board of directors of a private company running affairs under such an arrangement would throw up their hands and resign, or force a change, because they could not be responsible for insuring economical operation.

The Federal Government of course is much more complex than the greatest private business, and its board of directors—Congress—doesn't have to think about making a profit. But Congress should worry continually about economy, and it should have the power to review carryover funds as a regular thing, to keep a tighter grip on the purse strings.

That power would be contained in legislation recommended by the Hoover Commission 2 years ago, passed by the Senate June 5, cleared by the House Rules Committee July 17 and due to be debated soon on the House floor. The House bill (H. R. 8002), in bookkeeping lingo would establish annual accrued expenditures budgeting in the Federal Government.

The only opposition that has come forward has been among certain Members of the House who may feel that their own committee powers may be hurt or who think the present system is better because it is traditional. But some of this opposition is extremely powerful because of seniority, and the citizens committe for the Hoover report warns that the bills will face a bitter fight. It urges citizens favoring the bill to write their Congressmen.

The only reasons in opposition that carry much weight are that long-term programs, especially in defense, might be stalled by congressional review, and that the change would not provide as great economies as the supporters aver. On the first point, Congress has lived up to its responsibilities in providing defense money and we can't imagine that it won't in the future. On the second point, any savings will be worthwhile.

The President, Treasury Secretary Humphrey, the comptroller general, the American Institute of Accountants and other groups urge passage. We believe Ohio congressmen should support the bill and that the House should pass it.

Northern Skies

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. PELLY. Mr. Speaker, recently the Civil Aeronautics Board made some good news available to the people of the Pacific Northwest when it granted Pan American World Airways a certificate to fly to Europe from Seattle via the polar route. Also involved in the CAB's decision was a certificate for both Pan American and TWA to flow the polar route to Europe out of Los Angeles and San Francisco. This means, Mr. Speaker, that these two United States flag international carriers will be able to compete with the Scandinavian Airlines System from the west coast to Europe.

It would be most desirable, Mr. Speaker, if the CAB would act with equal promptness on certificating Pan American to fly the great circle route from California and Seattle to Tokyo and beyond.

I am pleased to refer to this body an excellent editorial which appeared in the Seattle Post-Intelligencer on July 17. This editorial congratulates the CAB on its polar route decision and, likewise, suggests that the sooner Seattle gets on the Pan American System to the Orient the better off all parties concerned will be.

Mr. Speaker, under leave to revise and extend my remarks, I include in the RECORD the editorial from the Seattle Post-Intelligencer of July 17:

NORTHERN SKIES

There was good news last week from the Civil Aeronautics Board which granted to Pan American World Airways a temporary certificate to fly the polar route, Seattle to London and Europe.

And we think that Joseph E. Gandy, president of the chamber of commerce, demonstrated sound, aggressive generalship when he promptly wired the President to express appreciation for the Board's decision—and to suggest that the same considerations should prompt CAB to give competitive service to the Orient via the North Pacific route.

That decision has been too long delayed as it is. A few short years ago the chamber was showing hesitancy in urging that Seattle be treated by CAB as an air metropolis instead of a stop-over spot on the pilot charts.

The Post-Intelligencer was the first to demand publicly that Seattle and Tacoma ask for, and get, the maximum air service consistent with the imminent jetliner age.

Mr. Gandy's wire to the President reflects the strong, farseeing attitude which Northwest cities exhibited in an earlier and spirited era. It is the only kind of attitude which will keep the region abreast of the times and out of the backwash of Pacific-coast progress.

Efforts To Arouse Public Resentment Against Government Supports Are Endangering the Whole Farm Program

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, I quote from the letter of David W. Klinger, editor of Capper's Farmer, with which he enclosed two articles from the current issue of that publication:

We know you understand and appreciate the value of a sound and healthy agriculture to our economy and our national defense. For that reason, we're calling your attention to this issue of Capper's Farmer and specifically to the editorial material on pages 12 and 16.

Capper's Farmer is genuinely concerned over repeated irresponsible charges against agriculture—and the lack of a workable farm program. Now, more than any time in our history, we think there's an urgent need for clear thinking and sound judgment in our approach to the farm problem. Agriculture needs your help and support.

Under unanimous consent I insert the two articles mentioned in the RECORD:

THEY ARE TRYING TO KILL PRICE SUPPORTS—EFFORTS TO AROUSE PUBLIC RESENTMENT AGAINST GOVERNMENT SUPPORTS ARE ENDANGERING THE WHOLE FARM PROGRAM

Farm price supports you've known since the war are in danger of being eliminated completely. Supports gradually have been discredited to the overwhelming majority of nonfarming Americans. It could be only a matter of time until the program's back is finally broken.

The administration is out to remove Government pricing as an income-supporting device. It wants supports only at disaster-protection levels. Beyond this, the administration has outlined no constructive program for the future.

We think there is much evidence that the drive to kill price supports could succeed.

The rising demand by city lawmakers to do away with all their so-called farm handouts comes at a crucial time—when the farm bloc is completely disorganized. In the words of one antisupport official, "the timing couldn't be better."

These are conclusions drawn from our study of official actions and public statements over the last 5 years. Secretary Benson's request for full 0-to-90 percent-of-parity flexibility is the latest evidence.

There is no question that the battle between high fixed supports and flexibles is dead. That, however, does not mean no price program at all. Congress is more likely

to approve some kind of substitute program than to permit full flexibility alone. This may be a two-price system, or production payments, or a combination. In the meantime, Secretary Benson says he wouldn't lower supports below 50 percent.

The hunt is on for a substitute program. Congressmen from farming areas are devoting their time to finding new programs, not defending the present one. The fight is boiling down to a choice between no Government income protection, except possibly under disaster conditions, and an entirely new approach.

Is Secretary Benson out to remove all supports if he can? After most surpluses are gone, yes. But while surpluses last, he wants to dwindle supports.

Here's his record on supports:

He asked for and got power to reduce basic support to 75 percent of parity. He has reduced props under surplus crops to about that level—77 percent of parity for corn and cotton this year, 75 percent for wheat in 1958. He now labels that step number 1—in line with his policy of gradualism.

The next step, Benson says, is to get almost blank-check authority to lower supports to zero.

What the third step will be he hasn't said. But while he says supports wouldn't drop below 50 percent right away, he leaves no doubt that they would be cut that far.

For wheat, 50 percent of parity means about $1.25 a bushel, compared with 1957's $2. For corn, 90 cents a bushel, compared with this year's $1.36. For cotton, 19 cents a pound. It was 28 cents in 1957.

When would supports be dropped? Not on 1957 crops. Nor on 1958 crops—although basics which haven't been cut to the present 75-percent support floor are likely to go to that level. Tip off is the announced 75-percent level for 1958 wheat.

How is the rug being pulled from under public acceptance of supports? By relentless public education and calculated official action, as the record reveals it.

USDA officials make speeches discrediting present programs without setting up any eventual goal except freedom. Thus, the talks undercut supports, and make the farmer look like the country's conniving poor relation.

This device has been so effective that the giant national magazine, Life, was prompted to say: "If enough Americans squawk, something will be done to stop this silly business."

A talk by Assistant Secretary Earl Butz, popular speaker in business circles, hammering at the dairy program, is an example. It doesn't give farmers enough free enterprise, says he.

Butz told the recent Milk Marketing Conference at East Lansing, Mich., that he opposes the use of Federal milk marketing orders as price supporting devices. He favors gradual but realistic price adjustment, as production and marketing efficiencies permit.

The shooting opened up as soon as Benson took office in 1953—when he publicly damned USDA as a swollen "bureaucracy." (USDA now has 25 percent more employees, 100 percent more Assistant Secretaries, plus more programs, than when Benson took office.)

Surpluses are put forward as the proof that supports won't work. But many prominent economists, including some at USDA, say this is mostly tilting at windmills. The problem just isn't as bad as it's painted, they say, and could be controlled by effective action under present laws.

A relatively new USDA official, Assistant Secretary Marvin McLain, recently said that, while we do have a substantial surplus problem, we need certain quantities of "reserve" in case of war or crop failure.

McLain says the wheat surplus is closer to 500 million bushels. This is in contrast to the total carryover of 1 billion bushels much publicized in official speeches. About 500 million is a legally required reserve.

Put on the same basis, the cotton surplus is only 7 million bales, not the 12 million generally advertised. As to corn, there actually is no real surplus. The billion-bushel carryover (4 months' supply) needed as a reserve is usually cited as surplus.

Benson's critics point out that for several years until Congress forced him, he refused to sell surplus cotton competitively on the world market. The cotton sales program now is hailed officially as a sensational success.

Further, his career economists told the Secretary several years ago that acre allotments—which he only recently condemns—could not alone control production. In 1954, he announced cross-compliance, which his economists said would work, but later canceled this plan.

The Presidentially appointed 18-man Agricultural Advisory Commission, composed largely of nonfarmers, looks more like a willing rubberstamp than an advisory body. And when the group doesn't see eye to eye with USDA brass, its recommendations for the most part are ignored.

You get an idea of the Commission's role from this interview with one of its members:

"No the members never take out any homework to do. We just come here (Washington) for the meeting and find out what it is we are to advise on at that time."

"How do you know, then, what you are advising on?"

"We don't. We just shoot from the hip. Then they do what they want to do anyway."

Accusations that Secretary Benson is trying to kill price supports resulted from his no-support-floor plan. However, he denies that it is our purpose to scrap farm programs or subject farm people to the unrestricted forces of the free market.

A clue to the Secretary's thinking is his early declaration: "No real American wants a subsidy." Later, in 1954, when he got his 75–90 percent flexible law—which he now says is inadequate—he said:

"It is my hope that ultimately flexible supports will be able to effect all the production adjustment necessary * * *." This, he said, would restore "greater freedom of operation to farmers as well as providing greater opportunities for higher income."

Comments at a recent press conference are revealing. After stating he didn't think he'd put supports below 50 percent, the Secretary was asked why he had requested full 0-to-90 percent flexible discretion.

The reporter asked: "If you don't need it (support below 50 percent), why do you want it—I mean full discretion?"

Benson: "Because we have it on other commodities and it's working."

The Secretary has full discretion on 188 other commodities. Of these only 9 are supported this year, including the feed grains, oilseeds, dry edible beans and pine gum. He is required to set supports for only 12 commodities, the 6 basics plus butterfat, milk, wool, mohair, honey, and tung nuts.

Referring to Government programs in general at a recent press conference, President Eisenhower remarked there are "probably only a very few of them that should be dropped." He cited "the farm program" and water pollution as "things of that character" that the Government can do without.

A week later, Eisenhower made a remark which had the effect of whipping the farmer in public.

He told reporters: "At present you must remember that about half the income of the farmer is from Federal subsidy. * * *" He said he believes this averages over a thousand dollars a farm family that the United States is paying in some form of subsidy. He added that not all of that "I think * * * gets right into the hands of the farmer."

Before Benson cleared up the statement for the White House later, it touched off a countrywide explosion of indignation against the farmer. By then every newspaper reader and radio-TV listener in the country had been led to believe that each farmer gets a subsidy of $1,000 a year from the Treasury.

Outside the Government, the national leadership of the American Farm Bureau Federation is the top farm outfit gunning for support floors—the only one. Since Secretary Benson took office in 1953, AFBF has spent almost a half-million dollars in lobbying, mostly in agriculture.

At the Bureau's annual convention in December 1956, President Charles F. Shuman announced: "For all practical purposes, the argument over the level of price supports is a dead issue."

Events in the following months proved Shuman an accurate prophet. The fight deteriorated so far that one of Farm Bureau's top officials later commented, "We've got it licked."

At the convention, Shuman attributed 81 percent of the decline in farm net income in recent years to increased costs of operation.

The way to solve that, he says, is to work for "crop-by-crop elimination of the authority of the Secretary of Agriculture to purchase and store farm products." He advocated getting rid of present stocks as fast as possible.

Farm Bureau's plans make good consumer news. Following the Shuman statement, the New York Herald Tribune's business editor declared:

"A move to get Uncle Sam out of his extensive and expensive agricultural business started in Miami last week. It is headed by the world's largest farm organization. At a little noted convention of the American Farm Bureau Federation, President Charles Shuman declared what most politicians are afraid to say: 'The farmer is hurt rather than helped' by Government programs."

Why Not Help Agriculture, Too?—Tell Your City Friends the Truth

Slapping subsidies is fast becoming a popular parlor game. But curiously and unfortunately, it's a game played with unusual ground rules. The idea, apparently, is to slap only farm giveaways. Other subsidies, direct and indirect, are by inference just, proper, and in the public interest.

It would be deplorable enough if the folks who instituted the game and set up the restrictive rules were merely misinformed. But it's reprehensible when they represent responsible segments of the American economy, including agriculture itself.

Who is slapping farm subsidies? Almost everyone, including some spokesmen for agriculture and some farm organization leaders. And their views make quick headlines in big city newspapers and mass circulation magazines.

No wonder the American consumer, whose knowledge of farming begins and ends at well-stocked supermarket counters, is confused. No wonder he looks upon farmers as public charges with a master key to the United States Treasury.

The farm bloc is split asunder, farm organizations apparently are incapable of presenting a united front for agriculture. So we think it's high time to sort the facts out of clouded half-truths and innuendoes.

Capper's Farmer does not defend the present farm program. We've criticized it loud and clear. But we do defend some safeguards for the industry that produces our food and fiber. For agriculture is an unorganized industry, particularly vulnerable to forces beyond its control.

We do think that farmers—and the Nation—have something to gain in using the

ideas inherent in the parity principle until we find a newer and better substitute. And we believe subsidies intelligently used make sense as a means of bolstering segments of the economy for the general welfare of all people.

America's Founding Fathers apparently believed so, too. Historically, the subsidy principle is one of the building blocks of our country. The first Congress of the United States, as its second official act, created a subsidy in the form of a tariff bill.

Subsidies have built our great industries, our transportation systems, our institutions of learning, our science and art. Today nearly all industry is being helped, directly or indirectly, by taxpayers' dollars. For example:

Labor: Government gifts include unemployment insurance, public employment offices, social security.

Maritime industry and airline companies: Subsidies go a long way to help keep our merchant and passenger ships afloat and our airplanes aloft.

(For example: The superliner *United States* cost $76,800,000 to build; $40 million of that was a Federal subsidy.)

Industry: Fast tax writeoff programs give industry, in effect, an interest-free loan in the amount of the deferred taxes. According to the Office of Defense Mobilization, 22,000 companies of various types have received benefits of fast tax writeoffs since the program started during the Korean war in 1950.

Mineral interests: Mineral depletion allowances are another indirect, but nonetheless very real, subsidy. Since mineral production depletes the wealth of the property, the owner is allowed to deduct, for his net profit, a percentage as depreciation costs.

In the case of sulfur mines, it is 23 percent; for oil and gas wells, 27.5 percent; for certain nonmetals, 15 percent, etc.

In a 1955 report of the congressional Joint Economic Committee, a study of 24 large petroleum companies showed that they paid an average of 22.6 percent of their net income for Federal income tax. The average paid by all corporations was 48.1 percent.

This is an incomplete list. But it's nough, we think, to illustrate that if farmers are riding a "gravy train," they share a pretty crowded seat.

However, it is not our intention to "point the finger." Rather this is a plea for reason, good commonsense, for a fair evaluation of agriculture's position.

We must not blindly condemn the parity principle, the basic concept of a healthy agriculture, merely because the current attempt at an action program is admitted to be unworkable. Our plea is for a workable program to carry out the parity concept.

A sound, healthy agriculture is indispensable to our economy—present and future. It is vital to our national defense. Petty squabbling, name calling, and finger pointing only confuse and divide. And we never needed clear thinking and unity more.

You and your neighbors are salesmen for agriculture. It's up to you to defend your business. Tell your city friends the truth. Write your Congressmen and the leaders of your farm organizations.

If you don't do your part, if you don't rise to the defense of your business, then you must share the blame when all farm programs are killed.

THE EDITORS.

IT'S TIME TO SPEAK UP

Capper's Farmer doesn't want to see the loan program killed before we have some better plan for improving farm income. Such action would be disastrous to agriculture and dangerous to our whole economy.

Now is the time for you, as a farmer, to speak out in your own behalf. If you want a sound workable farm program, it's high time to say so. Silence may be interpreted by Congress as disinterest.

THE EDITORS.

Metro Plan

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. PELLY. Mr. Speaker, under unanimous consent, I include part of an article from the Seattle Argus. This refers to a metro plan which is a proposed district program authorized by the Washington State Legislature for the people of an area in the drainage basin of Lake Washington to combine and finance an overall pollution control project. In previous statements I have suggested pollution control as one Federal aid program which can be more effectively, fairly, and adequately worked out on the State level. This is an example of such an effort on the local level.

I think Members will be interested in the following excerpt:

The future of Lake Washington—either as a huge septic tank or one of the Northwest's most magnificent esthetic recreation areas—will hinge upon an election to be held in March 1958. Should the voters of Seattle and the surrounding communities turn down the proposal for a metropolitan form of government, Lake Washington may be lost forever as a recreational facility.

Nine million gallons of sewage—raw and treated pours into the lake every day. To save the lake this sewage must be pumped away from the lake and into Puget Sound.

To become effective the metro plan as evolved by the advisory committee is bounded on the north by the Snohomish County line; on the east by a line running generally south along the ridge line east of Lake Sammamish; on the south in the vicinity of Auburn; and on the west by Puget Sound.

The plan must be approved by a majority of those voting inside Seattle and by a majority of the total who live in the dozen or so surrounding cities and towns and unincorporated areas.

The three functions of government which will be answered by a single yes or no of the voters are: sewage disposal, comprehensive planning, and rapid transit. The other item which will be on the same ballot will be a 1-mill levy to defray the costs of the functions.

Metro will function only in the wholesale sense with regard to sewage disposal. Each city will maintain its own collection and billing system; metro will provide the large trunk lines to the sound.

There will be no loss of local autonomy as each community will retain complete control over its fire, police, water, and other departments.

The need to halt the pollution of Lake Washington is so urgent that some consideration was given to an October election. However, the necessity of the 1 mill, which levy requires a turnout of 40 percent of the voters of the last general election and the approval of 60 percent of those voting, made a successful October election doubtful. Most of the cities and towns, including Seattle, will hold municipal elections in March, which assures a fair number of voters.

The Flying Dutchman

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. HAGEN. Mr. Speaker, I would invite your attention to the fact that included among my constituents are the very illustrious Warmerdam family, which produced Cornelius Warmerdam, the greatest pole vaulter of all time and perhaps the greatest track athlete of all time.

The following is what Mr. Daley, of the New York Times, had to say about Dutch Warmerdam in its issue of April 26, 1957:

THE FLYING DUTCHMAN

(By Arthur Daley)

Don Bragg, of Villanova, will take a fling at the world pole-vault record during the Penn relays this weekend and off somewhere in the Far West the chances are that Bob Gutowski will do the same thing.

The day is bound to come, however, when some daring young man without a flying trapeze will soar through the air with the greatest of ease for a new record. The remarkable part about it is that Cornelius Warmerdam's old mark of 15 feet 7¾ inches has lasted so long. It's 15 years since the fabled Flying Dutchman from Fresno established the outdoor ceiling and no athlete was even able to challenge that figure until recently.

A little more than a week ago, Dutch Warmerdam, a doddering old gaffer of 40, tried out one of the new fiber glass vaulting poles. He sailed over 13 feet without difficulty. Considering his age and long absence from competition, that was as extraordinary as any of his 15-footers.

"I just wish I had had this type pole in the old days, instead of the bamboo pole," he said. "I know I could have gone over 16 feet."

This was a dispassionate statement of fact because Warmerdam hasn't a boastful bone in his body.

OPENING THE GATES

Once a superstar crashes through some sports barrier, he usually opens the gates for others. When Roger Bannister, for instance, broke through the wall of the 4-minute mile, he had others tumbling after him. But it was back in 1940 when Warmerdam made the first 15-foot vault in history. Yet he opened no gates. None even came close to clearing that magic mark for 11 years. Then the Reverend Bob Richards began to edge ever nearer. This promptly evoked a tongue-in-cheek comment from Bob Morcum, once a championship vaulter himself.

"I predict," he said, "that Richards will become the first human being ever to vault 15 feet. I say that because I just don't believe that Dutch Warmerdam was human."

Eleven years after the flyer from Fresno showed how 15 feet should be cleared, Richards attained his first 15-footer. The parson since has gone over that height more than a hundred times and it was at the Millrose meet a couple of months ago that Richards achieved his best effort, 15 feet 6 inches. Gutowski tied him at that height. It's the closest anybody has come to either of Warmerdam's world records, his 15 feet, 7¾ outdoors and 15 feet 8½ inches indoors.

LACK OF HUMANITY

Maybe that's why Bob Richards awe and respect for Warmerdam keeps growing and

growing. Not long ago the parson gave a graphic description of the Flying Dutchman to Al Stump and the cocky Richards can handle words as cleverly as he can a vaulting pole.

"I can beat any human alive," said Reverend Bob. "But Warmerdam was part sprinter, part shock-absorber, part acrobat, and part strong man. He wasn't human."

There is no event in all sports that's quite as intricate as the pole vault. The sprint down the runway is complicated by having to carry the long, out-of-balance pole. At full speed, that awkward pole has to be jammed into the pocket in front of the pit. As the body leaves the ground, the arms must jerk it up higher. There's an acrobatic wriggle over the bar, the push-off from the pole and the tumble to the pit below. Any mistake in any phase of this complicated routine, which has been grossly oversimplified here, is fatal to success.

No man ever mastered it as the Dutchman did. His clearance of 13 feet a week ago should be proof of that. Yet he always was an incredible performer. When the big blond from California was in England during the war, he wandered past an athletic field with another Navy officer.

"Let's see you vault, Corny," said his companion, giving him a gentle needle.

"Like this?" said Warmerdam.

UP AND OVER

It had been close to a year since he vaulted. He had no equipment. The runway was pitted. But the Fresno Flier was game. He borrowed a pole and peeled down to his skivvies. He cleared the bar at—maybe you even guessed it—15 feet.

There never had been a 15-footer indoors until Warmerdam crossed the continent for the Millrose meet of 1942. He said the trip wouldn't be worth the effort unless the runway was lengthened for him. Only then could he guarantee—and this, mind you, was not a boastful man—a 15-footer. So they lengthened the runway and Dutch made good his promise.

It was an ungraceful exhibition he gave, though, and the youngster from Fresno State apologized profusely to Fred Schmertz, the meet director.

"I would have done better," he said, "if I had my own pole."

His vaulting stick had been lost in transit and the one he borrowed was 2 feet too short. And still he hit 15 feet.

Warmerdam's record is beginning to look fragile for the first time and it soon will be broken, perhaps by the 22-year-old Gutowski. But none of the new recordholders could possibly be as remarkable as the first man to vault 15 feet.

Assassination in Guatemala

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. MULTER. Mr. Speaker, the following editorial reflects a sad commentary on what can come from loose talk of Americans, official and unofficial, whether well intended or otherwise.

Let us encourage freedom but not license. The democratic way of life is attainable without annihilation of its exponents.

The editorial, as it appeared in the New York Herald Tribune of July 28, 1957, is as follows:

ASSASSINATION IN GUATEMALA

The shocking assassination of President Castillo Armas of Guatemala is a blow not only to his country but to the whole community of the Western Hemisphere. Just 3 years ago he led a successful revolution against the pro-Communist government of Jacobo Arbenz and put an end to a Soviet-supported attempt to create a Communist state in Central America. For this achievement, President Castillo Armas deserved, and received the gratitude of the Americas.

First Vice President Luis Gonzalez Lopez has been sworn in as the new President, and the Cabinet has proclaimed a state of siege throughout the country. The assassin, who afterward committed suicide, was identified as a palace guard. Preliminary evidence indicates that he was closely connected with the Communist movement which survives underground in Guatemala.

Mr. Castillo Armas' death is doubly tragic because it comes at a time when his country's economy was beginning to enjoy an unprecedented prosperity after the depredations of the previous regime. The President had thrown Guatemala open to foreign investment and foreign development. He had attacked with vigor its age-old problems of illiteracy, poverty, primitive agricultural methods, and lack of communications. If his manner of government did not coincide with democracy as it is thought of here, nevertheless it held out the promise of a truly democratic evolution.

The American people will feel great sympathy for the people of Guatemala in their loss. They will also feel confident that the new chief of state will fulfill his promise to carry on the policies of his predecessor. Mr. Gonzalez has a heavy task ahead of him. The assassination showed that communism has not yet given up the struggle in Guatemala, and that its methods are those of terror and murder. But President Gonzalez can be assured of the warm support of the peoples of the hemisphere in protecting his country's freedom and security.

Anti-Inflation Action or Ruination

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. DONOHUE. Mr. Speaker, the constantly increasing costs of living have concentrated attention upon the grave danger of inflation and the vital necessity of take reasonable action against threatening economic catastrophe.

It is obvious that some of the methods proposed to control inflation are either unpalatable to the majority of Americans, outside of wartime, or antiquated. Therefore, a resurvey and restudy of all the economic factors involved is imperative and it is vitally important that it be done now before it is too late.

Many of us have the conviction that such a study could best be conducted by committees of the Congress rather than any select commission appointed by the President; perhaps it would be of value to have both.

In any case, let us cease any petty and partisan quarrels about authority and responsibility and initiate an investigative project speedily before our economic structure deteriorates beyond repair.

I am pleased to include at this time a very pertinent editorial advocating the objective which appeared in the May 26, last, issue of the Worcester, Mass., Telegram.

The article follows:

ANTI-INFLATION ACTION NEEDED

President Eisenhower and other members of the administration expressed deep concern last January because of the steady rise in living costs. Since that time we have watched the price index rise each month for five consecutive periods. Over the past year, in fact, there have been cost-of-living increases for 10 out of 12 months, and the total rise has been almost 4 percent.

But there have been few evidences from Washington, in recent weeks, of any plan or serious worry over the creeping inflation implicit in the price-index figures. What has happened to the administration's deep concern over price rises?

The anti-inflation campaign may have been set aside temporarily while administration and Congress joined their battle on the budget. But this was hardly necessary. Higher prices are obviously one of the reasons for higher budgets. The Federal Government, as the Nation's largest purchaser, is one of the first to feel the squeeze. The expanded budget requests for next year, not to mention the big deficiency appropriations which have been necessary to fill out the current money needs, are solid evidence of the inflation danger.

Continued price rises have demonstrated that the present Government mechanisms for halting inflation may be inadequate and obsolete. Most of the present devices, like the Federal Reserve System's authority to limit credit and money supply, were established some 30 years ago. Little has been done in the meantime to determine whether better formulas might be possible. But Washington should not delay too long, for there is scant basis now to hope that the epidemic of price increases will run its course and die of natural causes.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

Water Famine Follows on Heels of Floods

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. JOHNSON of Texas. Mr. President, the people of Texas are painfully aware of the manner in which flood and drought alternate in our State. That has happened again this year, pointing up dramatically the need for Texas to catch up with other States in development and conservation of its water resources.

An editorial in the San Marcos Record, one of the leading weekly newspapers of Texas, tells the story briefly and simply. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FLOODS AND FAMINES, ALL IN 1 YEAR

The irony of it.

Less than 3 months ago the city of Waco was seriously damaged by floods in the Brazos River.

Last week water was rationed in Waco. The supply, drawn mostly from Lake Waco on the Brazos above the city, had so diminished that Wacoans were having to water lawns only every other day and water for other uses was being curtailed.

At Lampasas in May when the flood hit that town, the country was still listed as an area of drought relief.

Hays County farms are crying for water now; 2 months ago it was too wet to plow.

We Texans have been improvident. We should have provided dams to hold back and store floodwaters. It should have been done 25 years ago.

Let us not lose interest in flood-prevention and conservation projects now authorized or in the planning stages—projects like York Creek, Plum Creek, and the San Marcos-Blanco project.

Gen. Ernest O. Thompson Retires as Commanding General of Texas National Guard

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. JOHNSON of Texas. Mr. President, the retirement of Ernest O. Thompson as commanding general of the Texas National Guard spotlights one important phase of the career of this notable Texan. He has served the guard for 34 years.

Fortunately, General Thompson's retirement applies only to his military post. He continues as a member of the Texas Railroad Commission in a role that, to quote from an editorial in the Dallas News, "is perhaps as vital to national security as it is to the well-being of Texas in times of peace."

I ask unanimous consent that the Dallas News editorial discussing General Thompson's career with the National Guard be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THOMPSON IS HONORED ON LEAVING GUARD

Texans in general will join with Gov. Price Daniel in extending a hearty and deep-felt "well done" to Ernest O. Thompson as he steps down as commanding general of the Texas National Guard.

Retirement at 65 from this military responsibility is deserved, all the more so in view of Thompson's 34 years of devoted service to this arm of national defense. The Texas National Guard is a vastly stronger and more efficient unit today, thanks to the loyalty and spirited intelligence which he and his fellow officers have brought to it, notably in the postwar years.

This is in keeping with the proud tradition and heritage of the Texas National Guard. With an outstanding record, as among the States, it can trace its history back to fighting organizations in the Texas revolution against Mexico.

Happily for the people of Texas, Thompson's even greater service to the State as an outstanding conservator of our natural resources of oil and gas goes right on. As a member of the Texas Railroad Commission, he continues in a role that is perhaps as vital to national security as it is to the well-being of Texas in times of peace.

Address Intended To Be Delivered by Senator Martin Before Army and Navy Legion of Valor

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the Army and Navy Legion of Valor is holding its annual convention in Philadelphia this week. I had hoped to attend their dinner tonight but work here in the Senate has made it impossible for me to do so.

Three United States Senators, the distinguished senior Senator from Florida [Mr. HOLLAND], the distinguished senior Senator from North Carolina [Mr. ERVIN], and the senior Senator from Pennsylvania all hold the Distinguished Service Cross and are members of this organization.

I ask unanimous consent that the address I intended to deliver tonight be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS INTENDED TO BE DELIVERED BY UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT THE 67TH NATIONAL REUNION BANQUET OF THE ARMY AND NAVY LEGION OF VALOR, IN PHILADELPHIA, WEDNESDAY EVENING, JULY 31, 1957

It is a great honor for an old soldier to be invited to address the Army and Navy Legion of Valor, the most outstanding veterans' organization of the world.

Membership in the Legion of Valor is the proudest possession that can be held by any citizen of our country. As soldiers, veterans, and civilians you have fought to protect the ideals of the American Republic.

Here in the great city of Philadelphia we have a rich and inspiring historic background in which to consider what America really is and what it means to be an American. Here is the proper place to ask all Americans to renew their mutual pledge of loyalty and patriotism, so that this Nation, under God, may move onward in glory and greatness, in peace, and good will.

Here, in Philadelphia, 181 years ago, the signers of the Declaration of Independence, with firm reliance on the protection of divine providence, mutually pledged to each other their lives, their fortunes, and their sacred honor in the cause of freedom. Here General Washington was made Commander in Chief of the Continental Army to wage a war that the American Colonies might be free and independent States.

Here in Philadelphia was proclaimed the ideal that all men are created equal, that the right to life, liberty, and the pursuit of happiness is God given and inalienable, and that governments derive their just powers from the consent of the governed.

Here, Betsy Ross made the first American flag, whose stars and stripes are the beacon light of freedom-loving people on all the continents and every sea.

Here in Philadelphia, after 8 years of the hell of war, the wisest men of their time met to form a Constitution that would unite the Thirteen Colonies into one Nation, and after weeks of debate our Constitution was adopted. It is the oldest written governmental document in the world. Under it we have successfully fought great wars. We have resisted financial depressions, maintaining the strength of our social and economic plan.

Under that Constitution, we have carved out of a vast, unexplored wilderness the greatest industrial and agricultural system in the entire world. With less than one-sixth of the population and area of the world, we produce one-half of the world's goods. We have reached the highest living standard ever attained by any people, with cultural and spiritual attainments unequalled any other place in the world.

APPENDIX
JI

We take pride in those great achievements but we must bear in mind that we are still confronted by dangers.

What are the dangers that threaten the security and stability of our Nation?

We take too much for granted.

We permit Communist propaganda, which would destroy our Nation, to be freely circulated in this country.

We have too much Government; too much public and private debt; too much dependence upon government; too much evasion of law; too little interest in government; and the failure to appreciate that we are truly a Nation under God.

We seem to think that being the richest Nation on earth there is no limit to our resources, but we must member that we are not rich enough for everyone to have everything he wants. Therefore, when government attempts to carry out competitive political promises, many of them made by demagogues, and undertakes to supply all the wants of groups and individuals, the cost is certain to exceed available revenues. The inevitable result is excessive taxation, a crushing burden of debt and the extreme dangers brought on by inflation.

To avoid the dangers confronting us, veterans must man the ramparts of freedom and defeat all elements who would destroy our country and our way of life.

The foundation of American strength must be built on recognition by every citizen that he has a share of the responsibility for good government.

It is an obligation of citizenship to take part in government. It is up to every organization of veterans to work for honesty, economy and efficiency in government, so that we can have government at a cost we can afford.

The early settlers in the new world, facing the hardship of a vast and unknown wilderness, had one thing in common—an ardent faith in God.

Let us emulate their example.

As militant, God-fearing believers in American ideals, let us fill our more than 300,000 churches, cathedrals, synagogues, and temples in the United States, 165 of them built before 1776. Let us wage a war for complete loyalty, by all living in the United States, to the principles for which a million Americans died on battlefields, within our borders and in foreign lands.

Let us live by the motto "In God We Trust" and if that trust is deep enough America will survive every attack.

H. M. Baggarly

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, July 31, 1957

Mr. YARBOROUGH. Mr. President, Texas is proud of her many distinguished citizens, and in the realm of the fourth estate, Texas is especially proud of H. M. Baggarly, editor of the Tulia Herald at Tulia, Tex.

Mr. Baggarly, in his 42 years, has won more journalistic honors than most writers of our age, and he richly deserves them. He has gained national recognition for his printed thoughts, and he will go down in history as one of Texas' finest writers. Folks who do not know Mr. Baggarly would, I fear, from my remarks, think him to be a novelist or perhaps the editor of a large publication. Actually though, the Tulia Herald is published in a small west Texas town with a population of less than 3,500. It is a weekly publication. But its voice is heard, not only throughout the State of Texas, but from coast to coast.

I should like to mention only a few of the journalistic honors bestowed upon Mr. Baggarly in recent years.

This past spring he was awarded first place for column writing in the Nation. This award was for all classes of newspapers, weeklies, and dailies, distinguishing Mr. Baggarly as the Nation's No. 1 newspaper columnist.

In 1954 his editorial writing won first place for a national contest sponsored by Pan American Airlines and brought him a trip around the world. Unmarried, he took his hometown pastor on the flight and visited the Holy Land.

In Texas, during the past 5 years, he has captured 50 percent of the awards given by the Panhandle Press Association, winning each year first place for column writing and editorial writing. His newspaper has been named the best in the State in its class, and his other awards go on and on.

Mr. President, I should like to have the distinguished Members of the Senate have the privilege of reading a most penetrating column written by Mr. Baggarly, on the firing of three professors from Texas Technological College at Lubbock, Tex. Their dismissal has created a great protest in my State over the rights of teachers.

Mr. Baggarly's thoughtful analysis of this case is most interesting and enlightening, and how close our Nation's teachers are to being deprived of the basic freedom of free public thought on political matters is vividly illustrated. Texas has had a hard experience in the past 16 years with the discharge of college teachers for stating their views on public questions.

I ask unanimous consent that the lucid column, Town Topics, by Mr. Baggarly, as printed in the Tulia Herald July 18, 1957, be printed in the Appendix of the RECORD.

I also ask unanimous consent that a column by another able writer, Ross Short, which appeared in the Lubbock Avalanche-Journal as reprinted in the Tulia Herald for July 18, 1957, be printed in the Appendix to the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

TOWN TOPICS

(By H. M. Baggarly)

How much longer will Americans enjoy the benefits of the Bill of Rights? How much longer will we have freedom of speech, freedom to think, freedom of religion, freedom of the press, freedom to belong to the church of our choice or the political party of our preference without fear of a goose-stepping gestapo or a subtle governing board which operates in secrecy behind the scenes?

How soon will American bigots under the banner of Americanism slip in and wrench these basic rights from us by means of laws, decisions, and practices camouflaged to look like something American?

When the framers of the Bill of Rights insisted on the provision that we enjoy freedom of religion, they did not have in mind a guaranty that we might belong to the church of our choice—but at our own risk, if we happen to select one in disfavor with the Government or an administration.

When they gave us freedom of speech, they did not have in mind a guaranty that we may speak freely—so long as we say nothing that will offend the party in power.

Certainly no one would deny that freedom to belong to a political party and to participate in the affairs of a party belongs to everyone, except in a few cases where the law specifically prohibits.

If we start eliminating groups from politics, where are we going to draw the line? If we ban schoolteachers, ministers, and other groups outright, then add to those nonparticipators those who know what is expedient if they desire to hold their jobs or customers, who will be left to maintain this fundamental American tradition?

Within the shadow of Tulia, a fundamental freedom has been snatched from two college professors. These two professors who lost their jobs for being Democrats aren't the issue. The issue is that freedom to be an active Democrat for practical purposes has been snatched from every teacher in Texas who values his job.

And where can we place the blame for this travesty of freedom? It must be placed right at the foot of Allan Shivers. Even though he is no longer in the driver's seat, even though he no longer is in a position to crack the whip over the heads of thousands of his own appointees and their families, still his sinister shadow can still be seen.

According the to Lubbock Avalanche-Journal, although no information was revealed of the board's action (in firing two Texas Tech professors), it is presumed that the guiding hand in the meeting was J. Evetts Haley, board member from Canyon, who formerly was director of the Institute of Americanism at the college, and is State organizer for For America, a political movement with headquarters in Chicago.

This man Haley, one of Texas' most noted political crackpots, has no business on the board of regents of any college. He is an honorable man, is highly regarded as a historian, has good intentions—but like any radical, he is too far from the middle of any man's road to be placed in such a responsible position.

There have been rumors that Haley has used his position as Texas Tech regent to knife in the back other Democrats who have been college teachers. His behavior warrants a full-scale investigation by the Governor of Texas.

And where did we get this regent? He is another Shivers appointee, a part of our inheritance from the most corrupt State administration Texas has ever seen.

For those readers who have not read the full account of what happened in Lubbock Saturday, we quote a few pertinent paragraphs from the Avalanche-Journal:

"Texas Tech's board of directors, meeting for more than 4½ hours in a closed session Saturday, voted against renewal of contracts for 2 faculty members. The two faculty members summarily removed are: Dr. Byron Robert Abernethy, professor of government; and Dr. Herbert Marvin Greenberg, assistant professor of psychology and associate director of the vocational rehabilitation counseling program. Dr. Greenberg is blind.

"Although no reasons were recorded in the minutes of the board's action, it is generally known that both Dr. Abernethy and Dr. Greenberg have been in disfavor of board members because of their political views.

"Dr. Abernethy, for the past 2 years, has been active in liberal Democratic circles and only in May was keynote speaker at the statewide convention of the Democrats of Texas at Austin. He was also particularly active in the fight staged by the liberals in

last September's State Democratic convention in Fort Worth.

"Action against Dr. Greenberg was taken because of his publicly stated views on integration. Dr. Greenberg also recently conducted a survey among faculty members on their views of integration as a psychological study.

"Although no information was revealed of the board's action, it is presumed that the guiding hand in the meeting was J. Evetts Haley, board member from Canyon.

"A long time controversial political figure in Texas, Haley has been a constant objector to liberal viewpoints. His membership on the Tech board since its inception has been marked by conflict with both the administration and other members of the board.

"When the board's action was announced by Jim Lindsey, of Midland, vice chairman, who presided at Saturday's session, Dr. E. N. Jones, Tech president, requested time in which to notify the affected faculty members."

Texas Tech professors who were ousted by the board of directors during a secret session could not believe the news when informed by the Avalanche-Journal of the action.

"I am completely surprised and flabbergasted," declared Dr. Abernethy, professor of government, who has been at Tech since 1941.

"Dr. Herbert Greenberg, blind assistant professor of psychology, was so stunned he had to call college officials for verification before commenting.

"Abernethy also was so taken aback by the news of his firing that he asked, 'Are you sure this isn't a mistake?'

"Abernethy added: 'I haven't any idea why the action was taken. There has never been any criticism of the way I conduct my classes.'

"Asked if he thought the action might be an attempt at 'thought control' growing out of his outside political activities, the government professor said he would reserve comment 'until I find out what the reason was' for his ouster.

"Dr. E. N. Jones, Tech president, was asked if Abernethy's political activities were responsible for the action.

"'I will have to decline comment,' Jones declared.

"He added that 'My reason is that the action was taken in executive session'—at which even Jones himself was not allowed to be present—and explained that since he was not present he could not say upon what the board based its action.

"Asked whether there had been any complaints from the public about Abernethy's political activities, the president said that 'since his last political speech I have had two reports from town.'" ("Lubbock has a population of more than 139,000," commented the Avalanche-Journal.)

Only last month Abernethy turned down a job from a large northern university.

The Government professor has been at Tech since 1941 except for leaves of absences when he served as regional wage stabilization director with the National War Labor Board in 1943–45, as vice chairman and public member of the Board in 1945–46 and as director and chairman of the regional Wage Stabilization Board in 1951–53.

Like Abernethy, Greenberg said he had never been criticized for the way he conducted his classroom work and added, "I have every reason to believe the head of my department was well satisfied with my work."

He confirmed that he had supervised a survey by one of his classes in the spring of 1956 on the question of what Tech students thought about the subject of integration of white students and Negroes in public schools and colleges.

However, Dr. Greenberg said college officials never criticized him for this. He said he had participated in some public discussions on integration but had received nothing more than the usual amount of criticism for that.

What happened to Abernethy and Greenberg is now water under the bridge. They have been sacrificed on the altar of intolerance and bigotry. They both will go on to bigger positions in other States where governments have not been so contaminated with corruption and fascism.

They can wash their hands of Texas politics—but what about those of us who must remain? Texas Tech is our college. Our students will continue to be enrolled there. Must they be educated in an environment of thought control dictated by enemies of democracy?

What crime did Drs. Abernethy and Greenberg commit?

Dr. Greenberg merely found himself in line with the United States Constitution and the United States Supreme Court, not to mention the Bible and all major religious denominations who believe that in America all men are guaranteed equality of opportunity and that no man in America shall be discriminated against because of his race, color, or creed.

So he was fired.

Dr. Abernethy went on record as opposing the vile dishonesty which characterized the State convention of Texas Democrats last September in Fort Worth. He stood for honesty, fairness, and integrity. He opposed thievery, lying, and dishonesty.

Dr. Abernethy, being a good Democrat, believes in the principles of the Democratic Party, so he accepted the invitation of those Democrats of Texas who met in Austin this spring to form an auxiliary through which they could work for the Democrats of the United States. Since the State organization, conceived in corruption and born of dishonor last September in Fort Worth, can't make up its mind whether it is a Democrat or a Republican, since its leaders supported the Republicans in 1952 and did little more than remain neutral in 1956, conscientious Democrats of Texas wanted an organization which they could depend upon to get out and work for the election of Democratic candidates in 1958 and 1960.

And so for these "crimes" Dr. Abernethy was fired.

On the other hand, a Texas Tech professor could have worked militantly for the Shivers organization which was tainted with the veterans land scandals, the printing contracts scandal, the insurance scandal, the Rio Grande Valley land scandals, and all the other scandals of the past 8 years and have found himself in perfectly good standing with the Tech governing board.

For supporting corruption and dishonesty, he perhaps would have been promoted.

What is the situation which confronts those of us who are interested in the future of Texas Tech and other institutions of higher learning?

We have witnessed a situation in which one or possibly two appointees of an extreme rightist governor have been able to creep into an educational board and outlaw a fundamental right of college teachers, their freedom of thought and speech. We've seen illustrated the fact that if a regent has the authority to fire a Democrat from the faculty of a State college, and get by with it, then he can also fire a man for being a Baptist, a Catholic, or perhaps for being an Eastern Star. The principle is all the same.

The Tech incident brings to mind what happened at a meeting of the University of Texas regents after a governor of Haley's philosophy had had an opportunity to appoint some of his men to the board.

At the meeting, President Homer P. Rainey was handed a list of faculty members and told, "We want these men fired."

When President Rainey asked for a reason, he was given none.

What can be done to save our educational system from such a damnable philosophy?

The only person with the power to act is the Governor of Texas. He could and should call for an investigation of those who would prostitute our institutions of higher learning. But we can expect nothing from the present State administration.

Texas Democrats are now paying the piper for their irresponsibility in permitting these persons lacking in integrity to get a strangle hold on our State government.

Because there was a Shivers in the Governor's chair, there is now a Haley on the board of regents at Texas Tech. He who voted for Shivers indirectly voted for Haley.

Until the Democrats of Texas awaken and kick out these fanatics, crackpots and enemies of the democratic way of life, we can expect more and more incidents such as happened Saturday at Lubbock.

SECRETIVE TECH REGENTS STRIKE BLOW AT FOUNDATION OF AMERICAN WAY

(By Ross Short)

A cloud of resentment boiled Sunday among members of the Texas Tech faculty following Saturday's decision by the college's board of directors to oust two professors and abolish the department headed by another.

"I still haven't been advised of any reason why I have been eliminated," commented Dr. Byron Abernethy, one of the ousted professors. "I'm still a little too shocked to make plans one way or another in action to protest the move." Abernethy, professor in Tech's government department, has been with the college since 1941.

"Phone calls and visitors have barraged my home today," stated Dr. Herbert Marvin Greenberg, assistant professor of psychology, also ousted by the directors. "Most of the calls expressed surprise, shock, and indignation."

Members of Tech's psychology department met on the campus Sunday afternoon, reportedly for the purpose of a general discussion of the firing of the professors and the effects the action could have on Tech as well as on the department.

Professors attending the meeting refused to say whether any definite plan of action regarding the professors had been mapped.

Dr. J. William Davis, head of the government department, emphatically denied that either he or the department had anything to do with the firing of the two teachers.

"I think that Abernethy is one of the finest instructors I know of. He is a very capable man and has gained national recognition as such in wide circles of his association," Davis stated.

Other Tech professors, noted among students for being vocal on a wide variety of subjects, were tight-lipped in commenting on the surprise action by the board.

A cross section of teachers contacted by the Avalanche not only refused comment on the board action, but preferred that their names not be used in connection with the story.

The general feeling among faculty members was that the action would hurt Tech, both from the standpoint of faculty morale and future hiring of teachers.

"Everybody on the faculty will feel insecure," said Dr. Davis. "This is the darkest day that I know of in Tech's history.

"It (the board's action) is boiling down to a pretty bad morale situation among faculty members," said Dr. Sterling Fuller, professor of government and head of the faculty advisory group. "Those who have contacted me have felt that the firing of the professors is infringing on their freedom of speech."

Several students began talking of a petition in protest of the ousters.

Dr. Davis said he believes the action of the board originated entirely among the members of the group, stating that he knew of "no other place it could have come from."

Asked about his views in connection with his ouster, Dr. Abernethy declined to comment.

"I have no way of knowing the reasons until I am told, so I will withhold any statement until such a time," he stated.

Dr. Greenberg, allegedly ousted for his prointegration views, said:

"I haven't made an integration speech in more than 8 months. The only work I have done at Tech that pertains to racial issues is a study by two classes on the question of student views on integration. These studies are only 2 of 15 research projects which are published under my name."

Greenberg declared that his studies were completely objective, and a person with opposite views would have netted the same result after a similar piece of research.

Said Dr. E. N. Jones, "This is a very serious matter and the possibility of adverse effects may face Texas Tech."

College officials and another board member disputed board member J. Evetts Haley's version that the action was taken on the basis of the professors' "academic standards."

A general meeting of the Tech faculty to initiate such action as may seem appropriate was called for Tuesday afternoon.

Dr. Jones, Tech president, said he had registered a vigorous protest at the taking of the action in secret session and announced that a majority of the board has agreed not to hold such sessions in the future at the request of a single member.

The faculty advisory committee blasted the ousting of Dr. Abernethy and Dr. Greenberg without allowing them a hearing as a denial of basic American principles of justice.

Haley had no comment in Fort Worth when asked if the two were fired because of their political views. He said the dismissals came because the two didn't come up to required high intellectual and academic standards.

Board member Douglas Orme countered in Big Spring that, "I wouldn't say that was my position."

Superiors of the two professors at the college added that they were tops academically and had, indeed, been recommended by the administration not only for rehiring but for substantial pay increases.

Dr. Jones said that he "definitely" disagreed with Haley's statement.

Abernethy himself said the dismissal, "threatens the security and intellectual independence of every educator in the State of Texas."

American Foreign Policy and Our Relations With Russia

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Selling America Short," published in the Minneapolis Morning Tribune of July 12, 1957, dealing with the subject of our policy, as concerns our relations with Russia.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SELLING AMERICA SHORT

Our pet peeves these days are Americans who say they hope Russia under Khrushchev resumes a bristling, uncompromising foreign policy line because otherwise we might let down our guard.

They are philosophical cousins to those who say they hope Russia rejects all our disarmament proposals because we are certain to be outsmarted by Moscow in any arms limitation agreement.

They are also kinfolk of sorts to those who say we really cannot afford disarmament or an end to the cold war because our economy could not sustain the shock of a major cutback in defense spending.

We cannot help wondering if these Americans have ever thought through the implications of their opinions.

Do they really mean that Americans in general are so naive as to be influenced greatly by any superficial Soviet peace offensive?

Do they mean that our country can develop a realistic foreign policy only in the face of the threat provided by a belligerent, intransigent Soviet Union?

Do they believe our leaders are so stupid, so bankrupt in commonsense, that they would fail to read the fine print in any disarmament proposals advanced by the Kremlin?

Finally, do they have so little confidence in the flexibility and adaptability of America's economic system that they believe it must forever be propped up by huge military expenditures or go to smash?

We intend no disrespect here, but we cannot escape noticing that in some ways these gloomy opinions resemble the propaganda line of international communism.

It is the Reds who have insisted for years that the United States has a deeply vested political and economic stake in perpetuation of the cold war on its old, uncompromising terms.

It is they who contend that our economy requires war or cold war to feed upon; that it would collapse with the advent of genuine peace.

Well, we emphatically reject both the Moscow line and that of the American gloom and doom prophets.

We concede that if Moscow should resume a determined peace offensive it would pose new problems in tactics and strategy for our side. Our policies would need more imagination, more flexibility.

We would welcome this different kind of Moscow challenge and we insist that anyone who would run away from it is selling America far too short.

The Bridge of Trade Between the East and West

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. WILEY. Mr. President, I was exceedingly interested to read the text of a fine address which had been delivered by Mr. Eugene Holman, chairman of the board of directors of the Standard Oil Company of New Jersey, on the occasion of the banquet given at the Waldorf Astoria Hotel for Japanese Prime Minister Kishi at the time of the latter's visit to our country.

Mr. Holman pointed out significant examples of economic development in frec Asia. He emphasized the importance of still further expanding the availability of energy, which is crucial, of course, for commerce, industry, and agriculture.

He rightly praised Japanese-American relations. Then, he mentioned the prerequisites to further improvement in such economic relations with ourselves and any other people.

He pointed out that, if a foreign country is to attract private corporate investments—which belong, in effect, to vast numbers of American stockholders—then the foreign country must establish favorable conditions which will attract and retain foreign capital. There must be complete respect for the integrity, the inviolability, of the foreign investment. There must always be an overall proper climate for it, and for reinvestment, the plowing back of earnings.

And, as Mr. Holman says, too, "An investment is good only if it is mutually beneficial to the investor and the people of the host country."

I commend this address for reading by our foreign friends.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE BRIDGE OF TRADE BETWEEN THE EAST AND WEST, A SPEECH BY EUGENE HOLMAN, BEFORE THE JAPAN SOCIETY, WALDORF ASTORIA HOTEL, NEW YORK CITY

Our meeting here tonight is a very pleasant occasion, but not just that alone. It is, I believe, also a very significant occasion. You, Mr. Prime Minister, have come seeking ways to better the relationships between your part of the world and ours. That is an aim which we, in our part of the world, also greatly desire. This is so because we, like you, know that a growing relationship between the East and the West will work to our mutual benefit.

Can it also be, Mr. Prime Minister, that you are here to help bring to the west coast, and thus closer to your shores, that great ball club, the Dodgers, so your Yomiuri Giants will have easier access to a repeat victory? If this is one of the national aspirations you hope to achieve while visiting us, it is one in which I will take no part. Our common interest in baseball may form a tie of lasting friendship which I shall not risk by partisan feeling or wager. I only hope we may see a few games together, whether they be in Brooklyn, Los Angeles, or Tokyo.

I understand that at the beginning of your visit to the United States, you discussed political means of reaching your main goal of closer relationship. The political area is a vital one, of course. Tonight, however, you are in a city which is a symbol of commerce and industry. So what I should like to talk about here are the relationships helpful to trade and and its benefits to both of us.

Commerce formed the first bond between the East and the West. Western explorers, with trade in mind, first disclosed to our eyes the magnificent civilizations of the East. A hundred years ago, Commodore Perry brought us in touch with the ancient culture and crafts of Japan. We have learned in that 100 years to appreciate your ancient heritage of culture. Differing from ours in many respects, it has contributed to the betterment of civilization. We appreciate your art in its many brilliant forms. We realize that the Japanese people have one of the highest literacy rates in the world and great capacity for education in the sciences and technology. We have witnessed your self-sacrifice. We are aware of your democratic and stable government. We recognize in

you a great potential for bringing the East to a modern, workable arrangement with the West.

Japan, like all great nations, has needs and hopes, as well as cultural and material assets. Probably your greatest present need is to improve your world trade position and further develop your already industrialized economy. In the century just past, the United States and Japan have experienced successes as well as some disappointments in our commercial dealings. I believe we are now in a period of progress. Certainly, the record of the last 10 years of Japanese-United States relations has been marked by increasing understanding, firmly based on treaties, friendliness, and the achievement of mutual gain.

Now our common desire is to achieve even better relationships, not alone between ourselves but between all Asia and the many countries of the Western World. We seek this in the knowledge that the technology and investment capital of the West can enhance our trade relationships to our mutual economic gain. This, in my opinion, is the key to world peace.

All over free Asia today we see examples of economic development necessary for the fulfillment of human desires. For instance:

In Burma there is underway an ambitious electric power program;

In Cambodia increasing rubber and rice production, and the building of a modern port to give the nation free access to the sea;

In India fertilizer, aircraft and machine tool plants are rising, along with the great Bhakra Dam which will irrigate Punjab and provide needed electric power;

In Thailand the Chainat Dam will eventually irrigate two and a quarter million acres;

In Indonesia there are plans for a large-scale irrigation program, increased oil production and manufacture of chemical fertilizers; and

In the Philippines modern plants are being constructed and the search for oil stepped up.

The advances made by Japan are, of course, familiar to you. But we in the West are particularly impressed by the booming output of your industrial plant, by your world leadership in shipbuilding, by the growth in your motor vehicle production and your plans for modernization of the Japanese highway system. Significant, too, are the steps you are taking to generate electricity with atomic fuel.

The availability of energy, of course, is the key to expanding commerce, industry, and agriculture. Free Asia today accounts for but 8 percent of the free world's total energy consumption. Yet the area's use of energy is moving steadily ahead. An upward trend can be expected to continue. In this picture of increasing energy consumption, all energy sources have their place. Oil, for example, now makes up 32 percent of the total. Its consumption is expected to grow until it will account for 40 percent of all the energy used in free Asia 10 years from now.

The stress I place upon energy is not due alone to the fact that the company for which I work is a supplier of this vital element. It is, rather, that there is a close relationship between a nation's energy consumption and its standard of living. Increasing supplies of energy will make possible more commercial, industrial, and agricultural activity in free Asia. Such expansion, in turn, will bring the peoples of the Asian countries a larger measure of the comforts and the opportunities they desire.

Americans can appreciate the situation in free Asia today. When the United States was a new country, it also lacked the capital needed for economic development. Capital, a term I use to include technical skills and managerial talent as well as financial resources, is what moves and organizes human and natural resources for the benefit of people. In the case of the United States, the capital we needed came from the more mature economies of Europe. American railroads were built and manufacturing industries established by investments from England, the Netherlands, France, and other capital-exporting countries.

Today many of the nations of free Asia stand on the threshold of modern economic development. They, too, as did the United States, require the investment of skills and money which will enlarge their production of food; develop local sources of energy; build roads, factories, and homes; and bring the output of Asian lands into the busy markets of the world.

Whether Western capital will flow in adequate amounts to free Asia, in preference to the many other areas which are bidding for its benefits, remains to be seen. The flow of capital depends, above all, upon an understanding of the realities of what attracts investment.

It is encouraging to know that these realities of investment are well recognized in Japan. I would, however, like to give you two particular assurances in this connection.

My first assurance is that the people of the area where capital is to be put to work should understand that no political control is intended or implied by the investment. Businessmen do not believe in interference in the political affairs of the nations in which they are guests. The sort of control that the investor does desire is to retain management of his investment. Such control is to the benefit of the host country. For the techniques of management brought into a country by an investment, which go to work there and can be studied and adapted by local citizens, are often the most beneficial part of the investment. Certainly such management control is guaranteed in the United States to foreign investors, any of whom can freely do business here. All we ask is the same treatment.

My second assurance is that an investor is not an exploiter. The modern enlightened political concepts of the free world make economic imperialism impossible. An investment is good only if it is mutually beneficial to the investor and the people of the host country. When the proper climate exists for capital investment, many benefits come to countries where investments are made. While the investor expects a return on the investment, the additional capital generated is plowed back into the host country to underwrite the continuation of industrial development. As a concrete example of this point, I might mention that Jersey Standard's affiliate which operates in free Asia expects, in the 10-year period 1950–60, to invest about $200 million more than it anticipates earning in that same period of time. Similar circumstances are accepted by the many United States investors who at the present time have $33 billion at work in countries outside the United States.

Moreover, the results of such investments cannot fully be measured in straight financial terms. Particularly with investments made to develop energy sources, the many extra benefits include savings in foreign exchange, sources of inexpensive energy for domestic use and profitable export, tax revenue from many sources, and the kind of economic stimulation which encourages local industries to grow.

It is of great significance, further, to realize exactly what is represented by a western investment in free Asia. The capital put to work by the West is usually owned by great numbers of its citizens. Each investment represents a broad base of ownership. Each is established as an act of commercial faith by many western owners. The 9 tank ships now building in Japanese yards for Jersey affiliates, for example, have each been made possible by the savings and the hopes of more than 400,000 individual owners of our company. This number represents about half the population of the city of Kobe, where one of the ships is taking shape. If you were to add up the numbers of owners represented by the many other western investments in free Asia, you would find that literally millions of people are involved in the important job of helping to provide economic stimulation there.

Japan, one of the world's great traders, has learned at first hand the economic facts which I have mentioned. It is because of this that I believe Japan now has a unique opportunity to advance the closer meeting of the East and the West.

Affiliates of our company have been in business in Japan since the 1890's. We have confidence in your future. We have that knowing your future will be based upon widely diversified markets and increasing production of high-quality goods made possible by your ample supply of skilled labor. But most important to my mind, we see Japan today as an example of the blending of many good qualities of the East and West. As such, your nation stands as a bridge over which can pass, in both directions, the trade and ideas needed to bring the two parts of the world closer together. Between the raw materials and resources of free Asia and the techniques and capital of the West lie the trading knowledge and the manufacturing facilities of Japan. All of these elements working together are needed for expanding commerce and industry. Japan is a vital part of the working-together process, representing what we in the oil business call a catalyst—that is something which promotes beneficial reactions.

Let me say that American investors hope you will continue your useful, catalytic function. The wider trade you seek will be of ultimate benefit to the world. Trade is one of the main channels of human understanding and there is much need of that in the world today. We are hopeful, too, that your neighbors in free Asia may continue to see in Japan an example of what wise capital investment can accomplish. Let us hope, moreover, that they will realize that capital can accomplish this only in lands where agreements are respected and good will is the rule of conduct between the host and the guest.

Finally, I should like to mention an Eastern characteristic which impressed me deeply in my Asian travels. I believe it can be one of the most effective contributions to our joint endeavors. I speak of the quality of patience. Economic achievement is not reached overnight. With your wisdom in this respect, you can see through the false promises of those who offer economic progress as an immediate gift. You will understand the need to follow the path of economic evolution. You can see, with us, how the road of economic evolution is strewn with the wrecks of many national hopes.

Mr. Prime Minister, we welcome you to our country. We see a common ground and a mutual benefit in the improvement of trade relationships. I have spoken frankly about the need for understanding of our western way of doing business in order that the East may have the benefit of our capital for industrial development. I know you realize I have done so in the desire to help reach a common goal.

We look to you now in the hope you will form that bridge between a free East and a free West by which your freedom and ours, and the peace and prosperity of the world, can be insured.

The Case of William S. Girard

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Girard Case Footnotes," published in the Minneapolis Morning Tribune of July 13, 1957, dealing with the case of William S. Girard.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GIRARD CASE FOOTNOTES

It is unfortunate that this country's status-of-forces agreement with Japan had to be tested with fanfare in our highest Court by the cloudy case of William S. Girard.

And we cannot escape the conclusion that our Government stumbled at several steps in its handling of the case. At times the Government's chief argument seemed to be that Girard must be turned over for Japanese trial because any other course would endanger our relations with Japan.

This is undoubtedly true but it should always have been beside the point. The Girard decision had to be a matter of law, not one of national prestige. Girard could not be delivered to Japan simply to advance the cause of United States foreign policy.

On the basis of law, the Supreme Court by an impressive 8 to 0 decision has now upheld the Government. It ruled that the Defense Department did not violate the Constitution when it decided to let Japan try Girard for manslaughter in the death of a Japanese woman.

But the cloudy aspect of the case and the Government's awkward behavior have helped arouse a strong reaction against the whole status-of-forces system, and not only from isolationists and Bricker amendment backers. Hotheads in Congress are threatening hasty legislation that at best would jeopardize relations with allies we need and at worst would bring our troops home from overseas bases essential to our security.

We trust calmer counsel will eventually prevail on Capitol Hill.

Actually, on the basis of the wording of the Status of Forces Treaty, we do not see how the Supreme Court could have decided otherwise.

And a second fact which should eventually calm the troubled waters is that our agreements with other countries for administration of justice for our forces stationed overseas are working well and with general leniency by host governments for Americans in trouble.

From the date our agreement with Japan became effective, October 29, 1953, through the year 1956, there were 9,712 alleged offenses by United States servicemen against Japanese nationals. Japan waived jurisdiction in all but 329 of these.

Of the first 265 cases tried by the Japanese, only 57 resulted in prison sentences, the longest of which was 15 years for murder.

The United States Army's judge advocate general's office in Tokyo has said that in many cases the penalties assessed against GI's by Japanese courts have been substantially less than the prisoners would have received from American courts.

"One of the murders committed here by an American serviceman was so brutal and so obviously premeditated that I would think a court-martial would have given him a life sentence, if it hadn't condemned him to death," an official of this office told the New York Times. "He was sentenced to only 15 years and is eligible for parole in 5."

The Japanese pattern prevails elsewhere. Last year, host governments turned back 9,614 cases out of a total of 14,394 GI offenses subject to their jurisdiction. Time magazine says that of 4,437 Americans tried in foreign courts over a year's period, only 108 were imprisoned, 275 were acquitted, 3,876 got minor fines and reprimands, and 178 drew sentences which were promptly suspended.

Statistics such as these tell the real story of the status-of-forces agreeements. They should give assurances of a fair trial for William S. Girard. But far more important, they should warn against any reckless attempts to overhaul drastically a system that has functioned so well; a system intimately tied up to American security.

Senator Russell's Name Leads

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. TALMADGE. Mr. President, all of the citizens of Georgia are outspokenly proud of their distinguished senior Senator [Mr. RUSSELL], and the noble fight he is making for the preservation of constitutional government and individual liberty in this Nation. Typical of the statements of admiration and gratitude which are being heard throughout Georgia is the editorial entitled "RUSSELL'S Name Leads," which appeared in the July 27, 1957, issue of the Savannah, Ga., Morning News. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RUSSELL'S NAME LEADS

Through all the debate in the United States Senate on the so-called civil rights bill there has been one name which has led all the rest. That name is RICHARD B. RUSSELL, that of the senior Senator from the sovereign State of Georgia. As leader of the opposition to this noxious bill which the South's enemies all but succeeded in ramming down our throats, Senator RUSSELL has proven himself one of the best parliamentary generals ever to wage a campaign on the Senate floor.

It has also largely been RUSSELL'S work and research which have been chiefly responsible for unmasking this insidious measure. He has, in effect, been the alert detective who found the time bomb in the innocent-looking suitcase. In exposing it he has gone a long way toward rendering it harmless. Soon, it is to be fervently hoped, the fuse will have been drawn and the high explosives of racial hate, dissension, and disregard of constitutional guaranties rendered completely harmless.

With consummate skill the Georgia Senator has master-minded a campaign against this hate-inspired bill which has repeatedly brought praise even from the bitterest of his political foes. His logic has been good, his timing has been almost perfect and his individual debate has been masterly. Such things do not come by accident.

The South owes a great debt to Senator RUSSELL, of Georgia. Not only in this particular piece of legislation but in practically everything with southern interests he has proven himself an unflinching champion of the region that gave him birth. Convincing in debate, highly skilled in parliamentary procedures and unrelenting in his efforts to dig out the real facts underlying congressional action and maneuvering he has proven a tower of strength to southern causes. At the same time that he has given so fully of his time and talents to defending the South he has also emerged as a national figure of no mean prominence. His wise counsel is listened to on national and international affairs as well as regional ones.

His long service to his State and Nation have brought a great deal of prominence and acclaim to DICK RUSSELL. But through it all he remains the same unassuming and pleasant personality going out of his way to please, and listening as patiently to the plaintive woes of his humblest constituent as to the thunder from the temples of the mighty.

The University of the South

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. KEFAUVER. Mr. President, this year the University of the South at Sewanee, Tenn., celebrates the centennial of its founding. It is a unique institution in many ways. It has a fascinating history and an outstanding concept of education behind its 100 years of service to the State of Tennessee and to the Nation.

I ask unanimous consent to have printed in the Appendix of the RECORD an article condensed from a series on this historical university, originally written by Louise Davis, and published in the Nashville Tennessean Magazine.

There being no object, the article was ordered to be printed in the RECORD, as follows:

THE UNIVERSITY OF THE SOUTH

The builders of the University of the South were men of vision. They saw in the school that they had constructed atop a 2,000-foot mountain a center of learning to rival Harvard and Yale. They sought more than a college, they saw in Sewanee an American Oxford which would be a focus of cultural activity for the Southern States. But they never wanted to lose their concept of the importance of the individual. Thus, from the first, they never wavered in their purpose to furnish the truest men.

On July 4, 1857, the first meeting of the university's trustees was held atop that mountain. Bishop James H. Otey spoke of the plans for the Oxfordian school. He called it "the greatest center of learning in the South."

Of the threatening War Between the States, he said, "We contemplate no strife, save a generous rivalry with our brethren, as to who shall furnish to this great Republic the truest men, the truest Christians, and the truest patriots."

Great hope was mixed in the mortar that fastened the Tennessee marble cornerstone that fall of 1860. But 4 years later the fury and bitterness of the Civil War had blown to bits the beautiful 6-ton stone. Every trace of the university was destroyed; every building was leveled, even Sewanee's first

permanent hall, modeled on massive lines not unlike that of the Capitol at Washington.

There was nothing but ashes left on the 10,000-acre tract when the war ended. The southern dioceses of the Episcopal Church that had pledged the rich endowment of the university were bankrupt. The money promised 10 years before belonged to men who lay dead on the battlefields. If classwork were not in progress by 1869, the university's land would revert to its original owners. Conceived in southern prosperity, the university now existed on worthless paper.

Despite these nearly insurmountable obstacles, Bishop Charles Todd Quintard undertook the task of renewing the university's dream. With his unceasing enthusiasm he won the churches of the North and the Church of England as well to his cause. Through his efforts, generous gifts of money, supplies, and books enabled the school to make its deadline. When 9 students enrolled for the first session in the fall of 1868, the University of the South became a reality.

It became the only university entirely owned and operated by the Episcopal Church in America, and it is one of the few church-owned colleges in the country that has escaped the rebellion against church control during the last 50 years. But it was never required that faculty members or students belong to the Episcopal Church.

The little island of learning high on the mountaintop grew and prospered, free from the distractions of town and city life. From the first it was peopled by a close-knit group of idealists who never lost sight of the need for molding the truest men. Even today, the faculty of 60 averages less than 10 students to the class, so that each man may get the benefit of individual contact and assistance. No question is discouraged, no point of view declared undebatable, no idea made incapable of being challenged. It is part of Sewanee's program of encouraging new and complete understanding of each problem.

The vice chancellor of the university, Dr. Edward McCrady, expressed this view: "It would be a great tragedy if it were no longer possible for anybody to get a homemade, personalized education anywhere. The most effective teaching is in a two-way, personal encounter." It is this personal experience that remains the hallmark of Sewanee teaching and campus life.

Thus the ideal of individuality is given prime emphasis. The feeling of being one of a compact and single-minded community is emphasized both in the classroom and in outside activities. The unique honor system, in force since 1870, has gained the respect and pride of every generation of students. They feel, to a man, that they become more responsible students and thus citizens when their own integrity is exposed to the faith of their instructors and their fellows.

The students of the University of the South have become accustomed to the honors gleaned by the 340 graduates of their seminary who have become bishops. They are accustomed to the influence that editors, writers, college presidents, and business tycoons graduate from the university have on world affairs.

In the brief period when Sewanee had a medical school it turned out graduates like Dr. Cary Grayson, personal physician to Woodrow Wilson, and Maj. Gen. William C. Gorgas, conquerer of yellow fever at Panama.

In the brief years that Sewanee had a law school, it turned out distinguished lawyers, judges, professors of law. But the students who receive their bachelor's degree in arts and sciences are so intent on graduate work in other institutions that only 10 of this year's seniors are interested in getting jobs.

Out of the constant exchange of ideas comes something so sound, so creative, that Sewanee graduates with more scholastic honors than any other university its size. In a survey by the Chicago Tribune a few weeks ago, Sewanee was ranked eighth in the Nation in scholastic attainment, outranking Dartmouth, Washington and Lee, and scores of universities many times its size.

Sewanee's graduates have won more Rhodes scholarships than any other college its size, and have captured so many honors in the scholastic world that in every reputable rating it is ranked in the top 1 percent in the Nation. "Some schools have got to remain small to provide the best opportunity," says Vice Chancellor McGrady. "Every survey has put us No. 1 in the South, in the top 1 percent of the Nation. We are a quality institution. I don't believe we can do that kind of work if we get much bigger."

But not yet has the university attained the splendor envisioned by its founders more than a century ago. As one professor put it, "Sewanee is not yet at the top of the top 1 percent," and no less a grasp on the wisdom of the ages will furnish the truest men.

In this centennial year of the birth of a great institution, we may express the hope that the magnificient institution that is the University of the South will soon attain its dream of being at the top of the top, and that it will continue to provide the truest men through its matchless system of effective and intelligent personal teaching.

Crude Oil Imports

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which appeared in the Boston Herald on July 29, 1957.

I was deeply disturbed at the announcement on Monday that the President had directed a 10 percent reduction in crude oil imports. I, like many of my colleagues, am fearful that this restriction will impose shortages and higher prices on consumers of petroleum products, both industrial and domestic. Such an effect would be disastrous to users in New England, and could not be tolerated in connection with this vital commodity.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOO MUCH OIL?

Congressional spokesmen for the domestic oil industry are again yammering for restrictions on crude oil imports.

Six months ago the United States oil industry was riding high. The closing of the Suez Canal had created a world shortage of oil, and production here had been stepped up to meet the demand. But today the situation is reversed. Mid East oil is flowing again, and American producers are not only being pushed out of the European market but also out of their markets at home. Crude oil imports (mostly from South America) reached a new high in June, and domestic production has had to be cut back again.

This has naturally caused great concern among so-called independent producers who have no stake in foreign oil. Tremendous pressure is being brought to bear on the national Government to bail them out.

The local producers deserve sympathy in their predicament, but the Government should consider long and carefully before acceding to their pleas for a quota or tariff on crude imports. Such a move would, of course, solve their problem, but it would do so at the expense of consumers throughout the United States, who would be compelled to pay a higher price for oil. It would also alienate the friendly nations that now export to us. And it would grossly discriminate against American companies that have invested in the discovery and development of overseas oil reserves.

The President now has a special Cabinet Committee studying the matter as a result of a finding of the office of Defense Mobilization that excessive oil imports were jeopardizing national security. Its delay in reporting is doubtless an indication of the many complications involved.

The defense argument is particularly puzzling. The local oil people argue that protection should be granted in order to encourage the search for new oil reserves and keep the industry strong in case of war. But what of the search for reserves outside the United States (which under present conditions is much more promising)? Is that to be discouraged? And just how does it help America's defensive position to use up dwindling oil reserves in times of peace?

If the independent producers can't compete in the open market and if it is determined that they must be bailed out, then help should be given in the form of a direct subsidy, not through some indirect aid which does more harm to others than good to the oil men.

Under the Reciprocal Trade Agreement Act of 1955 the President undoubtedly has the power to apply either quota or tariff relief. But he is not obliged to do so. And he should not, if he can find any other solution to the problem of too much—and too cheap—oil.

Americans Enjoy Increasing Health, but Still More Can Be Done

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. WILEY. Mr. President, the American people are enjoying ever-improved health.

THINKING—KEY TO GOOD HEALTH

It is my own deep spiritual belief that we were all meant to have abundant health.

It is my own belief that the words of the Good Book hold the key to a man's well-being:

As a man thinketh in heart, so is he.

More and more, we are coming to understand the operation of the spiritual laws which govern so much of what we had formerly believed were merely so-called physical problems of health.

In my judgment, however, in the years up ahead, we will learn still more of how to master our own thinking, so that we enjoy the radiant health which we were meant to have.

I was interested to note in an issue not so long ago of the Wisconsin Agri-

culturist and Farmer a fine article concerning the numerous reasons for ever improved health enjoyed by the people of my State.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WISCONSIN FOLKS HEALTHIER

The health picture in Wisconsin last year had many bright spots, but there are still some improvements to be made in the overall health field.

Looking at the bright side first, we can list several things which have accounted for better health of Wisconsin residents. Included are:

1. More mothers are living through childbirth than ever before.

2. The lives of our babies are safer. Immunization against diseases, including polio, gives them a better chance to survive.

FLUORIDATION CUTS TOOTH DECAY

3. Fluoridation of public water supplies is definitely helping to protect teeth against decay.

4. Better understanding of food needs helps us to get our children off to the right start toward a healthy life.

5. More of us are living longer. Ten percent of Wisconsin residents were over 65 years old in 1956.

6. Early diagnosis and treatment provides hopeful answers for the problems of cancer, heart disease, tuberculosis and diabetes. Tuberculosis, especially, if discovered early can be kept in check. Only a few years ago it was a leading cause of death.

7. Stepped-up research is finding many ways to prevent and cure diseases.

8. Most of us, young and old, have a safer living than ever before because of such things as improved housing and safe drinking water.

But some dark spots still remain in the health picture.

HEALTH OF OLDER PEOPLE A PROBLEM

Because we are living longer doesn't mean we are fully enjoying those years in good health. In too many instances older people suffer from long-term illnesses.

The problem of our older citizens is becoming more important as the age span increases. Much work needs to be done in this field. We must see that the aged not only remain in good health but also have the necessary activities to occupy their time.

And a great many ailments are not found early enough for successful treatment. Regular physical examinations will help detect any such ailments early.

Accidents both on the highway and in the home claim many lives and are responsible for a large number of injuries every day.

Unfortunately 35 percent of the people in our State don't have the services of a full-time local health department available to them.

We must work to overcome these dark spots.

Dixie Views on Civil Rights

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 31, 1957

Mr. SPARKMAN. Mr. President, on Monday, July 15, there appeared on the editorial page of the Valley Times, of Hollywood, Calif., an article entitled "Dixie Views on Civil Rights." The article was written by Mr. George Todt. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Hollywood Valley Times (Calif.) of July 15, 1957]

DIXIE VIEWS ON CIVIL RIGHTS

(By George Todt)

"To pity distress is but human; to relieve it is Godlike"—Horace Mann, Lectures on Education.

Is it true what they say about Dixie? That southerners fail to appreciate the benefit of enlightened compulsory brotherhood? That they refuse to endorse wholeheartedly the surprising social legislation of a Supreme Court which relied upon Socialist and Communist Front authorities in its controversial Brown versus Education integration decision in 1954? Or that the South objects to the new social order backed up by Federal bayonets?

It is quite true. And the Senators from below the Mason-Dixon line are in it for a real fight on this proposed civil-rights legislation. Could be that this is the congressional battle of the century.

Some of the best men in the Senate are to be found on each side. The bill has been championed in the opening stages by California's great Senator WILLIAM F. KNOWLAND, and also Vice President RICHARD NIXON, an able ex-Senator, who presides over the upper Chamber. Both men are topnotch Republicans, each a possible presidential candidate in 1960. Arrayed against them is another very fine man, a Democratic champion of his section, Senator RICHARD B. RUSSELL, of Georgia. He is chairman of the Armed Services Committee and one of the most respected and sincere legislators in the Nation's history. How do you pick between men like these?

The answer, you can't. The issue will have to be settled, if it is to be settled fairly, upon its merits alone—and without recourse to political favoritism, emotionalism, or hysteria. And we must forever bear in mind that two wrongs never add up to a single right.

What is right in this instance? Who is at fault here? In which direction lies the correct solution? These are questions we must ask ourselves with soul-searching analysis. The first thing we ought to do is cast aside preconceived notions.

To read many newspapers, especially those which emanate out of New York City, one might be pardoned for thinking that the southern people were totally at fault—all of them intolerant, bigoted, and reactionary in the darkest meaning of the term. Actually, nothing could be farther from the truth. I lived in Texas, Mississippi, and Virginia as a student and soldier for several years. My opinion of these fine people was formed from first-hand acquaintance. In my book it would be hard to surpass them anywhere when it comes to patriotic devotion to American ideals and principles. And during my 3 years in the South I never saw a single incident of rudeness or violence between whites and blacks.

On the contrary, I witnessed everywhere I went nothing except respect and affection displayed between the races. And it came from the heart, too. Every southern family I knew had its history and traditions filled with loving care and associations with members of the Negro people. Certainly the latter prized the affectionate regard in which they were held by white southerners. I felt that tremendous strides had been made on a voluntary basis between the two races—so much so that it surprised me. For I had heard the most vicious propaganda against the South before I went there and saw for myself.

I quickly learned there was a huge gulf between fact and fiction. Who doesn't?

The Civil Rights Bill

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 31, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Knoxville Journal, a newspaper edited by the chairman of the Republican Party in Tennessee, and one of the strongest voices for Republicism in the South. I seldom find myself in agreement with the editorial policy of the Knoxville Journal, but this is indeed a thoughtful editorial on the pending civil rights bill, and I trust in the final analysis, when the Senate has completed its debate, it will prove to have been prophetic.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Knoxville Journal of July 27, 1957]

SENATE IS WELL ON WAY TO PASSAGE OF RIGHTS BILL ACCEPTABLE TO COUNTRY

The Senate in on the way to enacting a sensible civil-rights bill, as the reader knows who has been following the day-to-day debate on the question.

This week a majority of the Senate disposed of the portion of section 3 which was based on reconstruction days' powers which many thought would have enabled a national administration to enforce civil rights at bayonet point. Of course such powers would never have been used by any President, but there was no reason to have them in the bill in the first place. In addition, there was removed from the House version of the bill provisions which applied to rights other than voting, so that now the legislation can be properly referred to as a voting rights bill rather than by the broader term of civil rights.

In some parts of the country, and especially in parts of the South, there is of course objection to any legislation along the lines of that under discussion. It is difficult, though, to see how any legislation directed toward the safeguarding of the right to vote can be justifiably opposed. Under our Constitution the right of franchise certainly is the one which is on the top rung of the ladder; without it, none of the other rights of any citizen are safe because it is only through the franchise that such rights can be protected.

It appears there is only one remaining big obstacle in the way of the bill, the House-approved provision to the effect that a judge can try violators of the new law for contempt and then proceed to assign penalties without giving the defendant a jury trial. We predict that an amendment providing for jury trials will be included in the bill when finally passed, because it seems certain that otherwise this session of Congress will filibuster to a close.

Those who are supporting the House bill in its present form charge that southern juries will never convict, no matter how gross a violation of voting rights may be

committed. We disagree vigorously with that position which is in fact a reflection upon the character of all white southerners. Refutation of this kind of charge is provided from the record, as recently as this week, in the verdict brought in by an east Tennessee jury in the Clinton case. While that verdict concerned itself directly with a question of law and order, the overtones of race prejudice were strong enough to have made themselves felt if the jury had not been determined to do its sworn duty. We have confidence that other southern juries will likewise live up to their obligations under the law.

With the provision for jury trials included, it seems to us the Congress will have enacted a law which will command support and respect from a major part of the national citizenship. That is about all that any law can ever do.

It is to be devoutly hoped that the Senate will agree on a version of the civil rights law without undue delay so that Congress can get some other important and necessary legislation through the hopper before this session closes.

The Natural Gas Act

EXTENSION OF REMARKS
OF

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. STAGGERS. Mr. Speaker, following is a statement of Arthur K. Lee, chairman of the board, United Cities Utilities Co., entitled "Unfair Treatment of 22 Million Natural Gas Consumers." I wish to call the attention of the Members of the Congress to this statement, because I feel it sets forth data and facts relative to the natural gas situation which is of such great importance to the citizens of our Nation at the present time:

UNFAIR TREATMENT OF 22 MILLION NATURAL GAS CONSUMERS

In 1955, I addressed several letters to all Members of Congress opposing the Harris-Fulbright bill. I believe the statements and predictions contained therein can now be considered conservative.

I now propose to prove that domestic consumers are paying much of the cost of purchasing, transporting, and distributing natural gas to industrial users. This is being accomplished by the use of a two part charge by pipelines and is forced upon many distributors in an effort to minimize their overall gas purchase cost. A detailed table of the division of the consumers' dollar between producer, pipeline, and distributor for each class of service is attached hereto.

The two part rate was invented by pipelines in the late twenties when there was little market for gas, and in fact, much was being wasted into the air for that reason. General economic conditions and especially natural gas economics have changed radically since that time. Burning of gas for boiler fuel is wasteful and should be stopped. The two part rate has outlived its usefulness and must go unless 22 million domestic—residential and commercial—consumers are willing to continue an already large and rapidly increasing subsidy to industrial users in order to compete with the use of powdered coal on a dollar-and-cents basis, which is the only basis upon which fuel is purchased for boiler and similar inferior uses.

A short explanation of the two part rate is first in order. One part supposedly covers the sale of the gas itself and is designated the "commodity" rate. The other presumably represents only the cost of the use of the line and is designated the "demand" charge. It is a monthly minimum charge determined by multiplying the maximum thousand cubic feet of gas delivered during any day of the entire year by a definite charge per thousand cubic feet set forth in the rate schedule. As the maximum use takes place during the winter months for residential and other space heating, it is the domestic—residential and commercial—customer who pays this charge. The claim is made by the pipelines that cheap summer sales are necessary in order to keep their lines operating at full capacity the year around, even though the summer gas does not pay its part of the total cost expense. My study during recent weeks convinces me this is not true, and when you analyze the figures which I submit later in this article, I believe you also will be convinced. The two part rate may have had its advantages in load building while there was an abundance of gas of little or no field value, but it must be prohibited and a straight commodity rate only substituted for three reasons:

1. To stop ever-increasing subsidization of the industrial use of gas by domestic consumers.

2. To restore industrial competition with coal and other fuels; and

3. To conserve for domestic use a large proportion of the gas now used for boiler fuel and other inferior uses.

FPC release No. 9197 G-4649 for the year ending March 1957 shows cost of gas purchased by interstate pipelines to be $0.149 (March alone $0.152) per thousand cubic feet as against an average, per Gas Facts, annual statistical publication of the American Gas Association, in 1954 of $0.101, an increase in 3 years of nearly $0.05. As 50 percent of the gas is largely purchased under old contracts for less than $0.149, it is quite evident that new contract prices, escalations and renegotiations are spiraling the average upward with increasing rapidity.

Last week FPC bowed to the demand of 4 large oil company producers for a $0.22 to $0.35 price on the ground that the gas was needed for interstate customers. The threat used by the companies was that they would start negotiation for local sale. Sale to interstate lines is the only practical market available and a price much lower than $0.22 for delivery in the Gulf of Mexico would certainly be needed to move large industry away from powdered coal territory.

It is claimed that this $0.22 to $0.35 price will not trigger costs of gas on the mainland under escalator clauses. This may be true, I don't know. But there is little doubt that if the Harris bill is passed reasonable market price on the mainland will not be less than reasonable market price several miles in the Gulf.

In recent rate increases applications by large pipelines all or nearly all the increase is to be applied to the demand charge. Despite the fact that proper division of costs by pipeline companies should include cost of gas purchased in the commodity part of any two part rate, these companies have chosen to add those and other increases in costs to the demand (residential consumer) part of the rate schedule. One application for instance, says:

"It is the considered judgment of management that the commodity charges should not be increased at this time in order that a favorable position be maintained for off-peak loads."

This practice transforms a $0.05 increase in field price to $0.15 for the one-third sold to the domestic consumer. The $0.22 purchase just approved is a $0.12 increase from the 1954 average price and the increase cost of gas for sale to domestic consumers will be roughly $0.36 per thousand cubic feet. And the figures on page 6 of my statement of October 14, 1955, showing an annual increased cost to consumers of over $800 million if field prices were raised to $0.25, are perilously near becoming a reality in much less time than I anticipated. If you will multiply present known recoverable reserves of 237,000,000,000 thousand cubic feet by $0.12, you will find inventory value of these reserves, at the prices in this contract, have increased over $28 billion.

This one contract covers a reserve estimated at as high as 6 billion thousand cubic feet of gas. Convert that to dollars at a little less than average price and you have $1,500 million. It is well known that wells drilled in the gulf cost immense sums. I understand they may average $5 million per well. Presume that 10 wells are drilled before a sufficient safe flow is reached to begin initial deliveries. Increasing deliveries should pay all additional drilling and operation costs. If an investment of $50 million or even $100 million will return $1,500 million over a term of 20 years, would you call that a fair profit or a reasonable market profit? Quite a consolation prize to draw in a search for oil, especially when the price is doubled by a poker bluff and an added 27½ percent income tax discount.

The purchaser of this gas is Tennessee Gas Transmission Co. It supplies perhaps 2 million consumers, probably over half of them in New York or New England. Over a period of years that means $750 for each and every consumer for gas under this 1 contract, and the New York and New England consumer will pay 2 or 3 times the added cost allocated to "demand" in the short distance zone, because that charge is based upon pipeline usage in proportion to distance, by zones, from the field.

The entire contract may, however, be invalidated if the Harris bill is not passed. If a two part rate is prohibited by Congress, this and other reserves will be looking for a market for many years at about half this contract price.

The FPC release referred to shows that the pipelines during the year ending March 31, 1957, sold all gas carried (including direct sales) for $0.273 per thousand cubic feet. As the purchase price averaged $0.149, the average carrying charge must have been $0.124. Before me I have the rate card of one of the largest pipelines, showing a commodity charge in a zone near the field of $0.13 per thousand cubic feet, increasing by zones to $0.243 at terminus. The "demand" charge, also increasing by zones, runs from $1.30 to $3.09. Applications for increase are now pending by this company and several others, but I think it is fair to say that during the past year, the average charge by all pipelines for commodity has been not less than $0.20 and the average demand charge not less than $2. As the pipeline is paying $0.15 for the gas and selling it to the distributor for industrial use for only the $0.20 commodity charge, it follows that it only grosses $0.05 to $0.06 per thousand cubic feet on interruptible industrial sales ($0.075 on average direct sales, which, by the way, should be brought under FPC control and caused to pay the same commodity price) as against an average gross of $0.124. The utility distributor is compelled through the increased demand charge to make up this average. He tries to sell the $0.20 gas to interruptible consumers for all they will pay, but must pass most of it along to his domestic customers.

Presuming that the proportion of gas used as between domestic consumers on the one hand and industrial on the other is roughly the same today as it was in 1955 (less than one-third to domestic customers and more than two-thirds to industrial, including di-

rect sales) my calculation indicates that during the year ending March 1957 pipelines charged only $0.05 to $0.06 per thousand cubic feet for carrying industrial gas and $0.21 to $0.22 for domestic gas. This differential will rapidly increase if pipelines are allowed to allocate future increases to residential users only, and that is the reason I state above that the new $0.12 increase will cost the domestic consumer at least $0.36.

Thus far I have discussed the country-wide average operation of the two-part rate as between domestic and industrial uses. It has an even greater impact as between large cities and integrated gas systems on the one hand and smaller nonindustrial cities on the other. The city containing large industries, plus perhaps local supply and/or storage may be able (by selling during the summer, fall, and spring cheap interruptible) to purchase the same amount each day throughout the year. It is then rated as having a 100 percent load factor. But in a large proportion of cities neither industrial sales, local supply or storage facilities are available. This results in a load factor as low as 30 percent or 40 percent in such cities. On the rate card mentioned above, I find that gas at a 40 percent load factor would cost per average thousand cubic feet, 144 percent of the cost in a 100 percent load factor town. But if the distributor can buy his gas on a 100 percent load factor basis, his overall cost would be the same as a flat commodity charge.

There are 2 ways for a large city to achieve a 100 percent load factor. The 2 companies serving Chicago and vicinity sell over 75 percent of all gas sold by utilities in Illinois. They sold in 1956 roughly 50 percent of their gas for domestic and similar uses at around $1.08 per thousand cubic feet, 16 percent to firm industrial users at around $0.60 per thousand cubic feet and the balance of 34 percent to interruptible industrials at $0.275. Their overall gas cost was thus reduced to the equivalent of a straight commodity rate. The pipeline subsidiaries of Peoples Gas, Light & Coke Co. of Chicago have applications pending to increase their rates but in order to avoid any considerable increase of cost to the industrials which would cause them to begin using coal, practically the entire increase is charged to demand. Peoples alone used last year over 120,000,000,000 cubic feet and as the field price has increased $0.05 since 1954, Chicago gas must have cost the pipelines an increase of $6 million. Peoples on July 1, 1957, was compelled, because of increased gas and labor costs, to request a rate increase of $11,480,000. If this increase is granted, $200,000 plus small automatic adjustments, will be paid by large industrial customers and over $11 million by other customers. That means interruptible industrial rates will be increased $0.0125 per thousand cubic feet and other rates an average of $0.084. The increase for small residential use, according to company announcement, will be $0.20.

New York City and vicinity achieves a 100 percent load factor purchasing power in another way. The distributors there had established distribution of artificial gas mixed with local natural gas at high prices before long line gas arrived. The 20 percent of their gas sold to industry in 1955 for superior (not interruptible) uses paid $0.78 per thousand cubic feet, and local production and storage facilities are used to achieve a 100 percent load factor. General use of gas for residential space heating is discouraged by the high prices necessary for small deliveries. The higher price of interstate gas, because of increased distance from the field, also enters into this. The domestic rate averaged $1.47 in the State of New York and as a result the average domestic customer used only about 50,000 cubic feet per annum as against 98,000 cubic feet in Illinois and 182,000 cubic feet in Ohio, where domestic gas sold for an average of $0.65. Because these conditions make it possible to purchase that portion of their gas needed from interstate lines on a 100 percent load factor basis, giving them a favored position as between distributors, officers of Brooklyn Union, Consolidated and Consolidated Edison have been active in promoting and testifying in favor of the present Harris bill.

Now let's explore the claimed gas shortage. I admit that there is a refusal of large and small producers to commit their gas to contract, because they expect pipelines by use of the two-part rate to continue to transfer all additional costs to the domestic consumer.

The annual report of the committee of American Gas Association shows reserves at December 31, 1956, as 237,000,000,000,000 thousand cubic feet, and production for the year of 10,900. This would seem to indicate that without finding additional gas we have a reserve which will last 22 years at present usage.

But this "production" item is a misnomer. It consists partly of production but chiefly withdraw from reserves. It is true that new reserves are being created in increasing quantities and that the known recoverable reserve has increased every year since figures have been compiled, but the production as used in these reports is a figure governed by the amount of gas which can be sold through pipelines and utility facilities during the year under consideration.

Here is the way it is built up:

1. Much gas is produced in oilfields. This is truly, both from discovery and oil use, a byproduct. It was formerly largely flared—that is, burned—in order to prevent its interference with the production of oil. Then it was found that it had a valuable use in the field in repressuring the oil wells, and repeated use of the same gas, cycling, became common. Not all oilfield gas is needed for this use. In 1954 oil wells produced 3,500,000,000,000 thousand cubic feet and used one thousand five hundred for repressuring. There were 700,000,000,000 thousand cubic feet wasted and lost and one thousand five hundred used in the field for drilling, pumping, etc. Part of the waste and field use took place in gas well operations, but I think it is fair to say that of the two thousand two hundred so used at least one thousand five hundred was consumed in the oilfields themselves. Thus we see that while some oilfields contributed considerably to gas production, as a whole their contribution was probably less than 7 percent of the entire marketed production of 7,090,000,000,000 thousand cubic feet that year. And I am sure that oilfield production percentages remain relatively the same today.

But this 7 percent must be disposed of. There is no storage for it and most States as a matter of conservation, will not now allow it to be wasted.

This approximately 500,000,000,000 thousand cubic feet is the first item entering into production.

2. According to the statement attached hereto, 26 percent of all interstate shipments or a little less than 2,000,000,000,000 thousand cubic feet must be purchased by pipelines for the use of 22 million domestic consumers and 500 for commercial users. That means that after using the saved gas from oil wells, 2,000 billions had to be taken from new wells or present reserves to take care of residential and commercial customers.

3. The 1955 loss and waste exceeded 2,500,000,000,000 thousand cubic feet and assuming a proportional increase in 1956, must have reached 2,800,000,000,000 thousand cubic feet. Deducting this figure from the 10,900 production of 1956, we find that marketed "production" may have reached 8,100,000,000,000 thousand cubic feet; 7,367 billion were shipped through interstate lines in the calendar year and the lines were kept full by selling around 5,000,000,000,000 thousand cubic feet to direct customers and utilities at low prices. Evidently around 600,000,000,000 thousand cubic feet were sold intrastate through other than interstate lines.

We, therefore, see that "production" as used simply means the amount of gas which can be marketed at a low figure, subsidized by higher priced sales to domestic consumers.

Sale of industrial gas is comparable to the farm subsidy; 22 million residential gas consumers are paying through distributors and pipelines a subsidy similar to that paid on farm products by the consuming public through our Government. In the case of farms it may be justified, but there is no justice for the small consumer to be forced to subsidize gas purchases for large and profitable companies. Furthermore, farm products are replaceable, while gas, abundant for many years, is irreplaceable.

A portion of the 7,500,000,000,000 thousand cubic feet of gas shipped through interstate lines is sold through utilities in the States where produced. The nearly 1,500,000,000,000 thousand cubic feet so sold for industrial purposes in Texas, Louisiana, Arkansas, and Oklahoma in 1955 by utilities gross less than $0.15 per thousand cubic feet. It is probably fair to presume that the producers received less than $0.10. Around 600 billion (above) were probably sold direct at that figure or less. Where are the industrials which can afford to move to these States to consume any sizable proportion of this quantity, let alone at a price to compete with a $0.22 to $0.35 contract price.

Just what would be the effect of a one part charge? The field cost of gas last year was $0.15. The pipeline charge was $0.124 or an average of $0.274 cost to the direct and utility customer. If the distributor charge to industrial users remained at $0.05 to $0.06, a considerable part of the interruptible load would be lost and still more would be lost when the pipeline price was increased to take the place of loss from reduced load. It should however, stabilize with a loss of perhaps half the industrial and direct sales. That would mean that the entire gas sales of pipelines would be reduced to 66 percent of present sales. If one-third of quantity were lost, the pipelines could realize the same gross income by increasing their rate from $0.124 to $0.186, and would certainly make some additional saving in operating expense because of lessened volume. Add to this $0.186 the $0.149 field cost of gas and we arrive at a cost for domestic gas of $0.335 under a straight commodity rate instead of the $0.363 actually paid per that table by utilities. The gas saving would be 2,500,000,000,000 thousand cubic feet, competition would again be introduced to gas production, and in my opinion, if it were known that this would be a continuing policy, prices would recede to their 1954 level. A few days ago a Congressman stated on the floor of the House that steel is big business and should not increase its prices $6 per ton in face of present conditions. I call his attention to the fact that among the 20 largest American corporations, 10 are oil and gas companies, while only 2 are steel. But they expect a far larger proportional increase if the Harris bill becomes law.

This gas would be conserved for domestic and superior industrial use. This will be strongly objected to by the producer, because he would lose one-third of his sales. But he has contended that he wishes competition to fix his price and the elimination of the two-part rate, supplanted by a straight commodity charge, is the only way to provide real competition between fuels.

After all, why should the one-third of gas carried for superior uses subsidize in an ever-increasing spiral the two-thirds used for inferior purposes? While some railroads carry a few passengers at reduced prices, we

wouldn't allow them to carry two-thirds of their passengers at one-quarter price just because they are running their trains in that direction.

I think a reasonable, effective, and fair way to prevent the sale of gas for less than cost would be to amend the Natural Gas Act (or an amendment to the Harris bill if it is to be passed) by prohibiting the use of the two-part rate and the purchase and sale of gas by pipelines on year-around contracts and upon a commodity basis only, to both utility and direct customers, with a differential in price only as between customers on a zone basis. Continued increases in producer prices can, with only a flat commodity price existing, be made only with corresponding volume losses and for the same reason pipelines will be compelled to purchase cheaply enough and only in sufficient quantities to allow themselves to meet coal's competition.

The length of this article has seemed necessary in order to give you a reasonable understanding of the natural gas situation and the effect of the two-part rate.

Very truly yours,

ARTHUR K. LEES,
Chairman, United Cities Gas Co.

Average revenue per thousand cubic feet of producers, pipelines, and distributors, year ending Mar. 31, 1957

	Billions of cubic feet	Percentage of whole	Producers' revenue	Pipeline revenue	Distributors' revenue	Consumer pays
All interstate gas	[1] 7,500	100	[1] $0.149	[1] $0.124		
Direct sales by pipelines	[1] 1,500	20	[1] .149	[1] .076		$0.225
Sales to utilities for resale	[1] 6,000	80	[1] .149	[1] .136	$0.215	.49
To residential users		26	[1] .149	.214	.487	.85
To commercial users		6	[1] .149	.214	.277	.64
To superior industrial users		10−	[1] .149	.214	.187	.55
To interruptible industrial users		38+	[1] .149	.05	.06	.259

[1] These figures are from FPC release No. 9197 G–4649.

NOTE.—Percentages of use and other figures are computed figures based upon 1955 (latest available) utility sales as shown by Gas Facts, except that allocation between superior and interruptible industrial sales are purely an estimate as no countrywide figures seem available.

The Burden of the New Secretary of the Treasury, Robert B. Anderson

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. SPARKMAN. Mr. President, on yesterday a new Secretary of the Treasury took office, in the person of Mr. Robert B. Anderson. Recently, two rather objective articles regarding Mr. Anderson's burden were published. One of them appeared in the Wall Street Journal of June 3, 1957. That article is entitled "Fiscal Mess." The other is entitled "Robert B. Anderson's Burden." It was written by J. A. Livingston, the well-known economist, and was published in the Washington Post. I ask unanimous consent that both of these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of June 3, 1957]

FISCAL MESS

Early this spring the Treasury raised its interest rate on Government savings bonds from 3 percent to 3¼ percent. Despite this, the parade of people walking up to cash in their savings bonds has hardly diminished.

Early this month the Treasury, faced with the job of refunding nearly $4.2 billion of the public debt, offered a 57-month note at 3⅝ percent. It was a flop. People who held the expiring securities preferred cash over the new Treasury notes to the tune of $1.2 billion.

And just a week ago Treasury officials gave up hope of selling the public a long-term bond to raise cash. They found the market wasn't receptive at the interest rate the Treasury was willing to pay.

In the meantime the Government's expenses have been rising and tax collections have been coming in only moderately well. The national debt is already some $5 billion more than it was 4 years ago and officials expect it to go higher before it goes lower.

Although there are plenty more such unhappy statistics, this is enough to show that when Robert Anderson takes over as Secretary of the Treasury this summer he will have his job cut out for him.

The plain, simple, and incontrovertible fact is that the Government of the United States is in a fiscal mess.

To put it bluntly, the Treasury of the richest Nation on earth is short of money. At one point this spring it had hardly enough cash to pay a week's worth of bills. And with current spending rising faster than current income, despite the balanced budget, the squeeze threatens to get worse.

The basic cause of all this is a decade of uncontrolled spending which has now brought us to the point where even the present high tax rates cannot keep the Government's pocketbook filled. But in addition, the mess has been compounded by bad fiscal policy.

To imply, as recent Treasury decisions do, that the Government of the United States cannot borrow money in the marketplace is nonsense. And dangerous nonsense at that, for it also implies that the Government's credit is deteriorating.

The reason the Treasury cannot persuade individuals to invest in savings bonds is that it offers them no real inducement to do so; its recent increase in interest rates was not tailored to the requirements of savers but to a political notion of what the Government ought to pay.

So, too, with the recent financing fiascos, the United States Government can borrow money for 57 months or for 10 years. But short of putting a gun at the public's head it cannot borrow it at a lesser interest rate than the public is willing to accept for tying up money into the long, uncertain future.

Hence the present fiscal mess is purely manmade. The Government has let its own spending get out of hand; the armament program, the foreign-aid program, and all the rest have put huge demands on the money market. Yet it is trying to escape the pains of what it has created.

If the Government clings to that fiscal policy only a miracle will keep the mess from getting worse. For if the money squeeze continues and the Government refuses to do what is necessary to borrow from the public, the only alternative will be to borrow it from the Federal Reserve System. In short, to print the money.

There is already tremendous pressure on the Reserve to pump money into the market so that the Treasury can borrow money at a politically satisfactory price. So far it has been resisted but the Reserve can be overpowered because when the day arrives that there are no dollars in the Treasury even Reserve Chairman Martin will have to yield.

We do not envy Mr. Anderson his new job. It will take a man bold and determined enough to sell a sensible fiscal policy in Washington. Or one lucky enough to head the Treasury when Uncle Sam is living so that he doesn't have to borrow beyond his means.

[From the Washington Post and Times Herald of July 6, 1957]

ROBERT B. ANDERSON'S BURDEN

(By J. A. Livingston)

George M. Humphrey may go down in the history of Republican administrations as a great Secretary of the Treasury. Certainly, President Eisenhower regards him as such. Yet, in cold statistics of Treasury finance, Humphrey will leave behind what some irreverent Wall Streeters call a financial mess.

To say that Humphrey failed as Secretary of the Treasury is too hard. A failure is a person who has the tide with him and doesn't use it. The tide was against Humphrey.

When he first took office, he made it clear that too much of the Federal debt was short-term—under 5 years. He was going to lengthen it out. He selected W. Randolph Burgess from the powerful post of chairman of the executive committee of the First National City Bank of New York for that intractable task. If any man could, Burgess—with a background as a money-market specialist, author of the noteworthy book, The Reserve Banks and the Money Market—would succeed in spacing, simplifying, and systematizing the Federal debt structure.

Here are the results:

Five years ago, in December 1952, just before President Eisenhower took office, 34.9 percent of the marketable debt owned by banks, insurance companies, and other non-Government investors was due in less than a year. Today (in February 1957), the percentage of debt due inside a year is exactly the same—34.9 percent. No improvement there.

Five years ago, 25.3 percent of the debt matured in 1 to 5 years. Today, 31.2 percent. Deterioration. More debt is coming up for early refinancing.

Five years ago, 17.2 percent of the debt matured in 5 to 10 years. Today, 12.5 percent. Again, deterioration. The proportion of longer term debt is lower—exactly contrary to original intent.

Finally, 5 years ago, 22.5 percent of the debt matured in more than 10 years. Today, 21.4 percent. A slight deterioration in the percent of long maturities.

That's Robert B. Anderson's heritage as the incoming Secretary of the Treasury. Government maturities are closing in at a time when industrial corporations, public utilities, and State and local governments are calling for money. And the money market isn't exactly overflowing with cash-laden investors.

And Treasury financing costs are up. In December 1952 Government bonds were selling to yield 2.74 percent. Today, if the Treasury had to borrow, it would have to pay about 3.5 percent for long-term money. Interest costs, over $6 billion a year 5 years ago, now run to about $7.5 billion, a 25 percent rise.

rect sales) my calculation indicates that during the year ending March 1957 pipelines charged only $0.05 to $0.06 per thousand cubic feet for carrying industrial gas and $0.21 to $0.22 for domestic gas. This differential will rapidly increase if pipelines are allowed to allocate future increases to residential users only, and that is the reason I state above that the new $0.12 increase will cost the domestic consumer at least $0.36.

Thus far I have discussed the country-wide average operation of the two-part rate as between domestic and industrial uses. It has an even greater impact as between large cities and integrated gas systems on the one hand and smaller nonindustrial cities on the other. The city containing large industries, plus perhaps local supply and/or storage may be able (by selling during the summer, fall, and spring cheap interruptible) to purchase the same amount each day throughout the year. It is then rated as having a 100 percent load factor. But in a large proportion of cities neither industrial sales, local supply or storage facilities are available. This results in a load factor as low as 30 percent or 40 percent in such cities. On the rate card mentioned above, I find that gas at a 40 percent load factor would cost per average thousand cubic feet, 144 percent of the cost in a 100 percent load factor town. But if the distributor can buy his gas on a 100 percent load factor basis, his overall cost would be the same as a flat commodity charge.

There are 2 ways for a large city to achieve a 100 percent load factor. The 2 companies serving Chicago and vicinity sell over 75 percent of all gas sold by utilities in Illinois. They sold in 1956 roughly 50 percent of their gas for domestic and similar uses at around $1.08 per thousand cubic feet, 16 percent to firm industrial users at around $0.60 per thousand cubic feet and the balance of 34 percent to interruptible industrials at $0.275. Their overall gas cost was thus reduced to the equivalent of a straight commodity rate. The pipeline subsidiaries of Peoples Gas, Light & Coke Co. of Chicago have applications pending to increase their rates but in order to avoid any considerable increase of cost to the industrials which would cause them to begin using coal, practically the entire increase is charged to demand. Peoples alone used last year over 120,000,000,000 cubic feet and as the field price has increased $0.05 since 1954, Chicago gas must have cost the pipelines an increase of $6 million. Peoples on July 1, 1957, was compelled, because of increased gas and labor costs, to request a rate increase of $11,480,000. If this increase is granted, $200,000 plus small automatic adjustments, will be paid by large industrial customers and over $11 million by other customers. That means interruptible industrial rates will be increased $0.0125 per thousand cubic feet and other rates an average of $0.084. The increase for small residential use, according to company announcement, will be $0.20.

New York City and vicinity achieves a 100 percent load factor purchasing power in another way. The distributors there had established distribution of artificial gas mixed with local natural gas at high prices before long line gas arrived. The 20 percent of their gas sold to industry in 1955 for superior (not interruptible) uses paid $0.78 per thousand cubic feet, and local production and storage facilities are used to achieve a 100 percent load factor. General use of gas for residential space heating is discouraged by the high prices necessary for small deliveries. The higher price of interstate gas, because of increased distance from the field, also enters into this. The domestic rate averaged $1.47 in the State of New York and as a result the average domestic customer used only about 50,000 cubic feet per annum as against 98,000 cubic feet in Illinois and 182,000 cubic feet in Ohio, where domestic gas sold for an average of $0.65. Because these conditions make it possible to purchase that portion of their gas needed from interstate lines on a 100 percent load factor basis, giving them a favored position as between distributors, officers of Brooklyn Union, Consolidated and Consolidated Edison have been active in promoting and testifying in favor of the present Harris bill.

Now let's explore the claimed gas shortage. I admit that there is a refusal of large and small producers to commit their gas to contract, because they expect pipelines by use of the two-part rate to continue to transfer all additional costs to the domestic consumer.

The annual report of the committee of American Gas Association shows reserves at December 31, 1956, as 237,000,000,000,000 thousand cubic feet, and production for the year of 10,900. This would seem to indicate that without finding additional gas we have a reserve which will last 22 years at present usage.

But this "production" item is a misnomer. It consists partly of production but chiefly withdraw from reserves. It is true that new reserves are being created in increasing quantities and that the known recoverable reserve has increased every year since figures have been compiled, but the production as used in these reports is a figure governed by the amount of gas which can be sold through pipelines and utility facilities during the year under consideration.

Here is the way it is built up:

1. Much gas is produced in oilfields. This is truly, both from discovery and oil use, a byproduct. It was formerly largely flared—that is, burned—in order to prevent its interference with the production of oil. Then it was found that it had a valuable use in the field in repressuring the oil wells, and repeated use of the same gas, cycling, became common. Not all oilfield gas is needed for this use. In 1954 oil wells produced 3,500,000,000,000 thousand cubic feet and used one thousand five hundred for repressuring. There were 700,000,000,000 thousand cubic feet wasted and lost and one thousand five hundred used in the field for drilling, pumping, etc. Part of the waste and field use took place in gas well operations, but I think it is fair to say that of the two thousand two hundred so used at least one thousand five hundred was consumed in the oilfields themselves. Thus we see that while some oilfields contributed considerably to gas production, as a whole their contribution was probably less than 7 percent of the entire marketed production of 7,000,000,000,000 thousand cubic feet that year. And I am sure that oilfield production percentages remain relatively the same today.

But this 7 percent must be disposed of. There is no storage for it and most States as a matter of conservation, will not now allow it to be wasted.

This approximately 500,000,000,000 thousand cubic feet is the first item entering into production.

2. According to the statement attached hereto, 26 percent of all interstate shipments or a little less than 2,000,000,000,000 thousand cubic feet must be purchased by pipelines for the use of 22 million domestic consumers and 500 for commercial users. That means that after using the saved gas from oil wells, 2,000 billions had to be taken from new wells or present reserves to take care of residential and commercial customers.

3. The 1955 loss and waste exceeded 2,500,000,000,000 thousand cubic feet and assuming a proportional increase in 1956, must have reached 2,800,000,000,000 thousand cubic feet. Deducting this figure from the 10,900 production of 1956, we find that marketed "production" may have reached 8,100,000,000,000 thousand cubic feet; 7,367 billion were shipped through interstate lines in the calendar year and the lines were kept full by selling around 5,000,000,000,000 thousand cubic feet to direct customers and utilities at low prices. Evidently around 600,000,000,000 thousand cubic feet were sold intrastate through other than interstate lines.

We, therefore, see that "production" as used simply means the amount of gas which can be marketed at a low figure, subsidized by higher priced sales to domestic consumers.

Sale of industrial gas is comparable to the farm subsidy; 22 million residential gas consumers are paying through distributors and pipelines a subsidy similar to that paid on farm products by the consuming public through our Government. In the case of farms it may be justified, but there is no justice for the small consumer to be forced to subsidize gas purchases for large and profitable companies. Furthermore, farm products are replaceable, while gas, abundant for many years, is irreplaceable.

A portion of the 7,500,000,000,000 thousand cubic feet of gas shipped through interstate lines is sold through utilities in the States where produced. The nearly 1,500,000,000,000 thousand cubic feet so sold for industrial purposes in Texas, Louisiana, Arkansas, and Oklahoma in 1955 by utilities gross less than $0.15 per thousand cubic feet. It is probably fair to presume that the producers received less than $0.10. Around 600 billion (above) were probably sold direct at that figure or less. Where are the industrials which can afford to move to these States to consume any sizable proportion of this quantity, let alone at a price to compete with a $0.22 to $0.35 contract price.

Just what would be the effect of a one part charge? The field cost of gas last year was $0.15. The pipeline charge was $0.124 or an average of $0.274 cost to the direct and utility customer. If the distributor charge to industrial users remained at $0.05 to $0.06, a considerable part of the interruptible load would be lost and still more would be lost when the pipeline price was increased to take the place of loss from reduced load. It should however, stabilize with a loss of perhaps half the industrial and direct sales. That would mean that the entire gas sales of pipelines would be reduced to 66 percent of present sales. If one-third of quantity were lost, the pipelines could realize the same gross income by increasing their rate from $0.124 to $0.186, and would certainly make some additional saving in operating expense because of lessened volume. Add to this $0.186 the $0.149 field cost of gas and we arrive at a cost for domestic gas of $0.335 under a straight commodity rate instead of the $0.363 actually paid per that table by utilities. The gas saving would be 2,500,000,000,000 thousand cubic feet, competition would again be introduced to gas production, and in my opinion, if it were known that this would be a continuing policy, prices would recede to their 1954 level. A few days ago a Congressman stated on the floor of the House that steel is big business and should not increase its prices $6 per ton in face of present conditions. I call his attention to the fact that among the 20 largest American corporations, 10 are oil and gas companies, while only 2 are steel. But they expect a far larger proportional increase if the Harris bill becomes law.

This gas would be conserved for domestic and superior industrial use. This will be strongly objected to by the producer, because he would lose one-third of his sales. But he has contended that he wishes competition to fix his price and the elimination of the two-part rate, supplanted by a straight commodity charge, is the only way to provide real competition between fuels.

After all, why should the one-third of gas carried for superior uses subsidize in an ever-increasing spiral the two-thirds used for inferior purposes? While some railroads carry a few passengers at reduced prices, we

wouldn't allow them to carry two-thirds of their passengers at one-quarter price just because they are running their trains in that direction.

I think a reasonable, effective, and fair way to prevent the sale of gas for less than cost would be to amend the Natural Gas Act (or an amendment to the Harris bill if it is to be passed) by prohibiting the use of the two-part rate and the purchase and sale of gas by pipelines on year-around contracts and upon a commodity basis only, to both utility and direct customers, with a differential in price only as between customers on a zone basis. Continued increases in producer prices can, with only a flat commodity price existing, be made only with corresponding volume losses and for the same reason pipelines will be compelled to purchase cheaply enough and only in sufficient quantities to allow themselves to meet coal's competition.

The length of this article has seemed necessary in order to give you a reasonable understanding of the natural gas situation and the effect of the two-part rate.

Very truly yours,

ARTHUR K. LEES,
Chairman, United Cities Gas Co.

Average revenue per thousand cubic feet of producers, pipelines, and distributors, year ending Mar. 31, 1957

	Billions of cubic feet	Percentage of whole	Producers' revenue	Pipeline revenue	Distributors' revenue	Consumer pays
All interstate gas	[1] 7,500	100	[1] $0.149	[1] $0.124		
Direct sales by pipelines	[1] 1,500	20	[1] .149	[1] .076		$0.225
Sales to utilities for resale	[1] 6,000	80	[1] .149	[1] .136	$0.215	.49
To residential users		26	[1] .149	.214	.437	.85
To commercial users		6	[1] .149	.214	.277	.64
To superior industrial users		10—	[1] .149	.214	.187	.55

[1] These figures are from FPC release No. 9197 G–4649.

NOTE.—Percentages of use and other figures are computed figures based upon 1955 (latest available) utility sales as shown by Gas Facts, except that allocation between superior and interruptible industrial sales are purely an estimate as no countrywide figures seem available.

The Burden of the New Secretary of the Treasury, Robert B. Anderson

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. SPARKMAN. Mr. President, on yesterday a new Secretary of the Treasury took office, in the person of Mr. Robert B. Anderson. Recently, two rather objective articles regarding Mr. Anderson's burden were published. One of them appeared in the Wall Street Journal of June 3, 1957. That article is entitled "Fiscal Mess." The other is entitled "Robert B. Anderson's Burden." It was written by J. A. Livingston, the well-known economist, and was published in the Washington Post. I ask unanimous consent that both of these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal of June 3, 1957]

FISCAL MESS

Early this spring the Treasury raised its interest rate on Government savings bonds from 3 percent to 3¼ percent. Despite this, the parade of people walking up to cash in their savings bonds has hardly diminished.

Early this month the Treasury, faced with the job of refunding nearly $4.2 billion of the public debt, offered a 57-month note at 3⅝ percent. It was a flop. People who held the expiring securities preferred cash over the new Treasury notes to the tune of $1.2 billion.

And just a week ago Treasury officials gave up hope of selling the public a long-term bond to raise cash. They found the market wasn't receptive at the interest rate the Treasury was willing to pay.

In the meantime the Government's expenses have been rising and tax collections have been coming in only moderately well. The national debt is already some $5 billion more than it was 4 years ago and officials expect it to go higher before it goes lower.

Although there are plenty more such unhappy statistics, this is enough to show that when Robert Anderson takes over as Secretary of the Treasury this summer he will have his job cut out for him.

The plain, simple, and incontrovertible fact is that the Government of the United States is in a fiscal mess.

To put it bluntly, the Treasury of the richest Nation on earth is short of money. At one point this spring it had hardly enough cash to pay a week's worth of bills. And with current spending rising faster than current income, despite the balanced budget, the squeeze threatens to get worse.

The basic cause of all this is a decade of uncontrolled spending which has now brought us to the point where even the present high tax rates cannot keep the Government's pocketbook filled. But in addition, the mess has been compounded by bad fiscal policy.

To imply, as recent Treasury decisions do, that the Government of the United States cannot borrow money in the marketplace is nonsense. And dangerous nonsense at that, for it also implies that the Government's credit is deteriorating.

The reason the Treasury cannot persuade individuals to invest in savings bonds is that it offers them no real inducement to do so; its recent increase in interest rates was not tailored to the requirements of savers but to a political notion of what the Government ought to pay.

So, too, with the recent financing fiascos, the United States Government can borrow money for 57 months or for 10 years. But short of putting a gun at the public's head it cannot borrow it at a lesser interest rate than the public is willing to accept for tying up money into the long, uncertain future.

Hence the present fiscal mess is purely manmade. The Government has let its own spending get out of hand; the armament program, the foreign-aid program, and all the rest have put huge demands on the money market. Yet it is trying to escape the pains of what it has created.

If the Government clings to that fiscal policy only a miracle will keep the mess from getting worse. For if the money squeeze continues and the Government refuses to do what is necessary to borrow from the public, the only alternative will be to borrow it from the Federal Reserve System. In short, to print the money.

There is already tremendous pressure on the Reserve to pump money into the market so that the Treasury can borrow money at a politically satisfactory price. So far it has been resisted but the Reserve can be overpowered because when the day arrives that there are no dollars in the Treasury even Reserve Chairman Martin will have to yield.

We do not envy Mr. Anderson his new job. It will take a man bold and determined enough to sell a sensible fiscal policy in Washington. Or one lucky enough to head the Treasury when Uncle Sam is living so that he doesn't have to borrow beyond his means.

[From the Washington Post and Times Herald of July 6, 1957]

ROBERT B. ANDERSON'S BURDEN

(By J. A. Livingston)

George M. Humphrey may go down in the history of Republican administrations as a great Secretary of the Treasury. Certainly, President Eisenhower regards him as such. Yet, in cold statistics of Treasury finance, Humphrey will leave behind what some irreverent Wall Streeters call a financial mess.

To say that Humphrey failed as Secretary of the Treasury is too hard. A failure is a person who has the tide with him and doesn't use it. The tide was against Humphrey.

When he first took office, he made it clear that too much of the Federal debt was short-term—under 5 years. He was going to lengthen it out. He selected W. Randolph Burgess from the powerful post of chairman of the executive committee of the First National City Bank of New York for that intractable task. If any man could, Burgess—with a background as a money-market specialist, author of the noteworthy book, The Reserve Banks and the Money Market—would succeed in spacing, simplifying, and systematizing the Federal debt structure.

Here are the results:

Five years ago, in December 1952, just before President Eisenhower took office, 34.9 percent of the marketable debt owned by banks, insurance companies, and other non-Government investors was due in less than a year. Today (in February 1957), the percentage of debt due inside a year is exactly the same—34.9 percent. No improvement there.

Five years ago, 25.3 percent of the debt matured in 1 to 5 years. Today, 31.2 percent. Deterioration. More debt is coming up for early refinancing.

Five years ago, 17.2 percent of the debt matured in 5 to 10 years. Today, 12.5 percent. Again, deterioration. The proportion of longer term debt is lower—exactly contrary to original intent.

Finally, 5 years ago, 22.5 percent of the debt matured in more than 10 years. Today, 21.4 percent. A slight deterioration in the percent of long maturities.

That's Robert B. Anderson's heritage as the incoming Secretary of the Treasury. Government maturities are closing in at a time when industrial corporations, public utilities, and State and local governments are calling for money. And the money market isn't exactly overflowing with cash-laden investors.

And Treasury financing costs are up. In December 1952 Government bonds were selling to yield 2.74 percent. Today, if the Treasury had to borrow, it would have to pay about 3.5 percent for long-term money. Interest costs, over $6 billion a year 5 years ago, now run to about $7.5 billion, a 25 percent rise.

How is it, then, that in a letter expressing profound regret, President Eisenhower thanks Humphrey for his extraordinary talents? The answer is that Humphrey is honored for his influence outside the Treasury more than for his work inside it. He was the man, as President Eisenhower himself said, all "listened to" at Cabinet meetings.

Humphrey was a dedicated servant to orthodoxy at a time when orthodoxy was costly. He was unwilling to pervert the Federal Reserve System into a Treasury handmaiden. He did not press the Reserve to buy Treasury bonds and so support the Government market. That would have enabled the Treasury to sell long-term issues and thus elongate its maturity schedule.

But that would have amounted to monetizing the debt, creating money by Government fiat. It would have increased demand for goods and services, added to inflationary pressures. It would have undone the victory of former Reserve Board Chairman Thomas B. McCabe over former Secretary of the Treasury John W. Snyder in the Truman administration.

Humphrey sacrificed ease of financing, cheap financing, to what he regards as the greater good—sound money. All the while, his ambition was to pile up Government surpluses in the manner of Andrew W. Mellon and pay off the short-term debt.

But peacelessness—the war of nerves with the Kremlin—permitted no big surpluses. The debt he leaves behind is bigger than the debt he started with. And Treasury maturities come tumbling over one another in critical bunches.

That's Humphrey's failure—a failure that's a monument to his courage, character, and unflagging loyalty to his own and President Eisenhower's belief in a sound dollar.

Foreign Policy and Some Implications for Education

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 31, 1957

Mr. HUMPHREY. Mr. President, the distinguised Assistant Secretary for International Organization Affairs, Mr. Francis O. Wilcox, recently addressed the National Education Association on Foreign Policy and Some Implications for Education.

I ask unanimous consent that Dr. Wilcox's stimulating address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN POLICY AND SOME IMPLICATIONS FOR EDUCATION

(By Francis O. Wilcox)

I am honored to speak before this distinguished gathering of the National Education Association. We share a great responsibility, for one of the primary tasks of American education is to prepare the youth of our country for responsible citizenship. No one wishes more earnestly for your success in this task than do those of us working in the field of international affairs. An educated citizenry, aware of America's responsibilities in the world today, is essential to an effective foreign policy.

Most of us here this morning received our formal education at about the end of the American isolationist era. Now it is true that all of us took courses in history; some of us studied political science and international relations. But our approach to these matters and the approach of our teachers necessarily omitted many of the events which today shape our foreign policy.

For this was before Pearl Harbor, before the San Francisco Charter, before Hiroshima. In short, it was before America had assumed the important role its plays in world affairs.

The members of your profession are responsible for preparing present and future generations of boys and girls for life as citizens in a country which is an acknowledged leader of the free world. We can be proud of our new role. But a position of leadership is not all honors. It is lonely and perilous, and its mistakes are not overlooked. Indeed, our new responsibilities have, in a sense, set us apart. Our conduct both at home and abroad is being scrutinized as never before. An isolated civil or criminal offense committed abroad, an act of racial discrimination here at home, and America is in the papers in 50 languages—languages, incidentally, which few of our citizens are able to read.

THE RISING INFLUENCE OF ASIA AND AFRICA

We live in a very different world from that of our childhood. We have only to look at the map of Asia to realize that very fundamental changes have taken place. Empires once ruled by the Western World, which included the vast populations and the rich resources of Asia, Africa, and the Middle East, have fallen or are relaxing their hold. World War II shattered the old pattern. In its place new states have sprung into being with bewildering rapidity. Their citizens make up a population approximately four times that of the United States, and much of the world's material wealth lies within their boundaries.

A revolution, in many ways comparable to our own, has taken place in this area. Yet how many of our students, in school or college, can name these new countries or are conversant with their history, religion, or cultures?

When President Sukarno of Indonesia was visiting this country, he amused himself by asking children where his country was, how many people it had, and questions of a similar nature. Precious few knew the answers. He would laugh and turn away. But this is no laughing matter. Indonesia is the fifth most populous country in the world, immediately after the United States. It has vast tin and rubber resources. More important, it is a new state, strategically located, which the Communists would like to press into their orbit.

I have used Indonesia merely by way of example. For there is a dynamic new force throughout Asia and Africa which we must recognize and with which we must work. It is particularly important for Americans to do so, understandingly and constructively. The words of our Declaration of Independence, of Jefferson, of Patrick Henry, and of Lincoln have been the rallying cry of these people as they strove toward independence. There "the shot heard 'round the world" is still reverberating.

We, as a people and as a government, have much in common with the aspirations of Asia. We are doing much to foster the rapid economic and social progress of these countries toward responsible participation in the free world. But we must also develop closer economic, political, and cultural ties with the people of Asia and Africa.

UNDERSTANDING THE COMMUNIST THREAT

A second fundamental requirement for better understanding the world about us is to know the nature of international communism—its threat, its weaknesses, and its superficial appeal.

Again, the form if not the nature of communism has changed much since our own school and college days. Then it was a new, threatening, but unproved experiment largely confined to the Soviet Union. The war gave international communism the opportunity to exploit chaos, misery, and anarchy to its advantage. Through force, threat, and subversion it expanded its empire by seizing control of the luckless countries on its borders. It gained dominance over the weak and war-torn China mainland and extended its tentacles down the Korean and Indochina peninsulas.

There its expansion has been stopped. But international communism has thrown down the gantlet to the free world, and to the United States in particular. They have made clear that they intend to carry on an all-out war of ideas, ideologies, propaganda, and subversion.

This means that among the weapons and the defenses available to us to meet their challenge those of the mind, the spirit, of skills and knowledge, are of major importance. And these are the very disciplines for which you educators bear so much responsibility.

Voltaire once said, "There is one thing stronger than all the armies of the world, and that is an idea whose time has come." The Communists seem to be convinced that they have an idea whose time has come. Their faith in communism is based upon a conviction that Russian socialism will emerge triumphant, that inexorably the social and political forces of world communism will rise while Western capitalism will go down to oblivion and decay. Did not Khrushchev, just the other day, predict that our grandchildren will live under communism?

Now it is not sufficient to hate communism or to know that it carries within itself the seeds of its own decay and destruction. This will not make it go away. We must calmly evaluate its assets—both real and imagined—and study its weaknesses and vulnerabilities.

The Communists have sought consciously to develop as an asset their monolithic control over education. If the state decides that so many physicists, or so many engineers, or so many Burmese-language experts are to be turned out in a certain period of time, then they merely have to set the wheels in motion. For they regard the individual essentially as a commodity to be used to advance the cause of communism.

Now a free society cannot mass-produce specialists in this ruthless manner. But if this Communist technique becomes a threat to the free world, and there are signs that it is, then we must devise effective ways to meet it. Certainly education in a free society can draw upon our vast human resources when the national security is involved to meet any challenge posed by a slave state.

What confronts us here is a problem in basic education, beginning long before the college age is reached. It concerns the development of attitudes based on a careful reading of the world and our position in it. Our educational system would be incomplete and inadequate if it kept the facts about communism locked up in a closet. And these facts are not hard to find. Indeed, the Communists have proclaimed them clearly and repeatedly. The closing words of the Communist manifesto state, "The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions."

This is unequivocal language. Does it still reflect the intent of the Soviet leadership since the death of Stalin? Or has the advent of the nuclear age made the use of force too risky, the outcome of a violent struggle with the free world too uncertain?

These are questions to which we must find answers. Our conclusions will shape the course of our foreign policy and determine

for a long time to come the environment in which we live. We must be ever wary of superficially attractive slogans of peaceful coexistence. We must be equally vigilant to discern under the cloak of peaceful words the continued threat of Communist aggression.

Our position of leadership in the free world places upon us all a heavy obligation for clear thinking on these issues. Therefore it is imperative, in my view, that our schools and colleges push ahead quickly with programs designed to teach the cold, hard facts about communism both in theory and in practice. This is no time to equivocate. This is no time to shrink away from the facts. Our students ought to be thoroughly familiar with the origins of communism, its development in the Soviet Union, its methods, its weaknesses, its strengths, and the nature of its spurious appeal. In this period of competing political and economic systems our schools are becoming ever more important.

We ought never to lose sight of the fact that the Communists have no timeable for the execution of their program for world domination. It is probable, therefore, that our people will be subject to Communist propaganda and cold-war pressures for many years to come. This is a challenge they must be equipped to meet.

It is for this reason that I am very much heartened by the recent evidence that educational associations, school systems, and superintendents are beginning to make provision for teaching the facts about communism when students are of an age to understand them. I believe the truth in this respect will set us free from fears that are unfounded and reveal those that must be faced as long as communism is a world force to contend with.

INTERNATIONAL COMMUNISM AND AMERICAN AID PROGRAMS

The interdependence of the free world is more than military and political. It is also economic and social. Both aspects are reflected in our American foreign economic and military aid programs. An appreciation of their purpose is among the fundamentals of understanding our role in world affairs. Nothing like them has ever before been attempted by any other country. Why do we do it? What does it have to do with education? I am sometimes led to think that the reasons are better understood overseas than by our own people.

The reasons are directly related to the two subjects I have touched upon: the nature of the Communist threat and the revolution of rising expectations in Asia and Africa.

It became apparent after World War II that the Communists were moving on two fronts to extend their influence: the military, as exemplified by the takeover of the new satellite countries and the aggression or threat of aggression against Greece, Turkey, Iran, and Korea; and the politicoeconomic, as demonstrated by their propaganda and subversion among the peoples of Asia and Africa, many of whom were in various stages of revolutionary ferment.

The United States countered these two moves by military assistance and economic aid—the one to provide a shield against aggression, the other to help remove the poverty and despair on which Communist subversion thrives.

I think no one will question that both these moves are in the interests of our national security. They are not giveaway programs but cooperative endeavors designed to help people who are free to remain free.

Clearly American aid is no one-way street. We need our allies just as much as our allies need us. They provide us with bases that are absolutely essential to the effective employment of our strategic air power. And their own military forces stand with ours in defense of the free world.

Moreover, our economy would hobble along in low gear if we were deprived of the strategic materials—like rubber, tin, diamonds, and manganese—which foreign aid helps to keep flowing to our shores.

Our aid programs are particularly important in Asia and Africa. In these lands there is a persistent desire by millions of people to secure more of the better things of life. The Communists are constantly trying to sell them on the idea that there is a short road—the Communist road—to better living conditions and greater political and economic influence. Our aid programs are an effective antidote against the Communist virus. They are also a healthy tonic promoting greater welfare and higher living standards. By helping these new nations to maintain their independence, these programs have become an essential of the free-world arsenal in its struggle against communism. And to be most effective they cannot be sporadic attempts but programs consistently supported over a reasonable period of time.

The basic problem is not only to share what we produce but, more important, to provide a long-term program designed to make available our economic and scientific know-how to those countries that want to help themselves. As Secretary Dulles has pointed out, "We have unprecedented resources with which to create and with which to share."

TRAINING FOR OVERSEASMANSHIP

Now it is important to realize that we are confronted with real problems in human relations in putting these programs into effect. For, in carrying them out, it has been found necessary for the first time in our history to station a large number of Americans abroad in time of peace. This inevitably creates certain tensions, particularly in our relations abroad.

These aid programs, to be fully successful, require understanding, patience, and skill on our part and on the part of the governments and peoples with whom we are cooperating. It means training for a generation or more for this aspect alone of our new leadership in international affairs. This training should begin at the school level.

A surprisingly high proportion of those now in school will spend some portion of their lives abroad as soldiers, technicians, educators, government officials, business men and women, and tourists. How they act, how well they represent America, and how good a job they do will depend on what they are now learning, what they know, and what they think about the international community in which we live. We should be opening new windows on the world for them now. It is what one student of world affairs has called "education for overseasmanship."

One important purpose of such training should be to cultivate the quality of empathy—the ability to put yourself in the other fellow's position and see things from his point of view. This does not mean agreeing with him, necessarily, on all things. But we must understand the hopes and problems and attitudes of other peoples if we are going to be fully effective in our efforts to help them and, by so doing, to help ourselves.

We should realize, for instance, that ostentatious living abroad among peoples still climbing the ladder to economic well-being may well cause envy or irritation rather than admiration. We would do well to recognize the customs and cultures of other lands that are older than ours and that reflect spiritual values that have enriched civilization for many centuries. We have much to learn as well as much to impart, for cultural cooperation is assuredly a two-way street.

As a people we have a genius for selling things. Exhaustive studies are made by advertising firms to find out what people want, their buying habits, their tastes, their prejudices. I have often thought that, if we spent one-tenth the time and interest in studying our market where foreign relations are concerned as we do in studying domestic-consumer markets, we could do a much better job abroad and get a lot more satisfaction out of it.

This is of the utmost importance, particularly with the resurgent societies of Africa and Asia. Our competition is stiff. International communism is out to prove that the Communist way is the cheapest and quickest way to realize their aspirations. We cannot let this happen through a failure to communicate or a failure to understand.

FOREIGNERS IN THE UNITED STATES

Our citizens do not have to go overseas in order to have a direct impact on our foreign relations. The people-to-people diplomacy which President Eisenhower has urged upon us can well begin at home.

As a corollary, you might say, of our foreign aid and cooperation programs, some 40,000 citizens of other countries come to the United States every year. Many are government-sponsored; many come under private auspices. They are carefully selected and represent the leadership, present or potential, of their homelands. When they return, they will have a great cumulative influence on the attitudes toward the United States of their countrymen. What they see and experience here is therefore of great importance.

It will not suffice for us to say, "Do as I say, not as I do." A trip to the United States is a dream come true to most who come to our shores. This is the show window of democracy. And many of our visitors are window shopping. Those from neutral-minded countries, in particular, are comparing what we say about ourselves and about democracy with what they see in our national life. They are not inclined to differentiate between social injustice under democracy and under communism.

I was recently told about a young leader from a country in southeast Asia who received a travel grant to the United States from our Government. On his return he was asked his impression of America. "My principal impressions," he said, "were two: The parking problem, and the fact that I couldn't buy a bowl of rice in the restaurants."

We apparently did not get through to this young man the things that make this country great. I cannot help feeling that a weekend in one of your homes, that a few days in an American school, would have greatly changed this man's impressions of America. Such a classroom visit could also be of first-rate importance as a stimulus to our own understanding.

I know of the magnificent work now being done by educational associations and by schools and colleges to provide hospitality and an intimate look at American life for our foreign guests. I think this is a key aspect of our total foreign relations and one to which teachers and students in particular can make an effective and satisfying contribution.

THE UNITED NATIONS AS A FORCE IN WORLD AFFAIRS

No review of the new forces in world affairs could omit consideration of the United Nations. Twelve years after the adoption of the charter of the United Nations the fundamentals of international relations remain unchanged. We live in an interdependent world, a world united by geography and communications, by the common yearnings for peace, security, and well-being. Given this fact of interdependence, an international organization today is not a luxury but, in the words of President Eisenhower, "a sheer necessity."

Throughout history men have recognized the necessity of organizing for peace. The

past is studded with examples of treaties of friendship, defense pacts, and regional arrangements. However, it remained for our generation to witness an organization, universal in scope and intent, to which nations have pledged their intention to settle their disputes by peaceful means.

Now some people are critical of the United Nations. This criticism often comes from those who know the least about it. As a matter of fact, the organization is beset by people who are for the United Nations or against the United Nations—for, standing for uncritical acceptance, and against, representing unthinking denunciation. People who would never think of using these terms in discussing, say, the Philadelphia City Council, fall into them naturally when discussing the United Nations.

This attitude stems, I believe, from the all too common misconception that the United Nations is, or should be, some sort of magical body that can wield global power on the side of justice and peace. Instead, the United Nations is an assembly of 81 nations pledged to maintain international peace and security but protected by the charter from any interference in their own affairs.

THE HUNGARIAN SITUATION

In the United Nations, as elsewhere, politics is the art of the possible. Given this fact, what role can the United Nations play on the international scene? For one thing the mere fact of having to face an assembly of 81 nations can serve as a healthy reminder to all countries that they cannot afford to ignore the opinions and interests of others.

While the General Assembly cannot enforce its will, it can effectively puncture the propaganda of those who violate their charter obligations. Thus, at the time of the invasion of Hungary, the Soviet Union sought to show that it was invited by the legitimate government of Hungary, under the terms of the Warsaw treaty, to put down a few counterrevolutionaries. What more effective answer could be made to these assertions than the picture of delegate after delegate voting to condemn the Soviet Union? The statement of the Burmese delegate was typical. He said, in voting condemnation, "We do this to keep our self-respect—we can do no less." "There," he said, "speaking of Hungary, but for the grace of God go we."

No clearer testimony of the diabolical Soviet purpose in Hungary is needed than the recent impartial report of the General Assembly's five-nation committee, which includes representatives from Asia and Africa. The persistent, desperate, and terrifying rebellion against Soviet rule, led significantly enough by Hungarian students, reflected the deep desire of the Hungarian people to be freed from their Soviet masters.

The Committee's report undeniably confirms that the rulers of the Kremlin sent their tanks and guns into the streets to suppress the legitimate efforts of the Hungarian people to achieve their liberty and national independence. The Committee unfolds the cruel actions of the Hungarian authorities in flagrantly violating the fundamental human rights and freedoms guaranteed by the treaty of peace with Hungary. And to these findings of the Committee there must now be added the current repressive measures and sentences, including the death penalty, against many Hungarians who had bravely participated in the events of last fall. These underscore the importance of further United Nations consideration of the situation in Hungary, as soon as practicable.

The United Nations can and does do more than lay bare propaganda charges. It has been a powerful and positive influence on States through the force of world opinion. In the past decade a number of disputes, each containing the seeds of war, have been resolved or eased. The withdrawal of Soviet forces from Iran, the removal of the Communist threat in Greece, the formation of the United States of Indonesia, the Palestine and Kashmir truces—each was considerably influenced by opinion developed within the United Nations. Such actions served the interests of the United States and the rest of the free world.

THE MIDDLE EAST

The recent developments in the Middle East are the latest reminder of the impact of the United Nations forum. For those who maintain that the United Nations is primarily a talking machine, the events of the last few months should have a special meaning.

Nowhere in the world in recent days has the danger and challenge been greater than in the Middle East. The United States has vital security interests there. When the attack was made on Egypt in October of last year by invading forces, there was need for quick and decisive action by the United Nations. Even though the General Assembly is a large and cumbersome body, public opinion was effectively mobilized.

And it achieved almost miraculous results. A cease-fire laid the groundwork for a subsequent withdrawal of forces. The United Nations emergency force took its position in the Suez Canal area and later moved to positions along the armistice demarcation lines. This force remains the guardian of peace in the touchy areas of Gaza and Sharm el-Sheikh today. The Suez Canal is once again open to normal traffic, having been cleared of its debris and wreckage by a United Nations salvage fleet of over 40 ships. These steps have created at least the minimum conditions for efforts which must be made if long-range solutions are to be found to the Middle East issues which gave rise to the fighting.

There are a great many legitimate criticisms of the United Nations. But fundamentally what is wrong with the United Nations is what is wrong with the world itself. The international atmosphere reflects the hatreds and injustices which are the legacies of thousands of years of wars and rumors of wars. No intelligent person could expect that the existence of an organization could quickly abolish the mutual suspicion and distrust built up over the years. What is significant is that so much has been accomplished in so short a time.

It is my personal conviction that the United Nations represents the greatest and most successful effort to achieve peace in the history of the world.

The states that make up the United Nations are a mixed lot. Some are democracies; some are dictatorships. Some are in bondage; some are free. A few are wealthy; more are poor. But in this amalgam of nations lies our only hope of a peace with any approximation of justice. We must never forget that our country belongs to the family of nations and that every one of us belongs to the family of man. Those who deny the need for a United Nations, either by their words or by their policies, should tell us frankly how we can survive alone in this increasingly interdependent world.

I know that study of the United Nations holds an important place in our school rooms. It deserves our continued sympathetic and critical analysis and support. Should the United Nations fail or our leadership in it falter in these critical days, one of the great bulwarks of peace would be overrun.

CONCLUDING COMMENTS

In conclusion, I should like to reassert my conviction that the problems and the opportunities I have touched upon have an important place in our schools. I believe it is time to put our school curriculums under the microscope to determine if at present they provide the instruments we need to train young Americans for leadership, not only in our own country but for the new and wider international life on which we are embarked.

In particular, I feel that formal education in our schools and colleges should not stop at the eastern end of the Mediterranean and pay relatively little attention to the great continents of Africa and Asia. For many years our school system has been geared to Western civilization. We can no longer afford to gloss over the rest of the world. If our foreign policy of fostering security and the growth of democracy throughout the free world makes sense, then we should know far more than we do about these farflung countries.

Here is a great and challenging task for Western education—to correct our unfortunate lack of knowledge concerning the life and thought of many millions of our fellowmen in foreign lands—of those who are for us, those who are against us, and those who are uncommitted.

Moreover, I feel that in our teaching we can only at our peril omit a hardheaded study of international communism.

Arnold Toynbee has made the point that all development, all progress, comes from a challenge and a consequent response. In world affairs the challenge is before us. The direction the free world will take depends, to a large degree, on the quality of our response and the understanding of our leadership. That response and the nature of our leadership in the future will depend on the education of our youth of this generation and the next.

On this centenary of the National Education Association I wish to express my deep appreciation for what your organization has already accomplished in bringing to the youth of America a better understanding of the world problems that face our Nation. If we hold to the principles that have made our past great and prepare ourselves for the challenge of the present, we should not fail to realize the promise of a future made safe for free men everywhere.

Forgetting Anti-South Prejudices

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 31, 1957

Mr. SPARKMAN. Mr. President, on July 17, 1957, there was published in the Valley Times, of Hollywood, Calif., an article entitled, "Forgetting Anti-South Prejudices." The article was written by Mr. George Todt. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FORGETTING ANTI-SOUTH PREJUDICES

(By George Todt)

"In the Negro countenance you will often meet with strong traits of benignity. I have felt yearnings of tenderness toward some of these faces."—Lamb.

What are some factors which might conceivably contribute to a happier solution of the Negro problem in the South, with reference to proposed civil-rights legislation present battle center in the Senate, than now seems possible?

I have hinted in previous articles at what might be considered serious suggestions to improve the climate for discussion among all elements which are party to the disputed action. Those who are genuinely interested in helping, not hurting, the cause

of American unity will be most likely to pause for reflection. After all, it's our country.

In the first place, men and women of good will naturally recognize that our real problem is always to heal differences which exist among us—but without engendering hatred in the process. Our mission is not to be one of destruction, but construction, instead. Any fool can tear an existing structure apart in a fraction of the time it took a wiser man to build it. But what is the purpose of destroying anything until we are ready to replace it with something better? Here the matter of timing must enter into our considerations.

Often it is possible for planners to foresee that great changes must become accomplished in the future—but that does not mean necessarily today or tomorrow. For the truth is that even the planners must await the proper timing of their endeavors. They must get approval of their plans, the money must be voted for their use, and they must secure the requisite preliminary steps before they can start the construction. Rome was not built in a day—and neither are social changes of far-reaching consequences which affect a whole people.

I think it is time we took a few basic facts into consideration insofar as the matter of integration of schools and accompanying social changes in the South may be concerned: maybe the social planners in this instance moved so fast they inadvertently placed the horse ahead of the wagon. Possibly their timing was off. Perhaps they forgot to lay the necessary groundwork before they gave the go-ahead signal for work to commence.

The salient feature of this case is simply this: the South has lived with it's own social system and way of life for many generations extending back into our past. It has made its share of contributions to the Nation—and they have been magnificent ones. Whether or not those who are anti-South will like to agree with this statement, it is a matter of record that the Southern way of life has worked for those who have lived there. It is not fair to ask them to change their ways almost overnight, as it were, and without their consent in the matter. What would we say if the shoe were on the other foot?

I think that what first needs to be done is to enter this realm of discussion without preconceived notions as to who is right or wrong—at least not to assume that the South is totally in the wrong, as many of today's super-liberals would have us believe. Nothing in life is all black or all white; there is right and wrong to be found on both sides of most questions which cause us to furrow our brows in deliberation.

The South is no better or worse than other sections of the United States—but she deserves a fair share of sympathetic treatment in this matter which looms so large in her future. She is not getting it in the press and other communications media in the United States today. There is what almost amounts to a blackout on anything which pleads the case of Dixie in the court of public opinion—but the opposition gets the red carpet treatment!

I am not arguing for or against integration here—what I am simply pointing out is that a great section of our country should not be browbeaten or forced to accept social legislation at bayonet point or under duress of any kind. If it has to be accomplished in such a manner, then we are not ready for it. It has to come from the heart or it will spawn hatred and ill-feeling all out of proportion to the negligible results obtained.

I think that we might all be in accord with the recent expression of the New York Times which concerned a proposed law aimed at discrimination. The newspaper admonished:

"Progress must be a matter of education and spiritual growth rather than a consequence of legislation."

If this is true in New York City—shouldn't it also apply in Dixie, as well?

H. R. 8002 Would Weaken Congress' Control Over Federal Expenditures and Increase Spending—Bill Moves in Wrong Direction and Should Be Defeated

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. EVINS. Mr. Speaker, the Citizens Committee for the Hoover Report is doing an excellent job of propagandizing—and while I personally, and I am sure other Members of the Congress have supported many of the Hoover Commission reports—their recommendation with respect to H. R. 8002, the so-called accrued Federal expenditures budget bill, will not accomplish the claims made for it.

A special committee of the House Committee on Appropriations has made an extensive study of this proposal and on March 21, this year, issued a strong report in opposition to it. The Members of the House who are receiving duplicate-type telegrams and carbon copy propaganda appeals for this measure should consider the report of this committee, headed by our distinguished colleague, the gentleman from Texas, Congressman MAHON. The report was fully adopted by the Committee on Appropriations and bears the endorsement of both Chairman CANNON and the gentleman from New York, Congressman TABER, the ranking minority member of the Committee on Appropriations.

Chairman CANNON and the gentleman from New York, Congressman TABER are known economizers and both have performed an outstanding public service during this session of the Congress, as in the past, in making substantial cuts in appropriations and reducing the biggest peacetime budget in the history of this country. These gentlemen know whereof they speak. The House should follow their leadership and not be pressured by misleading propaganda.

In response to numerous messages which I have received on this subject, I have written my own constituents and friends a letter of explanation on the effects of this bill. Under unanimous consent I include a copy of my letter in the Appendix of the RECORD for the information of those interested.

The letter follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 31, 1957.

Mr. GORDON WALHOOD,
Tullahoma, Tenn.

DEAR MR. WALHOOD: This will acknowledge and thank you for your letter of recent date with reference to the establishment of an accrual Federal Budget Accounting System.

I should be most pleased to support this legislation in the event the legislation would bring about modernized and improved budgeting and better accounting and control of expenditure of Federal funds, as the advocates of this legislation proclaim. However, I must advise that the legislation would provide for payment of Government accounts on an installment basis. As we all know, installment purchasing costs more in the long run than the original direct payment. The bill would, in effect, give the numerous executive departments unlimited authorization for purchasing and for contracting for purchases of commodities, materials or services desired on an installment basis in an unlimited amount, and then referring to the Congress in their annual budgets a report of the amount expended for the one year for which they are asking for appropriations.

In other words, the Departments would purchase by contract anything and everything desired and then send the Congress a bill each year for only the annual installment payment on their purchases. The House Committee on Appropriations has made a study of this so-called accrued expenditure budget proposal and issued a strong report in opposition to it on March 21. The bill would put the Government into installment buying, a practice which in personal operations has led millions of families into overspending.

Those who have studied the measure thoroughly are of the opinion that under this bill Congress would lose substantial control of appropriations and expenditures. Both Chairman CANNON of the House Appropriations Committee and Congressman TABER, the ranking minority member of the Appropriations Committee, oppose this legislation as unsound and unwise and not in the best interest of checking appropriations and limiting expenditures. They feel that the measure would actually cost the Treasury vast sums and not save a dollar. The bill would require the return to contract authority which hard experience over the years proved to be so expensive that the proposal was once tried but later abandoned.

I have supported a large number of the so-called Hoover Commission recommendations to effect economy but, in my judgment, this is one that will not provide for economy or reduction in Federal expenditures. To the contrary, it would in the long run mean increased appropriations and greatly increased Federal expenditures.

Perhaps you may be interested in a report rendered by the Secretary of Defense under date of June 27, 1957, in which he pointed out at great length that the so-called savings alleged to have been effected in the Department of Defense by the adoption of the Hoover Commission recommendations are vastly overstated and that no real basis exists to demonstate the claims for the specific savings cited by advocates of the Commission. As a matter of fact, following the adoption of a large number of the Hoover Commission recommendations this year the Congress has been confronted with the largest peacetime budget in the history of the Nation and the proposed heaviest expenditures in many years.

Therefore, instead of reducing expenditures, as the propaganda proponents insist, many of these recommendations have resulted in increasing the staffs of the Departments and resulting increased expenditures. Secretary Wilson, of the Defense Department, acknowledges this fact in his recent report and, as indicated, both Chairman CANNON and Congressman TABER admit that the proposal, concerning which you have written, will not accomplish the desired end sought. As indicated, to the contrary, the measure would result in increased appropriations and Federal expenditures, and I, therefore, shall oppose the measure.

I thought you would want me to write you frankly and furnish you with information in this connection.

With assurance of my desire to be of service and assistance whenever possible, and with kindest regards and best wishes, I am,

Very sincerely yours,

JOE L. EVINS,
Member of Congress.

Race Prejudices Common to North

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. SPARKMAN. Mr. President, on Tuesday, July 16, 1957, there was published in the Valley Times, of Hollywood, Calif., an article entitled "Race Prejudices Common to North." The article was written by George Todt. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Hollywood Valley Times (Calif.) of July 16, 1957]

RACE PREJUDICES COMMON TO NORTH

(By George Todt)

"Cast thy bread upon the waters: for thou shalt find it after many days."—Ecclesiastes, XI: 1.

How well I remember during my undergraduate days when I left my native Arizona habitat for a year of schooling in the Old South. From the lurid propaganda tales which I had sometimes read and heard about—it would not have surprised me too much to find evidence of violence and strife between the races on every hand. But nothing could have been further from the truth. It was just the opposite, in fact.

Courtesy and good feeling predominated everywhere—this was Oxford, Miss., incidentally—and I never once saw, heard, or read of a single instance of violence between white and black men. Sure, there may have been some that didn't come to my attention in the academic year of 1937–38. But the point I wish to leave with my readers is that I learned from on-the-spot experience that conditions were much different than had been pictured to me before I entered the South. Preconceived notions were invalid.

Now don't get me wrong. I would be the last to deny that there have been instances of injustices meted out to American Negroes. In fact, I have run into some. However, it was not in the Southern States of Mississippi, Virginia and Texas, where I lived for 3 years. It was, instead, in that great citadel of modern liberalism—and home grounds of ADA Vice President Walter Reuther—none other than the northern city of Detroit, Mich.

It was in Detroit that the bloodiest race riot in our history occurred back in the summer of 1943. Hundreds of Negroes were massacred at Belle Isle in a senseless orgy of murder and insane blood-letting. Martial law had to be declared there and the 9th Infantry Regiment, part of the 2d Division at Camp McCoy, Wis., had to be rushed into the city. I was just passing through at the time, but managed to have time to talk with some of the officers of the 9th—many of them southern boys, from Texas A. and M. and elsewhere in Dixie.

Their horrified disgust at what took place then is a vivid remembrance, something I shall never forget. The wanton slaughter of the Negroes in Detroit at Belle Isle was something they just couldn't begin to understand. How could it happen in America they kept asking?

"This is the sort of thing they like to accuse us of in the South," one young captain from Texas drawled softly to me with a hard glint in his eye. "But anyone who has ever lived among southerners, as you have done, must know that violence of this kind would be unthinkable. It just couldn't happen in Dixie."

To bring our sampling up to date, here is a more recent incident which bears some repeating. Just who is the real friend of the American Negro, anyway? If we consider the propaganda mill alone, we might be pardoned for thinking that his staunchest and most sincere support came from New York City. Ah, but have you heard the latest from there?

Well, this being an election year, Mayor Wagner and the city council had an eye out for minority political votes—so they proposed an antidiscriminatory law for the houseseekers. Included was a fine of $500 and possible contempt-of-court jail term for any landlord who turned down a tenant for reasons of race, religion, or national origin No mention of the right of a private property owner to rent to whom he pleases. But this seemed to be too much even for New York City to digest comfortably. Landlords, real-estate men, tenants and others just rose up en masse—and mail to the tune of 3 to 1 against the proposed law warmed the councilmen's hearts. Result: They quickly pigeonholed the measure.

Strangest note of all was sounded by the New York Times, ardent champion of any and all desegregation measures in the South. It seems that desegregation was a horse of another color when applied to New York City, however. Quoth the Times:

"The difficulties of enforcement are enormous, nuisance cases would be innumerable, and intolerance might be aggravated rather than diminished. * * * Progress must be a matter of education and spiritual growth rather than a consequence of legislation."

This is just what the southerners have been saying, themselves.

Hon. Nat Patton

SPEECH
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. MAHON. Mr. Speaker, I wish to join with my colleagues in mourning the passing of a great Texan, Hon. Nat Patton, former Representative in Congress, of Crockett, Tex. In 1934 four new Members of Congress were elected in Texas. Nat and I were among the four. In January 1935 Nat Patton appeared on the Washington scene, where he quickly made a place for himself in the hearts of his colleagues in Washington.

Nat Patton became a national figure. Everybody about the Capitol knew him. He loved life; he loved people; his good deeds were too numerous to be counted. He was devoted to his duty, devoted to the people he represented. He was an indefatigable worker in behalf of his east Texas constituents. He often worked in his office at night and he took a great personal interest in the individual lives of the people of his district. He kept in close contact with them. He served them well. No task was too burdensome for him if he felt there was a chance, even a remote chance, to be helpful to his fellow man. No work, however, seemed to be burdensome to him. He worked with a willing spirit and a light heart.

Mr. Speaker, I want to pay tribute to the memory of my departed friend and extend my deepest sympathy to his wife and other members of the family.

Coverup in Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD two outstanding columns which have been written by Mr. George Todt on the subject of the so-called civil-rights bill now pending before the Senate. Mr. Todt writes for the Valley Times of Hollywood, Calif. These articles appeared in the July 26, and July 27 issues of the Valley Times.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Hollywood Valley Times (Calif.) of July 26, 1957]

THAT COVERUP IN CIVIL RIGHTS BILL

(By George Todt)

"There lives more faith in honest doubt, believe me, than in half the creeds."—Tennyson.

Grave doubts are now arising on many sides as to just what was the true intent of the so-called civil-rights bill presently before the Senate. We were told in the beginning that it was designed to insure the voting rights of Negroes in the South. Today it appears, however, that the primary purpose of this doubletalk legislation was to integrate southern schools—by force, if necessary. This is brotherhood?

Yes, true brotherhood—according to the Attorney General's department, which drafted the controversial bill. And, in order to obtain its blessings, we are supposed to chuck trial-by-jury out the window, be placed at the mercy of volunteer snoopers with axes to grind, and subject to bombs and bayonets if a proposed civil-rights czar so ordains it.

Have Americans lost their reason to even countenance such preposterous and vicious nonsense? Have we become so fat and rich with the passage of time that our senses have also become dulled in the process? Do we still believe in our constitutional Republic? If we do, then we will never attempt to build justice upon injustice. Two wrongs cannot make a right. For, as George Washington said, "Heaven itself has ordained the right."

It is time that every American awoke to the insidious possibilities presented in the almost-buried-out-of-sight provision of the bill which would empower the President to use troops in the Southern States to force

integration of schools and other civil rights. Why was this done in such a devious manner—perhaps tricky would be a better word for it—which amounted to turning part III of the bill into an amendment of Reconstruction Act 1885 and then carefully bypassing the Senate Judiciary Committee, which would have been empowered to have questioned witnesses about the bill's intent and purpose? Constitutional questions could have been settled in committee before attempting to ram it through the Senate. Senator WAYNE MORSE of Oregon recently complained about this very item to the Senate on July 17, and his position was very well taken. (See CONGRESSIONAL RECORD, p. 10823).

Senator MORSE said he was concerned with the fact that this controversial section III "strengthens the trend in this country toward a government by the Executive."

Senator RICHARD RUSSELL put his finger on the mainspring of trouble regarding the civil-rights bill on a CBS Face the Nation television broadcast on Sunday, July 21. "Under this proposed legislation," he said, "the Attorney General would have too much power."

The following day the courageous southern champion received help from an unexpected quarter, one of the administration's stanchest supporters: Senator LEVERETT SALTONSTALL, of Massachusetts. Said ex-Governor SALTONSTALL: "I speak feelingly on this because, as Governor, I felt the impact of Federal dictation." Then he went on to say that, "We violate one of the cardinal principles on which our Government is founded—home rule," if we were to permit the Attorney General to go into local areas to enforce civil rights as indicated in the bill. Chances seemed excellent that this dangerous item might be scrapped.

But the most inflammatory issue before the Senate regarding civil-rights legislation concerned possible loss of trial by jury. Despite attempts to downplay the importance of this constitutional liberty, many Senators were taking a long, hard, second look. Listen to the eloquent words of Senator ESTES KEFAUVER, a great liberal thinker and nominee for Vice President on the Democratic ticket last November:

"When people are brought into court for the purpose of prosecuting them criminally, we are doing violence to the great heritage left to us by those who worked so hard for our freedom when we argue against giving people, under those circumstances, the right to trial by jury.

"We may be assured that if this right is taken away in criminal-contempt cases, in civil-rights cases, efforts will be made to take it away in labor and other cases. If we deny a person a great right merely because there may be a miscarriage of justice, we shall soon be denying the people every right, because, as I have tried to point out, the decisions of judges are not perfect. The decisions of juries are not perfect, but certainly the decision of 12 people in a criminal case will, in most cases, be more nearly perfect than the decision of 1 man. That is in accordance with our American common-law system of justice."

It seems to me that either the Constitution guarantees certain inalienable rights to us, or it doesn't. If, through arbitrary expedience, a power clique in Congress takes away our right to trial by jury today, where will this end tomorrow? Can we permit the camel of centralized Federal authority to poke its nose under the tent of localized home rule? In short, could a mighty oak of tyranny grow out of the little acorn labeled "loss of trial by jury"? Isn't it something for us to think about?

[From the Hollywood Valley Times (Calif.) of July 27, 1957]

SOUTHERN NEGROES' PROGRESS RECORD

(By George Todt)

"Judge not, that ye be not judged."—Matthew, 7: 1.

How do you draw up an indictment against a whole people? A great British statesman once said it couldn't be done. Apparently such thinking and that produced by the Attorney General's Department in these modern United States doesn't coincide. For the latter has, in writing the controversial civil-rights bill, decreed that southern people are not fit to have jury trials under certain conditions. Is this fair?

The recent trial at Clinton, Tenn., ought to knock this discriminatory argument into a cocked hat. The southern all-white jury which returned a verdict of guilty against 7 of the 11 defendants even won applause from northern extremist pressure groups for its fairness and reason. Southern prosegregation extremists, on the other hand, were miffed.

Here was a test case which the entire Nation had been instructed to watch—particularly those who have drummed up a "Hate the South" campaign ostensibly in the interests of brotherhood, compulsory style. Well, we have observed this showcase, at long last, and the southerners acquitted themselves with flying colors. It now remains to be seen whether some of their overzealous opponents will have the sportsmanship and good taste to call off their dogs. Forty million southern people deserve a fair shake all the way around.

Many of us have been sickened at the vicious attempts to portray the South as something akin to an oversized concentration camp, where persons of African descent are forced into an involuntary second-class citizenship which is both backward and uncouth. This is what certain superliberal propagandists would have us believe to serve their own selfish political ends. But there is certainly another way to look at it.

Recently I watched Senators RICHARD B. RUSSELL, Democrat, Georgia, and JOHN L. MCCLELLAN, Democrat, Arkansas, take on Senators PAUL DOUGLAS, Democrat, Illinois, and JACOB JAVITS, Republican, New York, in a civil-rights debate on television. The latter presented telling and powerful arguments—Senators JAVITS is a most gifted speaker on TV and possessed of a brilliant legalistic mind—but it was something Senator RUSSELL said which caused me to prick up my ears the most. It was such a homely little truth, so completely down to earth, that no wonder it has been largely overlooked. Genius is simplicity. And the Senator from Georgia had it. This is what he said:

"Where in any 92-year period of the earth's history has the Negro race made so much social and economic progress as he has in the Southern States since the end of the Civil War?"

Where, indeed, in the entire 5,000 years of man's recorded history? Where upon this planet can we find Negroes by the millions better off than they are today in the South? In Africa? Asia? or Europe? The answer is—hardly.

The truth of the matter is that the people of the South, far from being the Negro's enemy, have been his greatest friend. Now let's forget about the rabble-rousers, trouble-makers, and agitators of all descriptions who have made this issue a political football among ambitious minority leaders and pressure groups. Let's look at the matter as seen from the viewpoint of someone without an ax to grind. And in the South, itself.

In the first place, the problems of the South regarding racial integration are much more monumental than in other sections of the country. This is simply a matter of elemental arithmetic. Where other areas speak of their Negro populations in the thousands or even hundreds of thousands in a few instances—Southern States count theirs in the millions. Integration may be made to appear quite easy where there is only a relatively small minority to be assimilated—as in many of the Northern and Western States. A lot of this argument is bound up in whose ox happens to be getting gored at the time.

Faced with a much larger problem than elsewhere in the Nation, the southern people have demanded that they be allowed to keep their traditional way of life—local home rule—but at the same time they have taxed themselves with a vengeance to provide the material needs of southern Negroes without stint or lack of affection for their dark-skinned friends.

In many areas, facilities for the latter are better than those provided for whites. Again, the truth of the matter is that the southern Negro has come a long way in the history of his race—and the major portion of such progress in these modern times has been made right in the South, aided and abetted by his sympathetic and friendly white fellow citizens. This may cause some raised eyebrows among those who have never been in the South, but the American Negro has been far happier and contented in Dixie than anywhere else in our country.

How otherwise explain the fact that by far the preponderant portion of our Negro population has elected to remain in the South today, as well as yesterday? Why haven't these people come away to the States which preach integration but practice segregation on the side? Where is the general exodus? Can it be that the majority of the American Negroes realize that they are being made into a political football and want none of it? Or is it that they have been far better treated in the South than has been generally recognized—and that the real reason they stay there is because they realize Dixie has been good to them?

Having talked with these people in the past when I was in the South, it is my own definite impression that Negroes there loved their white folks and friends, and were loved and respected by them in return. It is strange that all this "Hate the South" emanates not from the southern Negro, himself—but from pressure groups outside the South. How do we explain this factor? Who has political axes to grind? What is behind it?

Shortage of Hotel Facilities in Europe

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, July 31, 1957

Mr. WILEY. Mr. President, very often, these days, we read articles in the newspapers and magazines rightly praising the vital role which is played by increased American tourist travel abroad.

The vast flood of foreign travel not only improves understanding of America and by America, but it helps very directly

in providing needed dollars to dollar-short foreign countries.

This is a key point which is made in an article which I have in my hand which was written by Mr. Ralph T. Reed, president of the American Express Co.

It is a point which I have personally made in talks at home and abroad, since the war.

PAINLESS FORM OF FOREIGN AID

Literally millions of Americans, especially young people and students, are eager to see European, Asian, and South American countries. The dollars which they spend abroad provide a tremendous tonic to foreign economies. This constitutes a relatively painless form of foreign aid.

For example, the vast tourist industry is Britain's No. 1 dollar earner.

DISMAL ACCOMMODATIONS FOR TOURISTS

Yet, the plain, blunt fact of the situation is that most foregin countries are woefully inadequate in planning accommodations for American tourists. As a result, travelers are jammed into obsolete, inadequate facilities.

But if these foreign countries acted to provide better facilities for the tourists, they would find that they are earning far more tourist revenue, in addition to creating a much better impression of their own countries.

The shortage of hotels in Western Europe is particularly acute.

For example, in all of England, but one new hotel has been built in the postwar period, according to a recent U. S. News article.

The shortage in Italy and France is likewise serious.

POSTWAR REBUILDING PROBLEM

Naturally, we can well understand the rebuilding problem of many of these countries. They suffered tremendous damage to their buildings during World War II. Each of these hard-pressed countries has had to concentrate on their highest priority construction needs, replacement of bombed-out homes, for example.

Nevertheless, it would be to these countries' own self-interest if they would now use American-style mass construction to improve the availability of hotel rooms.

I mention this fact not for the principal purpose of seeking greater comfort for the American traveler although that is certainly desirable. Rather, I mention it, basically, in the interest of increasing the tourist income of foreign lands, and making sure that the American who goes abroad has the feeling that he is truly welcome.

SEEING AMERICA FIRST

Of course, as I have always pointed out, I hope that the average American will see his own country first. I hope that he will get acquainted with the magnificent sights of his own great Nation, including for example the many tourist attractions of my own home State.

But I know that millions of Americans want to go abroad, as well, and it is for that reason that I make this suggestion today.

EUROPE SHOULD HELP ITSELF AND USE AMERICAN KNOW-HOW

Western Europe can hardly expect Americans to be sympathetic with Europe's economic problems if it does not do more in its own self-interest.

Fortunately, American hotel companies and our construction industry as a whole are ready, willing and eager to help finance, build, manage and/or lease foreign hotel facilities. Already, under American auspices and joint United States-foreign auspices, several beautiful new hotels have been built in Istanbul, Caracas, Bogota, Mexico City, Madrid, Panama City, and elsewhere.

Often however, existing foreign hotel owners seem to want to enjoy their present monopoly of hotel space, and many foreign unions seem to prefer their ancient building methods to efficient, modern American processes.

The result is that Europe is losing out. It would be far better for Europe's own self-interest to cooperate with American business wholeheartedly.

But whether Europe, Asia, and Latin America do the job themselves or with American know-how or money, the important thing is that the construction job be done.

I send to the desk the text of the U. S. News article from the July 26th issue as well as Mr. Reed's article from the May-June 1957 issue of Systems magazine. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE OTHER SIDE OF A VACATION IN EUROPE

Tip to tourists: If you're going abroad, better make sure you can get a place to stay.

Hotel shortage in Europe, long a problem, is becoming acute. There's a need for thousands of new rooms at peak seasons.

With travel increasing year by year, the situation is almost sure to get worse. And little is being done about it, so far.

It is going to be harder and harder for Americans to vacation in Europe from now on, despite the fact that it is becoming much easier to get there.

Record-breaking numbers of tourists, flocking across Europe this summer, are finding hotel rooms harder to get and highways more jammed than ever before. The squeeze is to get much worse before it gets better.

Country after country in Europe is discovering that it simply does not have the hotel space to accommodate today's crowds of travelers. With construction of new hotels virtually at a standstill, it is going to be nearly impossible for tourists to find living space in the period just ahead.

By 1960, Europe will be deluged with 50 million tourists, a jump of more than 50 percent over this year. The American Automobile Association predicts 1 million of them will be Americans taking their vacations on the other side of the Atlantic, double the number going to Europe this year.

The age of the jet air transport, scheduled to begin in 1960, will make it still easier for Americans to get to Europe. Instead of taking 14 hours to fly to London or Paris, the new planes will make the trip in half the time. New ocean liners—some designed to carry only tourist-class passengers at low rates—will be coming into operation, too.

By the early 1960's in other words, Americans will be able to get to Europe in half the time and often for much less money than they can today.

Whether they'll be able to find a place to stay once they get there is something else again.

Already, there are too many tourists in Europe during the summer months for the number of hotel rooms available, according to the Organization for European Economic Cooperation. "Difficulties are bound to become worse," says the OEEC, "if tourist travel increases over the next few years to the extent indicated."

To avoid a real crush, European travel experts estimate that a minimum of 72,000 additional hotel beds will be needed by 1960 in capital cities such as London, Paris, and Rome. In the main tourist areas outside of the capitals, a bare minimum of 10 percent more hotel space is urgently required, even assuming that, as more Americans of lower incomes travel in Europe, they will occupy hotel rooms for shorter periods than today's tourists do.

Trouble is, nothing like this amount of construction is now in sight.

SCRAMBLE IN FRANCE

Only a handful of new hotels has been built in France since 1949. Outside of Paris, the French have increased available hotel space just 10 percent in 7 years—a period when American vacationers were flocking to their country. In Paris itself—a city visited by practically every tourist who goes to France—there has been a microscopic 1 percent increase in the number of hotel rooms since 1949.

Yet France was host last year to 4.3 million tourists, a 400 percent increase over prewar days.

Even now, Americans are beginning to skip France on their European tours because of the hotel shortage. To avoid losing the dollars American tourists bring with them, the French Government is trying to stimulate hotel building with a low-cost loan program. It hopes to add 60,000 rooms by 1961. But the travel people are skeptical that this goal can be reached at all, much less in time to accommodate the new hordes. Right now, for example, only one major new hotel—to be built by the Government—is planned for Paris.

CONFUSION IN BRITAIN

Desperately short of dollars, the British are letting their biggest dollar earner, the tourist industry, sink into serious trouble for lack of hotel space.

This year there will be a scramble to find rooms for the 300,000 Americans and the three quarters of a million other tourists Britain expects. Unless more hotels are built, and built quickly, officials expect Britain to lose its share of the crowds that will want to come when the jet age begins. "The American visitor," says one British banker, "may look forward to seeing the Tower of London, but he doesn't expect to sleep in the moat."

In London, which lost 20 hotels to German bombers during World War II, only one new hotel has been built in postwar years—and that by an American company. The only new hotel presently contemplated for London is a 32-story building planned by another American chain.

Yet Britain needs, as an absolute minimum, 5,000 additional hotel rooms to handle its present number of tourists.

The drawback in Britain is that nobody except people in the travel business seems to be much interested in increasing tourist accommodations. Many businessmen dislike hotels as investments because it is hard to keep them full the year round. The Gov-

ernment, trying to hold down inflation, discourages the heavy outlays of capital needed to build hotels. And some officials say privately that they would rather limit tourist facilities to those who can afford to spend a lot, instead of opening up the country to crowds of people who spend relatively little per person.

NIGHTMARE IN ITALY

If the British are reluctant to build new hotels, the Italians are running them a close second. Italy's shortage of hotel rooms now is estimated by the government at 127,000. Rome alone needs a minimum of 3,000 more rooms to handle the demand expected in the next 3 years. Yet, when one American company wanted to build a modern hotel in Rome, it was balked by opposition from Italian hotel owners.

Hotel building in Italy is being done mainly because of prodding by the Government. Loans to aid in building 192 hotels with 7,500 rooms are being made from the public purse. Whether they will be built in time to take care of the expected crush of tourists remains to be seen. There were 13,000 hotel rooms in Rome in 1949. There are only 14,000 today.

HOPE IN GERMANY

It is a different story in Germany. Only in that country do you find hotel building anywhere near adequate for the numbers of tourists. There were 485,000 hotel beds in 1938 in the area that now constitutes West Germany. In 1947, with most of the country in wreckage as a result of the war, hotel beds were down to 134,000. Today, there are 550,000.

It's still difficult to find hotel space during the height of the tourist season in Germany. But German officials expect new construction to match the 10 percent increase in the number of tourists expected over the next 5 years, after which the tourist boom is expected to level off.

A SOLUTION?

One possible answer to the hotel shortage in Europe—roadside motels—is only beginning to be explored. Italy as 82 built or planned, but there are only 8 in Britain, 3 in France and none in Germany. They are just as hard to find in the other countries.

Luxury hotels, built by American companies, are sprouting here and there in the European capitals. London has one and Madrid has another. Still others are planned for Berlin, Athens, Rome, Vienna, London, and an as-yet-undesignated city in Scotland. But the space they will provide will not go very far in relieving the acute shortage of hotel rooms American tourists are to encounter in Europe from now on.

THE BUSINESSMAN ABROAD

(By Ralph T. Reed)

Foreign trade and investment promote security and prosperity at home.

These words have the agreement today of almost all broad-thinking men of affairs. The extent of our overseas business and investment bears testimony to its importance where all Americans are concerned.

One form of international trade that has undergone a great growth in recent years, and has become vitally important for several reasons, is international tourism. Perhaps it may surprise some to think of tourism as a form of trade, but in reality it is a vast, diversified industry, involving many necessary functions and many separate areas of business activity.

Most important, though, international tourism plays a significant role in promoting America's security and prosperity.

This year alone it is expected that the United States tourist will spend upwards of last year's $1.2 billion in foreign carriers. These expenditures are enough to pay for almost a tenth of all the merchandise we sell to these countries. They are equivalent to about 12 percent of the revenue secured by overseas nations from imports coming into the United States.

Meanwhile, we hear almost daily of new developments which should have startling effects on the coming development of international travel—assuming a degree of world stability.

With transportation improving so rapidly, a weekend in Jamaica or weekend in Europe can become an active reality for many tourists. Many other resort and travel areas, before restricted to the traveler with a month or two to spend, will soon be open to the 2- and 3-week vacationist. And much of the time which he now spends getting to these areas he will then enjoy in them.

It should not be forgotten that the billions thus spent abroad are not aid dollars. Rather they are voluntary consumer expenditures in the open market—value given for value.

BETTER FORM OF AID

While direct United States aid continues to be a necessity in certain areas, we can all agree that this kind of free functioning of economic demand and supply through tourism is a far superior form of dollar stimulation for any nation today. It's a healthy sign when the one can replace the other. The benefiting nations develop a greater self-sufficiency and initiative from such revenue, secured through their individual efforts. The revenue itself moves quicker and more spontaneously into commercial channels.

For every American businessman, this means a lot. It means more dollars for the purchase of American exports. It means increased capital investment in local industry abroad. It means greater demand for American goods overseas, and for foreign goods by our returning travelers.

Put in another way, travel dollars have a way of returning home as trade dollars.

There is a second major factor involved. Everyone has heard the old saying that "ideas seldom respect the boundary lines of nations." This has never been more true than today.

Ideas in this age move with the speed of sound—literally. In the course of a very few years, the mass communications mediums have become an intimate part of our daily lives and the lives of millions around the globe.

Among other effects, this condition has stimulated a tremendous curiosity throughout the world about America and American values. Our uniquely high standard of living, as well as our traditions of liberty, cause intense interest in many quarters which used to have only a vague curiosity. Among some we find misconceptions about our country; among others even some antagonism. But we never find lack of interest.

One might say that we suddenly find ourselves on stage, under a world spotlight, being asked to explain the values we live and work by.

Under such circumstances, our words and actions as American businessmen have a close connection with our country's future well-being. For better or worse, we bear a very considerable responsibility.

There are significant signs that this problem of communicating America's aims to our friends and business colleagues abroad is today receiving the attention it deserves. Recently, President Eisenhower called a meeting in the White House of 60 Americans, representing all phases of business, professional, artistic, and religious life, to develop a program of intensified people to people contacts with our friends abroad, with a view to telling our story more effectively wherever misunderstandings exist.

With all the tremendous powers of the mass communications mediums today, it's a reassuring fact that the most effective means of communicating our values and principles to others continues to be through casual conversations between one individual and another. The American tourist abroad is given constant opportunities to talk with citizens of countries he's visiting.

In general, American tourists seem to have been doing a far more effective job of making friends abroad than they're given credit for. This particularly applies to representatives of United States companies traveling abroad professionally.

The American businessman is usually successful in establishing very friendly and personal relationships with his opposite number abroad. Meeting on the familiar grounds of commercial operations, he can show most clearly his ability to give and take, to respect the other man's point of view, to work out a relationship that benefits both parties. Such contacts do more than anything to eliminate the false notions of American business which still linger.

But, of course, the volume of business travel abroad has its limits. There are many other groups whose numerical strength is far greater and whose help is vital in building proper respect for the values of a free society.

Student travel is one of the best forms of insurance we have against future stagnation of the mind. These young people are the best of our country. We want them to travel more, and we want students of other government groups to encourage exchange.

PROPER WELCOME HERE

Travel by foreigners to our own country is a subject which only recently has begun to receive the attention it deserves. While exchange barriers in many countries limit at present the volume of such travel, there is much effective work which can be done to publicize the attractions of the United States abroad to those who can travel. We can also make sure that these friends from abroad are given a proper welcome when they get here.

Finally, and most important, we should at all times keep in mind that we are out not only to build long-range overseas markets and sources of supplies for ourselves alone, but we are out for the strictly humanitarian motive of developing and increasing the general welfare of everyone everywhere. With these motives in mind, we will find that intercontinental travel and trade appear to be just about the best insurance we have against another form of intercontinental exchange—the intercontinental missile.

The Lease-Purchase Building Program Will Cost $750 Million More Than Direct Appropriation Method, and Will Destroy Historic Lafayette Park

---

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, July 12, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I testified before the Subcommittee on Public Buildings and Grounds of the House Committee on Public Works on February 28 this year in support of an amendment to H. R. 4660 which provided ways and means for building better and more efficient public buildings. H. R. 4660 is now before the House as S. 2261 as amended.

It is my belief that the Federal Government should take as much care in building its public buildings as private industry does. I do not think that the same care and planning is going into Federal buildings as goes into, say, any of the great buildings being built in New York City and other cities throughout the country.

I have been concerned, as have others, about the lack of any building under the lease-purchase program. One hundred and forty-six buildings have been approved by the Public Works Committees of the Senate and House for construction under the lease-purchase program, yet today only 1 building is under construction after 3 years. Surely 3 years is long enough to demonstrate the worth of a program.

There has been a great deal of talk about economy, yet here is the administration recommending a construction program—the lease-purchase program—which costs the taxpayers at least 75 percent more per building than the same building would cost under the method of direct appropriation. This is due to the higher interest rate and the payment of taxes on Federal buildings constructed through lease purchase. This policy is unwise, unsound, and is a departure from all previous policy of the Federal Government.

The chairman of the Subcommittee on Public Buildings and Grounds, the gentleman from Alabama [Mr. JONES], pointed out in a speech he made on this floor on Friday, July 19, that—

An analysis made by the General Accounting Office at my request shows that the lease-purchase program for the 146 projects approved by the congressional committees would cost more than $750 million—that is right; three-fourths of a billion dollars—in excess of what the cost would be under the direct appropriation method. Those are the GAO figures.

There has been a great deal of talk about economy by various Members of this body, but it seems to me that right here is one place to begin economizing and it is for this very reason of economy that I strongly support S. 2261 as reported by the Committee on Public Works of the House of Representatives.

I frankly do not see how we can go back to our districts and justify our support of a lease-purchase program that will cost such enormous and unjustified sums in interest.

The bill reported by the House Public Works Committee with amendments, S. 2261, provides that all of the projects approved under lease-purchase shall go forward under direct appropriation with the exception of six buildings in the District of Columbia and a post office building in Illinois. One of these six buildings, Federal Office Building No. 7, General Services Prospectus No. 3–DC–05, planned for the west side of Lafayette Park in the area bounded by 17th Street, Pennsylvania Avenue, Jackson Place, and H Street should, I think, be given much more thought than has been given it so far by the Executive agencies involved, particularly the General Services Administration and the President's Advisory Commission on Presidential Office Space. Many distinguished civic and cultural leaders, architects and others have suggested that this Federal office building be confined to the 17th Street, Pennsylvania Avenue, and H Street sides of Square 167 and I happen to think and believe that this is a really excellent solution of the matter, since it would leave historic Jackson Place undisturbed.

I am, therefore, considering offering the following amendments to S. 2261 when it is under active consideration on the floor of this House in the hope that it will lead to a second look and a more constructive—and less destructive—building plan being put forward by the General Services Administration. Especially, I feel, will this be so if the Public Works Committees of the Senate and House are given an opportunity to go over the plans for this building again.

AMENDMENTS TO S. 2261, AS REPORTED

Page 9, strike out the following: "Federal Office Building—FOB No. 7—(Veterans' Administration), 3–DC–05."

Page 12, line 3, after "1954," insert the following: "other than the project known as Federal Office Building—FOB No. 7—(Veterans' Administration) which has the General Services Administration Prospectus No. 3–DC–05."

Page 13, imediately after line 7, insert the following:

"SEC. 5. The Administrator of General Services shall make such improvements, alterations, additions, and repairs to the old State Department Building situated on the southeast corner of the intersection of Seventeenth Street and Pennsylvania Avenue NW., Washington, D. C., as may be necessary to make such building suitable for use as an office building by the President of the United States, except that no such improvements, alterations, or repairs shall materially alter the appearance of the exterior of such building. No appropriation shall be made for any improvement, alteration, addition, or repair authorized by this section if it has not been first approved by resolutions adopted by the Committee on Public Works of the Senate and of the House of Representatives, respectively, submitted in accordance with subsection (b) of the first section of the act entitled 'An act to provide for the construction of certain public buildings, and for other purposes,' approved May 5, 1926, as amended."

These amendments would remove this Federal office building—FOB No. 7—from the list of buildings which the reported bill S. 2261 would permit to be constructed under the lease-purchase program and exempts it from the provision approving for construction by direct appropriation all buildings heretofore approved for construction under the lease-purchase program. Further, they add a new section authorizing the Administrator of General Services Administration to alter, repair, and otherwise modernize the old State Department Building without altering its exterior appearance in order to make it suitable for an office building, and with the added requirement that the plans for such renovation and reconstruction be submitted to the Committees on Public Works of the Senate and House. This building can, of course, be built by the direct appropriation method under my amendments if it is resubmitted to the Public Works Committees of the Congress and approved by them.

Language was written into the independent offices appropriation bill preventing the General Services Administration from using any of its funds during the current fiscal year for the preparation of drawings and specifications, the acquisition of sites, or the design, planning, construction, or development of plans for a Federal office building at the west side of Lafayette Park which has been recommended to the Congress for housing an expanded White House office staff. The plans for this building have not been definitely formulated and it was felt that there was no need for the Government to take over at this time the national headquarters of the National Grange and otherwise proceed to take irretrievable steps to alter beyond recognition one of the historic sites of the Nation without giving thought to the many important values involved.

The expansion of the White House offices also calls for razing the historic State, War, Navy Building, and there is a blazing controversy going on over this proposal also. I would like to include at this point some newspaper articles which will delineate this controversy for us:

[From the Washington Post and Times Herald of March 2, 1957]

PLAN OFFERED TO SAVE HOMES OF LAFAYETTE SQUARE—NATIONAL TRUST SUGGESTS RESTORING HISTORIC SITES AS BLAIR HOUSE ANNEX

(By Jean White)

The Government was called upon yesterday to restore the old spirit of Lafayette Square when once-elegant homes along historic Jackson Place are razed.

To clear way for a $27.4 million office building, the Government has taken title to 9 parcels of property along the street flanking the west side of Lafayette Square. Decatur, Blair, and Blair-Lee Houses would be spared in the block, the Government said.

Yesterday Richard H. Howland, president of the National Trust for Historic Preservation, urged that several of the mid-19th-century mansions also be saved. These, he said, could be worked into the design of the new building.

If restored, several houses at the south end of Jackson Place, he wrote members of the group, could serve as a much-needed bedroom annex to Blair House, just around the corner on Pennsylvania Avenue.

And architecturaly, he emphasized, the restored mansions would be an effective counterpart to Decatur House, at the other end of the block, a generation earlier in style.

The trust decided earlier not to protest the Government plan since Jackson Place already had lost several of the mansions from its day of elegance as one of the Capital's great residential streets. Three houses were scheduled for demolition for a private office building.

Howland said the trust will urge that the new building's facade on Jackson Place reflect the original concept of Lafayette Square. This side, he said, should be comparable in height and texture to Decatur House.

The trust also has its own personal problems with the Government move, Howland pointed out. It will have to move from its headquarters at 712 Jackson Place by May 1 to escape paying Government rent retroactive to January 25.

"We would like to receive a well-located historic or architecturally significant property in the Capital as a gift," Howland wrote.

[From the Washington Post and Times Herald of March 15, 1957]

LAFAYETTE SQUARE PLAN OFFERED

A Washington architect recommended yesterday that the residential aspect of Jackson Place NW. be preserved in planning Government office structures in the block.

Frederick Gutheim, of Dickerson, Md., writing in the current issue of Progressive Architecture, said this would be the best solution in trying to preserve the once fashionable street and yet answer pressing demands from the White House and its agencies for more working space.

Gutheim said "tall office buildings that have been allowed to intrude on Jackson Place could be replaced with structures in residential scale." However, he said, "suitable private organizations such as the National Trust for Historic Preservation, should be permitted to occupy these structures.

One such structure might serve as an official residence for the Vice President, he suggested.

The Government is planning to build a $27-million office building in a block bounded by Jackson, Pennsylvania Avenue, and 17th and H Streets NW. All existing buildings, except Blair and Blair-Lee House and Decatur House, would be torn down.

Gutheim said a "frankly utilitarian structure—about all we can expect of Federal building in these preoccupied and uninspired days—could be allowed" on the 17th Street side.

As Gutheim saw it the pressures for the Government office building stem from the White House organization and its vast expansion by the Eisenhower administration.

A staff expansion of unprecedented magnitude was required by the Eisenhower way of doing business at SHAEF headquarters during World War II and at NATO, according to Gutheim.

[From the Washington Evening Star of May 27, 1957]

TWO SPEAK UP TO SAVE STATE-WAR BUILDING

The two House Members of a Presidential Commission named to find more White House office space are set against razing the old State-War-Navy Building.

Representatives SMITH, Democrat of Virginia, and MCGREGOR, Republican of Ohio, both oppose a majority report of the commission to replace the landmark.

They are bound to win powerful support in the economy-minded House, whose Speaker RAYBURN also has spoken out against any effort to obtain funds to tear down the building.

The Commission report is at the printers, Robert V. Fleming, who heads the 7-man group, said. It is expected to be made public by the White House next Monday.

OTHERS FAVOR DEMOLITION

All the other Commission members were understood to favor demolishing the 19th century structure at 17th Street and Pennsylvania Avenue, NW.

But the House Representatives signed the majority report only after razing was approved "when economically and financially feasible," it was learned.

"I feel that at this time it is not economically feasible to tear the building down," Representative MCGREGOR said. He estimated razing costs at $6 million.

Though he said he recognized the cramped quarters at the White House were deplorable, he also stressed that Congress must call a halt to expanding executive staffs.

"If we keep giving space to White House employees, I have the feeling that the executive branch will keep hunting people to fill it," he added.

HISTORICAL VALUE DEFENDED

Representative SMITH, interested in the historical value of the old building, said, "It would be a shame to tear it down."

Many architects defend the granite structure with its elaborate cornices and chimneys, while others scorn it, he noted. But he said it represented a period of American architecture that might well be maintained.

Mr. Fleming declined comment on the Commission report, or on his own personal view of the old State controversy.

But he was understood to favor replacement along with other Commission members, Senators CHAVEZ, Democrat of New Mexico; and HRUSKA, Republican of Nebraska; General Services Administrator Franklin G. Floete and Douglas William Orr, New Haven, Conn., architect.

What are the historic values involved, it may be asked? They are set forth in Public Law 292, 74th Congress, approved August 21, 1935, known as the Historic Sites Act, "That it is hereby declared that it is a national policy to preserve for public use historic sites, buildings and objects of national significance for the inspiration and benefit of the people of the United States."

These then are the values that are involved, and our national policy regarding them is clear.

I sponsored legislation in the 84th Congress appropriating funds to complete the historic buildings and sites survey authorized in the Historic Sites Act of 1935. Shortly thereafter Department of the Interior officials advised me they would request funds for this purpose in their budget if I would not insist on my own measures. They were true to their word and I am glad that the Congress appropriated $139,265 for the survey of historic American buildings, and $92,930 for a survey of historic sites as requested in the Interior Department appropriation bill for 1958.

The Director of the National Park Service, Conrad L. Wirth, advised me under date of July 19 as follows:

Now that the Department's request for funds for the current fiscal year has been approved, we are turning our attention to the immediate task of organizing personnel and procedures for the nationwide study (of historic buildings and sites). In view of the task ahead, and the great interest throughout the country in historical conservation, we are anxious to start the survey as soon as possible. We appreciate your interest in the preservation of our Nation's important historic sites.

I include at this point for the information of my colleagues some of the correspondence I have received as to the importance of the White House-Lafayette Park area:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
NATIONAL PARK SERVICE,
Washington, D. C., April 1, 1957.

Hon. FRANK THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. THOMPSON: We have read with interest the mimeographed statement issued from your office for release on April 21, bearing on the question of a new Federal office building in the vicinity of the White House for use of the executive department, which was enclosed with your letters of April 22 and 24.

Your efforts in behalf of historic preservation throughout the country and here in the Nation's Capital have been helpful and we appreciate your strong interest in this subject. We are taking cognizance of the fact that you are concerned over the prospect that the historic setting of the White House and its immediate environs may be drastically changed by the construction of new Federal office buildings.

As you know, the National Park Service plans to make a study under the Historic Sites Act of 1935 regarding the several sites you mention provided funds therefor are made available. It would therefore appear proper, as you have done, to call the attention of Mr. Fleming, Chairman of the Presidential Commission, to the act and to the policy it establishes.

With best wishes.

Sincerely yours,

CONRAD L. WIRTH,
Director.

UNITED STATES
DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., May 13, 1957.

Hon. FRANK THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. THOMPSON: Two press releases issued from your office on April 21 and 26 have been reviewed as you requested.

Your continuing interest in the preservation of historic structures is appreciated. We note from the two releases that you have quite properly communicated your views regarding the problem of providing additional office space in the vicinity of the White House for use of the executive department to the President's Advisory Commission on Presidential Office Space.

As we advised you in our letter of April 8, 1957, the National Park Service shortly after July 1, 1957, proposes to undertake a study of the historical and architectural significance of buildings in the vicinity of the White House provided funds requested in the President's budget for the resumption of the Historic Sites Survey are appropriated by the Congress.

The proposed resumption of the Historic Sites Survey is an important facet of the comprehensive mission 66 program of the National Park Service which, as you know, was submitted to Congress last year with the strong support of the President and the Department of the Interior. This is but one indication of this administration's continuing interest in the conservation and protection of historic structures and areas throughout the Nation. Among the historic areas of the National Park system established since January 1953 are the Edison Laboratory National Monument and the Edison Home Historic Site in New Jersey; Chimney Rock National Historic Site, Nebraska; Fort Union National Monument, New Mexico; Cumberland Gap National Historical Park, Kentucky-Tennessee-Virginia; Fort Vancouver National Monument, Washington; Golden Spike National Historic Site, Utah; and Independence National Historical Park, Pennsylvania.

Sincerely yours,

HATFIELD CHILSON,
Acting Secretary of the Interior.

I think the Congress was thoroughly justified in denying funds to the General Services Administration to proceed with its plans for a great office building at the west side of Lafayette Park.

Clearly, the language of the Historic Sites Act of 1935 is explicit and requires the preservation of both historic build-

ings, and sites, and both buildings and sites are involved in the White House-Lafayette Park area.

The report of the President's Advisory Commission on Presidential Office Space makes no mention of the historic values involved in the area. The Chairman of the Commission, Robert V. Fleming, wrote me under date of May 14, 1957, in part as follows:

The Commission was informed that no historical survey of the area under discussion could be developed before June 2, 1957. Consequently, the only alternative to submitting a report when due would be to extend the date for the Commission's report.

As you have noted, the time for the Commission's report has once been extended. The purpose of the extension however was to permit all members of the Commission to participate in the deliberations.

Yet the report of the President's Advisory Commission on Presidential Office Space, which the President sent to the Congress on July 17, calls for the building of a huge office building at the west end of Lafayette Park and thus supports the position of the General Services Administration.

At the same time, the Commission recommends the razing of the historic State, War, Navy building located on the northeast corner of 17th Street and Pennsylvania Avenue NW., and its replacement by a modern office building.

The Washington Post of June 4 reported that the distinguished Speaker of this House, the gentleman from Texas [Mr. RAYBURN] was one of the traditionalists who were rallying to defend the historic State, War, and Navy Building and that newspaper reported an interview which one of its reporters had with the Speaker on April 10. The Speaker was quoted as saying he was "very much opposed" to tearing this landmark down, and that if the State, War, Navy Building "doesn't suit them on the inside, then they can do as they did at the White House" and that he would oppose any efforts to obtain congressional funds for the purpose of building a replacement.

September 6 this year is being proclaimed as Lafayette Day, for it marks the 200th anniversary of the birth of the Marquis de Lafayette, the great French general who fought with the American colonists against the British in the War of Independence.

Americans will always remember Lafayette for the freedom he helped to bring to this country, and for the freedom he fought so ably to establish. He will be revered and remembered by all who cherish our country and have experienced its blessings of liberty and prosperity.

Now might be a singularly appropriate time to think of ways to preserve and maintain the historic park which is named in his honor.

Every city, but particularly the Nation's Capital, should set apart certain old houses, certain breathing spaces in the form of parks, and so on, to show the more impressionable teen-agers that American life does not consist merely of gasoline stations, the drive-in diner, and the second-hand car park.

Fifty million visits were made to historic sites and buildings open to the public in 1956. I am informed that officials of the National Park Service believe there will be at least 80 million such visits a year by 1966. This is the depth of the feeling Americans have for their historic past, and I am convinced that all reasonable steps must be taken to preserve our great heritage.

At the centennial convention of the American Institute of Architects the editor of the Atlantic Monthly magazine, Edward A. Weeks, Jr., spoke movingly of the need for the preservation of our historic past. He declared that—

In a State like Virginia, preservation has become a fine art. In Williamsburg where every fence rail and Kleenex carries the arms of William and Mary; and in the gracious houses along the James; Westover, Stratford, Shirley, and Berkeley Hundred—it is so easy for the 20th century to imagine the grace and the quality of colonial America. One is grateful for the care which has kept these shrines alive.

Let us in this House be mindful of our heritage and be always careful to preserve it in order that our children and our children's children may be grateful for the care which we have taken to keep our shrines alive.

Our Legislative Body in the Far Pacific

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. O'HARA of Illinois. Mr. Speaker, the most farflung legislative body convening under the Stars and Stripes is that of Guam, and it has been a happy circumstance that visits to Washington of the distinguished and able Speaker of the Guam Legislature, the Honorable A. B. Won Pat, and other members of the body over which he presides have brought us in the Congress in close personal association with our fellow lawmakers who maintain representative government on an island thousands of miles away on the highest of American legislative standards. It was a privilege and a pleasure, as well as working to mutual advantage, to have with us during the early months of the session Speaker Won Pat and the Honorable J. A. Perez and the Honorable J. C. Arriola, members of the Guam Legislature. I am sure I am expressing the sentiment of the House in saying that we were most happy to have them with us and that indeed they won a place in our hearts.

As a member of the Committee on Foreign Affairs, I took an especial interest in the visit of our fellow lawmakers from Guam because the success of the American legislative system on that farflung island is bound to have healthy repercussions in the thinking of the peoples in the Pacific area. My heartiest congratulations to Speaker Won Pat, Representatives Perez and Arriola, and their colleagues on the splendid job they are doing.

I am extending my remarks to include Resolution 168 of the Fourth Guam Legislature, a copy of which has been sent me with the certification of Speaker Won Pat and the legislative secretary, V. B. Bamba. I appreciate the graciousness of our good friends who make the laws of Guam. The resolution follows:

Resolution 168

Resolution relative to expressing the gratitude and sincere appreciation of the people of Guam to the Honorable BARRATT O'HARA, Representative from Illinois, for his sympathetic interest in their problems and his gracious and cooperative reception of their representatives

Be it resolved by the Legislature of the Territory of Guam:

Whereas at the direction of this legislature, the Honorables A. B. Won Pat, speaker; J. A. Perez, and J. C. Arriola proceed to the Nation's Capitol at Washington, D. C., for the purpose of conferring with Government and congressional leaders about the problems of Guam; and

Whereas the Honorable BARRATT O'HARA graciously gave his time and sympathetic interest in the understanding of the problems confronting this Territory: Now, therefore, be it

Resolved, That this legislature does hereby express to the Honorable BARRATT O'HARA the gratitude and sincere appreciation of the people of Guam for his sympathetic interest in their problems and his gracious and cooperative reception of their representatives; and be it further

Resolved, That the speaker certify to and the legislative secretary attest the adoption hereof and that copies of the same be thereafter transmitted to the Honorable BARRATT O'HARA, Representative from Illinois, and to the Governor of Guam.

Belgium Honors American for Trade Fair Assistance

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. REECE of Tennessee. Mr. Speaker, over many years, Col. John D. Hartigan has served the United States and its agencies with distinction in many capacities, but more recently Mr. Hartigan has been adviser to the State Department on United States participation in the Brussels Universal and International Exposition.

As a result of his work in this capacity, he has been signally honored by Belgium by being decorated Officier de l'Ordre de la Couronne, and in this connection I wish to place in the RECORD an article from the Christian Science Monitor of July 23, 1957.

The article follows:

BELGIUM HONORS AMERICAN FOR TRADE FAIR ASSISTANCE

WASHINGTON.—John D. Hartigan, former adviser to the League of Nations and the United States Department of State, has been decorated Officier de l'Ordre de la Couronne by Belgium. The award was made July 11 at the Belgian Embassy by Ambassador Baron Silvercruys, in recognition of Mr. Hartigan's contributions to the field of international expositions and trade fairs.

Most recently, Mr. Hartigan has been adviser to the State Department on United States participation in the Brussels Universal and International Exhibition scheduled for 1958.

In 1934, Mr. Hartigan assisted the League of Nations commission which made preparations for the Saar plebiscite held in January 1935.

As early as 1936, he began negotiations with the Belgium Government for its participation in international expositions, at that time the Golden Gate International Exposition.

With international expositions suspended by World War II, Mr. Hartigan in 1940–41 devoted his efforts to European relief, concentrating on aid for Poland and Belgium.

In 1950, he resumed work in behalf of expositions and as chief of Trade Fairs and Exhibitions of the Economic Cooperation Administration, he worked with the Beligum Government regarding its participation at the Chicago International Trade Fair of 1950.

Last year, Mr. Hartigan served as adviser to the American Furniture Trade Mart's International Trade Mart.

Mr. Hartigan also has reported from Europe for the Christian Science Monitor on refugee and relief matters.

Effect of Voting in the United States

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Good Government Requires Quality Not Quantity of People Voting," which appeared on July 29, 1957, in the Charleston, S. C., News and Courier, one of the Nation's most distinguished and outspoken newspapers.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOOD GOVERNMENT REQUIRES QUALITY NOT QUANTITY OF PEOPLE VOTING

On no subject in American life is there more sanctimonious nonsense uttered and printed than now is heard about voting. At the present time, the national press is moaning and groaning that large numbers of Negroes are not registered and voting in the Southern States. The Baltimore Evening Sun, for instance, recently spoke in somber tones of the distressingly small number of Negroes registered.

The fact is that government does not get better as more and more voters cast their ballots at each election.

Practically every able-bodied citizen in Hitler's Germany voted. And yet Germany was one of the worst states in modern times. Communist nations have no problem in getting citizens to the polls. Indeed some Socialist countries have compulsory voting. Even those nations with compulsory voting do not enjoy more liberty than citizens of the United States.

In this Republic, the turnout of voters in giant metropolitan centers such as Chicago, New York, and Boston is massive. And yet in each of these cities government is at a low ebb and corruption is notorious and traditional.

On the other hand, in Virginia, where only a handful of voters of either race turn out for State elections, government is honest and dignified. Even the worst enemies of the Byrd organization in Virginia, which is simply an alliance of the better elements in the Commonwealth, acknowledges that the State is free of corruption.

The truth is that King Numbers is not a very wise monarch. Those cities and States that are ruled by him suffer. Those cities where government is in the hands of educated and propertied men and women are good places in which to live.

It's all so simple, actually. If one finds a small community here in South Carolina where perhaps 100 men and women vote—people who own their farms and businesses, teachers and professional people from good stock who have roots in their community—one finds good, stable government. If one adds to the voting population the town bums, the chronic unemployed who prefers making a little whisky to making a living, the Negro cooks of the community who make good okra soup but wouldn't know the qualifications for county auditor, one adds elements that will make for bad government.

That's the situation around the Nation. The politicians, the ringsters, the corruptionists, the spoils system manipulators—they want lots of voters of a kind they can boss. They like the kind they can get vote their way for half a pint of cheap whisky on election day. Certainly, however, that isn't the kind of voter intelligent, responsible Americans, North or South, want on the voting lists.

Despite the widespread understanding among responsible Americans that mass voting isn't a substitute for intelligent voting, the hokum about voting carries on and a myth persists.

Strong Forces Continue Efforts To Eliminate Independents

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. MULTER. Mr. Speaker, one of the best known and most articulate figures in independent banking is Harry J. Harding, president of the First National Bank of Pleasanton, Calif. Mr. Harding is honorary president of the Independent Bankers Association of the 12th Federal Reserve District. He played an important role in securing passage of the Bank Holding Company Act of 1956.

Mr. Harding gave the following analysis of the problems facing independent banking to the 23d annual convention of the Independent Bankers Association at Miami Beach, Fla. I recommend to our colleagues the reading of Mr. Harding's address. Of special interest is his suggested formula for limiting bank mergers.

The address, as it appeared in the July 1957 issue of Independent Banker, follows:

CONVENTION ADDRESS—STRONG FORCES CONTINUE EFFORTS TO ELIMINATE INDEPENDENTS

Although the title of my talk appears on your program as "The Single, Dual, and Triple Banking Systems Reexamined," I will approach this by discussing the three "F. T. F.'s" of independent banking.

These F. T. F.'s are: Face the facts of independent banking, first things first in independent banking, and finish the fight for independent banking.

What are some of the facts of independent banking today?

Fact No. 1 is that independent banking is under attack.

We do not hear anyone advocate the destruction of our system of independent banking and the substitution therefor of the Canadian or the European systems of nationwide branch banking—with only half a dozen or so banks—at least not openly and directly. Such an effort quickly would be buried in an avalanche of opposition.

WHITTLING PROCESS

The effort to accomplish the elimination of independent banks is more subtle. It takes form largely in a whittling process, a constant nicking away at diffused control of banking, on the one hand, and a building up of public acceptance of absentee ownership and management.

Among other things, these undermining efforts to take the form of the recurrent urging that control over the reserves of all banks be placed in the hands of the Federal Reserve Board—or increasing the powers of the Federal Deposit Insurance Corporation—or to expand the powers in the hands of the other Federal supervisory agencies.

The State comptroller of the State in which we are now meeting, addressing the Florida Bankers Association a few weeks ago, warned that the continued invasion of the rights of the States by the Federal Government and its agencies, in the field of banking, could result in the disappearance of State chartered and State supervised banks.

So, fact No. 1 that we should face is that our system of independent banking is under strong undermining attack.

Fact No. 2 is the threat of holding company expansion within a State.

The Bank Holding Company Act of 1956 falls short of the objectives of your organization. While it prohibits further interstate expansion, it leaves the door wide open in most States for the expansion of bank holding companies within a State, regardless of what the branch banking laws of such State might be. It placed a responsibility upon each of the States to enact its own legislation, if it wishes to regulate the expansion of such companies within its borders.

A rather startling idea, which certainly seemed aimed at furthering the purposes of a proposed New York State bank holding company, was the publication by a well-known and highly respected bank stock analyst, claiming that Congress, by enacting the Bank Holding Company Act, had "given its blessing" to a new "triple banking system."

NEW TERM FOR EVADING

Completely misunderstanding the legislative history and the restraining purposes of the act, he enthusiastically hailed what he believed to be congressional approval of the "pole vaulting" of the State's branch banking laws. (Let me add that "pole vaulting" is a polite way of saying "evading.")

This authority on bank stock says: "The announcement of plans for a new bank holding company, First National Corp., marks the opening of a new era of banking in New York State, and, inevitably, the Nation."

He also stated, "The proposed bank holding company * * * now shows the way to leap across every wall from New York City to Plattsburg and from Albany to Buffalo. Indeed, the proposed first little jump has suddenly revealed greener pastures that have already forced other bankers and their stockholders to look to their own jumping shoes."

PREMATURE EXULTATION

That expert on bank stocks spoke a little too soon. He hadn't dreamed that in addition to Mississippi, Illinois, and Georgia,

which States already had laws on their books, other States would be enacting legislation to clip the wings of any holding company movement.

Indiana and Kansas recently enacted laws that ban holding companies. Pennsylvania, New Jersey, Minnesota, and Massachusetts have had bills in the hopper.

Most surprising of all, probably, to the stock expert, was the action of New York State, as follows:

First in the antiholding company position taken by Governor Harriman and George A. Mooney, superintendent of banks.

Second, the enactment of a stopgap law aimed at preventing the proposed First National City Bank holding company from acquiring a bank in a district in which it could not legally operate branches.

Third, extension to this stopgap measure to keep it in effect until May 1, 1958.

No, we are far from developing this so-called triple system of banking, thanks to the work that the independent bankers have done over the years and are still doing to fight this threat. But this inadequacy of present bank holding company laws is fact No. 2 that we must keep in sight.

CONCENTRATION BY MERGER

Fact No. 3 is the concentration of banking control through the mergers of banks. This merger trend has been accelerated in recent years.

Last year alone 103 banks absorbed 143 other banks—almost 1½ banks gobbled up by each of the surviving banks.

In the 20-year period from December 31, 1936, to December 31, 1956, according to the FDIC, the number of banks in this country decreased from 15,679 to 14,166—a shrinkage of 1,513 banks, though approximately 1,000 new banks were organized in this period.

This year-by-year shrinkage in the number of banks, in the opinion of the ABA, is nothing to be alarmed at. The ABA, to which we all belong, bitterly opposed the Celler bank-merger bill in 1955 as not needed. It declared "* * * that the number of individual banks in operation since 1939 has remained relatively stable; that this stable level in the number of operating institutions has adequately supplied the banking needs of the country essential to the enormous economic growth of the country during this period."

A decline of about 10 percent in the number of banks in 20 years, the ABA regards as "relatively stable," notwithstanding an "enormous economic growth."

WHAT LAW SAYS

The Financial Institutions Act of 1957, as approved by the Senate, declares that in addition to other factors, the respective Federal supervisory agencies in considering proposed mergers shall, and I quote:

"In the case of a merger, consolidation, etc., take into consideration whether the effect thereof may be to lessen competition unduly or to tend unduly to create a monopoly, and, in the interests of uniform standards, it shall not take action as to any such transaction without first seeking the views of each of the other two banking agencies referred to herein with respect to such question; and in such case, the appropriate agency may also request the opinion of the Attorney General with respect to such question."

Let me discuss this a little. You will note that there is no outright prohibition of any merger, merely the requirement the appropriate agency shall "take into consideration" competitive and monopolistic aspects and "in the interest of uniform standards" shall first seek the views of the other two banking agencies.

The appropriate Federal agency at its discretion may also request the opinion of the Attorney General with respect to such question. What is the question? Whether the effect of a specific merger may be to lessen competition unduly or to tend unduly to create a monopoly? Does that mean monopoly is O. K. as long as it does not tend unduly to create a monopoly?

How would you define "unduly"? In the existing antitrust legislation, such as the Sherman Act and the Clayton Act, the word "unduly" does not appear.

The word "substantially" has been passed upon as to meaning by the courts in a number of cases. It is safe to say that it will be years before the meaning of the word "unduly" can be determined. There will have to be a number of court decisions on this point.

You will also note that the provision which we have quoted does not say a word about any approval of any merger by the State supervisor of banks where a State bank is concerned. Here again the termite of Federal control continues to eat away at the vitals of our dual banking system.

FDIC MERGER STAND

The FDIC, in a letter signed by its general counsel, addressed to the Honorable STROM THURMOND, United States Senator from the State of South Carolina, has given assurance that it will not consent to any transaction under the merger section involving a State bank without the prior approval of the State banking authority, if such approval is required by State law.

While this is a recognition the State supervisor should have the authority to disapprove a merger, this is not enough to preserve the prerogatives of the State supervisory authorities and to maintain the autonomy of the States over banking. This policy of the Federal Deposit Insurance Corporation can be changed by the Board of Directors at any time. The personnel of the Board does change. We learned with sorrow of the passing of Maple Harl, former Chairman and a Director of the FDIC. This brings home more than ever that boards do change.

I strongly believe that neither the Federal Reserve Board, nor the Comptroller of the Currency, nor the FDIC, should have any additional powers over the mergers of State banks, and I hope that the House of Representatives will amend the Senate bill in this regard.

Certainly the record of the States as to the maintenance of competition among banks is as good as that of any Federal agency. However, inasmuch as banks have been held to be engaged in interstate commerce and since existing Federal antitrust laws apply to concerns engaged in interstate commerce, it does not seem realistic to permit each State to establish its own standards to apply to monopolistic tendencies, either for banking or for any other line of business. Therefore, I believe the enforcement of all antitrust and monopoly laws, including those affecting banking monopoly, should rest with the Federal Government, that is, the Attorney General.

Those who argue that the Federal supervisory agencies alone should have anything to say over banks and banking are forgetting that by reason of being engaged in interstate commerce, banks come under a whole flock of laws that are administered by agencies other than the Federal supervisory agencies. Among these laws are the Fair Labor Standards Act (wages and hours law as we usually refer to it), the Labor Management Act of 1947 (Wagner Act), Social Security Act, the Clayton and the Sherman Acts.

PERMISSIVE WORDING

The merger provisions in the proposed Financial Institutions Act which I have quoted state that the respective Federal agencies may request the opinion of the Attorney General. Why? Presumably because the Attorney General's opinion should be helpful. Then why under the sun shouldn't the respective Federal agencies take advantage of that help? They will, if the wording of the act is changed from "may" to "shall."

The independent bankers consistently have held there is danger in the economic power inherent in the concentration of control over banking. Monopoly, in the ordinary sense, the destruction of competition always has been second to this danger.

It was not so much the fear there would be no competition to the second bank of the United States, that led Andrew Jackson to fight for a system of diffused control over banking, as it was the fear of the economic power that centralized control would beget.

Congressman CELLER has presented some arresting figures on the concentration of banking, figures that are startling in showing how far down the road to the European system of banking we have traveled. I also will shock you with some figures from an era with which I happen to be pretty well acquainted and where I saw it happen.

At the end of 1935, there were in California 275 banks, of which 236 were unit banks; 39 branch systems. At the end of last year, there were only 139 banks, of which 87 were unit banks and 52 branch systems.

At the end of 1935, the bank assets held by branch banking systems amounted to 83.6 percent of the total. Twenty-one years later, at the end of last year, the branch systems held 97.8 percent of the total bank assets, largely concentrated in 7 branch banks.

In Washington, at the end of 1935, there were 188 banks, of which 180 were unit banks. By the end of 1956, the number of banks had decreased to 97 with unit banks numbering 74 and branch bank systems 23. The percentage of bank assets held by the branch banking systems in the 20-year period increased from 52.9 percent to 89.3 percent, largely concentrated in the 5 large branch bank systems.

In Oregon, at the end of 1935, there were 97 banks, of which 94 were unit banks. At the end of 1956, the number of banks had dwindled to 52, of which 41 were unit banks and 11 branch bank systems. In the 20-year period, the percentage of bank assets held by the branch bank systems increased from 69.1 percent to 91.5 percent, practically held about equally by two chains.

ARIZONA: 2 INDEPENDENTS

At the end of 1935, there were 9 banks in Arizona, of which 6 were unit banks; 3 branch systems. By the end of 1956, the number of banks remained the same, but the unit banks had decreased to three. Now there are only two. Think of it—only two small independent banks in the entire State of Arizona.

Whereas in 1935 the percentage of bank assets in Arizona held by the branch systems was 77.2 percent, by the end of 1956 this had increased to 96.5 percent. But, as a matter of fact, two holding companies hold practically all of the assets as shown by the branch banking systems just mentioned.

Certainly, in Oregon and in Arizona, where two organizations alone in each State hold practically all the bank deposits, there is competition between these two organizations. But we would like to ask the Comptroller of the Currency, the Federal Reserve Board, and the Department of Justice, as well as the ABA, has a tendency toward monopoly developed in the States that I have just quoted? Or, at what point does this tendency toward monopoly begin?

MUST CHECK MERGERS

As so ably pointed out by Congressman CELLER, unless the merger movement is speedily checked we will wake up 1 day to find that these mergers, repeated and multiplied over and over again throughout the country, will have brought about a new situation like the European system where a few banks completely dominate our banking

structure. That is fact No. 3 on our list of facts we must face.

Fact No. 4 is the extension of branch banking. The destruction of legal restrictions on branching is perhaps the most serious of all threats to independent banking.

Branch banking proponents argue that independent banks and branch banks can exist together. The history of no country supports their claims. No, the history of Europe and Canada, as well as some American States, overwhelmingly demonstrates the fact that branch banking drives out unit banking.

PATTERN IN CALIFORNIA

Let's take another look at California. The Bank of America started in 1904. By the end of 1922, when I located in California, it had 61 banking offices in 42 communities and deposits amounted to 229 millions. By the end of 1956, the Bank of America branches had reached the 600 mark and deposits amounted to 8,993 millions, about 44.5 percent of the State's banking resources. There is no ceiling.

There are half a dozen other large branch systems in California trying to overtake each other in opening branches. There are now 1,304 branch bank offices in California and only 87 unit banks.

There are some branch bank operators in California who very frankly admit they are afraid of the situation. They are opposed to any "octopus" system and they want competition, instead of monopoly by themselves or any other bank.

Because they cannot restrain the ambitions of their competitor branch bank operators—and as these competitors reach out and surround them with branches, they feel forced, in defense of existing business, to expand themselves. Thus the pressure continues, ever spiraling toward greater and greater concentration.

RECORD SHOWS ATTRITION

In our own country, the history of those States where branch banking is permitted, even though limited to cities or counties, shows in almost every case a steady attrition in the ranks of independent banks and a constant increase in the number of branches.

Of 7,957 branch offices as of December 31, last, 3,336 were in the 18 States that permit statewide branches, and 4,403 are located in the 18 States that limit branches to cities, counties or other areas.

In 20 years, there has been a gain of about two and one-half times in the areas in which branching is limited, as against a gain of two and one-fifth times for the statewide States. In States where branching is limited in area, the concentration of bank assets in a few institutions is just as marked as it is in States permitting statewide branching, sometimes more so.

No; the argument that branch banks and unit banks can live side by side on a basis of equality is a fallacy.

Fact No. 5 is the lack of public interest. In my opinion a great many people care very little whether a bank is a unit bank, a branch bank, or a subsidiary of a holding company. Most people care very little whether a bank's policies are laid down locally or by an absentee management located a long distance away. The public's primary concern is as to the safety of its funds, and it looks to the Government to provide this protection.

That is why Carter Glass, after nearly 32 years as a member of the House and Senate Banking and Currency Committees, was able to say he had never heard a merchant or businessman protest against branch banking.

Happily, there are people who understand the difference between independent and other banking. It is this percentage who prefer independent banking that accounts for the slightly better growth in unit banks as compared with other systems. Nevertheless, the public apathy is fact No. 5 we must consider.

Fact No. 6 is internal weaknesses. Certainly, faulty building helps create the termite problem. We might say that we ourselves are guilty of faulty building when we do not properly provide for management succession, when we fail to build up our invested capital as our business grows, and when we get careless about providing adequate services for the public as conditions and ways of doing business change.

There are other problems that confront us, such as competition of pseudobanks and various lending organizations. But these problems your association has been studying and we are hopeful there will be devised a treatment necessary to meet these situations.

The facts that face us, then, are:

Independent banking is under attack.

Holding company expansion within a State regardless of branch-bank laws, in undermining independent banking.

The concentration of control of banking by the merger method is another threat to independent banking.

The spread of branch banking.

The public is disinterested.

Internal weaknesses in our banks must be corrected.

WHAT TO DO

With these facts before us, let us take a second look and determine which of these undermining influences presents the most urgent problems to be tackled.

I think we will pretty much agree the most serious threats are from the three channels through which concentration of banking control is taking place: merging, branching, and holding company intrastate expansion, and these need to be tackled simultaneously.

Let's begin with the merger threat.

For quite a number of years the House Judiciary Committee and the Senate Select Committee on Small Business, particularly, have called attention to the dangerous trend of banking concentration and have sought to cure this tendency.

In my opinion, none of the proposed bank merger bills go far enough. Preston Delano, then Comptroller of the Currency, in testifying before the Senate Committee on Banking and Currency in 1950 on S. 2318, a bank holding company bill which had been drafted by the Federal Reserve Board, declared, "It has also been suggested that it would be wise to have a definite ceiling beyond which bank holding companies could not expand. A suitable test might be a specified percentage of the banking offices or bank resources within defined areas."

I seem to be in good company, then, when I suggest a somewhat similar provision be added to the bank merger bill. You may wonder why we had not endorsed this principle at the time Preston Delano made the suggestion. We, however, took the position and have steadfastly maintained it, that the bank holding company device had been used to evade the Nation's banking laws, and we oppose legalizing such evasion in any degree. The matter of law evasion does not apply to branch bank legislation.

SUGGESTED STANDARDS

So that we may have something to shoot at, let me suggest an addition to any bank merger bill, along the following lines:

"No merger shall be approved under this act, in cities of 10,000 or less population, when the result will be 2 or less banks located in the city in which the merging bank is located; nor in cities of more than 10,000 population up to 25,000 population when the result will be 3 or less banks located in the city in which the merging bank is located; nor in cities of over 25,000 population to 100,000 population when the result will be 4 or less banks located in the city in which the merging bank is located; nor in cities of over 100,000 in population when the result will be 5 or less banks located in the city in which the merging bank is located. In each case, the population figures will be those of the last Federal census.

"Nor shall any merger be approved under this act when the result will be that the merging bank will hold more than 30 percent of the total banking deposits of the area in which the merging bank has offices."

Let's kick this around for awhile. I don't want you to say you are for this or that you are opposed. I would like to have you think of the arguments both for and against such a proposal, so that we may carefully study and weigh them.

You may feel that the criteria specified in this suggestion are not realistic, but can you think of better yardsticks than the ones suggested? Do you think that we ought to have any yardsticks other than the discretion of some Federal agency? Have you any reason to believe the Federal agencies would?

The yardsticks I have suggested are no more arbitrary than the existing requirements as to the capital necessary for the establishment of a new bank, or of a merging bank. The prevention of undue concentration of banking control is just as much in the public interest as the limitations on the loans that a bank can make. As to the argument that mergers should be left to the discretion of a supervisory agency, this, in my opinion, could apply equally as well as to the capital requirements for a new bank.

SEES OBJECTION

I know the supervisory agencies will immediately howl that the merger door must be kept open so that without hindrance they can merge a failing bank, a bank that is not properly managed, or a bank that is undercapitalized, with another good bank, regardless of its monopolistic tendencies.

If such an emergency escape hatch needs to be kept open, that can be provided, of course, but I wonder if merging a weak bank is the one and only solution that the FDIC or any other supervisory agency can think of. If so, why do not the laws say something affirmatively giving the power to compel the merger of a bank under such circumstances, to the supervisory agencies? Or is this a method they themselves have seized upon without congressional sanction?

You will note what we have proposed places no limitations on size, nor does it in any way hinder normal growth. It merely restricts cannabalism.

Let's not say it can't be done, but rather ask ourselves, should this be done? I am convinced we must have a ceiling on concentration of control over banking or face destruction to our independent banking system.

Second: What can be done to overcome the threat of envelopment by branch banking?

Every effort must be made to hold existing restrictions on branching in the various States. This should be done by study and discussion of branch banking and its tendency to drive out independent banking—a tendency that is just as inexorable as the workings of Gresham's law.

While each State will have to solve its own problems, your organization must be prepared to give help and guidance to State groups, profiting by the experience and success achieved in other States. This means a certain amount of public education also.

PUBLIC HEARINGS NEEDED

There is no provision in the National Bank Act, nor in the Financial Institutions Act of 1957, for public hearings on national bank branch applications. I fail to see any valid reason why such applications should be made and passed on in secrecy.

What we want to know, is, wherein is it detrimental to the public interest to have

it known when an application for a branch has been made? I hope that the House of Representatives will amend the Financial Institutions Act to provide for such public hearings. Your association is on record in favor of such a provision.

The Comptroller of the Currency should be restricted by statute in his authority to approve branches of national banks, in addition to the geographical limits in which State banks can have branches, as at present, so that limitations a State may place on drive-in or tellers windows would have to apply to similar stations or offices of national banks in those States.

Likewise, I am of the opinion that the ceiling in percentage of deposits of a city or area, such as I have suggested for mergers, that is, 30 percent, should apply in the case of de novo branches, in other words, no bank holding 30 percent of the deposits of the area in which it is authorized to operate, should be permitted to establish a new branch.

Now let us look at the third important threat, holding company expansion within its home State. One difficulty in securing enactment of the Bank Holding Company Act of 1956 in the form it was originally overwhelmingly approved by the House of Representatives, was the intensive effort on the part of the ABA and the Federal Reserve Board to convince the Senate Banking and Currency Committee that holding company banking was not essentially branch banking.

THE SAME, COURTS SAY

The ABA particularly testified at length as to the differences between a branch bank and a separately incorporated bank controlled by a holding company. The representatives of the Independent Bankers Association held that these differences were mainly in form and not in substance.

In the March issue of Banking, there appeared an item stating that a court in the State of Georgia held that holding company banking and branch banking were the same. Courts in several other States have held the same thing. Had the American Bankers Association recognized the obvious, that the holding company was a mechanism for evading the law of the States relative to branches of banks, I am quite sure we would have gotten the House-approved Spence bill, substantially in its original form.

We realized after successfully having the Douglas amendment prohibiting interstate expansion by bank holding companies adopted by the Senate, the bill was all we could hope for at the time. Striving for the ideal might have meant that legislation would have been delayed as our opponents counted on doing and thereby we would have been defeated.

REVIEW PROVISION

We knew if we kept well organized, and, as experience proved the need, the act could be amended. In fact, the act provides that within 2 years after the enactment, the board of governors shall report to the Congress the results of the administration of the act, stating what, if any, substantial difficulties that have been encountered in carrying out the purposes of the act, and any recommendations as to the changes in the law which in the opinion of the Board would be desirable.

I think we can expect the holding companies will make every effort to bring about a softening of the law. We must be ready ourselves, at the proper time, to support amendments that will strengthen the act.

SUGGESTED AMENDMENTS

The first of these amendments would be a definite restriction on the evasion of the State branch banking laws through the holding-company device, such as was recently attempted in New York State. This would mean adding a provision essentially similar to the one deleted from the House-approved Spence bill, as follows:

"Nor will it be lawful for any bank holding company or subsidiary thereof to acquire, directly or indirectly, any shares in a bank in any area within its home State except in the same geographical area in which a bank located in the same city in which the bank holding company has its principal place of business could lawfully establish a branch of such bank."

A second amendment, in my opinion, would be a provision to restore the requirement which also was in the House-approved Spence bill, that the Federal Reserve Board would have to accept as final any disapproval by the State supervisory authority as to the acquisition of stock in a State bank, and by the Comptroller of the Currency as to the acquisition of stock in a national bank.

I am not saying these are the only changes in the Bank Holding Company Act of 1956 that should be advocated, but these are the ones that primarily are necessary to prevent the further evasion of branch banking restrictions and for the preservation of independent banking.

Now we come to the third F. T. F.: Finish the fight for independent banking.

To my way of thinking, we are fighting on 3 fronts, and on all 3 fronts, we need to act and act quickly:

At the national level, we need congressional action on merger legislation and Bank Holding Company Act amendments.

At the State level, we must hold the line against extension of branch banking areas and secure enactment of State merger and holding company laws.

At the banking level, we need more intensive organization.

NEED MORE BANKING

Not that I minimize our strength. This organization has proved its strength and has established its standing. But, our first problem is to arouse all independent bankers. There are 5,000 more banks that should be in this fight. With strong representation in a State, it will be a lot easier to secure enactment of State laws to regulate mergers and bank holding companies. With effective State laws on the books, it will be easier to get congressional action.

No job is hard when we can break it down into small parts. To double the membership merely means that each member should undertake to secure one new member, that's all, just one new member. If those present today will do this it will add substantial strength to your organization. If there's the will, it can be done.

Don't fool ourselves. We've got to face these undermining attacks on independent banking with our eyes wide open. We've got to make decisions like grownup men, men who are confident that what we represent is in the public interest, that the business in which we are engaged has been a mighty factor in the growth and prosperity of our country, and can continue to be so. We are not playing for marbles. The future of free enterprise and our independent banking system is at stake.

You bankers are the leaders in independent banking. If you were not interested, you would not be here. But, the passive, gentle sort of an interest will not win this battle. Every bit of support, every bit of strength you gave to the independents' fight to secure bank-holding company legislation needs to be doubled and tripled. Remember, the best defense is a strong offense.

Let's face the facts, tackle first things first and finish the fight for independent banking.

Air-Fare Increase Has Strong Public Support

EXTENSION OF REMARKS

OF

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. STAGGERS. Mr. Speaker, I would like to call the attention of the Members of the Congress to the following story in a recent issue of the Aviation Daily. This article, I believe, is very interesting and thought-provoking. It is my feeling that some action should be taken by the Congress to remedy this situation and grant needed relief to the airlines:

AIR-FARE INCREASE HAS STRONG PUBLIC SUPPORT

Of extreme significance throughout CAB's bitterly contested 32-day hearing in the suspended passenger-fare case is the fact that not one consumer's group or a single member of the public uttered a word of protest against the domestic airlines' proposed 6-percent fare hike. In fact, there is increasing evidence of strong public support for the carriers, who have met opposition only from the CAB staff and in lukewarm fashion from the General Services Administration.

Last week the Daily reported that the Los Angeles Chamber of Commerce board of directors voted unanimously to endorse the airlines' modest fare boost. The group's transportation director, Ray Allen, transmitted the endorsement to CAB. It has since been learned that the Chambers of Commerce of Kansas City and Dayton have taken similar stands. Jay B. Dillingham, president of the Kansas City group, wrote CAB that "We business people who are large users of air transportation strongly feel that it is reasonable for us to pay a nominal increase in our air fares, since other modes of transportation have received substantial rate increases."

Harry R. Hall, executive vice president of the Dayton chamber, phrased it thus in a letter to CAB members: "Present airline profits (and losses) appear to be inadequate to meet airline commitments for new equipment. The main source of revenue, the passenger fare, should be sufficient to allow the airlines to meet their new equipment commitments. We recommend strongly that you take immediate action to alleviate this unhealthy economic condition."

Editorially throughout the country there is virtually amazing support for the price increase, largely in recognition of the industry's stable fare levels over the inflationary years, the industry's heavy commitment for new and improved aircraft, and the threat to continued service gains inherent in today's declining profit margins.

NEED FOR STANDARDS ESTABLISHED

Meanwhile, the airlines, by the seriousness of their present case before CAB, appear to have minimized the early fears in some congressional circles that they were simply trying to beat the threat of a fare cut thought to be inherent in the general passenger fare investigation. By the same token, the interim fare case would appear to have proved the need for establishment of standards which was the prominent feature in the House Antitrust Subcommittee's demand last year which led to the general fare investigation. If such standards were now in effect, the most controversial issues of the current case, such as depreciation, investment

base, and tax differences would not have arisen.

Thus, if the present complex situation can be summed up at all at this point, it would appear the airlines, with sincere public backing, have proved their need for an emergency fare boost, and the CAB's investigation of that need has confirmed the wisdom of Congress and the Board in instituting the industry's first general fare investigation, out of which will come necessary standards to permit intelligent evaluation of the complicated financial period ahead.

The Natural Gas Act

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. NEAL. Mr. Speaker, as a means of acquainting Members of the House who have not had the benefit of hearings with conditions in the gas industry leading to congressional effort to bring about legislation favorable to the producers and the consumers, I take this opportunity to offer the following comments.

Natural gas occupies a unique place among household fuels. Its adaptation to domestic and commercial heating has made remarkably rapid strides in the past quarter century. Many of the major cities and an innumerable number of small communities still clamor for gas supplies to serve their household uses. These demands can be met only by continued increased production and transportation facilities to bring this commodity to their city gates.

Until 1938 gas exploration, gathering, and transport was a free-for-all industry. In that year Congress passed the Natural Gas Act which provided that pipelines delivering gas to industries and to municipalities for resale should be placed under the control of the Federal Power Commission empowered to establish prices that pipelines might charge to utility companies making distribution to domestic users and to industrial users within the limits of their distribution system.

In order that cities and localities at great distances from the source of supply might contract with pipelines for domestic gas supplies, the FPC established a two-point price system—one for delivery of gas to the city gate, the other for interruptible and direct sales to industry. It is evident that this method was utilized for the purpose of giving the pipelines a source of outlet for their line capacity during seasons when domestic consumption was insufficient to use the pipelines' full quota. During this period FPC controlled the prices of all gas delivered to city gates for distribution by utilities, but with that portion of the line capacity which could not be delivered to the utilities during certain seasons the pipelines were left free to negotiate with industrial users for quantities of gas without any price supervision by the FPC. So that since 1938 the FPC control over the prices of gas was limited in that it controlled only the prices of that portion of the gas sold to utilities for resale.

Under the Supreme Court action in 1954 known as the Phillips' decision the powers of the FPC were extended to control the price of gas delivered to the pipelines direct from the source of supply. This decision, however, made no change in the authority of the pipelines to continue their two-price system. Hence, that part of the pipelines' freedom to distribute portions of their capacity to industrial users was left unchanged.

Production of gas in the field has always been looked upon as an industry carrying with it great risk. Due to the uncertainties connected with gas drilling, independent operators have objected to any control or price-fixing regulation, and were opposed to the regulations imposed by the Phillips' decision. In order to meet these objections and to encourage producers to take the risk essential to the development of new gas fields, a number of bills have been introduced in the Congress to restore more freedom for producers and to relieve them from FPC's power to control their prices of gas delivered to the pipelines.

During the committee hearings on the Harris bill, which may come before the House this session, it was revealed that known gas reserves are estimated on the basis of present consumption to last about 22 years. If the rate of consumption is to accelerate in the future as rapidly as it has in the past, it is essential that new fields and new reserves must be found in order that domestic consumers of natural gas may be saved the necessity of losing their investments in household facilities and fixtures in the event scarcity of gas makes it necessary for them to seek new sources of fuel.

It is admitted that two-thirds of the total gas delivered by pipelines in 1955 went to industrial consumers either through resale by the utilities or through direct and interruptible sales by the pipelines before reaching the utilities. It would seem that should the supply of gas materially decrease, supplies to the domestic consumers would either have to be limited or the direct and interruptible sales by the pipelines would have to be materially curtailed.

This brings up to the important factor of the gas industry which is of great concern to the householders throughout the Nation now using or anticipating the use of natural gas for household use. It is quite evident that the present custom of selling such a large portion of natural gas to industrialists is a potential means of materially cutting short the unknown future supply of gas and thereby deprive domestic consumers, for whom natural gas is so well suited for domestic uses, of adequate supplies at reasonable cost.

The Harris bill empowers the FPC to fix rates for gas delivered by the producers to the pipelines as well as rates the pipelines may charge to the utility distributors, but costs as a factor in making these rates cannot be considered by the FPC. While costs at the producers' level are difficult to assess, there is no apparent difficulty in establishing costs as a factor in rating prices charged to the utility distributors, except as they apply to the pipeline sales from their reserve holdings.

Eighty percent of known reserves are owned by pipeline companies, most of which are also producers. These reserves are estimated to have cost the pipeline companies 1½ cents per thousand cubic feet. Whenever FPC approves an advance in a producer contract, the same advance automatically increases the sales value of their reserves. Should the FPC refuse to consider original costs in estimating a fair and reasonable price to the utility distributor and instead base its rates on the accelerated price of these reserves, the pipelines could reap considerable profit at the expense of the consuming public.

Since this bill gives FPC wide discretion to consider all relevant facts, except cost, as a basis for establishing gas rates, consumers may expect this agency to faithfully perform its legal function in the light of the consumers' best interests.

Since other fuels, coal for instance, exist in such unlimited quantities as compared to the future prospect of natural gas, it would certainly seem in the public interest to take such steps as may seem advisable to conserve the present and future supplies of natural gas for that segment of our economy for which it is best suited.

The authority given the pipelines to negotiate with users of coal at whatever price may be sufficiently low to induce the user of coal to turn to the use of natural gas is both unfair to the coal industry and exceedingly dangerous in its extravagant manner of rapidly depleting gas reserves.

The Harris bill, which we are considering, does provide some relief to the producers of natural gas. It relieves them of the necessity of appealing to FPC for a permit to sell their produced gas, yet places sufficient restraint on the industry to prevent any tendency to monopoly among the gas producers. Aside from laying down certain rules as a basis upon which the FPC can arrive at fair market prices for gas paid to producers, and sales charges allowable to the utility gates, it offers nothing to counteract the unpopular features of the operation of the industry as now prevails under the recent decision of the Supreme Court. It makes no attempt to correct the uneconomic exhaustion of gas supplies practiced under the present unregulated privilege of the pipelines to make interruptible and direct sales of gas to industrial users. As pipelines are extended and if the privilege of the pipelines is not curtailed, it is easy to see that natural gas will continue to be a direct and unfair competitor with coal and oil, and at the same time shorten the period during which natural gas will remain available for domestic use.

Unlike gas reserves which are supposed to last only 22 years, during which time continuous exploration must proceed in order to discover any new sources, coal reserves in this country are estimated to last at least a period of 2,000 years. Coal in the past has played a decisive part in the economy of the country during war periods, and to be able to continue its

ability to meet future emergency needs, the industry must be permitted to keep their mining operations open, in order to be prepared to meet any future emergency. Coal mining not only employs many thousands of miners but a much larger number of men engaged in rail and water transportation, large investments in rail and water facilities, plus the required number of sales and delivery people to carry on. The investment in pipelines is in no way comparable to the coal-carrying portion of the railroads, nor is the cost of maintaining the pipelines to be in any way compared with the immense cost of rails and other means of transport engaged in carrying coal from the mines to market. The tax returns on coal property and coal production, and that portion of the transportation systems engaged in its transport, far exceed anything that is returned by the pipelines.

I bring these things to your attention for the purpose of showing that the unfair competition of gas with coal is of such magnitude as to gradually place the whole coal industry at a very great disadvantage. So practices uneconomical to the interests of coal producers and shippers can prove to be dangerous to the national economy.

For that reason I think it quite essential that the privilege of the pipelines to make sales to industrial consumers at prices below the price charged to the city gates, plus a reasonable allowance for transportation, should be denied and for that purpose I am endorsing the amendment to the Harris bill proposed by my colleague, Mr. STAGGERS, which would place control of the interruptible and direct sales by pipelines to industrial consumers under the power of the FPC. If pipelines are no longer able to negotiate the sale of gas to industrial users situated within easy distance of the reach of the interstate pipeline at prices much below or sufficiently low to induce the users of coal to substitute the cheaper fuel, then the damage to the coal industry which is essential and which our Nation must protect, would be greatly reduced.

As I see it, it is just as important for the Nation to preserve for domestic users a natural fuel that is so well suited to their purpose as it is to protect the coal industry's economic welfare for ready compliance to the Nation's demands in event of a national emergency.

The public interest, after all, should be the prime objective of any legislation designed to regulate the gas industry. These remarks are expressions of my own conclusions after several weeks of committee hearings and extended discussions.

The Civil-Rights Battle

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What's Behind the Civil-Rights Battle?—Politics," which appeared in the July 25, 1957, issue of the Williston Way, one of South Carolina's outstanding weeklies.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT'S BEHIND THE CIVIL-RIGHTS BATTLE?—POLITICS

In the past couple of weeks we've heard several people ask the question, "What is really behind the battle of civil rights?" Without claiming to be a clairvoyant, we believe we have the answer, and it all comes out in one word: "politics."

Both the Democratic and Republican Parties are making every effort to get the Negro vote. This vote, in 8 Northern States, can have a mighty big influence on Presidential elections, and for that reason the way of life in the South is being jeopardized by the 2 parties in their fight for control of the Government.

In the 8 Northern States that can be swung by bloc-voting the Negro, there is a total of 207 electoral votes. When you realize that only 266 electoral votes are needed to carry a presidential election, the magnitude of importance of these 8 States is brought into its true light.

In recent years the Democratic Party has had the majority of this Negro vote, but with the recent Supreme Court decisions and the continued pressuring and plugging of the NAACP (we still say the initials stand for National Association for the Advancement of Communist Propaganda) this vote has had indications of swinging to the Republican Party.

The Democrats, naturally, don't want to lose this vote in national elections, so they—or rather the northern segment of the Democratic Party—are going all-out on the civil-rights bill in an effort to hold the vote.

The Republicans have made inroads in the vote in the past couple of elections, and they are just as anxious to consolidate, and increase, these gains; therefore, the support of the bill by that party.

So northern members of both the national parties are eager to turn the civil-rights bill into a civil-wrongs bill if it will aid them in getting, or holding, this minority but powerful northern Negro vote. That leaves the South just where they want us—the whipping boys.

So, don't worry your mind any longer about the question "What is really behind the civil-rights bill?" cause you know the answer—politics, on a big scale.

An Appeal for a Better Understanding of Coal Industry Problems

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mrs. KEE. Mr. Speaker, last week's newspapers carried an announcement of an agreement between Campagnie Francaise Thomson-Houston, famous French electronics firm, and Decca Radar, Ltd., of England, for the purposes of cooperating in the design and production of radar equipment for European air defense. The two firms will make available to each other design details of certain equipment required for defense purposes.

Any such action to strengthen the security of allied nations is a cheering development. On reading of this amicable and logical arrangement, however, I could not help but contrast it with the lack of understanding exhibited by international oil shippers with respect to the problems of competing industries. Year after year foreign residual oil has been poured into America's fuel markets without regard to the damaging effect upon the United States coal industry, an industry that is just as vital to the security of this country and our friends elsewhere in the world as are oil and radar and steel and airplanes.

Mr. Speaker, this week's report by the President's Special Committee To Investigate Crude Oil Imports is most disappointing in that it has not recognized foreign residual oil as a specific peril to the national security. Crude oil imports must be reduced, the report states, but there is not a single word about foreign residual oil and its damage to the coal industry.

Even now there is another serious threat to the coal industry looming on the horizon. The Niagara River bill, which directs the exportation of hydropower into areas of Ohio and Pennsylvania, would remove coal's opportunities in the power-generating field and create unemployment in coal States—in West Virginia, Kentucky, and Indiana as well as in those using the hydroelectricity, for Ohio and Pennsylvania coal not needed thereabouts will seek other outlets and serve to bring about general distress market conditions.

Mr. Speaker, in closing, may I ask that some attempt be made to emulate the cooperative attitude exemplified by those manufacturing plants on the continent which are so eager to join in the common defense of the free world. I hope also that Congress, in the absence of a firm stand by the White House and its Cabinet Committee, will see fit to act against the deplorable policy that permits open raids upon the domestic coal and oil industries of the United States by selfish interests among the international oil people.

The British Have Budget Worries, Too

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent that a very interesting article by George W. Oakes, of Philadelphia and Washington, which appeared in the Sunday Star of June 10, be printed in the Appendix of the RECORD. The article analyzes the similarity of problems being experienced in England with those we are discussing in the Congress of the United States. The solutions discussed and applied by the House of Commons may be helpful to us in dealing with the same problems.

Mr. Oakes, who wrote the article, is an outstanding journalist who is now stationed in London.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE BRITISH HAVE BUDGET WORRIES, TOO

(By George W. Oakes)

"Parliament, like all elected assemblies, has lost the will to control government expenses—it's constantly pressing to increase spending." Such is the considered view of one of the House of Commons' most respected Conservatives, a former Cabinet Minister with 30 years of parliamentary life behind him.

Herbert Morrison, the Labor Party's most experienced parliamentarian in the Commons, wrote in 1954, "Whether the House of Commons is an adequate and efficient watchdog over public expenditure is open to question." That view is shared by most M. P.'s today.

Under the British system, the House of Commons allows the majority party or the government in office to spend what it considers necessary to implement its policy. The Commons' most powerful control is its constant right and privilege to throw any government out of office by defeating it.

Unlike the American system under which Congress can alter and amend the details of the President's budget, the House of Commons in practice accepts the government's recommended estimates or appropriations as presented. If it rejects these proposals, then the government must resign.

HOW IT WORKS

The British procedure works this way:

Each February the Government proposes its estimates to the House of Commons for the next fiscal year (which begins in April). These estimates are debated on certain days when the whole House sits as a Committee of Supply (Finance). Formerly the supply debates concerned financial matters, but during the past quarter century or so they have become occasions for the opposition to criticize and discuss the general policy behind the estimates.

For example, a supply debate on colonial estimates recently gave the opposition a chance to attack the Government's Cyprus policy rather than the cost of implementing it. So the Commons gives less attention to Government spending than it used to.

The House of Commons, in contrast with Congress, has no committees that hold hearings or question Ministers on financial expenditures before all current estimates are voted. However, there are two select committees of Commons that, without discussing policy, try to see that public funds are spent as economically as possible and only for the items authorized.

These are the Select Committee on Public Accounts, established by Gladstone in 1861, and the Select Committee on Estimates, set up in 1912. This machinery, organized when the annual budget was a mere fraction of that presented last April, and the entire governmental organization, about the size of a modern city administration, has remained virtually unchanged.

STUDIES PAST SPENDING

The Public Accounts Committee—by far the more important—consists of 15 members from both parties under the chairmanship of a prominent member of the opposition—often an ex-financial secretary to the treasury. It methodically examines the money already spent to determine whether it was used for the purpose intended by law. Its method is to concentrate on one Government department at a time, covering thoroughly the major establishments once every few years.

The committee has a single clerk, but it also utilizes the staff services of the controller and auditor-general, an officer of the House of Commons whose duty is to audit the accounts of the Government departments and report to the Commons.

Sitting every week, usually from February to August, the committee questions in detail the highest permanent officials and they hold these sessions in great respect. If civil servants exceed their authority or use money for purposes other than intended their careers can quickly be ruined.

The Public Accounts Committee's chief defect is that it is examining expenses incurred nearly 2 years earlier. Former aCbinet Ministers believe that the committee's accounting operation should be expanded so that it could examine more departments regularly instead of covering a limited number once every few years.

The committee labors under a further disadvantage as it is not authorized to investigate the accounts of the great nationalized industries—coal, electricity, railways, etc. Then, too, some question whether an annual accounting checkup is adequate for long-range projects with expenditures spread over several years.

But despite its limitations, M. P.'s regard the Public Accounts Committee as efficient and of vital importance. Its investigation of uneconomic expenditures and extravagance was particularly useful during the last war.

POLICY IS BYPASSED

The Estimates Committee, with 36 members split among the parties, is appointed annually to examine proposed expenditures and recommend economies consistent with policy. It's five subcommittees meet weekly from January and the full committee, under the chairmanship of a member of the party in power, issues its reports during the summer.

The committee cannot consider policy matters, hence in practice it can only advise on broad principles of management and economic administration. To take a minor illustration, it would inquire whether in constructing army barracks, estimates were received from a sufficient number of contractors but it wouldn't concern itself whether the barracks should have had more recreation rooms.

Since the committee operates with half a dozen clerks and no other permanent staff, its scope of activity is limited. High civil servants appear before it to answer questions and explain appropriations. As a result of its reports to the Commons, the Government usually issues a reply concerning the committee's proposals and sometimes these provoke debates. Two recent reports that attracted attention concerned the procurement of military aircraft and the construction of civil airports.

The Estimates Committee is generally regarded as considerably less effective than the Public Accounts Committee.

Many authorities doubt its usefulness for several reasons. It cannot deal with financial policy and so is unable to influence current estimates. It is handicapped by lack of an investigative staff and by the M. P.'s ignorance of technical financial problems. That the little time available for the vast task of checking the estimates prepared in February and voted on shortly thereafter means that in the few subjects it can cover each year it is often inquiring into funds already spent.

FEAR LOSS OF POWER

There is a conviction among experienced parliamentarians, former cabinet ministers and many M. P.'s that creation of additional special advisory committees would mean a degelation of powers from the Commons and thus weaken the authority of the House itself as the center for debate and decision.

Also, it is felt that bipartisan committees would tend to tie up ministers too much and inhibit the opposition during debates. Nevertheless a special committe was set up during the current session to examine the reports and accounts of certain nationalized industries.

Sir Robert Boothby, an independent Conservative M. P. believing that Parliament needs additional means of exercising its control, has for some time favored the establishment of select all-party advisory committees in the field of defense, foreign policy, and finance which would have the power to question ministers and high civil servants. Some M. P.'s argue that if such a committee, composed of qualified M. P.'s, could have questioned ministers before the Suez adventure, it might never have occurred. Nye Bevan is known to favor a special Commons committee to supervise colonial policy. But this demand for additional committees has not attracted much general support. On the whole, ministers and potential ministers are against any mechanism that might restrain their powers when in office.

Right to Jury Trial

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 31, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the July 28, 1957, issue of the Augusta (Ga.) Chronicle, which is one of the South's oldest and most distinguished newspapers. It is entitled "Right to Jury Trial."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHT TO JURY TRIAL

The civil rights bill might produce a filibuster after all.

The Eisenhower administration, having suffered a major defeat in the Senate's elimination of section 3, has retreated to prepared positions. From there it will wage a last-ditch fight to salvage what it can from a civil-rights measure which already has been emasculated.

Still, at least one more crucial battle looms. President Eisenhower has ordered his congressional lieutenants to stand firm against any effort to amend the legislation with a guaranty of jury trial in right-to-vote cases.

Such an effort most assuredly will be made. Senator O'MAHONEY, of Wyoming, already has proposed such an amendment.

Senator RICHARD B. RUSSELL, leader of the anticivil rights forces, served notice that if the right-to-trial-by-jury amendment is beaten a full-blown filibuster will result. Southerners, and other Senators who have befriended them on this issue, will go down fighting; they will not give an inch.

Last week we wondered in print whether President Eisenhower had refreshed his memory lately on the matter of jury trials guaranteed in article VI of the United States Constitution.

Evidently, he hasn't.

At the cost of being repetitious, we should like to put down in print again the provisions of this article because what Mr. Eisenhower and his supporters are proposing is diametrically opposed to the language of the Constitution. It says:

"In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State

and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.".

Those are the words of the United States Constitution.

Yet, President Eisenhower is fighting for a law which would permit a Federal judge to try, convict, and punish a person—without trial by jury—in criminal contempt cases arising from cases charging violation of another person's right to vote.

These are not civil contempt cases referred to in the present civil-rights bill; they are criminal cases, and article VI of the Constitution provides that a person is entitled to trial by jury in all criminal prosecutions.

The American people won a significant victory in defense of their rights by the Senate's action last week; but this victory will not be complete until the menace to their right to trial by jury is removed.

And so, come next month, or the next, we might find a weary, hoarse group of Southern Senators still talking against this menace.

Oil Companies Are Not Hurting

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. MACK of Illinois. Mr. Speaker, those who seek to destroy effective Federal regulation of natural-gas prices have long contended that under regulation producers lack incentive to provide adequate supplies of natural gas. This argument is phony.

Since the Supreme Court ruled in 1954 that the Federal Power Commission should fix producers' prices of natural gas sold to interstate pipelines, gas production has actually increased. This is not news to readers of the financial pages of our daily newspapers. Oil-and-gas-industry profits are at an alltime high.

Major oil companies control at least 85 percent of the natural gas moving in interstate commerce. They are not hurting a bit from Federal regulation. Under leave to extend my remarks, I include reports published in the New York Times of July 30, 1957, on the earnings of some of these companies. The Supreme Court decision directly concerned the Phillips Petroleum Co. Yet, Phillips enjoyed the most profiitable 6 months in its history during the first half of 1957. Standard Oil of New Jersey also reported record earnings for this same period.

Perhaps these reports are the answer to a question that has perplexed many members of the Committee on Interstate and Foreign Commerce. For a solid month in 1955 and again for several weeks this year our committee heard extensive testimony on the need for legislation to nullify the effect of the Supreme Court decision in the Phillips case. Time and time again we heard consumer gas shortages threatened because continued regulation would make gas exploration unprofitable. Strangely, however, not a single official of a gas-producing company testified before our committee. No official of Phillips, or Gulf, or Standard Oil, or any of the other big producers, appeared for questioning on the adverse effect regulation was having on his company's earnings.

Why? I think the answer lies in these financial reports.

The reports referred to follow:

JERSEY STANDARD NETS $463 MILLION

The Standard Oil Company of New Jersey reported yesterday record net earnings for any half-year period at $463 million. This was equal to $2.35 each on the 196,939,278 capital shares outstanding.

For the first half of 1956, the company had reported a net income of $392 million or $2 a share.

Total income from sales and investments amounted to $4,030,000,000, or 15 percent above the $3,494,000,000 in the first 6 months of 1956.

The company estimated capital and exploratory expenditures made by affiliated companies reporting consolidated earnings at $629 million. This represented an increase of about 50 percent more than such expenditures of $413 million in the first half of 1956.

Of the total expenditures this year, additions to property, plants, and equipment were $508 million and those for the search for oil and gas and charged against current income were $121 million. The company said that more than 85 percent of the total was made in the Western Hemisphere, with approximately one-half of that in the United States.

The company's worldwide gross production of crude oil was placed at 2,484,000 barrels a day in the first half of this year, compared with 2,286,000 a day in the similar period of 1956. Crude-oil runs to refineries averaged 2,485,000 barrels a day, against 2,439,000 in the first half of 1956.

PHILLIPS PETROLEUM

The Phillips Petroleum Co. in the first 6 months of this year had a net income of $53,398,637, the highest for any 6 months' period, the company reported yesterday. This was equivalent to $1.55 each on the 34,350,353 shares outstanding at the end of the period.

The first half of 1956, the company reported a net income of $51,565,719, or $1.50 each on the 34,338,371 shares then outstanding.

Consolidated gross income this year also was at a record for any first-half year at $572,810,766, compared with $507,954,264 in the first 6 months of 1956.

The company's net production of crude oil and natural gas liquids averaged 225,720 barrels a day, against 207,496 a day in the first half of 1956. Crude oil processed at refineries averaged 244,065 barrels a day, compared with 248,657 in the 1956 period.

SUN OIL CO.

The Sun Oil Co. and subsidiaries today reported consolidated net income of $25,187,436 for the first 6 months of this year, compared with earnings of $25,138,552 in the corresponding period of last year.

The 6-month earnings were equivalent to $2.34 per share on the 10,752,254 common shares outstanding on June 30, compared with $2.48 a share earned by 10,143,601 common shares outstanding on June 30, 1956.

Joseph N. Pew, Jr., board, chairman, said the 1957 profit resulted from a gross income of $400,920,717, an increase of 14.4 percent over the $350,476,234 of gross income during the first half of last year.

TEXAS GAS TRANSMISSION

Texas Gas Transmission Corp. and subsidiary reported yesterday operating revenues of $87,296,144 for 12 months ended June 30. This compared with $76,145,989 a year ago. Net income of $7,020,677, equal to $2.17 a share, compared with $6,702,532, or $2.09 a share, year earlier. June quarter operating revenues of $22,656,683 compared with $18,501,540 a year earlier, while net income of $1,750,451, equal to 54 cents a share, compared with $1,563,681, or 48 cents a share, in the like 1956 quarter.

W. M. Elmer, president, advised stockholders that the activities of Texas Gas Exploration Corp. have been expanded substantially this year, having drilled or participated in drilling of 24 wells during the first half against 22 in all of 1956. Seven have been completed successfully, he said, adding that 7 are still drilling and 10 were dry holes.

TRANSCONTINENTAL GAS

Transcontinental Gas Pipe Line Corp. reported yesterday new highs in virtually all categories for the second quarter and for 12 months ended June 30. Tom P. Walker, chairman, and E. Clyde McGraw, president, commented that the 1957 construction program is proceeding on schedule. Completion of the present expansion program will boost total allocated capacity to 970,000,000 cubic feet a day, plus 136,000,000 cubic feet daily available from storage for next winter's heating season.

Operating revenues totaled $91,046,704 against $84,166,081 for 12 months ended June 30, 1956. Net income of $13,859,173, equal to $1.55 a share, compared with $10,888,202, or $1.17 a share, a year ago. Operating revenues for the June quarter totaled $22,281,513 against $20,924,376, while net income of $3,756,835, equal to 41 cents a share, compared with $2,726,411, or 29 cents a share, in the like 1956 period.

The Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 31, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from an outstanding radio broadcast which was delivered by Mr. George E. Sokolsky over a number of American Broadcasting Co. stations on July 21, 1957.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

THE CIVIL-RIGHTS BILL

(By George E. Sokolsky)

Congress is now in a state of funk and the politicians of both parties are more concerned with the 1958 and 1960 elections than with the maintenance of the law in the United States. The Supreme Court has become a legislative body, usurping some of the functions of Congress, and it is quite possible that the Warren Supreme Court has knocked out the 10th amendment altogether. The 10th amendment reads:

"The powers not granted to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people."

The present civil-rights bill before Congress is a political measure designed to turn over to the Federal Government, through the Department of Justice, the enforcement by Congress of civil rights, particularly in States which do not grant equal civil rights to Negroes, although it has been my observation that there is as much discrimination against Negroes in the North as in the South.

As anyone who lives in a city like New York knows, there is no such thing as equal rights between Negroes and whites and that all the political gimmicks devised to prevent covert segregation in the schools fail because when Negroes or Puerto Ricans move into a New York city area, the white people move to a suburb. Thus, a school sooner or later finds itself in a Negro or Puerto Rican area and first most of the children and then all of them are Negroes and Puerto Ricans. This is a devious way of getting around equality but it happens all the time and many of the so-called liberals who shriek their heads off about the iniquities of the South, talk about how various parts of the city have become run down and how they must take their children out of them.

What they mean by run down is that Negroes and Puerto Ricans have moved in. Those great liberals who are rich send their children to private schools where they will not be contaminated by the lower races, although many of these schools have one Negro child in each class to establish their liberalism and sense of equality.

So it may happen one day that the Negroes will have as much to complain about in the big northern cities as in the South, but that is not yet.

The civil-rights bill, now before Congress, is basically a political measure, designed to influence the Negro, Puerto Rican and other minority votes in the North. It will have little effect upon voting in the South. It turns over to the Department of Justice extensive powers over the States, so extensive as to be a direct violation of the 10th amendment, but nobody worries much about the 10th amendment; all that attracts attention now is the first and fifth amendments which give the Communists advantages over all other American citizens now that the Warren Supreme Court has so ruled.

I dislike being cynical about great men who hold high office and I should like to believe them when they assert moral pretenses for their acts. After all, at heart, they may be very good and just men who would not consciously do an evil deed.

But the fact is that any civil-rights bill, whether well written or poorly written, whether honestly devised or dishonestly devised, would be popular in the Northern States among the politicians of both parties because it would arouse in the growing and already large Negro population a sense of gratitude. However, any measure which eliminates trial by jury is evil and wicked because it is destructive of our system of government and ultimately would do harm to Negro and white alike because when one stone in the arch of our liberties is removed, it will not be long before the entire arch collapses.

Liberty is not divisible. It stands whole or falls entirely. Trial by jury is an essential part of the Anglo-Saxon way of life which is our way of life no matter where our forebears came from. Whenever and wherever the jury system breaks down, the liberties of the people disappear. If politicians believe that it is more necessary for them to be reelected than it is to preserve the United States and the American way of life, then obviously it is time for the American people to rid themselves of such politicians. As soon as any man thinks that he is greater than the whole American people, it is time to drop him altogether.

Senator KARL MUNDT, discussing this question on the floor of the Senate, said:

"Blackstone believed trial by jury was provided for in the Magna Carta and described it as 'a trial that hath been used time out of mind in this nation, and seems to have been coeval with the first civil government thereof.'

"The drafters of our own declaration of rights in 1774 insisted that the colonists were entitled to 'the great and inestimable privilege of being tried by their peers of the vicinage.'

"Thomas Jefferson, Benjamin Franklin, and all the drafters and signers of the Declaration of Independence, asserted deprivation of trial by jury to be one of our grave grievances against George III.

"Our great Anglo-American forefathers were not prone to play recklessly with human rights. They were not prone to barter and manipulate and discard human rights like so many well watered pieces of stock. When they found themselves confronted with a situation where it appeared that to protect more carefully one series of rights they must relinquish others, they knew that their search was not finished."

Michigan Taxes

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks I should like to insert the following article from the July 19, 1957, issue of the Detroit Times in which Governor Williams answers many of the questions that have been raised about the tax situation in Michigan:

GOVERNOR WILLING TO CHANGE TAX SETUP—ASKS INDUSTRIALISTS TO SAVE STATE'S NAME

(By Al Kaufman)

LANSING, July 19.—Governor Williams today made a dramatic appeal to Harlow H. Curtice, president of General Motors Corp., and other industrial leaders, to work with the administration "to save the good name of the State of Michigan."

In an exclusive Times interview, highlighted by frank replies to a list of 10 questions, the Governor conceded a "lack of liaison between some sections of business and State administration," and added:

"This is a bad thing for everybody, and I think it should be corrected.

"Maybe I haven't been as much a backslapper as I might have been, but everybody in Lansing knows my door is always open, and any businessman—from Harlow Curtice to the littlest corner merchant—can come into the capitol and see me at any time.

"I have never refused to listen, and I am ready to be convinced if I am wrong.

"I would very much welcome some frank personal talks with some of these business leaders to get their ideas on how we can meet Michigan needs without doing injury to any group of our citizens."

DISAVOWS HOSTILITY TO INDUSTRY

For the first time in the 9 years of his regime, Williams made public statements conciliatory toward business interests.

He disavowed hostility to industry, said he was willing to accept the advice of business on tax problems, and disclaimed any favoritism toward labor.

Williams said there was absolutely no truth to charges that he was a captive of Walter Reuther and Gus Scholle of the UAW-CIO, and added:

"All that Mr. Reuther and Mr. Scholle have ever asked of me is good government—and that's the only favor I have ever done them."

On taxes:

"I have never insisted on a corporation profits tax. I have always said if anybody could come up with a better idea, I would accept it."

CALLS IT VICIOUS PROPAGANDA

Caught in the series of Republican charges that his administration is driving business out of the State, Williams renewed his reply that the statements were vicious propaganda blackening the name of the State.

Exploding stories he has worked out his political future for 1958 and 1960 that call for a try at the Democratic nomination for President, Williams told the Times:

"As these questions indicate, I have plenty of problems as Governor of Michigan."

"THEY ARE NOT MY TAXES"

Following are the Times questions and the Governor's written replies:

"Question 1. The decision this week of Jones & Laughlin Steel Corp. to locate a new $16 million plant in Ohio rather than in Michigan because of tax differentials revives the argument that your administration is responsible for the so-called unfavorable political and industrial climate. What have you to say?

"Answer. We can expect these charges to be revived continuously between now and the 1958 election.

"The simple truth is that the State taxes they are complaining about are not my taxes. Our tax on business, the business activities tax, was written by lobbyists for big industry, and I refused to sign my name to it.

"The tax is inequitable to small business, and there is no question that it works against business coming into Michigan because it must be paid by a new business whether the enterprise makes money or not.

"QUOTES FINANCIAL PAGE

"A businessman considering coming to Michigan knows that he must pay this tax the moment he opens his doors, even if it takes him a year or two to get into profitable operation. This year I tried to get the business activities tax removed from some 25,000 small firms, by forgiving the first $50 of the tax—but the proposal was killed by the Republican majority in the legislature.

"Your question presumes that Jones and Laughlin actually made their decision because of taxes, but there is clear evidence that taxes were not their first consideration. In a statement made to the Chicago Journal of Commerce on July 16, the company said it chose the site near Canton, Ohio, because there is an existing steel plant on this site, and the company can get into operation faster and cheaper than if they were to build a new plant. The company did not mention taxes in the statement it gave to the Chicago Journal of Commerce.

"ACCUSES LEGISLATURE

"Question 2. Republican Speaker of the House George Van Peursem, in a speech Tuesday night at Farwell, said that 'Ohio, Indiana, Illinois, and Wisconsin are far ahead of Michigan while the working men and women of our State are watching their jobs disappear.'

"Van Peursem, as spokesman for the Republican Party, also charged your attitude toward business 'will turn Michigan into a Democrat desert,' and quoting figures from your emergency industrial production commission, said the number of factory jobs has declined to the lowest point since you took office in 1949 and will go lower.

"What have you to say?

"Answer. The fact that Van Peursem is making this the theme of his series of political speeches is proof that this is political propoganda. There is no danger that Michigan will become a Democratic desert, but such things as the heartless treatment the legislature gave the mental hospital system, raise the possibility it could become a Republican wreck.

"It is true that industrial employment on May 15 is at the lowest point since September 1956—not 1949 as Van Peursem says. But the curious thing is that Michigan employment in nonmanufacturing industries on the same date was at the highest May level in history. The Republicans never mention that because it indicates there is nothing basically wrong with our climate or our economy.

"We lack data on the reasons for the current unemployment in the auto industry. Some of it is probably due to automation and other labor saving techniques. I have been trying without success for several years to get the Legislature to set up a commission to look into this.

"We are going to do our best to find out what is responsible for this unemployment, and what can be done about it. The Republican party with its political exploitation of the State's problems, is no help.

"DENIES UNFRIENDLINESS

"Question 3. What is your reply to charges that you have not been friendly to men like Harlow Curtice and other industrial leaders in Michigan?

"Answer. Harlow Curtice and I received honorary degrees from the University of Michigan together, and have met socially from time to time. On all such occasions, there was nothing but pleasantness between us. I count many industrial leaders as my friends. Not all of them agree with me politically, and I don't think any of them likes to pay taxes, any more than you or I do.

"It has been my duty, as governor, to recommend tax measures that some businessmen did not like. I think they would have been a lot better off today if my proposals for taxes based on profits had been accepted years ago, instead of the Republican business activities tax and other existing business taxes.

"It is probably true there has been a lack of liaison between some sections of business and the State administration. This is a bad thing for everybody, and I think it should be corrected.

"Part of the trouble is the fact that business leaders too often rely upon their Lansing lobbyists to maintain contact with State government—some of the lobbyists are more interested in politics than in good relations between their companies and the administration.

"ASSAILS ROAD FUNDS RAID

"That doesn't go for all of them, of course. But we had an example in the last session of a lobbyist for a company actively working to reduce highway construction funds by making the gas tax bear the cost of the State police.

"I suppose he thought he was minimizing the possibility of taxes on his company, but I wonder if his bosses knew he was conniving to raid highway funds and build fewer roads on which to operate their cars.

"Maybe I haven't been as much of a backslapper as I might have been, but everybody in Lansing knows that my door is always open, and any businessman can come into the Capitol and see me any time. I have never refused to listen and I am ready to be convinced if I am wrong.

"I would very much welcome some frank personal talks with some of these business leaders to get their ideas on how we can meet Michigan's needs without doing injury to any group of our citizens, individual or corporate.

"EXPLAINS TAX POLICIES

"Question 4. If Michigan must have new taxes to support State government, why do you insist on a corporation profits tax at a time industry contends Michigan taxes are throttling expansion? What is your attitude toward a combination corporate profits and personal income tax for Michigan?

"Answer. I have never insisted on a corporation profits tax. I have always said that if anybody could come up with a better idea I would accept it.

"I recommended a corporation profits tax last winter because it seemed to be the only way we could get the money we need for education, mental health and other vital services, without consumer taxes which raise the cost of living for Michigan families. The legislature decided otherwise, and imposed taxes on cigarettes and liquor, as well as unbalancing the budget.

"We'll have to wait and see how badly the budget is out of balance and how badly State services—such as mental health—have been damaged before we can make any predictions about taxes next year.

"ASKED TAX STUDY GROUP

"The question of a personal income tax was dealt with very fully in my tax message of 1957, and I think it would be unwise to expand on that statement which you gentlemen have.

"The main point I made in that message is this: That it would be unfair to impose a personal income tax on those citizens who already bear the main burden of the sales tax. To tax a citizen's paycheck when he gets it, and again when he spends it, doesn't seem right to me. Such double taxation would, of course, be another increase in the rising cost of living.

"Realizing that an honest difference of opinion existed as to methods of taxation, I recommended the setting up of an independent, blue ribbon citizens tax study commission, the recommendations of which might very well be so persuasive as to win the acceptance of taxpayers generally, the legislature, and myself. I still feel this is the best way out of our present tax impasse.

"CLAIMS TAX PERCENTAGE CUT

"Question 5—Your critics have called you a 'spending governor' who keeps presenting Michigan with increasingly higher budgets. Is economy in government impossible? Is there no way to cut taxes. Exactly what is Michigan's future—economic, social, and taxwise?

"Answer. My critics have called me a lot worse names than that. It is not true the cost of government in Michigan has gone up, in relation to the income of the people. The expenditures of our State government, in proportion to income, actually decreased in the last 8 years.

"In 1949–50 the people of Michigan spent 5.8 percent of their total personal income for State government. In 1955–56 they were spending 5.5 percent for this purpose.

"It is true that the dollar costs of government have gone steadily upward. This is not surprising because everything else has increased in cost. With individual citizens receiving higher wages, the cost of living hitting record-high levels, how could the dollar costs of the State government go down?

"The State has to pay for every hour of work by its employees, every shovel full of gravel it puts into highways, every kilowatt of power it uses—just as everyone else does. If the cost of these things goes up, the cost to the State goes up.

"GROWTH IN POPULATION

"There are particular factors which have operated to increase the dollar cost of government in Michigan. One of these factors is the immense growth of our population—more than a million people since 1950. Our growth in the last 7 years is 80 percent greater than the growth of the Nation as a whole. Obviously, if you have more people, you have to have more of everything to give them adequate governmental services.

"The important thing is that we have met this challenge without increasing the percentage of income required for taxes, but actually have lowered that percentage.

"Now I know a lot of people say, 'Well, if we have more people in Michigan to pay taxes, won't the increased population pay its own way?'

"To some extent this has happened. Our sales tax revenues have increased beyond all expectations. This has saved us repeatedly from what appeared to be financial disaster. The trouble is that most of these new citizens are children—60,000 additional ones reaching school age every year.

"DEFENDS SCHOOL EXPENDITURES

"These children must have schools—and schools cost a lot of money. There is no alternative except for the adult population to make the necessary investment in the services needed by these children. After all, they are our children, and how could we spend our money in a better cause?

"The rise in government costs has not been confined to Michigan. Every State has experienced it. Michigan obviously has met some of its great additional needs better than some other States, but if we are out in front on some State services, that condition won't last long. Other States will have to meet their own needs—and none of them is going to be able to print its own money.

"It is significant, for example, that the Ohio legislature this year increased appropriations, according to U. S. News & World Report, by 48 percent, and Indiana 31 percent, as compared with Michigan's 6 percent.

"But we are not going to be able to save in any of these ways enough money to provide the answer to rising government costs. The costs are rising not because we are wasting tax money, but because we are compelled to buy more services, for more people, at higher prices.

"TELLS OF BUDGET REQUESTS

"Another sense of the word 'economy' is to forgo some good and needed things because we cannot afford them. There is room for that, too, and we have done a lot of it. I reduced the budget requests of State agencies this year by $93 million before sending them on to the legislature.

"The only really effective economy is to spend money only for things that are absolutely needful—and to get a dollar's worth of value for every tax dollar paid out. We think we have a good record in our efforts to do that.

"As to Michigan's future, I can only say I believe in Michigan. We have several things here that are priceless and that cannot be taken away from us.

"We have unlimited supplies of water, and water is going to be the big need of industry in the future. We have a wonderful vacationland which will boom when we get better highways and the Mackinac Bridge. We have one of the world's finest educational systems, with immense facilities for technical assistance to industry and agriculture.

"We have a highly skilled labor force with responsible leadership. The industrial conflicts we passed through 15 years ago may hit some of our competing States in the future.

"We have a gigantic industrial complex which is going to remain centered in Michigan for the foreseeable future. We have tremendous natural resources—lumber, salt, chemicals, and so forth. All we need is to stop calling each other names, and hanging our dirty linen on the national fence, and roll up our sleeves and get to work together.

"DISLIKES BUSINESS RECEIPTS TAX

"Question 6. Do you think of the business-receipts tax as a deterrent to small

business locating and expanding in Michigan?

"Answer. I think the business-receipts tax is a deterrent to new business locating in Michigan principally because it demands a considerable rate of taxation immediately, without respect to business making a profit. However, I have dealt with this problem more fully in my answer to question No. 1.

"Question 7. What part do you think the State legislature has played in creating the so-called 'hostile atmosphere' toward industry?

"Answer. I don't think there is any 'hostile atmosphere' toward business in Michigan. If the present tax structure has created a feeling of resentment on the part of some industrialists, the fault lies not only with the legislators who enacted these taxes but also with the business interests who wrote and dictated these Republican tax policies.

"WILL COMBAT ILL REPORTS

"Question 8. Now that Michigan has been advertised around the Nation as having an unhealthy tax climate, what do you propose to do about it?

"Answer. If we continue and redouble our efforts to attract industry through existing State agencies such as the economic development commission and through such new agencies as we can devise, we can continue to build our economy.

"However, we will do well to just hold our own without making too much progress as long as they continue to advertise Michigan all over the country as a place to stay away from.

"In the long view, there must be a revision of our tax structure to eliminate the genuine and real causes of business complaint—the inequity, for example, of the business activities tax. But we cannot hope to do that overnight, after 10 years of refusal by the legislature to face the fact that a new tax structure is needed.

"NO CAPTIVE OF LABOR

"Question 9. There have been charges that you are a captive of labor and Walter Reuther, of the UAW-CIO. What roles do Reuther and Gus Scholle play in your administration?

"Answer. Mr. Reuther and Mr. Scholle are the elected heads of labor organizations which include about 600,000 Michigan citizens. As spokesmen for the economic interests of these citizens, they have every right to be heard by State government.

"I am willing to listen with just as much attention to the representatives of the Michigan Manufacturers' Association.

"I am proud of the fact that no special interest—labor or otherwise—controls this administration.

"It is significant that while we have fought for labor's rights when they were imperiled, the great achievements of the last 8 years occurred in areas which affect the whole people.

"SEEKS ADVICE OF LEADERS

"It is a matter of record that in making the policies of my administration I have sought the advice of leaders of business, agriculture, and the professions as well as labor.

"Men like Walter Cisler, Justin Whiting, Dan Gerber, Prentiss Brown, Stanley Powell, of the Farm Bureau, have actively helped to plan programs which I have endeavored to make effective. I believe in getting the service and counsel of all segments of our community.

"All that Mr. Reuther and Mr. Scholle have ever asked of me is good government and that's the only favor I have ever done them.

"Question 10. What about your political plans for 1958 and 1960?

"Answer. As these questions indicate, I have plenty of problems as Governor of Michigan. I have worked out no political plans for 1958 or 1960."

Water Problems in New Jersey

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. COLLIER. Mr. Speaker, today the House is scheduled to take up H. R. 2147, dealing with a reclamation project at San Angelo, Tex., which is primarily for use as a reservoir to supply municipal, domestic, and industrial water for that hard-pressed city. The Federal Government is, in effect, being asked to finance the city's water-supply-reservoir.

In this connection I would like to note an article which appears in this morning's issue of the New York Times. This article deals with the water problems which face the fast-growing population of the State of New Jersey. It is worth noting that these people are not appealing to the Federal Government to solve their water problem for them; instead, they are discussing what they themselves can do about it. The plan, it seems, is for the State to issue bonds in the sum of $14 million to finance construction of a reservoir system.

I think the article is worth reading to show some areas of the country which look constantly to Washington for help what can be done by people to help themselves.

The article follows:

The New Jersey Water Resources Advisory Committee today renewed its appeal for a referendum in November on a plan to solve the State's water-shortage problem.

At the same time, the committee made public a report summarizing its program. The report will be received officially on Thursday by the State senate's committee on revision and amendment of laws, headed by Senator Wayne Dumont. The senate committee also will receive reports from groups opposing the plan.

The advisory committee's program calls for a referendum on a $14 million bond issue to finance construction of Raritan Basin reservoirs at Stony Brook, near Princeton, and at Spruce Run, near Clinton. The chairman of the committee is George F. Smith, president of Johnson & Johnson, of New Brunswick.

At senate hearings last month, residents of Stony Brook, as well as Princeton University, opposed the program. Princeton owns about 65 acres of land that would be affected by a reservoir.

As a substitute, the opponents proposed a reservoir in Round Valley, near Lebanon, about halfway between Stony Brook and Spruce Run.

The Stony Brook people, today's report said, "seem oblivious to the fact that a Round Valley reservoir would do nothing toward solving the water needs in the Princeton-Pennington area."

The committee's program, the report continued, puts Round Valley in its proper perspective as an adjunct to, and not as a substitute for, reservoirs on the Raritan River.

The Spruce Run reservoir, the committee asserted, would assure plenty of water in the area. It also foresaw an increase from 45 million to 90 million gallons a day at the confluence of the Raritan and Millstone Rivers, and an additional 40 million gallons of water supply available for sale daily between Spruce Run and the confluence.

The Stony Brook reservoir, the report said, would provide an assured water supply for the Princeton-Pennington area and for communities downstream on the Millstone.

The committee said that additional on-river reservoirs, that it planned to propose soon, would bring to 320 million gallons a day the total new water supply from Raritan Basin sources.

The committee dismissed as false charges that its plan was based on incomplete engineering studies. It said the studies were the most painstaking water surveys ever made in New Jersey.

Fight for Trial by Jury Is Not the South's Alone

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial which appeared in the Nashville Tennessean on Sunday Morning, July 28, 1957.

This excellent editorial concerning the fight in the Senate for a jury trial amendment to the civil-rights bill will be of great interest to each Member of the House, and the editorial follows:

FIGHT FOR TRIAL BY JURY IS NOT THE SOUTH'S ALONE

Having stripped the administration and Attorney General Herbert Brownell of some extraordinary enforcement powers they coveted, the Senate now enters into the climatic fight over the right of jury trial in voting cases.

Up to this point, therefore, it can be said that the South has won important victories. But as a matter of fact, the triumphs are not credited alone to this section. Thoughtful Democrats and Republicans in other parts of the land rejected the idea that Federal troops could be used for enforcement, just as they opposed the injunctive process in dealing with all civil-rights matters, including segregation.

Voting with the majority in detonating part III of the rights bill was that staunch Republican, Senator SALTONSTALL of Massachusetts. He believed that its passage would weaken rather than strengthen the civil rights of an individual, and this view was based on a fear that suits by the Attorney General to enforce a large variety of constitutional rights might have the effect of weakening home rule or government close to the people.

Now that the issue has been narrowed down to the vote, it can be assured that the administration will wage an all-out campaign for the rule by injunction in this category.

But there are better reasons to hope that the same majority which has cleansed the bill of other evil features will stick together in this final test.

Southern spokesmen and their friends have made out a strong case for refusing to leave alleged voting-rights violations into the hands of the Attorney General and a single Federal judge. Such a violation of tradition in criminal cases would set a dangerous precedent and serve as a reflection on the good faith of an entire region. Once the step was taken, it could be extended to other areas in other sections of the country.

One thing has already become abundantly clear: The measure alleged to have been drawn up by Mr. Brownell, though there are doubts on that score, was not based on good intentions. Its meaning was never clear to the average man, or even some experts. It reached for powers no Government legal officer should want, and was shot through with a deviousness which ultimately caused President Eisenhower to express doubts.

In the last analysis, the South has never been overwhelmingly opposed to reasonable legislation supporting the present laws covering voting privileges. It does not take that stand today, even though the Brownell bill has obvious political purposes.

In behalf of its own dignity, and in keeping with tradition, however, it does insist upon the inalienable right of trial by jury; and it is on this front that it will make an all-out fight.

Only by courage and vigilance has the administration's grasp for unwarranted power been broken in part. There will be no relaxation of courage and vigilance as the jury-trial issue is faced on the Senate floor with Senators KEFAUVER and GORE in the van of the resistance movement.

Washington Newsletter by Congressman Earl Wilson

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. LAIRD. Mr. Speaker, since living costs in this country are at an all-time high and the value of the American dollar continues to shrink, the need for Congress to become actively concerned is most apparent. Under leave to extend my remarks, I include the timely current newsletter to constituents by Congressman EARL WILSON, of Indiana:

PUBLIC ENEMY No. 1

As this session of the 85th Congress nears the close there is emerging a national issue which may overshadow all others when Congress reassembles in January. I hope that issue receives penetrating attention.

Our Nation's greatest enemy today is within our own borders, a sinister and fearful monster leering through the windows of every home in the land. Standing at his shoulder is enemy No. 2. They are poised, ready for the kill.

No. 1 is inflation; No. 2 is communism. Together they can kill the American way of life.

For many years our major fears have been of communism. Certainly we should not minimize that threat or relax our vigilance. Nevertheless, communism can hardly take over a strong, healthy Nation. First, there must be a sickness, or a weakness in the intended victim.

Inflation is our sickness. Dry it up, and communism cannot succeed.

A Congressman's mail is heavy with pressure missives of all types. I endeavor to read all of mine. I am glad to see an upsurge of statistics, editorials, speeches, individual appeals and angry demands that Congress do something to stem the sweep toward further cheapening of the American dollar.

When the price of steel rises $6 a ton at a time like the present, we are in danger—because steel is basic in the American economy. When certain powerful union leaders force hourly wages in key industries closer to the $4 level while workers in other industries are less fortunate, the inflation threat becomes great. Add these situations to the fatc that demand for goods in many fields is heavier than production, and we've got inflation.

Along with these factors, taxes keep edging upward. Costs of Government rise. Living costs climb and the value of the dollar drops proportionately.

In flation means disaster to pensioners, to farmers, small independent businesses, and thousands of other segments of the Nation's economy. It kills incentive and hope. Thrift, a natural trait of most people, flies out the window because there is no point in saving a dollar today which won't be worth a quarter in a few years.

The inflation sickness now has such a grip on America that a man must make $6,779 a year to be as well off as he was on $3,000 a year in 1939.

More Americans now are at work, making more money than at any time in history. This should mean prosperity, happiness and a buoyancy of spirit and hope. But it doesn't.

There's a great uneasiness in this land, and it is not entirely because of communism and the H-bomb. People are wondering and worrying about the cost of living, taxes, the plight of old folks and the future of their children.

It is a high time to tackle public enemy No. 1. I hope Congress will subordinate all other issues next January.

Pay Increases for Federal Government Employees

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. KING. Mr. Speaker, in behalf of the Federal Government employees in my district in California, I wish to thank you for the privilege of presenting to you their case for a prompt and substantial pay raise. There is certainly no problem involved in justification of such a pay increase. From a dollars-and-cents point of view and from the humane standpoint the need for more money for classified employees cannot be denied. The only questions are when and how much.

This salary problem is a very real and a pressing problem which calls for a forthright approach. It has broad implications for employees and the Government itself. For employees it is a matter of justice. For the Government it is a matter of attracting and retaining qualified personnel. If there is thought of economy, it should be recognized that employing qualified persons is economical, rather than employing less desirable persons who cannot do their jobs efficiently and with credit to their employer. These, I submit, are aspects of this problem which should be considered in formulating the decision on this legislation.

I oppose most strongly any attempt to let false notions of the need for economy in Government expenditures stand in the way of paying adequate salaries to those people who serve the Government and the public—notions which are entertained only because Federal employees must accept what is given them without being able to fight for their rights with the conventional methods available to employees who negotiate wage matters with their employers through the collective bargaining system. To say the least, it is highly improper for the Federal Government, as an employer, to take advantage of its unique authority and expect Government employees to bear the cost of the Government's budgetary difficulties.

Certainly threats of a Presidential veto should not deter the Congress from taking the only just and equitable course, and both justice and equity require that salaries of Federal employees be raised to a point where they are comparable with those paid in other fields for similar work, and where they will provide an adequate living standard for the employee and his family.

It has long been my belief that one of the greatest wastes in Government is the loss of trained personnel through heavy turnover caused by a breakdown in employee morale as a result of inadequate compensation, instead of recognizing and making good use of the experience and training of career personnel.

While it is true that a good many public-spirited civil servants are willing to sacrifice part of what their earning power would bring in the civilian labor market, it is equally true that the large mass of Government workers with families to support cannot continue to make that kind of a sacrifice indefinitely. The high turnover of employees in Federal agencies is sufficient proof of that.

I have always believed that good government begins with a competent career service, properly compensated both financially and with public respect.

All the talk about good government and economy is useless if we neglect the basic force needed to achieve these goals, the people who dedicate their lives to working in Government.

At the present time, we are in danger of losing our most competent employees because of the fact that their pay scales are not comparable with the pay scales of comparable positions in private industry. This would be a tremendous loss to the Federal service. It also would have an adverse effect on the appeal of the Federal service to new young people who are considering it as a career.

For these reasons, it is most essential, in my opinion, that this session of Congress grant a substantial increase in pay to our Federal classified employees.

And Somewhere in the Rubble Is Modern Republicanism

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the Trentonian, one of the

really outstanding newspapers of New Jersey, concludes editorially from its study of the defeat of the school bill that "somewhere in the rubble is modern Republicanism."

I include this challenging editorial for the information of my colleagues.

The editorial follows:

SOMEBODY'S WEAK

With the help of 59 percent of the Republican vote, the school construction aid bill died its predicted death in the House of Representatives last week. Whether that should be the cause for sorrow in New Jersey and Pennsylvania is a moot question—it has often been shown that Federal aid is pretty durned expensive stuff.

However, the political implications of the bill's defeat are interesting. Congressman FRANK THOMPSON, JR., Democratic Representative from this district, left no doubt about his feelings on the matter. He had been one of the leaders in the fight for passage, and his resentment was indicated when he said, "The failure of this bill evidenced lack of leadership on the part of President Eisenhower, who could not get his own party to back him up."

Congressman WILLARD S. CURTIN, Republican Representative of Pennsylvania's Bucks-Lehigh district, was among those voting to save the bill.

Their efforts were beaten down by that oft-deplored coalition of southern Democrats and conservative Republicans.

Once again an antisegregation rider on the bill insured its defeat, although this year, in contrast to last, the antisegregation amendment did not play a major role in killing the measure.

THOMPSON's assertion that President Eisenhower could not get the backing of Republican Members of the House came hard on the heels of GOP lamentations that the White House would not indicate any support for school construction. At that time a Democratic compromise measure was under consideration, but in Thursday's voting, the Democrats attempted to save the sinking ship by throwing their support behind an allocation formula contained in the bill proposed by Mr. Eisenhower. Even that failed to work, as a majority of the Republicans voted to kill the bill's enacting clause.

So, in the final analysis, we have an instance in which Mr. Eisenhower and the northern Democrats found themselves in the same boat—they had been soundly defeated when they had attempted to stand together. The only conclusion that can be drawn is that the northern Democratic-White House coalition is not mathematically as strong as the southern Democrat-northern Republican team.

And somewhere in the rubble is modern Republicanism.

No Federal Schoolhouse Aid

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I enclose herewith an editorial which appeared in the Des Moines Register of July 29, 1957:

NO FEDERAL SCHOOLHOUSE AID

The Federal school-aid bill is dead. The House defeated it on a 208 to 203 vote, and congressional leaders agree that this ends all prospect of passage at this session.

Federal aid for schoolhouses had the enthusiastic support of the National Education Association and virtually all educational organizations. It was supported by both the Republican and Democratic Parties in their platforms. It had the endorsement of President Eisenhower.

Why, then, was the proposal rejected?

Basically, it was defeated because most Congressmen are not convinced that Federal aid is necessary to solve the schoolhouse shortage. They believe that States and local communities can handle the problem satisfactorily.

Economy sentiment was a factor. So was the fear that, once started, this program would continue indefinitely and be expanded, and that it might lead to some Federal control over education.

Injection of the segregation issue—which the administration opposed—was a factor, too. An amendment was voted to deny Federal funds to school districts maintaining segregated schools. Some Democrats voted for this and some refrained from voting. The amendment made it easier to kill the bill.

The defeat of the bill serves notice on States and local communities that they must arrange to finance their own school improvements.

This is no tragedy so far as Iowa is concerned. Iowa is one of the States which would have received slightly more in Federal funds than it would have paid in added taxes. The biggest beneficiaries in this respect would have been Southern States. Alabama would have received 3 or 4 times as much aid as it contributed in taxes. A rich State like New Jersey would have contributed about twice as much as it got back.

Surveys made in connection with this proposed Federal aid program showed that Iowa has the overall financial resources to handle its own problem of providing the needed classrooms. If school districts are organized efficiently—which means reorganization in many areas—and if help is given a few districts with special problems, Iowa can get along quite well without Federal aid.

We hope that the enthusiasm for providing the best possible educational opportunities for all youngsters, which has motivated those seeking Federal aid, will not be lessened by defeat of the Federal schoolhouse bill. It should be directed to local and State school problems.

Excess Lands on Kings River Project

EXTENSION OF REMARKS
OF
HON. EARL CHUDOFF
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. CHUDOFF. Ever since the Reclamation Project Act of 1902, a basic feature of the Federal reclamation law has been its excess land provisions, which limit the holding of lands entitled to project water to a maximum of 160 acres for any 1 landowner. These provisions might be called the very heart of the reclamation law. In the words of former Secretary of the Interior Oscar Chapman, they are a "reaffirmation of the historic American policy of widespread ownership of land and the family-size farm."

That policy has just survived a close brush with administrative emasculation in the Department of the Interior. This would have occurred had the Secretary of the Interior decided to approve the proposed irrigation repayment contract with the Kings River Conservation District of California. Previously, with the full assent and approval of Assistant Secretary Fred G. Aandahl and Secretary Douglas McKay, provisions had been built into this proposed contract which would have made it extremely easy for each and every holder of excess land in the district quickly and permanently to escape the restrictions of the 160 acre limitation of the reclamation law. When this proposed contract, in the form finally approved by the district, was forwarded to Secretary McKay in November of 1955, there was every indication that he was prepared to give his approval.

As a result of numerous complaints addressed both to the Department of the Interior and the Committee on Government Operations, the Secretary was informed on December 7, 1955, by the full Government Operations Committee and later by the Public Works and Resources Subcommittee concerning the committee's interest in the proposed contract and especially its effect on the acreage limitation provisions. In his reply to the chairman of the full committee, Acting Secretary Clarence A. Davis, on December 22, 1955, stated that the Department was making an additional analysis of the applicable law and departmental precedents in the matter and that these studies would include consideration of recent expressions of interest that had come to the Department. "Action on the negotiated contract," the Acting Secretary added, "will be deferred until this analysis is finished." The further review mentioned by Mr. Davis was transmitted to the chairman of the Public Works and Resources Subcommittee on May 25, 1956.

After taking office as Secretary in June of 1956, Mr. Fred A. Seaton apparently decided he ought to take a long look at the proposed Kings River contract left him by his predecessor, Mr. McKay. It was a look which took some 13 months.

Now, after more than 19 months of vacillation in the Interior Department, Mr. Seaton has made the decision to reject the proposed Kings River repayment contract, with its convenient escape hatch for all excess-land owners, and to uphold the letter and the spirit of the long-established acreage limitation provisions of the reclamation law.

More specifically, this proposed contract would have permitted any landowner irrigating with project water, whether individual or corporate, to relieve his irrigable lands from the 160-acre limitation simply by paying in advance the full amount of his pro rata share of the district's total construction charge obligation to the United States.

It is interesting to contemplate what the effect of the approval of the proposed contract would have been in terms of excess lands in the Kings River project. With a total irrigable acreage within the district of about one million and a total irrigation construction charge for the district of $14,250,000, the per-acre share of this construction cost obligation would

be about $14, assuming for all landowners uniform water rates and uniform water requirements per unit of land. Thus, an individual landowner with 1,160 irrigable acres could escape the restrictions of the excess land provisions for his 1,000 acres of excess land by paying either $1,400 in lump sum or $140 a year for 10 years, if he had executed a so-called recordable contract.[1] Likewise, a corporation owning, say, 10,160 irrigable acres could lift the acreage limitation from its lands by payment of a lump sum of $14,000, or instead, 10 annual installments of $1,400 with a recordable contract. Actually, excess lands within the district total over 266,000 acres. There are 132 landowners who hold more than 640 acres apiece. Fifty-two of these own more than 1,280 acres apiece. There are several corporations owning between 10,000 and 20,000 acres each.

Yet, out of a total of 6,260 landowners in that project, 5,472 of them have no excess lands. The combined acreage of these nonexcess owners is more than 50 percent of the total irrigable acreage on the project.

The net effect of the Secretary's recent decision is that release from the 160-acre limitation would be allowed to project lands only after the entire district obligation of $14,250,000 has been repaid. Under reclamation law this $14,250,000 obligation would be in the nature of an interest-free loan to the district for the entire maximum repayment period of 40 years. Whether a majority of the district's landowners would favor the borrowing of up to $14,250,000 at current interest rates in order to pay off all or any substantial part of the district's obligation to the United States seems problematical.

As late as 2 days before he left office, former Secretary of the Interior Chapman, in a letter to the senior Senator from Illinois, dated January 17, 1953, asserted plainly that he was opposed to a lump sum or accelerated payment of construction charges as a means of avoiding the acreage limitation provisions of the reclamation law.

However, the administration which succeeded Mr. Chapman in the Department quickly turned to a different policy. On November 9, 1953, the Department specifically authorized the Bureau of Reclamation to negotiate with the Kings River interests for a repayment contract which would provide, among other things, for repayment of the irrigation allocation in 40 years without interest, with the option on the part of the water users' organizations to make a lump sum payment in full of $14,250,000.

This authorization was reaffirmed early in 1954 by Secretary McKay.

[1] Under Reclamation law, water may be delivered to excess land if the owner enters into a so-called recordable contract with the United States to dispose of the excess lands on terms established by the Secretary of the Interior (43 U. S. C. 423e). The recordable contract procedure set forth in the proposed Kings River contract would allow the landowner 10 years in which to dispose of his excess lands, during which time these excess lands would be entitled to project water.

Later, in a letter dated May 19, 1954, to Mr. William F. Docker, attorney for the Kings River District, Assistant Secretary Aandahl explicitly sanctioned contract negotiations by the Bureau of Reclamation along the lines of the crucial—and now finally rejected—provisions for prepayment by individual landowners as well as organizations of landowners in order to free their excess lands from the acreage limitation provisions of the reclamation law.

Secretary McKay himself recorded on October 20, 1955, his acquiescence in a policy of permissible payout by individual landowners to avoid the excess land provisions. This occurred in a letter to Mr. Eugene E. Marsh, attorney, McMinnville, Oreg. It is worthwhile to quote a portion of this letter:

> I am informed by the Bureau of Reclamation that the contract currently being considered by the Kings River Conservation District will permit water users' organizations, as well as individual landowners served by the Kings River project, to make lump-sum payment of the construction charge obligation. These lump-sum payments, which actually can be made in installments during the 10-year period provided in the recordable contracts, will permit existing large landowners to comply with the provisions of the reclamation law without disposing of their excess landholdings. The same provisions of the recordable contract allow a 10-year period for the large landowner to bring his holding into compliance with law if he should so decide. These principles, so I am informed, have been in effect by the Bureau for many years preceding this administration. Should the large landowner elect the lump-sum or advance payment route, we do not anticipate hardship in most cases, since the average repayment contract obligation for this million-acre project is very modest.

Within a month of this letter, Secretary McKay had such a proposed contract before him for his final approval. However, as has been mentioned, he was immediately confronted by numerous expressions of concern, including those of the chairman of the House Committee on Government Operations and the Public Works and Resources Subcommittee of that Committee; and the more than 19 months of indecision followed.

Secretary Seaton's eventual determination was announced in a letter dated July 12, 1957, to Mr. Philip A. Gordon, board president of the Kings River Conservation District. As chairman of the Public Works and Resources Subcommittee of the Committee on Government Operations, I wish to state that I find myself in wholehearted agreement with this pronouncement from the July 12 letter to Mr. Gordon:

> Where discretion may be vested in the Department or the Secretary, that discretion should be exercised to obtain compliance with the principles on which the legislation is enacted. What I am concerned about is a process by which inferences are based on inferences and there is a whittling away at a principle until all that is left is a pile of shavings.

It is my sincere hope that the Secretary will let this statement serve as his guide when consideration is given to other matters relating to the conservation, development, and utilization of the Nation's natural resources.

Seventieth Anniversary Celebration, Bavarian Aid Society, Altoona, Pa., Saturday, July 27, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. VAN ZANDT. Mr. Speaker, in February 1887, a group of German immigrants met at the Joseph Frischkorn Hotel in Altoona, Pa., where it was agreed to organize what is now known as the Bavarian Aid Society. The group consisted of Messrs. George Lunglhofer, John Widbman, Pantaleon Frischkorn, George Vogel, Joseph Zollner, Theodore Ziegler, Joseph Frischkorn, John Loeb, John Knott, and Phillipp Kummel.

After the election of officers, regular meetings were held monthly and in the year of 1913 it was decided to rent a new headquarters to meet the needs of the expanding organization in both membership as well as activities. In 1922 the present home of the Bavarian Aid Society was constructed at a cost of nearly $20,000 to house its 380 active and 220 social members.

Since moving into its new home in 1923 the Bavarian Aid Society has equipped the home with bowling alleys and other recreational facilities for the benefit of the members and their families. In addition to the recreation provided its members, the society has paid out over $12,000 in death benefits and some $70,000 in sick benefits.

On Saturday, July 27, 1957, the Bavarian Aid Society observed its 70th birthday with a program that launched a 3-day celebration of the natal event. During the course of the program, many tributes were paid to the sturdy founders of the society and to the many accomplishments of the organization over the 70 years of its existence in achievements of its objectives to aid in building a strong and virile America.

It was my privilege to participate in the program along with Mayor Robert Anthony and Chief of Police Val Rouzer, of Altoona, and Rt. Rev. Msgr. J. Donald Wagner, pastor of St. Mary's Catholic Church, Altoona, who paid a great tribute to the 605 members of the society and its ladies auxiliary for the part they are playing in promoting good citizenship and deeper faith in God.

The 70th anniversary program was under the leadership of the following officers of the Bavarian Aid Society: Michael Lang, Sr., president; Rudy Vorndran, vice president; Peter Gerhard, Sr., treasurer; and Joseph Lengfellner, recording secretary. The members of the board of trustees are as follows: Joseph Bernhart, Sr., Anton Muhlbauer, Joseph Niemeier, William Bernhart; John Maier, Joseph Stangl, and Frank Schadenfroh. Mr. Clair Hoff, Jr., is marshal, while the steward of the society is Mr. Walter Frank. There is a separate ladies auxiliary known as the Ladies Aid Society of which Mrs. Mary Nachtman is president.

One of the solemn aspects of the 3-day celebration occurred Friday evening, July 26, when a memorial mass was offered for deceased members in St. Mary's Catholic Church, Fifth Avenue and 14th Street, Altoona, Pa.

Following is the brief address I delivered on the occasion of the 70th birthday anniversary of the Bavarian Aid Society.

BAVARIAN MIGRATION TO THE UNITED STATES SINCE 1887

(By Hon. JAMES E. VAN ZANDT, of Pennsylvania)

As the Bavarian immigration of 1887 and after to America is an aspect of German immigration, I should like to first to say a few words about the general character of the German settlements in the United States.

There have been three great waves of German immigration to the United States:

(A) The first came in colonial times.

(B) The second wave arrived following the Napoleonic Wars.

(C) The third period of German immigration followed the Civil War.

(D) The largest number of arrivals in this third period came between 1882 and 1892.

What sort of people were the Bavarians of the 19th century?

Bavaria had been an independent monarchy for many centuries, and continued its semi-independent status under German empire until after World War II.

Germany was, politically speaking, of course, a united nation from 1871 to the end of the Second World War, but the Germans had previously developed distinctive regional ways of thinking and doing things, just as we have in the United States.

The Bavarians have traditionally regarded themselves as being more lighthearted and funloving than the methodical Prussians.

I do not know whether the American institution of the rathskeller was introduced by our Bavarian Americans, but it would not be unnatural to believe it was.

While the Bavarian enjoyed work, he also knew how to enjoy himself when he was not working.

The Bavarian was a homeloving man.

He enjoyed festivals of all kinds—particularly the celebration of Christmas, in which the bearded Saint Nicholas and the Christmas tree play an important role.

He enjoyed singing and physical sports.

Bavarian immigrants in the 19th century particularly favored rural and forested areas, since they had already lived in an area in which rural interests were strongly represented and felt most at home in such surroundings.

As with earlier German migrants, land hunger was an important element in bringing them to this country.

The native American of an earlier date was content to work his land and move on when he thought he could do better elsewhere.

The German settler, on the other hand, who frequently took up where the native American left off, was more attached to his property.

He was more interested in crop rotation and conservation methods and in keeping up his property.

He was a steady, hard-working citizen who would do credit to any country.

A good many of these Bavarian settlers were particularly attracted to forest areas, such as the hardwood sections along the western shore of Lake Michigan in Wisconsin, and no doubt have played an important role in the conservation movement in the United States.

The Bavarian influence has been strong in the German Catholic churches of the United States.

Coming from that part of Germany in which Catholicism has retained its greatest strength, it was but natural that Bavaria should have contributed a number of the important leaders in the American Catholic hierarchy.

The founder of the Benedictine Order in the United States, Archabbot Boniface Wimmer, for instance, who established the mother community at St. Vincent in Westmoreland County, Pa., in 1846, was a native of Bavaria.

Michael Heiss, born in Pfahldorf, Bavaria, served as bishop of La Crosse, and after 1880, as archbishop of Milwaukee.

No doubt some of the criticisms that used to be leveled against their earlier German confreres were made against the Bavarian immigrants of the past century.

It used to be held against them that they liked to drink beer and listen to music on Sunday.

They were criticized for not wishing to give up the use of the German language in their churches and schools.

These do not seem, today, to be important arguments.

Along with other residents of German background, Americans of Bavarian stock have proved to be loyal and patriotic citizens.

Mutual Security Act of 1957

SPEECH

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 2130) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. JUDD. Mr. Chairman, it seems that every year during the debate on the mutual security bill, we get into the same arguments about 3 or 4 main items of contention. One is the $6-billion carryover; another is unobligated balances; a third is illustrative presentations instead of firm, definite projects; plus all the other difficulties we have in this complicated worldwide program, many of which were ably and objectively discussed by the gentleman from Alabama [Mr. SELDEN], who just preceded me. We will get into discussion of this type of problem even more when we come to offer and debate amendments under the 5-minute rule tomorrow. But in the time I have tonight I want to bring before us again just what it is we are trying to accomplish with this program. We are trying to save the life of a desperately sick world.

I spent 19 years in surgery, and once or twice I have seen a surgeon so anxious to save the patient's blood that he lost the patient's life; and, in other cases, I have seen surgeons careless of blood to the point that even though the operation was successful, the patient had lost so much blood that he died anyway. Our task in this program is to save the sick patient; but we must do it without any unnecessary loss of blood that might seriously weaken ourselves.

At the outset may I make 4 or 5 broad statements to make sure we are all talking about the same thing. Maybe they are just assertions, but to me they are hard facts.

The first is that we are living today on the same planet with an organized, worldwide, ruthless conspiracy, with the avowed objective and the unwavering will and a steadily increasing capacity to destroy us. For if they can isolate, weaken, and destroy the United States, then the whole world is helpless before them. In the last week their boss, Khrushchev, has again openly declared they will never change and will never give up the Communist objective of world control.

The second statement is that since there is no way for us to get off this planet, and since we do not care to be destroyed, therefore we are and must be in inescapable head-on collision and conflict with the Communist conspiracy. That conflict is the cold war.

The third is that we cannot continue the cold war indefinitely. It costs too much; the drain and the strain are too great; it would mean too great loss of blood. That is the reason for the anxiety of our people, the demand for economy.

The fourth is that we cannot call the cold war off—except on their terms. Their terms amount to surrender—but on the installment plan instead of outright and all at once. One day last week they declared that they will never yield or change on their basic objectives. The next day Khrushchev said, "Why not, nevertheless, have a marriage of convenience?" That is, weaken our position and strengthen theirs—a little at a time.

At the disarmament conference in London they make plain what they mean—both sides should promise to abolish atomic weapons, or renounce the use of them. We know we would keep our promise; they would not keep theirs—witness Teheran, Yalta, Potsdam, Panmunjon, Geneva. That is, if they can cajole or pressure us into yielding where the United States is superior—atomic weapons; but they would not give up anything where they are superior—land forces; then we are supposed to believe that would be disarmament. No; that would be surrender to them. With their greater superiority in land power, the rest of Eurasia and Africa would be at their mercy. You cannot call the cold war off except on their terms, which amount to surrender.

There is only one conclusion left: we have to win this cold war. We have to confront them with such unity and sustained firmness and strength in the free world—military and economic and moral strength—that on one hand they dare not start a hot war, while on the other hand they will be forced by mounting pressures within to make changes that will inevitably lead to their downfall.

This is what the mutual security program is about.

Well, if this struggle must continue to either the death or the transformation of one or the other system, how do the two sides stack up in the conflict?

First, look at the Soviet bloc. Undeniably they lead us in certain fields.

They lead in manpower.

They lead in territory—and theirs is the strategically located heartland of the great continent—Eurasia.

They roughly equal us in natural resources, strategic minerals. To be sure, we, today, have access to greater resources than they—but only because of the allies with which this bill deals. The Russians have approximately as much under their actual control as we, if not more.

They have the largest and strongest land force in the world, the largest and most modern submarine force in the world, the largest and most modern tank force in the world.

They approach equality in air power, some say superior in everything except long-range bombers.

They approach equality, or at least adequacy, in atomic weapons—and the planes and missiles to deliver them. They do not have to be superior here. If we are standing alone, and they have enough to knock us out in a suprise attack, they do not need any more than that.

Where do we lead? We lead in about four fields.

We have the largest and strongest surface Navy.

We still lead in industrial capacity, but the gap between their industrial capacity and ours gets narrower every year. They are catching up. There is no sure guaranty that they cannot match us here, given time.

There are only two where we have overwhelming superiority which they cannot match, unless we throw them away. One is allies. I remind you they are voluntary allies. We do not have or want satellites. They and their territory and resources are not under our control.

The other is the advance bases that are available to us all around the rim of the Soviet Union and the Communist bloc of nations. Why? Only because we have those allies. And without this bill we could not long have those allies.

Reference is often made to some 250 bases abroad. Just where are they? Their importance becomes apparent if we study the location of some of them. I have no map here but let us say my first is the Soviet bloc. Begin up there at the northwest corner of the Soviet bloc, with Greenland. Come down then to Iceland, the United Kingdom, the Low Countries, Western Germany, France, Spain, and Morocco; then across Libya, Greece, Turkey, Saudi Arabia, Thailand, and the Philippines; then up through Formosa, Okinawa, Korea, Japan, Alaska, and Canada. Only two of those are wholly under our control, Okinawa and Alaska. The rest of them are fully independent and sovereign countries. We are there only because and as long as those countries are our allies.

These advance bases are the one ace card we have that the Communists cannot match. They confront the Soviet planners with an insoluble strategic problem. The Russians have or can build up enough strength to get through with atomic weapons in a sneak attack and cripple us terribly.

But the minute they were to start coming toward us through our warning lines, on the soil of other countries, we would be attacking them from all these bases outside the United States.

Or, suppose they take first the ones closer home, such as England. Actually England does not need to worry any more about an atomic attack against her. They would be foolish to attack England first because it would tip their hand and we would move instantaneously against the Soviet Union from our bases in Alaska or Okinawa or in the Middle East somewhere, as well as from continental United States. And the bases are at such varying distances from the Soviet bloc that there is no way they can hit them simultaneously and thus eliminate all of them at one time. If they started their planes or missiles for the most distant bases first, like those in the United States, it would alert our whole system so that our counterattack against them from nearer bases would be in the air before their planes to knock out the nearer bases had arrived, or even taken off.

What good would it do them to attack us here when they know we would still destroy them from these other bases? This is what makes them sweat in the Kremlin. There is no way for them to overcome our superiority here—and there will be no attack on us, as long as we have these advance bases, that is, have these allies. Are we to take any chances on losing our one ace card?

That, Mr. Chairman, is what this mutual security program is about. Its purpose is to strengthen the capacity of our allies to defend their own independence and the bases on their soil. That helps mightily to defend the whole free world, including ourselves.

It is not that we are to fight their battles for them; and it is not to hire or try to bribe them to fight our battles for us. Rather, it is to help them do the thing they want most to do, namely, to preserve their own national independence, to lift their economic standards, to work toward better and, in most cases, more democratic government. So many of these countries have only recently won their independence. Their deepest desire is to preserve and strengthen it. It so happens that for us to help them do these things helps us as well as them. We and they have formed these alliances because it is to their interest to do so and it is to our interest to do so. It is as simple as that.

Perhaps at this point we ought to try to clear away some of the specific misconceptions about the program that are still so prevalent, the clichés that sound so convincing when used by its opponents. It is said, for example, that it is not possible to buy friends. Why, of course, it is not possible to buy friends—in international life any more than in private life. But we are not trying in this program to buy friends; it cannot be done. We want these countries as allies. Whether they like us or not is quite secondary.

A better word is partners. Those who form a partnership keep it going if it is profitable to both sides. Often it happens that the closer you are to your partner, the more irritating he becomes to you, the less you like each other. But still you both maintain the partnership if it is advantageous to both. What is the common interest that holds these partnerships together? Again, the answer is simple: They cannot defend themselves without us as partners; and we can defend ourselves much more surely and easily and cheaply if we have them as partners. We would like also to be good friends, but that is not primary.

A second misconception is that this is foreign aid—as if it did not aid us. They say charity should begin at home. Certainly. But this program is not charity. It is not philanthropy. It is not "do-goodism." I do not think we would be within our powers under the Constitution if we were to appropriate public money just for charitable or philanthropic purposes. The program does do good to other countries; but that is not its justification. We vote for it because it does good to our own country. Is it sensible or patriotic to refuse to do what is good for our country, just because it also is good for other countries?

A third misconception is that we are giving away or spending billions and billions of dollars abroad. That is not so either. Most of the billions of dollars are spent right here at home. We do not send dollars abroad in substantial quantities. What we send is commodities, mostly grown or manufactured in the United States; the billions of dollars are spent here buying those American commodities and making American jobs in the process. The dollars are no good to them except as they buy the things they need—from wheat to planes—and cannot get without dollars. So, we are not sending or spending billions of dollars all over the world. We spend most of the money here in the United States. The next misconception is that if we would just stop this program, we would save the $3.9 billion which the President requested for it, and we could use that $3.9 billion to reduce our national debt or our budget or our taxes; or we could use it to increase old-age and social-security benefits or build more schools or highways or hospitals or housing; or apply the money to various other domestic programs that we need right here at home. I get letters to that effect almost every day, as I am sure you do. They ask, "Why don't you cut out this aid to foreigners so that I can have a decent retirement allowance?"

The answer is that if we were to cut out this program, we would not have more money to use here for such purposes; we would have less. For without the allies and overseas bases which the mutual security program makes possible, we would immediately have to increase our own military spending by a far larger amount than this program costs. We would have a larger budget, not a smaller. We would have less to reduce taxes on our national debt.

Let me point out in more detail why this is so by breaking down the $3.9 billion that the President requested—already reduced in the bill by over $600

million. Of the $3.9 billion total, $2.8 billion is for military assistance. Of that $1.9 billion is for military hardware to equip their armed forces, that is, planes, guns, tanks, trucks, and so on, manufactured in this country; and $900 million is for defense support, that is, to help them feed, clothe, and otherwise maintain those armed forces which are larger in some 15 countries than their own economically poor economies can support. Now our own defense appropriation bill, still in conference with the Senate apparently is going to come out at around $35 billion.

What do we get with that $35 billion for our own Armed Forces? We get 125 air squadrons; we get 1,000 naval vessels; and we get 21 ground divisions. Now, if we appropriate 8 percent more, or $2.8 billion for the military assistance part of mutual security, what more do we get? We get 125 more air squadrons; we get 2,500 additional naval vessels; and we get 200 more Army divisions. That is, it requires $35 billion to maintain our own Defense Establishment, and by providing 8 percent more, we double our Air Force, we more than treble our Navy and we increase our land forces more than 10 times. Do you know any other way we can get as much defense for the same expenditure, or for a comparable expenditure?

What would it cost in dollars, not to mention men, if we had to replace those squadrons and vessels and divisions with American units? Of course, we simply could not do it. We do not have enough money, or materials, or men.

Let me break it down another way. There are five main bastions, around the Asian rim of the Soviet bloc, that we are helping supply and support with this program. Begin with Korea; then Formosa, Vietnam, Pakistan, and Turkey. It costs us less than $1.5 billion to maintain those bastions; and we get in return more than 2 million first-rate soldiers. Without this aid, those countries would be greatly weakened or even some go down. What would it cost us then—whether we tried to hold on in Asia with our own forces or withdrew from all of Asia to the Hawaiian Islands and vastly expanded our Military Establishment?

Again, let us take just one country, Korea. We have had a war there and it is fresh in our minds. We had eight American divisions in Korea. Now we have two. Why do we have only two Americans divisions there now? Because there now are 20 well trained and equipped Korean divisions. If we cut this program drastically, we will not have those Korean divisions holding the line. Then we will either have to abandon the Western Pacific, or we will have to send American divisions back to Korea.

How much does it cost a year for one American division? The figure is classified, but I can tell you that it costs just about 10 times as much to have 1 American division on the ground, ready to go, as it does a Korean division. So, big as the amount is that we are authorizing for Korea, it is a bargain compared to what it would cost us to get the same amount of defense there with American forces.

I just wonder whether we want to mislead any of our people into thinking that it would save them money if we were to cut out this program, which gives them and us so much security. I do not suggest that all these other divisions are as good as ours, by any manner of means. But one reason for the program is to improve them, to make them more effective.

Let me just mention one more misconception that confuses thinking. It is said that these expenditures are too big for a peacetime program. Correct. But unfortuntely this is not peacetime. There's the rub. Just because there is no actual fighting and dying at the moment does not mean there is any true peace. On the contrary, we are locked in a mortal struggle. It is to prevent its becoming one of fighting and dying that we have this big a budget. In every real sense it is a wartime budget.

What are the conclusions to which this kind of overall survey of mutual security leads us? It seems to me there are three main facts. One is that the program has had many failures. There has been a lot of waste. Nobody has been more critical of it than I, over and over and over again. A good many projects were ill-conceived, mistakes in planning. There have been blunders in carrying out plans. A good deal of the personnel was ill-chosen or unsuitable. They produced more irritation than goodwill.

You have heard repeated reference to these failures. Let us not deny them or try to justify them. Let us frankly admit them.

But the failures are only one of the facts. Another is that, overall, the program has been a remarkable success. The free world is still free, and it would not have been without this program. The failures have involved not more than 2 percent of the projects. Ninety-eight percent of them have been amazingly successful. Not a single country in the world to which we have given this kind of aid has been lost to the enemy, although every one of them has been and is under determined attack. That is the record of achievement.

There is much talk about Iran. There was indeed a lot of waste in Iran, if waste is measured by lack of sound permanent projects carried through to completion. But if success is measured in saving a patient, in denying a vital strategic area to the Reds, then I would say that Iran is perhaps the most strikingly spectacular success we have had anywhere. We had a plunger in charge there who took bold steps and he made some mistakes; but he kept the country in the free world. If we had had a cautious man, eager most of all to avoid waste, he would not have been willing to take those steps; and we would have lost Iran during one 2-week period. The Middle East oil would have been lost and the free world would have been cut in two.

Has anyone ever served in our Armed Forces in war and not known of perhaps a sergeant who made a mistake in the handling of some materiel and lost it? Or even of a general who miscalculated and lost some American lives? But no one urged that we abolish the Defense Department just because some officials had made mistakes in judgment with resulting waste or loss. No. We admitted the mistakes and moved to correct them.

The third main fact is that the program has saved us money—net. Without it we would have had to spend more, not less; because we would have had to expand greatly our own Armed Forces.

Yet some projects unquestionably have failed. But in toto, the program has been extraordinarily successful in its main objective of keeping the free nations free and helping them become stronger and more united in their own and our defense. And it has saved us enormous sums when we consider what our defense costs would have been if we had not had the program.

Mr. Chairman, there are about three courses we can decide to follow at this juncture. First, we can, because of the failures and the waste, abolish the program, give it up as a bad job.

Second, we can decide that—because we have not yet achieved the security and unity we hoped for—we should greatly expand our aid, more of the same. Neither of those courses offers hope. The first would abandon our allies and partners to our enemies; the second would increase the confusions, waste and frustrations of which we complain.

What is the third course? To improve our aid. We need to study it critically and continuously, not just to condemn but to correct. We must work unceasingly, not to cut out the program, but to cut out of it the things that have led to the failures. Strengthen the patterns of effort that have proved most successful. Cut down or eliminate those that do not quite hit the target.

In short, do not scrap mutual security. Do not double it. But fix it.

More steps have been taken along these lines in the last year than in any previous year. Some of them probably will not work out as well as we hope. But with the aid of our Foreign Affairs Committee and the House Government Operations Committee and the Appropriations Committees of both Houses, and the various public bodies and commissions that have been studying it all year, I believe we have made some basic headway in analyzing the faults of the past and determining the changes that will help it. We can make it sounder and more efficient.

What do we have to do to improve the program? May I make four suggestions. The first is to ask ourselves afresh, What it is that we are trying to do? Is it just to make people fatter and stronger? No, it is to win their hearts and minds, their confidence, both in the free world and behind the curtain. In essence, we have to do what a candidate seeks to do in a political campaign, win voters. The peoples of the world are choosing sides. Are they going to vote for us? Or for the other side? We are trying to win their vote, their confidence. There is no use of making them stronger, richer, more productive and better armed, if they are not going to be on our side.

We have planned our programs too much in material terms. We have done a better job with the tangible things. The Communists in many places have done a better job with the intangibles. We have dealt more with commodities; the Communists have paid more attention to populations. We analyze figures; they analyze people.

When and where they have succeeded, how have they done it? Not by performance—they cannot deliver. They win by promises, flattery, giving people a sense of importance. Fortunately, we do not have to make lying promises the way they do, and we should not. But we do have to pay more attention to meeting the emotional needs of people. In our preoccupation with bringing material benefits, we pay too little attention to the things of the spirit, personal dignity, national pride, desire for equality of status, appreciation, comradeship.

We are like the loyal, honorable and practical-minded man who works hard to provide a fine home for his wife—but forgets to make love to her. And then he is mystified and brokenhearted and resentful when she runs off with some ne'er-do-well. How could she be so foolish? Because people crave flowers and affection—as well as food. It is still true that men do not live by bread alone—or by guns and dollars. The Reds have seen this more clearly than we. Witness the success of the Bulganin-Khrushchev team on their lovemaking pilgrimages.

We can build bridges, dams, and dynamos better than any one else in the world; but those are not enough. We have to study more carefully how other people react to what we are doing. If we irritate or alienate them by any program or process, it is not a wise expenditure of money or effort.

The key thing is not the amount of our aid but the manner of it.

What we need is not a bigger program, but a better one.

It is not the size of our aid, but the intelligence, the quality of it that will determine its success.

So, the first thing is to examine, identify, and get our sights on the main target, the confidence of people and then determine the things that hit that target.

The second is to streamline the program to the essentials—concentrate our efforts on those policies and projects that experience has shown do win the hearts and minds of people. Those that do not, let them go.

In too many places we are still spreading ourselves too thin. We should do fewer things better. We tend to give every country the full treatment—a little of everything. Some countries, for example, need mainly agricultural help, but we put in also an industrial expert, a commercial attaché, an educational attaché, a labor attaché, a public health agency—sometimes as many as a hundred or more projects. We overwhelm them. Let us pick out the 5 or 10 or 20 programs that are essential to the survival of that particular country and do them well, not have a uniform pattern that some one thinks we should follow everywhere. These are the kind of things we have been trying in our committee to get the mutual security people to do. We are making headway, but still greater changes in emphasis are needed.

The first question to ask in a country is, How much does it need? The answer to that is often astronomical. The second question is, How much can the country effectively use? The answer to that is much smaller. The third and most crucial question is, How much can they self-respectingly receive? The answer to that generally is still smaller. But it is the real test of what our effort should be, and we must streamline our programs to that level.

My next suggestion for improvement is to get a longer-range program. To do it on a year-to-year, piecemeal basis is just not good enough. The problem is a long-range problem. It cannot be solved without a long-range program. I believe 3 years' planning ahead is a minimum.

When Japan attacked us, did we declare war for 1 year? And then take 2 or 3 months to debate whether we would fight a second year, leaving our allies uncertain as to whether they could count on us beyond 1 year at a time? No, we declared war. We put on no time limitation. Both our enemies and our allies knew we were in it until we won victory. That did not mean we lost control of the war, or had no further opportunity to review our operations or change them as circumstances indicated. Rather, we reviewed them constantly, we changed strategy and tactics whenever and wherever we thought best. But we had committed ourselves to fight the war to the finish. Our allies did not lie down; they fought harder because they had fresh hope. They knew we intended to win, no matter how long it took. And it took a lot shorter time and less money than if we had tried to conduct it on a year-to-year basis.

This is the reason, the necessity as I see it, for the long-range development program proposed in this bill. It is not true that Congress will have no control over the development loan fund. The budget for it will come here every year like that of every other Government-owned corporation, like the Commodity Credit Corporation, the Small Business Administration—every one of our lending agencies. The development fund managers will come before us with specific plans for loans for specific projects instead of lump allocations to individual countries, as is the case now. The only way we can correct the difficulties we all complain about in the present setup is to authorize a long-range loan program under prescribed standards and guidelines and with the ability to cut it down each year if those in charge do not follow the guidelines in good faith. It is to cure the difficulties inherent in the year-to-year authorization pattern, that we want to set up the 3-year development loan fund along the very same lines we follow in our domestic loan programs.

The new thing about the development loan fund is not that it authorizes border-line loans—they are being made all over the world under existing legislation, wherever it is considered that political objectives require such loans. The new thing is that more definite restrictions and criteria for making such loans are laid down by the Congress in the legislation. After the first year the fund can go to the Treasury, just as Commodity Credit Corporation does, to borrow the money needed for loans for projects which it should be able to plan ahead in greater detail than is possible now. It will not be under the pressure of beating the June 30 deadline, with the waste of money that process often represents. When it has its proposals for loans refined and sends them to Congress in its budget each January, the Appropriations Committee, should it not approve them, can vote to limit the total loaning authority or even disapprove individual projects. If such a longer-range method of handling long-range development loans is not more intelligent control, and a far better system than we have now, I do not know what would be.

The fourth improvement needed is to get better personnel in mutual security. To begin with, we have to take more pains in selecting them. It is not enough for a man to be a good electronics expert. He and his wife have to live in such a way in the country that they do not antagonize the people with whom they are working. We can put good weapons into the hands of a man in another country and teach him how to use them well, but that does not necessarily make him a better ally. How we give the aid is as important as what and how much. Attitudes toward people are as important as technical skills.

We also have to take time to train our personnel better. One of our men just back from Afghanistan told me that technicians coming there from Russia speak both of its languages, Pushtu and Persian. They told him they had studied those languages for 3 to 5 years in preparation for coming. In contrast, we are in such a hurry that some have been sent out without knowing much of anything about the country to which they are going—its people, their history, customs, language. Well, they know what continent it is on. That is not enough. We will get more done in the end if we take time to train our people longer and better.

And then, they must be willing to stay longer than the usual 2 years. They hardly get adjusted to the climate and the people and get the feel of the job before their term is up and they come home. It is like the big executives who come down here to Washington, work hard for a year or so, organizing or reorganizing an agency—and as soon as they get it going well, they resign and go home. What happens? The agency soon settles back into the same old ruts—under less able men. The top executives say they must go home to look after their private interests. But how long will they have any private interests to look after—if we don't succeed in keeping the world free and strong and united? MSA is the major instrument we have for accomplishing that. Where is there a bigger challenge or duty for our top men and women? The task must be lifted up until it captures the imagination and enlists the loyalty of our very ablest per-

ons and keeps them at the job until it is done.

Such men would not think of bringing out a new model automobile without years of study and preparation. Yet they imagine the United States of America can save a world without their giving to the task literally years of single-minded and dedicated study and effort.

In summary, our personnel must be better selected, better prepared, willing to stay on the job longer periods of time, and willing to live and work more closely with the people of the countries where they serve. To win their confidence, we must identify ourselves with them—so they know we are all working together as genuine partners in a common task of vital importance to all.

Just to cut the program will not save money. To improve it, make it successful, will save money.

If we will do these things, Mr. Chairman, this mutual security program will save the world. And there is no question but that we can do them. We have always accomplished successfully any task that we took the pains to understand and set our hands to with a will. This is no different. The difficulties are indeed great: they constitute, not an excuse for failure, but the problem to be solved. Let us get on with the job.

Federal Aid to Grant-in-Aid Programs

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, July 31, 1957

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a joint resolution adopted by the Legislature of the State of Illinois on June 28, 1957, relating to Federal contributions to grant-in-aid programs.

There being no objection, the joint resolution was ordered to be printed in the RECORD, as follows:

Senate Joint Resolution 23

Whereas the ever increasing expenditures of the Federal and State Governments with consequent increasing tax burdens is a cause for grave concern to the people of this State and Nation; and

Whereas much of the financial burden of the taxpayer is the result of Federal grant-in-aid programs through which a State, by furnishing a sum of money to the Federal Government receives an equal or larger sum from the Federal Government to finance and conduct certain programs; and

Whereas at first glance such an undertaking seems to be a highly desirable venture since it appears that the State is actually receiving something for nothing; and

Whereas this idea of getting something for nothing is as deceiving as the pea used in the old shell game, because the money which the State receives from the Federal Government is actually the money which the taxpayers have already paid into the Federal Treasury in the form of taxes; and

Whereas in transferring the taxpayers' money from one pocket to another, which occurs when a State accepts a Federal grant-in-aid, an appreciable amount of the money is lost due to the expense of bureaucratic administration and overhead in effecting the transfer, with the result that the taxpayer, instead of reaping a benefit from the Federal grant, is actually receiving less than he has already paid into the Federal Treasury; and

Whereas in further deflating the "something for nothing" bubble, the taxpayer finds that in addition to the initial loss sustained in accepting the grant-in-aid, he must further pay the excessive cost of the program due to unnecessary Federal requirements and redtape; and

Whereas the State and local governments which participate in grant-in-aid programs are becoming more and more subject to Federal encroachment on their individual sovereignty due to the Federal controls, restrictions, and regulations incident to such participation, and the Federal Government is interfering to an unwarranted and undesirable extent in purely State and local matters, and is also compelling the States to expand their revenue unwisely and uneconomically; and

Whereas the time has come for the States to seriously review the Federal grant-in-aid programs to determine whether such programs are more harmful than beneficial, and in line with this policy, it is the sentiment of this general assembly that the State and local governments can more efficiently and economically expend the taxpayers' funds than can the Federal Government through the grant-in-aid programs: Therefore be it

Resolved, by the Senate of the 70th General Assembly of the State of Illinois (the House of Representatives concurring herein). That this general assembly respectfully request the Senate and House of Representatives of the United States to: (a) seriously review and reassess all present grant-in-aid programs for the purpose of reducing the costs of such programs and the Federal controls incident to such programs, (b) refrain from enacting new grant-in-aid programs in the future unless such programs are an actual necessity and the desired results cannot be obtained through State and locally financed and controlled programs, and (c) to reduce Federal control over all present and future programs for the purpose of permitting State and local governments to exercise their sovereignty and minimizing Federal encroachment on States rights; and be it further

Resolved, That a suitable copy of this preamble and resolution be forwarded by the secretary of state to each Member from Illinois in the Senate and House of Representatives of the United States.

Adopted by the senate, May 1, 1957.

JOHN WM. CHAPMAN,
President of the Senate.
EDWARD E. FERNANDES,
Secretary of the Senate.

Concurred in by the house of representatives, June 28, 1957.

WARREN L. WOOD,
Speaker of the House of Representatives.
FRED W. RUEGG,
Clerk of the House of Representatives.

Will Democracy Win in Guatemala?

EXTENSION OF REMARKS

OF

HON. STERLING COLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. COLE. Mr. Speaker, the tragic assassination of President Carlos Castillo Armas of Guatemala last week was an event which shocked all freedom-loving people. Since that event, remarks on this floor have indicated the measure of loss to the advancement of democracy throughout the world which has been suffered by the killing of President Castillo Armas by a Communist assassin.

All of us are, of course, seriously concerned about the effects of the President's death—whether it signals a return to Communist-dominated government in Guatemala.

In May of this year, Dr. Julio Asensio, Minister-Counselor from Guatemala to the United States, spoke to the Republican Women's Club of Broome County, N. Y., gathered at Binghamton, N. Y. Dr. Asensio's remarks were pointed primarily to the contribution that women have made in Guatemala's political evolution and were thoughtfully received by his audience. After the tragic events of last week, Mrs. Nicholas Ward, vice president of the club, and Mrs. Helen Scholderer, Republican county vice chairman, telephoned Dr. Asensio at the Embassy here in Washington to personally express their sympathy on the death of the Guatemalan President. Dr. Asensio assured the ladies that Guatemala would not return to communism.

Believing that excerpts from Dr. Asensio's speech in May and a newspaper account of the conversation between Mrs. Ward, Mrs. Scholderer, and Dr. Asensio will be of interest to the Congress at this particular time, I include the text of these items below:

EXCERPTS FROM A SPEECH DELIVERED BY DR. JULIO ASENSIO, MINISTER-COUNSELOR FROM GUATEMALA TO THE UNITED STATES, BEFORE THE REPUBLICAN WOMEN'S CLUBS OF BROOME COUNTY, AT THE ARLINGTON HOTEL, BINGHAMTON, N. Y., MAY 7, 1957

I am happy to have the opportunity to enjoy the wonderful hospitality of my hosts and to discuss with the women of Broome County who, as in Guatemala, must be aware of matters of great importance to all people of the free world who desire to be free.

When your organization honored me with its invitation, it was suggested that I tell you about the part women in Guatemala played to liberate our nation from communism.

The story is tragic as well as historic. It seemed like an almost hopeless fight. Men were tortured and mutilated and murdered. They were heroes; but, behind each man there was a woman—wife, mother, or sister. While the men suffered physical torture from the Communists, women were also experiencing spiritual and mental torture.

We men of Guatemala have reason to be proud of the women when we think of the role our womenfolk played in our liberation. However, we cannot rest on the achievements of the past. As great and glorious as this past was, we must always face new problems as they arise.

I shall discuss what the women of Guatemala are doing today and must do in the years ahead—what all women in the free world must do if our society is to survive.

Women are charged with the responsibility of training our young in the fundamentals of democracy. In your country, as in mine, women do this. Men can help, but the fundamental responsibility is that of the wife, mother, nun, on whose performance we must rely.

We learned at firsthand in Guatemala the Communists work on the very young. When the party was underground and the Communists masqueraded as liberals, they concentrated on the school systems, even to the kindergartens, and circulated children's fairy tales, printed in Moscow, in Spanish, and distributed in Guatemala.

We must be equally vigilant by teaching our young of the free world the fundamentals of democracy. They will then be less susceptible to the Communist line.

Democracies must have citizens who know what their rights are and assume and enforce these obligations. I am constantly amazed and alarmed at the attitude of those in the free world.

Recently my government prepared for our schools and young people a publication entitled "Citizens for Liberty." It attempts to explain the basic but forceful form of democracy. It sets forth the freedoms and privileges citizens are entitled to and also the duties they must perform.

I specifically refer to one chapter because of the way it was written. It explained that in a free society the sovereignty rests with the people. Authority of the government and public officials of the government must be restricted to powers given to them by the people. When called upon to do so, officials must give an accounting of the manner in which they exercise their authority.

The principle of democracy is so basic it almost sounds trite to mention it here. Yet in too many areas of our free world this has been ignored or forgotten, not only by officials but by citizens.

My personal opinion is that if we in Guatemala had thoroughly understood democracy and what it implied, the Communists would not have lasted but for so many days. You have to lose a thing before you understand and appreciate it.

This is our greatest challenge, the desire that our children shall live in a free nation. We must have in all of our nations, men and women who understand the privilege of citizenship and their duties as citizens.

Second, we must with humility, men and women, every citizen of a democracy, fulfill our duties to protect these rights. That is what you ladies are doing. The sovereignty of a nation rests with its own people. Citizens must know and understand the complex problems facing their nation. They must make decisions as to how their government will act.

From what I have been told about your organization's aims, I must say you women of the United States are making great contributions to our great common cause. You are studying and analyzing problems and making your views known not only to government officials, but to the electorate. At election time you work like beavers to get the vote out.

I am told that this is a phase in the American way of life that people outside the country cannot understand. When you contact a neighbor with opposite political views, you urge him to use his privilege to vote. Other nations do not understand this. Yet a mere 50 to 60 percent exercise their right to the ballot. Unless these rights are used, they wither away.

One problem in Guatemala is that half of the voters are women and we have not developed the organizations which will assist our women in arriving at decisions. I feel every citizen owes to himself and his nation the obligation to study, within the limits of his intelligence, the qualifications of the candidates, and to exercise the right of his ballot. We cannot afford, deliberately or inadvertently, to send 80 to 90 percent to vote under regimentation.

You women of America are doing a job in the field of practical political education that demands the respect of all countries.

I suggest that would it not be an advantage for some of you ladies to come to my country. I would like to have you enjoy some of the most beautiful scenery in the world. You might be of much help to our women in political organization education and the women of my country could give you much help in Communist tactics.

You, the women of the triple cities, as the women of Guatemala, and all over America, have a challenge. You must bring up young men and women in an intellectual world in which they must comprehend the ideals of democracy and be able to cope with the ideological battle being waged for the minds of men.

We cannot continue to take for granted what has been taken for granted as a birthright. We must in all of our countries teach youth that ours is the best way of life. They must know and appreciate what democracy is. They must accept sometimes tedious and arduous and sometimes risky tasks of fulfilling civic duties. They must be willing to work and live for it and to recognize evil forces that work toward the destruction of their goal.

The women of the United States have that great historical responsibility.

[From the Binghamton (N. Y.) Sunday Press of July 28, 1957]

GOP OFFICIALS TALK TO MINISTER—GUATEMALA WON'T GO RED, CITY WOMEN TOLD

Two prominent Broome County Republican women said they had been assured last night that at any cost, Guatemala will never return to communism.

Mrs. Nicholas Ward, vice president of the Broome County Women's Republican Club, and Mrs. Helen Scholderer, Republican county vice chairman, talked to Dr. Julio Asensio, Guatemalan minister-counselor, by telephoning the Embassy in Washington.

They called to express their sympathy to Dr. Asensio on the death of President Carlos Castillo Armas of Guatemala, cut down by an assassin's bullets Friday night.

SPOKE HERE IN MAY

The two women had met Dr. Asensio when he came here in May to address the GOP group.

Mrs. Ward said that the Minister-Counselor had expressed his "warm appreciation for the many expressions of sympathy which have been pouring into the Embassy from the people of your country."

She quoted Dr. Asensio as saying, "We particularly want the people of your country to know that, no matter what the cost, our country will never return to communism."

Mrs. Scholderer also sent the following telegram last night to Jose Luis Cruz-Salazar, Guatemalan Ambassador to the United States:

"Our hearts go out to you and your countrymen in this hour of tribulation. May God bless and protect each and every one of you and lead your people in their courageous fight for spiritual life and freedom."

IKE SENDING SON

Meanwhile, in Washington, President Eisenhower announced that he is sending his son, Maj. John Eisenhower, as his personal representative to the funeral of the late President.

Mr. Eisenhower issued a statement that the Guatemalan leader's death was a great loss to Guatemala and the entire free world.

"Under his leadership the threat of Communist domination of his country was repulsed and Guatemala became a valuable member of the Organization of American States," Mr. Eisenhower said.

Members of Congress also mourned Castillo Armas as a great fighter against communism, and Secretary of State John Foster Dulles said:

"His brave leadership of his freedom-loving people against a hated alien tyranny has given inspiration to all who prize freedom and popular progress."

The Algerian Question

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, July 31, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Algeria, a Western Problem," by Mr. Henry Giniger, one of the Paris correspondents for the New York Times who specializes on north African affairs. This article appears in Western World, a recently founded monthly published in both French and English in the interest of a close Atlantic community. The article is a penetrating analysis of the Algerian crisis, and clearly points to the need for fresh political breakthroughs both within France and within the Atlantic alliance. The article gives as good a brief conspectus of the Algerian situation as I have seen.

I might add parenthetically that though Mr. Giniger's parent paper concluded in its most recent editorial on the problem that, "There seems to be no solution in present circumstances," and that, "The best one can hope, in Micawberlike fashion, is that with both sides hanging on a solution will sooner or later present itself," I am happy to say that the vigorous reportorial tradition of this great newspaper by continuing to provide us with the real facts about this complex issue, has not resigned itself to such hopeless a conclusion. Certainly Mr. Giniger's article reflects no such abject hopelessness.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALGERIA, A WESTERN PROBLEM

(By Henry Giniger)

The fighting in Algeria is essentially a French problem, but so deeply does it affect the Western alliance that it must rightly claim its attention.

Whether this attention should be transformed into active intervention or participation by third powers in the search for a solution is something France must decide. But the decision should be one of deliberate national volition. The same is true of the solution itself. For the sake of its own self-respect and for the sake of the consideration it seeks in the world, France cannot allow situations to develop over which it has lost control and to which it is consequently obliged to submit. This has often been the case in the past, particularly in matters of colonial policy. It is not the characteristic of a great nation.

It is not within the scope of this article to suggest ways in which a national volition can arise and be expressed. They are essentially questions of internal organization and politics, and in this field, at any rate, France can only help itself.

Suffice it to say that the seeming impossibility of forming a strong and coherent ma-

jority in the National Assembly and the absence of men with imagination, intelligence, and leadership who are available to take power are reasons for discouragement not only in France but among its allies.

For the situation in Algeria has become such that this area is now a source of weakness instead of being a source of strength for the Western community.

It has weakened France. It has contributed heavily to the double crises of France's internal and external payments. Premier Maurice Bourgès-Maunoury has several times described the financial cost of the war in terms of the direct outlays for military operations. In this way he arrives at a figure of some 200 billion francs a year which he does not feel to be an excessive strain on French monetary resources. He points out, in addition, that France will have to spend much greater sums for Algeria's economic development.

But Bourgès-Maunoury's analysis neglects the considerable withdrawal of French manpower from industrial and agricultural production, the diversion of industry from the production of exportable goods to military equipment, and the imports of such equipment—all factors in the almost disastrously unfavorable balance of payments.

If the direct financial burden of Algeria would not be lifted by putting an end to hostilities, and, on the contrary, could easily be augmented, such expenditure holds much greater promise for the future than the type that consists in either destroying men or driving them into hatred.

In the political field, the Algerian situation has created certain dangers not yet wholly clear, but perceptible enough to be disquieting. A form of narrow nationalism has developed, and even such an internationalminded group as the Socialist Party has not been exempt from it. There are many Socialists who even accuse the party leadership of having help to foster it. The possible seizure of political power in France by some sort of extremism, as the direct result of the violent loss of Algeria, has become a topic of worried discussion in France.

NATO NEEDS FRENCH FORCES

In view of France's position in the western chain of defense, the disadvantages for the entire Atlantic community of its subjection to economic and political stresses are too obvious to merit further discussion.

The chain of defense is even more obviously weakened by the withdrawal by France of most of its troops from the European Continent, where they formed a part of the western shield against aggression.

It could be argued that the loss is not so great in this day of atomic power, but we are being constantly assured by the Atlantic community's military leaders that conventional land forces are by no means outmoded and that a return of the French forces to their defensive positions in Europe would be highly welcome.

It is argued, also, in defense of the French military withdrawal from Europe, that Algeria is part of the North Atlantic Treaty Organization area and that in seeking to maintain French control there, French troops are, in fact, defending the important Mediterranean flank of Europe. But France's allies have the impression that this area is being defended against itself. The area can be extended to the bordering states of Tunisia and Morocco, where French forces are stationed partly because of the Algerian situation, to all appearances without the approval of the governments and peoples concerned.

The strategic value of existing or projected bases in areas where the surrounding population is basically hostile to them is a doubtful proposition. It is doubtful both from the point of view of practical military considerations (danger of sabotage, etc.) and from the point of view of the moral position of the West which is supposed to be a free association of peoples.

In the integrated Europe now being constructed among six nations—France, West Germany, Italy, Belgium, Holland, and Luxembourg—France's economic and military involvement in Algeria worries some of the smaller partners who fear German predominance. Most Frenchmen feel the same way. It might be argued that reason requires an end to germanophobia, but reason is often ineffective against deepseated sentiment. Germany might still be predominant even if France did not have Algeria to contend with, but the odds in favor of Germany would at least not be so great.

Going further afield, the Algerian war has helped to put the West in a difficult position in the Middle East and Far East—that is to say the Bandung area. It is one of the major areas of struggle between the Communist and Western World, each side seeking to turn to its own advantage the nationalism that has been the major characteristic of these largely underdeveloped nations.

The West, and principally the United States, is engaged in this struggle badly handicapped by the inability of France to come to terms with Moslem nationalism in Algeria. These are some in France who would reverse the problem and say that France is having difficulty because of the cold war competition between Washington and Moscow. This explanation constitutes an attempt, conscious or not, to dodge responsibility. It cannot be seriously maintained that if the two great rival powers in the world were to end their cold war, the Algerian problem would cease to exist.

For the moment, all the propaganda advantage inherent in the Algerian situation is on the side of the Soviet Union, which has seized upon it with relish.

The Western position was aggravated when France, pushed by a desire to strike back at Egypt, a Moslem country that gives aid and comfort to the Algerian rebels, embarked upon a military adventure which, world power relationships being what they are, it was unable to bring to an advantageous conclusion.

It will be protested that the Suez expedition last November was a joint British-French affair and that both countries were animated by a desire to head off a threat to their oil supplies, a large part of which comes through the canal. This motive was undeniable but does not offer a sufficient explanation of the bitter hostility with which the French view the Egyptian President, Gamal Abdel Nasser. It is an attitude that antedates Nasser's seizure of the Suez Canal Co. in July 1956, and its direct relation to Algeria is very plain.

The split between France and the United States on the Suez issue is one aspect of the deep divergence, between the two countries concerning north Africa. Many Frenchmen believe the United States has made a choice, and it is against them. They do not appear to consider the possibility that Washington may not wish to make a choice at all and that if what the French call their presence in north Africa were given a character acceptable to the local populations, the choice could be avoided and Washington would be taken off a rather embarrassing hook.

Such has been the case, the divergences over Algeria aside, with Tunisia and Morocco, two French protectorates that were given their political independence last year. The Tunisians and the Moroccans do not have anything more to eat as a result of their independence, but they are at least no longer killing Frenchmen and Frenchmen are no longer killing them. This is something. Isolated incidents there have been, but they are almost invariably related to the situation across the frontiers in Algeria.

We come now to the crux of the problem. For a growing number of people in France and among France's allies, only the recognition of Algeria's independence is capable of restoring peace. This argument is based not only on the fact that up to the present the rebels have refused to stop fighting until Algeria's independence was recognized. It pictures the Algerian movement as part of an inevitable historical current that cannot be stopped. It also looks to the future when the rapidly rising Moslem population will outnumber the European, not by 7 to 1 as now, but by 10 to 1 and more, a weight of numbers that cannot be denied.

EUROPEANS AND OIL

But an apparent majority of France's politicians, including those who have been and are still responsible for French policy, maintain that the very presence of 1,200,000 Europeans who consider Algeria their home makes independence impossible. No nation could accept abandoning its nationals to what is considered a menacing majority. Furthermore, it is argued, oil and mineral deposits discovered and exploited by France in the desert regions of southern Algeria mean so much to the French economy that France cannot lose control over Algeria as a whole.

The second factor can be considered under much the same angle as the strategic factor discussed earlier. Exploitation of military or economic resources is made difficult, not to say hazardous, by the presence of hostile populations. In addition, it has been suggested that in the interest of economy and convenience, oil pipelines should pass through Tunisia. In this case the disadvantages of continued conflict over Algeria and the advantages of an overall settlement are both obvious.

Equally obvious is the encouragement peaceful conditions in Algeria would give foreign investors who are being asked to associate with France in economic development. Reluctance on the part of European partners to get very deeply involved financially in the Sahara region was noticeable during the recent discussions that led to a common economic development program within the framework of the projected common market.

The question of the European population (not all French by any means) is a thorny one and not perhaps completely understood abroad. Because its past is so intimately linked with Algeria this population is much worried about its future and is easily aroused by anything that appears to constitute a danger to it.

POSSIBILITY OF FOREIGN INTERFERENCE

Those who advocate outright and immediate independence for Algeria ought to consider the possibility that the reaction of the well-armed European population to an immediate end of French authority could thus produce a result contrary to that desired.

On the other hand, France must not allow this question to paralyze all action toward a political settlement. Since February 6, 1956, when the newly approved Premier, Guy Mollet, received a violently hostile reception from part of the European population during his visit to Algiers, the unfortunate impression has been created that just such a paralysis has taken place. Hence the impatience abroad and the moves to take matters out of French hands.

These moves will build up so long as the present situation is allowed to continue and no amount of protests about foreign interference will halt them.

A rather one-sided view of what constitutes foreign interference is taken here. If statements are made or acts taken that are contrary to what now constitutes official policy, then they are foreign interference. At the same time appeals are made to condemn rebel acts and foreign diplomats are invited

to Algeria to inspect French accomplishments. Foreign statements favoring the French side are welcomed.

More important than this, when France calls upon certain countries of Western Europe to associate with it in the economic development of French Africa, the question of war or peace in Algeria becomes not so purely internal as some persons in France insist on proclaiming.

Because the Algerian question does affect all the countries of the Western Alliance and Morocco and Tunisia, it would probably be to France's benefit if they were brought deliberately into the picture. But France should remain the final arbiter of the situation.

For example, it might be useful to discuss the question behind the closed doors of a North Atlantic Treaty session. This would be in accordance with France's long expressed desire to see the alliance effective in all regions. Ideas could be exchanged and a French solution could be presented for the moral backing it could get. But officially affording an opportunity to its NATO partners to express their ideas and criticisms, France would discourage independent moves whose principal effect is to arouse French indignation and to cause further strain in the alliance.

TUNISIA AND MOROCCO SHOULD HELP

Tunisia and Morocco, because of their special situation in north Africa, their special relation with France and their special affinity with the Algerians, should be closely associated in working out a solution. Their backing would be an important factor in its success.

All nationalist movements are political by nature and social and economic reforms, however necessary, cannot meet the problem. Nor at this late stage are political and administrative reforms sufficient to bring an end to revoluntionary agitation.

It does not appear that any solution less than an offer of independence in a specifically stated number of years will restore peace to Algeria. The shock to the long-dominant European population would be cushioned by the time given them to adjust to a changed regime. The crushing of this population is not an inevitable process any more than it was in Tunisia and Morocco. Coexistence is a rule of Algerian life that will be found to be not only mutually advantageous but indeed necessary to the viability of the country.

Meanwhile, an apprenticeship in democratic administration would be given the Algerians through gradual stages of increasing political responsibility. If it is true, as many French say, that the Algerians lack a sense of democracy, it is perhaps because the system practiced in Algeria since 1830 did not give them the opportunity to acquire one.

Both France and the rebels must make concessions.

The time lapse before independence becomes fully effective will also give France the opportunity to work out new institutions by which north Africa will be able to associate harmoniously with it on an equal footing. If indissoluble links are established they can only be by free consent rather than by French decree.

CONCESSIONS ON BOTH SIDES

The details of such a solution can be worked out effectively only through negotiations between the French Government and the representatives of the Algerian rebellion. France must make considerable concessions and so must the rebels. They must show that, if they are riding a historical current, they have sufficient authority, statesmanship and responsibility to be able to control it and prevent it from sweeping their country into chaos.

Negotiation has never really been seriously tried up to now. The unofficial and almost furtive contacts taken with the nationalists cannot be called negotiation for this implies a certain amount of give and take on both sides as well as the prior preparation of concrete proposals. The nationalists have hurt their cause by fighting among each other for power and here again a bit of statesmanship is in order if the negotiations are not to be needlessly complicated. It should be added that greater unity on the French side would also be helpful.

Of all of France's western partners, the United States could play an important role in an eventual agreement by acting as a moderating influence on the nationalists. They appear to set great store by American opinion judging by the amount of lobbying and propaganda work they do in American official and unofficial circles. It might be asked why the United States does not assume such a role. The answer is that France is not doing much to help it and only a radical change in the French attitude could put Washington in a position where it could apply its influence with some assurance of success.

We come full circle. The change of attitude by France along the lines suggested, far from constituting an abandonment, requires all the authority and purposefulness France can muster. A policy of surrender and resignation consists of permitting things to go along until all control is lost, lassitude and exhaustion set in, and the power of decision is taken out of French hands.

The Plight of Poland

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. SHEEHAN. Mr. Speaker, a very interesting article on the present situation in Poland was written by Mr. Stefan Kleczkowski, and was published in the Contemporary Review, June 1957.

Mr. Kleczkowski's background as a former editor and newspaper correspondent enables him to approach the problem of the Polish people from a realistic and objective point of view. Mr. Kleczkowski's article is as follows:

THE PLIGHT OF POLAND

The "bread and freedom" riots in Poznan on June 28, 1956, ushered Poland, after 12 years of Communist domination, upon a road of a freer and happier development, and has precipitated a chain-reaction of political forces of which the Hungarian revolt last year was only a prelude. Although the Poznan uprising was ruthlessly suppressed by the Soviet forces, the lesson was learned not only by the Poles but also by the free world outside that it is possible, and even necessary, to show fortitude and courage when faced by the Russian bullies, and that a defenseless nation could, if it wanted to, oppose Russia's military might and win the day. The subsequent Warsaw anticlimax of October 19, 1956, merely reinforced the belief that the Soviet "Goliath" could be stood up to and challenged by a Polish "David," who could triumph in an unequal battle for human rights, if only for a short time. Moreover, the Soviet prefabricated myth that the satellite countries were completely integrated in the Soviet Empire was exploded. This assertion was, of course, a fallacy. The truth is that, far from having imposed its nefarious doctrine on a helpless and ill-treated people, the Soviet rulers have come to realize at last that their system, with the exception of a few henchmen and opportunists, has no hold on the country, while from the strategic and military point of view Soviet Russia cannot rely on any of the oppressed nations. It is clear that Polish, Hungarian or any other army of the Communist-dominated Eastern Europe of some 100 million inhabitants is completely unreliable, and as such is bound to be, in case of crisis, a burden rather than an asset. This makes the Soviet occupation of Eastern Germany very precarious, because all communication lines from Russia to that part of Europe run through Poland. The Poznan and Warsaw rebellions have also wrecked another Soviet assumption, namely, that it had succeeded at least in winning the Polish youths. Having found this to be also untrue, the Soviet press now brands the young Poles as "hooligans, bandits, and brigands."

In religious matters the change is even more astounding. Far from being weakened by the incessant Godless propaganda, the Roman Catholic faith and its adherents are more closely united than ever. All the churches are full, almost daily, to overflowing, and the ardour of the faithful is as powerful as during the days of the early Christians. Years of persecution and martyrdom of the Roman Catholic clergy, with the Primate Cardinal Wyszynski at the head, have deepened the devotion of all Poles beyond description. The revival of the religious mass-worship has found recently an unforgettable expression in a great demonstration in the city of Czestochowa, the famous place of pilgrimages to the shrine of the Blessed Virgin. The shrine, to which the Polish Roman Catholics ascribe miraculous properties, was visited on August 26, 1956, by more than a million people from all parts of Poland, to commemorate the 300th anniversary of the proclamation by King Jan Casimir of the Mother of God as "Queen of the Polish Crown." It was thus that the highly religious Poles supplicated the protection of the Holy Virgin, as of yore, in their fight against the eastern barbarians and their atheist thought. This act of patriotic and religious submission proved once more that the Roman Catholic region is the most powerful bulwark against the godless and brutal Communist doctrine with its materialistic tenets and absence of all moral and spiritual values, while the illegal incarceration of Cardinal Wyszynski only strengthened the conviction in all Poles that their religion is the best and most potent weapon against Russian tanks and police terror.

In this political situation the Poznan and Warsaw events brought a material, though not very solid, change for the better. Gomulka, an old Communist who had been purged for his pro-Titoist views and imprisoned, became First Secretary of the Polish Communist party, a virtual dictator of Poland on the Soviet model. He replaced a hated Moscow henchman, Bierut, who lost his life in mysterious circumstances in Moscow on December 3, 1956. His dramatic encounter with Mr. Khrushchev last October in the "Belvedere," former residence of Marshal Pilsudski in Warsaw, paved the way for a relaxation of the Soviet iron rule in Poland. His plan is to give Poles as much liberty as is indispensable for avoiding a new popular uprising, while keeping the Communist system intact. Thus, almost overnight, the Soviet Marshal Konstantin Rokossowsky, who stood inactive with the Soviet army while Warsaw burned during the 63 days abortive uprising in 1944, was sent home. He was the Soviet military governor of Poland, and as such was treated as a symbol of the Soviet domination. Soviet officers and advisers in the Polish forces were replaced by Polish officers. The dreaded

UB (secret police) was disbanded or camouflaged into a less obnoxious body. Press censorship was considerably relaxed, and more freedom of speech assured. Nowadays the press can write fairly freely provided it does not attack Soviet Russia or the Government. The jamming of foreign radio transmissions has also been stopped, at least temporarily, and the entrance allowed of a few foreign newspapers and publications. Collectivization of farms was largely abandoned, and a small dose of private initiative permitted, especially for small traders and handicraftsmen.

This is not all. Some 70 percent of all Polish farmers have been allowed to purchase small holdings and were given building materials to rebuild their homesteads. Small privately owned shops have been allowed, and they are sprouting all over the country like mushrooms. Trade barriers have been relaxed to some extent, and customs duties may be lowered on foreign imports. This is of immense importance to the whole population which is getting food and clothing parcels from their relatives living in Britain, France, Canada, United States, and other countries which prohibitive duties have hitherto prevented. Now it will be easier for Poles to import consumer goods which are in extremely short supply there, and that means practically everything that people in the West are enjoying in plenty.

This confirms the well-known fact that the economic situation in Poland, and for that matter in all satellite countries, is appalling. After taking over in Poland in 1945, in accordance with the Yalta agreements, the Soviets made it clear that their aim was to "bolshevise and russify" the country. Its 27 million population (nearly 35 million in 1939) was to be turned into docile Soviet slaves whose lives would be controlled by Soviet agents from birth to death. The Polish economy was to become the "milch cow" of the Russian "Moloch." The outcome was that the country soon became a secret police state, with the rule of terror and oppression rampant in every walk of life. In the economic field the nation which in pre-war days was a large exporter of foodstuffs was brought practically to the verge of starvation, and is now forced to import enormous quantities of grain from Russia and other countries.

Excessive industrialisation and collectivisation has produced chaos and impoverishment. With Polish industries geared to swell the Soviet war potential, and agriculture ruined by a highly unpopular and unworkable collectivisation system, with high prices for foodstuffs and commodities, and very low wages, the nation's economy, from a normally prosperous level, has been reduced to the state of famine and penury. In a territory which before the war exported large quantities of eggs, butter, bacon, sugar, starch, etc., food is scarce, consumer goods are unobtainable except at very high prices for the privileged few. While unemployment is growing and housing in short supply, the industrial population is forced to produce fatuous quotas and norms of inferior goods which are not satisfying even the barest needs. Such commodities as pins, razor blades, buttons, hooks, and even common glue, are almost unobtainable. What there is is of such poor quality and in such short supply as to be completely inadequate for a population used to Western standards. The discrepancies and injustices of the economic system come to light at once when one remembers that the average wage of a skilled worker in office or factory amounts to about 600 to 1,000 zlotys (roughly £10 to £15 a month), as compared with the salaries of party officials who get as much as 40,000 zlotys a month. With the price of a good pair of shoes about 500 zlotys the incongruities of the present economic situation in Poland are even more apparent.

These examples prove that the Communist system in Poland has failed lamentably. Ever since 1945 Russia's policy has been to tie Poland hand and foot to the Soviet political and economic system, and use it as a jumping-board for an eventual attack against the West. As in the Soviet Union, the whole Polish economic life has been made subservient to the needs of the Soviet war plans, while spiritually the country was to serve as an outpost of the Communist assault against the West. No efforts were spared to achieve both ends, and to crown the pattern of Soviet imperialism and colonization, great efforts were made to substitute the worship of the prophets of militant communism, Marx, Engels, Lenin, and Stalin for that of the Almighty.

The Poznan uprising and subsequent bloodless Warsaw revolution came as no surprise. Shortage of bread, destruction of all civic liberties in the name of the triumph of the working masses, have led to a bloody showdown between an ill-fated and exhausted nation and its Moscow-imposed stooges. Betrayed by their allies in Yalta, crucified and oppressed, first by the Germans, and then by the Russians, the Poles could no longer stand the grind of perpetual famine, poverty, and enslavement. The seeds of revolution were sown and the volcano continues to smolder. Gomulka and his friends know this, and are performing a tightrope trick to keep themselves and their party in power, to hold the emotional and sorely tried Poles under control, to appease Russia without losing freshly gained concessions, and to put off the day when the Poles start asking for real freedom and independence. It is an unenviable position fraught with enormous dangers and risks as the Hungarian revolt has shown. The Poles feel like a man who has just come out of a prison and whose hands have been freed, but his feet are still tied to the prison walls.

There is, however, an answer to Poland's tragic plight. It was given by August Zaleski, President of the Polish Republic in exile residing in London, in an interview published by El Dia of Montevideo on November 11, 1956, Polish independence day. "Let us hope that the Soviet Union will come to realize that it is impossible to hold down by force 100 million people living in the center of Europe and accustomed to the enjoyment of freedom. In the long run such a state of affairs will become very dangerous for Soviet Russia, because, whenever she will fall into difficulties, the oppressed nations will renew their protests against Soviet domination. If Soviet Russia truly desires peace, she should understand that by granting freedom to the states of eastern and central Europe, from the Baltic Sea to the Mediterranean, she will secure a much better protective wall."

Investigating Highway Accidents

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. RAINS. Mr. Speaker, we in Alabama hold great concern for the human slaughter on the highways of this Nation. Our attention to highway accidents is accentuated by the fact that one of our colleagues, Hon. KENNETH A. ROBERTS, is chairman of the Special Subcommittee on Traffic Safety.

In the fall, Representative ROBERTS will take his subcommittee into Alabama, Tennessee, and Arkansas for hearings on traffic conditions in those southern States. On the subject of these hearings, there appeared an editorial in the Mobile (Ala.) Press-Register on July 28. Under leave to extend my remarks, I insert the editorial, as follows:

SHOCKING TRAFFIC SLAUGHTER

Representative KENNETH A. ROBERTS, of the Fourth Alabama Congressional District has pointed to a situation that should be so shocking to the people of the State that not a moment would be lost in moving to do something about it.

He called attention in Washington last week to evidence indicating that the mileage-death rate in traffic in Alabama—meaning the number of deaths in proportion to vehicle miles traveled—is the fifth highest among the States of the Nation.

Mr. ROBERTS quoted the statistics in scheduling public hearings in Alabama, Tennessee, and Arkansas in September before a House Subcommittee on Traffic Safety, of which he is chairman.

His subcommittee will hold a hearing in Nashville on September 16, in Little Rock on September 18 and in Montgomery on September 20. Mr. ROBERTS said insurance records indicate that the 1955 traffic accident death rates in Alabama, Tennessee, and Arkansas were above the rate for the Nation and that only four States had higher rates than Alabama that year. The calculations were based on the ratio of traffic deaths to vehicle mileage.

A traffic-death rate that makes Alabama the fifth worst State in the Union in that respect is enough to shock the State into prompt new determination and action to reduce the accident toll through stepped-up law enforcement activity and other safety promotion.

Meanwhile, an Interstate Commerce Commission report on a two-truck collision in North Carolina early in June that killed 21 persons and injured 16 others serves as the strongest sort of argument for the practice of safety in traffic.

This disastrous accident occurred at a highway intersection and involved a truck loaded with migrant farmworkers and a tractor-trailer truck loaded with potatoes.

The ICC investigation resulted in the blame being placed on the truck carrying the farm workers.

"It has not been possible to determine whether the failure of this vehicle to stop was due to reckless operation and disregard for traffic laws, or failure of the brakes to control the heavily loaded vehicle, or by a combination of reckless driving and poorly maintained vehicle," said the ICC report.

"It is known that the 1½-ton truck was loaded with people whose weight probably totaled approximately 5,500 pounds. This vehicle was in obviously deteriorated condition, the body of makeshift construction, and maintenance had been neglected.

"Survivors have stated to the effect that it was operated at a high rate of speed and that this speed was not reduced much, if at all, at the intersection * * *

"The accident was the direct result of the manner of operation of the vehicle transporting these workers."

All over the United States too many unsafe motor vehicles—trucks and automobiles alike—are operated on the highways, endangering not only the lives of their occupants but the lives of other users of the roads.

And all over the United States too many unsafe drivers are behind the steering wheels of automobiles and trucks, endangering their own lives and the lives of others using the highways.

As long as this deplorable condition exists to the extent that it does today, the Nation will continue to count a frightful annual

traffic death toll, not to mention the nonfatally injured and the economic loss.

Much is said and a great deal is actually done to bring about safer traffic conditions, but in spite of it all the accident toll still testifies from year to year that the problem is yet to be solved. So the question remains as urgent as ever—in fact, it becomes even more urgent each day: How much longer before the Nation will stem the grim tide of slaughter on the roads?

The Third of a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. MICHEL. Mr. Speaker, today I should like to insert the third editorial letter of the series written by F. F. McNaughton, publisher of the Pekin Daily Times, Pekin, Ill.

The letter follows:

[From the Pekin (Ill.) Daily Times of July 24, 1957]

THE EDITOR'S LETTER

(By McNaughton)

In 1938 on our first day in Russia, the guide had said: "Today we do so and so."

This time our guide said: "What do you want to do?"

Well, there are things I want to do that will not make her happy; but I knew it would start us off on the right foot if we showed interest first in the things the Russians are proud of; so I said:

"We want to see Galina Ulanova, your greatest ballet dancer; and we want to see your greatest opera; and we want to find out for sure if it is true that you are doing wonderful things in education."

That set us in right.

Ulanova is to be in a special appearance in about a week, with the great old conductor who had helped make her No. 1 in all the world. He is almost totally blind now; but he would conduct for Ulanova again before an audience of 14,000.

But alas, the only rendition of their most beloved opera, Prince Igor, was that very night, and tickets never could be gotten the same day. But I looked so woebegone at that news that they said: "Perhaps."

At 6:30 p. m. they handed us two tickets.

They were second row, main floor, on center aisle—best seats in the house.

It was the best-staged opera I have ever seen. (Not best singing, but the best scenery and staging.) They had horses on stage; they took half hour for a dawning; they had stars that twinkled and a river that rippled; they had a battle that set a city afire and there were actual flames. (At least, I thought so.)

Then they called on the world-famous Bolshoi Dancers for the Dance of the Slaves, a wild and very much naked revel for the gratification of a tyrant.

Between acts are 20-minute intermissions when they go to restaurants and cafes in the opera house for snacks.

A German bomb hit the opera house during World War II. That is one of many reasons (shortage of men being another) why the Russians stubbornly (and perhaps wisely) oppose a reunification of Germany—in fact, oppose anything that will give Germany a chance to start a third world war within 40-odd years—within the lifetime of tens of millions of Russians who suffered horribly from the former two wars. 'Twas out of the first war that communism gained control of Russia; and has since taken control of vast areas and populations of this earth.

Swiss Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. SHELLEY. Mr. Speaker, August 1 again this year will be the time when the great democracy of the United States extends its cordial greetings to the great democracy of little Switzerland. On that day, 666 years ago, the Swiss laid the groundwork for the development of a democratic way of life which is among the finest in the world today. Then it was that the people of three tiny cantons in the north of what constitutes modern Switzerland today gathered together to tell the Habsburg monarchy to keep hands off.

Now, centuries older and 19 cantons larger, the Swiss people of Germanic, French, and Italian origin are the possessors of a sound, democratic tradition and a healthy economy.

It is sometimes little realized how much the Swiss and American peoples share in common. They have the same love for freedom and democracy, are gifted with the same industriousness and precision skills, and both enjoy similar standards of living which are among the highest in the world. Both the Swiss and Americans have made substantial contributions to the other nation's welfare. In the United States, for example, there are many Swiss-Americans who, like their fathers and grandfathers before them, are valuable assets to the well-being and vigor of our country.

In this time of tension and strain between nations, it is a good thing to be able to point to the long and profitable relationship enjoyed by Switzerland and the United States. This friendly state of affairs between one of the finest democracies and the world's greatest democracy was formally recognized with the signing of the Treaty of Friendship and Commerce 106 years ago. In our own era we can point to the Reciprocal Trade Treaty of 1936, which has had a profound and positive impetus on commerce between both states.

Yet even this fine tradition has not prevented friction and misunderstanding to arise between both countries. It is now 3 years since President Eisenhower raised the tariff on watch imports, to the dismay of both the Swiss and our other friends overseas. The facts in the watch question and the significance of mutual trade in combating the Soviet economic offensive impel us to rectify this grevious wrong. It would be appropriate indeed, if, upon extending congratulations to Switzerland on the anniversary of its independence, steps are taken to erase the only blot marring our longstanding friendship with one of Europe's oldest democracies.

They Should Read On

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. ABBITT. Mr. Speaker, within recent months many of us have called attention to the fact that the so-called civil rights bill was being foistered on the American people in one of the most deceptive ways I have ever known. A large segment of the nation's news media have been representing the bill to the public as a simply right-to-vote bill. Supporters of the measure have insisted that it is only a moderate attempt to assert Federal power in the field of civil rights. Nothing could be further from the truth.

Those of us who know the bill to be liberty-destroying, iniquitous, and dangerous to the American way of life have tried earnestly to awaken the people to its dangers. We pleaded that proponents of the bill read it carefully and to view its contents in light of what the bill might do to their people in the event a ruthless Attorney General ever decided to use it in such a way.

The debate has accomplished one real good and that is that it has forced the other side—the proponents—to admit the bill is more than a moderate attempt to legislate in the field of civil rights; it is indeed more than a mere right-to-vote bill. This has resulted in the approval of amendments in the Senate which would eliminate the drastic provisions of section III.

These actions could not have been achieved without some honest soul-searching on the part of those who have been seriously considering the bill and its provisions. The campaign of education which we have been trying to wage is beginning to pay off. The press is finally coming around to the realization that more is involved than the right to vote. Commentators are looking at the bill with a renewed objectivity.

One of the best editorials I have seen on this trend appeared recently in the Progress-Index of Petersburg, Va., edited by Edward A. Wyatt IV who from the beginning has demonstrated a keen knowledge of what is in the bill and what dangers are hidden in its carefully-worded clauses. This editorial, entitled "They Should Read On," is included herein with my remarks and I recommend it to the reading of all people who are interested in the welfare of our Nation.

The editorial follows:

THEY SHOULD READ ON

Senators BYRD and RUSSELL and other opponents of the civil rights bill must be credited with having made a real impression,

now that some of the advocates of the bill have gone so far as to take a look at what it contains. Having done so, President Eisenhower has backed off a step from his complete support of Senators KNOWLAND and HUMPHREY are offering an amendment to save, but soften, section 3 which permits injunctions for school integration.

They are willing, it seems, not to go back to the Reconstruction period to find provisions to use in the bill. Senator HUMPHREY says that Attorney General Brownell "made a blunder by placing that provision in the bill," and Mr. Eisenhower, who repeatedly has coupled unyielding support of the civil rights measure with statements of his own good intentions, says he would favor using troops in school integration cases only upon request of local authorities.

Now that Messrs. Eisenhower, Knowland, and Humphrey have begun to read, let them read on. They've seen the light, albeit only a little light, but they may see more if they are willing to give their personal attention to the monstrous thing they are supporting.

Southern opponents of the bill again have called attention to the evils which it contains. Evidently their criticisms have been dismissed as sound and fury. Finally, as a result of the recent statements from Senators BYRD and RUSSELL, somebody decided to do a little concentrating upon the subject at hand.

All of this is a sad commentary upon the processes of government, of the ignorance of persons of measures which they support, and the wonder may be that we are not stuck with more objectionable legislation than we are. According to Senator HUMPHREY, the responsibility for the reconstruction tie-in rests upon Attorney General Brownell, at which nobody need be surprised. But Senators HUMPHREY and KNOWLAND and the rest, including even President Eisenhower himself, have an obligation to be acquainted with the provisions of proposed legislation which they support. By their own admission, this obligation has not been honored.

The willingness to soften one obnoxious provision is no cause for high satisfaction. The thing is evil from start to finish, an unwarranted usurpation of the rights of States, and the Nation will have gone a long way down the road to totalitarianism if it is placed upon the statute books.

But the modified attitude is cause for hope that men who have opened their eyes and their minds a little way will open them further. Let us hope they will be appalled by what they have been doing and allow the whole affair to die the death it deserves. That depends upon whether they are willing to change over from vote-hungry politics to statesmanship.

By a Margin of Only 5 Votes

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the Trenton Evening Times is one of the leading independent newspapers of New Jersey, though it has an almost perfect record of support for Republican candidates including General Eisenhower. It is interesting, therefore, to read an editorial in the Trenton Evening Times of July 30 on the defeat of the school bill entitled, "Eisenhower's Fault?" I was so struck by this extremely significant editorial that I include it here for the information of my colleagues:

EISENHOWER'S FAULT?

By a margin of only 5 votes, the House of Representatives has killed the $1,500,000,000-school-construction bill. Under the bill, Uncle Sam would have distributed $300 million a year to the States for school aid. Thirty-one States would have received $80 million more than they contributed in the form of Federal taxes.

Defeat of the bill is a major reversal for the Eisenhower administration. It is a reversal which could have been averted if the President had exerted his best efforts in the bill's behalf. This characteristic reluctance to enter the arena of rough political conflict on behalf of even the most important of his measures will spell the certainty of many similar defeats in the days of waning power that lie ahead. If the President could not have summoned a half dozen Republican votes to his cause on an issue which he considers vital he has indeed reached a low level of influence on Congress.

Soil and Water Conservation in the State of Kansas

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. AVERY. Mr. Speaker, on July 15, I placed in the CONGRESSIONAL RECORD my observations with respect to soil and water conservation in the State of Kansas. I pointed out that the farmers of Kansas are demonstrating tremendous interest in conservation work. They know the value of conserving our natural resources. Through the outstanding leadership and efforts of Assistant Secretary Ervin L. Peterson, the Department of Agriculture is giving highly valuable technical assistance in this field. The farmers in my district in northeast Kansas are enjoying great benefits from Mr. Peterson's constructive policy of emphasizing permanent conservation practices.

I am pleased to note that Nolen J. Fuqua, president, the National Association of Soil Conservation Districts, saw fit to reproduce my remarks in the July 23 issue of the NASCD official newsletter, Tuesday Letter, with the title, "Good Speech."

Because of the outstanding work of the National Grange, I feel it is especially appropriate to call attention to the letter from Herschel D. Newsom, master of the grange. His background and experience qualify him to speak with authority on matters pertaining to agriculture. Mr. Newsom's remarks will be of importance to all Members of Congress who are interested in the farmer. His letter follows:

NATIONAL GRANGE,
Washington, D. C., July 29, 1957.

The Honorable WILLIAM H. AVERY, M. C.,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN AVERY: We sometimes get our information in what would seem to be a roundabout manner. I have just been looking at the Tuesday Letter of the National Association of Soil Conservation Districts and find they have reproduced your speech of July 9 on the attitude of Kansas farmers toward soil and water conservation work. I am writing this simply to say that I share your views, not only on the value of the work being done, but on the outstanding qualities of the Assistant Secretary of Agriculture, Mr. Ervin L. Peterson. Consistently, since he assumed his position in the Department of Agriculture, he has demonstrated unusual capabilities for cooperation, judgment, and understanding as well as a notable capacity to get things done. He is performing a great service for agriculture and the Nation, especially in the field of natural resources, and we in the National Grange are certainly pleased that you have contributed to the public recognition of this fact.

My sincere compliments on an excellent statement.

Respectfully yours,
HERSCHEL D. NEWSOM, *Master.*

For a Permanent Small Business Administration

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. HILL. Mr. Speaker, I include with my remarks an article from a recent issue of a trade paper, Burger Tire Consultant Service, endorsing the extension of the Small Business Administration, not only for a 2- or 3-year period but as a permanent agency.

With these remarks I wholeheartedly agree and express my very deep disappointment that the other body has failed to act on legislation doing this very thing that was passed by this House, by only 2 votes in opposition, over 4 weeks ago.

As the present SBA Act will soon expire immediate action by the other body seems absolutely necessary. This excellent legislation should not expire and the fine program now being carried on by SBA to assist small business firms should be made a permanent agency.

The article follows:

VOTE THE STRONGER SBA APPROVED BY THE HOUSE IS WHAT WE URGE SENATORS

"Right up front, that's where you've got to put small business." This is what we're telling the Senate on the subject of Small Business Administration legislation.

Our constant work to make SBA stronger paid off last month when the House voted 392 to 2 to make the agency a permanent fixture on the executive side of Government. It's been on a 2-year temporary basis to date, which has prevented it from developing fully its muscle to serve you.

Additionally, the House voted to give you, the independents the agency was created to serve, a bigger say in directing SBA's operations.

These are things we've been after from the beginning, to make sure you stand shoulder to shoulder with big business, labor, and farmers in executive branch highest councils where make-or-break decisions are reached on business, and to make sure SBA has all the advice needed to do the bang-up job it must for you.

CIVIL RIGHTS THE ROADBLOCK

Now a Senate committee's recommendation threatens to wipe these gains out. It is urging the Senate to vote a simple 1-year extension for the agency.

Its argument: it must do this to assure quick action, to prevent SBA from getting hopelessly tangled in the upcoming debate over civil rights.

But we're pounding away on these thoughts: that small business welfare is just as important to our country as the voting and school rights of any minority, and that small business deserves to be right up front instead of in any back seat.

We're determined to hang on to the gains we helped win for you in the House. Some are saying: "Let it go over to 1958, when there'll be more time," but our reply is: "A bird in the hand is worth any two in the bush." The House has given us your opportunity, and we're going right down the line to make the most of it.

Federal Sewage Disposal Funds

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. JOHANSEN. Mr. Speaker, on July 19, under a special order, I discussed the suggestion by Mr. Milton P. Adams, executive secretary of the Water Resources Commission of Michigan, that allocation of Federal funds for sewage disposal plants might be made on a basis which would pass over the requests of municipalities located in the congressional districts of those Members of Congress who had voted against the $50 million appropriation for fiscal 1958.

I am happy to report that Mr. Adams and the Commission apparently have thought better of any such fantastic scheme.

Since directing Mr. Adams' attention to my remarks in the House I have received the following telegram from him:

LANSING, MICH., *July 26, 1957.*

Hon. AUGUST E. JOHANSEN,
House Office Building,
Washington, D. C.

Thanks for yours of recent date based on 13 replys received and other counsel the Commission could not afford to modify its method for establishing priorities based on congressional voting. Commission also without authority to recommend scaling down of grants to accelerate safe program. Personal acknowledgment will follow as opportunity permits.

MILTON P. ADAMS,
Executive Secretary,
Michigan Water Resources Commission.

I also directed a copy of Mr. Adams' original letter to me and a copy of my remarks to the attention of the Honorable Marion B. Folsom, Secretary of Health, Education, and Welfare.

Following is a copy of a letter I have received from Secretary Folsom:

THE SECRETARY OF HEALTH,
EDUCATION, AND WELFARE,
Washington, July 30, 1957.

Hon. AUGUST E. JOHANSEN,
House of Representatives.

DEAR MR. JOHANSEN: This is in reply to your letter of July 23, 1957, in which you enclosed a copy of letter dated July 10, 1957, from Mr. Milton P. Adams, executive secretary of the Water Resources Commission of the State of Michigan, and also copy of a speech which you delivered on the floor of the House of Representatives.

Mr. Adams informed you that the Water Resources Commission of Michigan had scheduled a public hearing at Lansing on July 30, 1957, for the purpose of seeking counsel on how to accelerate Michigan's program on the allocation of Federal funds in the construction of sewage treatment plants, as provided in Section 6 of the Federal Water Pollution Control Act. His letter to you stated the commission might very well hear suggestions that the funds granted by Congress for fiscal year 1958 should go only to those municipalities whose representatives in Congress had voted to retain the $50,000,000 item for this purpose when the appropriation bill for this Department was being considered in the House of Representatives.

You were also asked by Mr. Adams what the Congressional reaction might be to his recommending that all grant certifications made to the Public Health Service be scaled down one-third or one-half from the "congressionally authorized limits" or "up to 30 percent or $250,000 ceiling, whichever is smaller."

You are correct in assuming that neither the Department of Health, Education, and Welfare, nor the Public Health Service, had associated itself in any way with the suggestions contained in Mr. Adams' letter.

You ask that this Department submit a statement relative to the legality of these proposals.

Section 6 (b) (4) of the Federal Water Pollution Control Act provides:

"no grant shall be made for any project under this section unless such project is in conformity with the State water pollution control plan submitted pursuant to the provisions of section 5 and has been certified by the State water pollution control agency as entitled to priority over other eligible projects on the basis of financial as well as water pollution control needs."

It seems very clear that any formula or method of determining priority of one project over other eligible projects on the basis of financial, as well as water pollution control needs, would meet the conditions of section 6 (b) (4) of the Federal act. However, any decision on the part of the State agency, notwithstanding the provisions of the statute, eliminating municipalities in certain congressional districts from consideration in receiving Federal funds, because those Congressmen representing such districts had cast negative votes on appropriating funds for the program, would in effect impose an absolute limitation in an area where Congress had provided none, and would, therefore, in our opinion, not be within the intent of Congress.

On the question of reducing the maximum or ceiling of 30 percent of the estimated reasonable cost of the project or $250,000 whichever is smaller, we have taken the position that recommendations by State agencies based on consideration of need in an individual case would be entirely appropriate. The function of determining the percentage and amount (within the statutory ceiling) of Federal participation in approving projects is vested by the statute in the Surgeon General, and not in any State agency. A uniform or blanket reduction of grant certifications by a State agency on all applications of one-third or one-half from the statutory 30 percent or $250,000 ceiling, would not, in our opinion, be within the intent of Congress.

Accordingly, should the proposals suggested by Mr. Adams in his letter to you be adopted by the Water Resources Commission of Michigan, the Surgeon General would be under a duty to consider such action as he deemed necessary to carry out the intent of Congress in the administration of the Federal Water Pollution Control Act.

We appreciate your interest in this matter, and if we may be of further service to you, please advise us. A copy of this letter has been sent to the Michigan Water Resources Commission as requested.

Sincerely yours,

M. B. FOLSOM,
Secretary.

So-Called Liberals Fail in Their Tactic

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. DELLAY. Mr. Speaker, I think the sentiment expressed in the following syndicated column by David Lawrence, which appeared in the Jersey City Journal on Monday, July 29, is especially timely. I heartily agree with Mr. Lawrence's views and commend them to my colleagues. The article follows:

SO-CALLED LIBERALS FAIL IN THEIR TACTIC
(By David Lawrence)

Coercionism, the misguided tactic of too many of the so-called liberals of today, just will not work.

This has just been impressively demonstrated in the handling by Congress of two major pieces of legislation—the modification of the civil rights bill and the sidetracking of Federal aid for schools.

It is unrealistic to say, as some of the partisans now are saying, that if President Eisenhower had only fought harder for the school bill he could have gotten it through the House. What killed the bill for this session was the mistaken zeal of a large group of both northern Democrats and Republicans who tried to jam down the throats of the Southern people a measure that would have deprived them of Federal money for their schools unless they accepted integration. It is true that there was a parliamentary maneuver under way to eliminate this coercive feature from the pending bill, but in the background was the announced intention of certain of the so-called liberal bloc in the House to attach the same provision later on to an appropriation bill as a rider.

What is generally overlooked by the critics is that, even had there been approval by the House, no such bills would have gotten by in the Senate anyway.

It is passing strange how often so many of the so-called liberals openly advocate that the President apply threats and the tactics of pressure to coerce the members of his own party in Congress. This is euphemistically described as a means of exercising leadership. It runs counter, however, to true liberalism which holds that the elected representatives of the people should represent the will of their constituents and should not surrender convictions by succumbing to the blandishments of Presidential patronage or special favor.

The idea is frequently advanced that all a President has to do is to crack the whip and, to change metaphors, he will then have a rubberstamp Congress to do his bidding. This isn't true representative government today and it never has been. Presidents have won major causes only when they could convincingly persuade and not when they tried to coerce.

The real reason why the $1,500,000,000 school bill failed is that the sponsors of it

ave not yet sold it to the country. There , of course, need for more classrooms and some areas certainly Federal aid is essenal if there is to be any immediate program construction. But the very partisans who e complaining about the President's failre to fight aggressively for the school bill rget that they themselves helped to build p throughout the Nation the so-called econmy mood of today which began when the itics last January assailed the $71,800,000,- 00 budget of the administration.

There wasn't a Chinaman's chance of assing any kind of a school aid bill at this ession. The southern bloc had its back up, id so did the economy-minded bloc of the ouse. This was a big enough coalition to rm a majority—and the decision was to ostpone school legislation until next sesion, when the real battle for it will take lace.

As for coercionism, it is not working in the vil rights fight and it never will bring intetation in the South. Such ill-advised proosals as the one introduced by a so-called emocratic liberal in the Senate the other ay—to reduce the South's proportion of epresentation in Congress if more Negroes idn't vote—is reminiscent of the way the epublican Congressmen from the North nctioned in reconstruction days. Also, to eny jury trial on the theory that southern eople on juries cannot be trusted to render st verdicts, is the way to increase discord nd dissension.

Whatever may be the solution ultimately the handling of the race problem in Amera, it can come only through voluntarism— nd not coercionism. There is nothing libral about coercive tactics however tempting ay be the Machiavellian maxim of totalirian minds that the end justifies the eans. It will not work in free America. any of the intellectuals of our day who, elding to emotion, have swallowed the ercionist doctrine do not yet realize that e greatest victories in behalf of humaniarian causes are won through patience and oral suasion. For this is true liberalism hich, it is gratifying to note, is motivating ore and more Members of both parties in e civil-rights fight in the Senate.

Race Mayhem In Chicago

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. TUCK. Mr. Speaker, under leave o extend my remarks in the RECORD, I nclude an editorial which appeared in he Bee, an afternoon daily published in Danville, Va. The editor pointed out hat the recent race riot in the city of Chicago presents another graphic picure of people behaving in a very differnt manner to the lofty assertion of armonious race relations. The text of he editorial is as follows:

RACE MAYHEM IN CHICAGO

Yesterday's dispatch from Chicago detailng the race riot, described by the police as ne of the worst in recent years, was so aconic and undertoned that it is hard to nd out whether it was started by white or olored people and whether or not it was he result of smouldering feeling as more nd more colored families move into white esidential areas. Today's accounts of the econd successive day of rioting is also poor reporting since it refuses to say whether the thousand persons were white or colored.

At any rate we have here another of those graphic pictures of people behaving in a very different manner to the lofty assertion of harmonious race relations in America's second largest city.

If what happened at Chicago on Sunday and Monday had occurred in the South, a national howl would have resulted with strong demands from the North that Federal troops be assigned to the rioting area to quell the commotion.

Chicago is the hotbed of the neoliberal activity. More Negro missionaries preaching the doctrine of race equality and evolution have come into the South out of the University of Chicago than any other educational institution. Most of them have taken the Chicago situation as their basic theme showing how integration of the races works out well in practice. Unhappily these preachments lose their face when these apostles of the new day find themselves called on for an explanation for such things as those which took place in Chicago and which evidently are building up for a new battle royal in Calumet Park next Sunday.

This was no isolated brawl. About 200 were engaged in the Sunday fight with 3,000 looking on while several thousands more persons were seeking relief from heat in other parts of the park. Three hundred police had to be called out and after the afternoon riot had been quelled it broke out again during the night. Stone throwing and the burning of automobiles marked the course of these affrays.

Chicago has a bad record for racial clashes and while its leading newspapers rant and rave against the South's resistance to desegregation, it has precisely the same problems that we have, and while they do lipservice to harmony between the races, both sides are ready to fight at the drop of the hat.

The Chicago race riots should impress the colored people of the South that they cannot safely depend on these modern Moses to lead them into the dreamed-of Utopia, and that the colored people are better understood by those who have lived among them for so long. How many times have the outside evangelists proved to be both a snare and a delusion to the people they try to lead by the nose.

Panama Demonstration Emphasizes Wisdom of 1903 Canal Treaty

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. FLOOD. Mr. Speaker, I am sure that I voice the sentiment of our entire congressional membership, both House and Senate, and their expression of regret concerning news of the demonstration on July 24, 1957, in Panama City against President Ernesto de la Guardia, Jr., of the Republic of Panama.

A featured news story in the Panama Star and Herald of July 25 tells about a meeting of several thousand persons in the city of Panama, called for the purpose of demonstrating against the President and for demanding his resignation. The paradoxical nature of that political situation is indicated by the fact that the meeting was called by Temistocles Diaz, First Vice President of the Republic, who had been feuding openly with the administration of President Ernesto de la Guardia, Jr., for the last 2 months. One of the speakers at the meeting was Ismael Vallarino, a member of the National Assembly of the Republic and a brother of National Guard Chief Vallarino.

Fortunately, there was no bloodshed involved in the demonstration, although a number of participants were arrested, tried, and sentenced to short-term imprisonment.

In this connection, it is pertinent to mention the cruel assassination on January 2, 1955, of Panama's able and efficient President José R. Remon. Though his successor, First Vice President Jose Ramon Guizado, was deposed by the National Assembly and imprisoned for plotting the murder of Remon, the actual assassin has never been punished.

Our general impression has been that President de la Guardia, a successful businessman and conservative in character, has been discharging his duties as President of the Republic with firmness and dignity. We are surprised at this organized protest led by the First Vice President.

All of this illustrates the vision and wisdom of the architects and authors of the Hay-Bunau-Varilla Treaty of November 18, 1903, which conferred on the United States complete authority and sovereignty over the Canal Zone and Panama Canal in perpetuity. On that basis, the construction of the waterway and its subsequent operation were undertaken by the United States.

Certainly, the Canal Zone should never be permitted to become the theater of revolutionary movements, which unfortunately occur at times in Panama, or the Panama Canal the subject of Panamanian political fluctuations.

We sincerely trust that the situation in Panama has been effectively composed. Moreover, it is to the undoubted interest of the United States and Panama that the stability and progress of the Isthmian Republic be maintained.

Under leave granted, I include as part of these remarks the indicated news story:

OPPOSITION MARCH BROKEN UP AMID GUNFIRE—NO CASUALTIES—NATIONAL GUARD TROOPS MOVE OUT—10 DEMONSTRATORS JAILED—DIAZ WARNS OF CIVIL WAR AFTER PRESIDENT IGNORES DEMAND FOR RESIGNATION

An opposition demonstration broke up last night amid the crack of gunfire and the wail of sirens as troops dispersed a march on the national guard headquarters.

National guard headquarters said there were neither dead nor wounded. Ten demonstrators were arrested and sentenced to jail terms ranging from 30 to 60 days.

Col. Bolivar Vallarino said national guard troops did not fire. But about a dozen shots rang out in front of the central fire station as national guard radio patrol cars roved around in pursuit of demonstrators. Whoever was firing, apparently was doing it into the air.

About 25 national guard motorcycles and a dozen radio patrol cars and jeeps, carrying troops armed with rifles, moved out against the demonstrators.

The march on the national guard headquarters was a sudden development at the

end of a 3-hour rally called by Vice President Temistocles Diaz, who has been feuding openly with the administration of President Ernesto de la Guardia, Jr., for the last 2 months.

The concentration was widely billed as a show of force. But not more than 3,000 persons—by general estimate—turned out. Up to the time of the sudden move at 11 p. m. out of Santa Ana Plaza, where the meeting was held, the rally had not gone beyond fiery talk and a token demand on President De la Guardia to quit office immediately.

A dozen speakers had voiced strong attacks on President De la Guardia personally and on his administration. The speakers included National Assembly Deputy Ismael Vallarino, brother of National Guard Chief Vallarino.

Finally, after 2 hours of haranguing, the organizers submitted a resolution to the rally—which by that time was labeled "a town hall meeting"—demanding that President De la Guardia resign warning him to bear the consequences if he did not do so, and calling for "civic measures" by the people in support of the movement.

Two commissions were appointed to inform President De la Guardia and the national guard headquarters of the contents of the resolution. The commission sent to the presidential palace returned at 10:30 p. m. with word that it had been intercepted by an officer of the presidential guard and was told that the President was receiving no one.

Norberto Navarro, a leader of the opposition movement and chairman of the commisison that was sent to the Presidencia, said the group was treated courteously.

There was no direct word from the other commission, which was headed by Dr. Sergio Gonzales Ruiz. But one of the announcers at the rally quoted national guard headquarters as sending word that it was receiving orders from the President.

One of the announcers, Homero Velasquez, then told the crowd—which by this time had dwindled to about half its original number—over the loudspeakers that there should be no move against the presidential palace, because there was a plot to massacre the people.

He said these were instructions from Diaz. But then Diaz himself took the microphone and in an abrupt turnabout announced that the people would arm themselves, that civil war would come if necessary. Then he added:

"Either that tramp gets out of the (presidential) palace or I will be killed."

Then cries of "To the presidencia" broke out from the bandstand where the speakers' platform was located and the crowd surged out of the plaza.

Instead of heading toward the presidential palace, however, it turned toward A Avenue in the direction of the national guard headquarters.

The demonstration was intercepted two blocks from the headquarters building and as motorcycles, jeeps, and radio patrol cars moved out with sirens at full blast, everybody scampered.

The disturbance lasted about a quarter of an hour.

Tension had been evident throughout the city before the meeting, which had been expected to result in trouble. By 7 p. m., 1 hour before the rally began, Central Avenue was practically deserted and most of the stores had their plate-glass windows boarded up or protected by heavy wire screens. National guard troops had been deployed along both sidewalks of the main business section, several of them equipped with walkie-talkies.

After the meeting began, there was a relaxed atmosphere and at times the crowd displayed even a festive mood. It was not until the very end of the rally that talk of violence became really serious.

Vice President Diaz walked out of the park with the crowd and presumably he was with it at the time that it was dispersed.

Those who were arrested and later sentenced by Night Police Judge Antonio Santamaria were:

Norberto Navarro, charged with hampering the arrest of demonstrators, 40 days in jail.

Javier Hernandez, Florencio Linares, Juan Barrios, Jr., Jose Felix Jimenez, Juan B. Dominguez, and Jose Diaz, charged with throwing stones at national guardsmen, 60 days each.

Florencio Morales, Valerio Mendez, and Leonardo Tejada, three San Blas Indians who said they had come to the rally under the impression that it was a big celebration, 30 days each.

As the rally came to an end and at the height of the disturbance, four fire-alarm boxes were broken. In one instance, firemen found gasoline-soaked rags in an abandoned building. The other alarms were false.

The rally was preceded by an afternoon-long convention of opposition delegates at which a platform was adopted. The opposition movement has been named by the organizers "National Liberation Movement."

The Serious Drought Condition in Massachusetts

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 16, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, I have urged for sometime the administration to declare Massachusetts a disaster area because the distress caused by the intense drought there. I have been in constant communication with the Civil Defense, the Department of Agriculture, the Small Business Administration, the Interstate Commerce Commission for boxcars and lowered freight rates to carry hay and other food for livestock, help for our milksheds, and assistance in the price of hay and feed. A letter regarding the subject is as follows:

THE COMMONWEALTH OF MASSACHUSETTS,
DEPARTMENT OF AGRICULTURE,
Boston, July 29, 1957.

HON. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: With reference to our telephone conversation I would like to report that dairy farmers are probably the hardest hit. It will be necessary for them to purchase this fall, 75,000 to 100,000 ton of hay, but we hope, there will be some relief, from Washington on the high cost of transportation of hay. There is also the problem of new seedings which are a total loss involving time and labor plus seed and fertilizer. We believe the agricultural conservation program will help with this reseeding program.

The poultrymen have had losses to their poultry ranges. They have increased costs because of the additional grain necessary to feed their poultry because of the lack of grain feed on their ranges. These poultry ranges will have to be all reseeded before they can be used another seasoh.

The fruit trees are now beginning to show drastic effects because of the continuous drought. The leaves are falling from the trees, the fruit is small and the damage to this year's growth which is the production growth for next year is seriously damaged. We do not know what project of the USDA can help out on this fruit program.

We will send you in the next few days a compilation of the various losses and monies to our agricultural economy in Massachusetts. We have done everything we can in this State to the best of our knowledge to help agriculture. We have seeded the clouds in the hope of making rain and we understand there is available through civil defense a possibility of receiving irrigating equipment.

Sincerely,

CHARLES F. SHELNUT,
Assistant Commissioner.

John Paul Jones: Fighter for Freedom

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News, a publication with wide circulation in my congressional district:

JOHN PAUL JONES: FIGHTER FOR FREEDOM—1747–92

(By Harry H. Schlacht)

We salute John Paul Jones, our greatest naval hero. We honor our defender of democracy. We hail the 210th anniversary of his birth. His name is revered by all Americans. His fame walks the pathways of the stars.

Biography is the key to history. The greatest souls of history are those who conquered in the face of adversity; who hitched their chariot to the star of hope; who snatched immortality from the ruins of time. Such a man was John Paul Jones.

Let us raise the curtain that conceals the past. Let us illustrate the lofty patriotism that characterizes the Revolutionary era. Let us contemplate the life and service of John Paul Jones, one of the most glorious in the galaxy of American immortals.

He was an immigrant. He was born John Paul at Kirkbean, Scotland, July 6, 1747, and died at the age of 45 in 1792. He settled in Fredericksburg, Va., in 1773 and added Jones to his name. He entered the American Navy at the outbreak of the American Revolution and was commissioned lieutenant on December 7, 1775. He was promoted captain in 1776 and made a successful cruise as commander of the *Ranger* in waters around British Isles in 1778.

His story reads like a fairy tale. His life rises to the simplicity of an epic. His deeds will never cease to excite men with the splendor of events and inspire them with the majesty of his achievements.

His supreme courage, with heroic endurance, with unfaltering faith in God, he became one of the elect of Americans. He was the trusted friend of Washington, Jefferson, and Franklin. He was the personification of valor. He was the foremost naval commander of the Revolution.

His genius blew the breath of life into the drama of the infant Republic. His deeds were the inspiration of the dawning sea-power of the new world. His services were of the highest moment to the glory of the Nation. He won his battles not by ships but by his genius. He was the conqueror of

e conquerors of the sea. He was the
ayard of the blue waters.
On water he was the wizard of the sea.
n land he was the master of diplomacy.
e believed in the royalty of man. He be-
eved in the sovereignty of the citizen. He
elieved in the matchless greatness of the
epublic. Love of liberty was the master
assion of his soul, and he longed to have his
ame and fame associated with his adopted
ountry—America.
Whose blood does not run faster, whose
lood does not run warmer, when he reads
he thrilling exploits of John Paul Jones.
hat American has not treasured up in his
ind Captain Jones' bloody sea skirmish
ith the British *Serapis*, "Are you prepared
surrender?" shouted the British captain.
And Captain Jones, commanding the *Bon-
omme Richard* in the thickest of combat,
atless and begrimed with powder, the very
carnation of battle, shouted the historic
ords: "I have not yet begun to fight."
By the inspiration of his example, he
rged weaklings into giants. He captured
is opponents. He snatched victory from
efeat. He transferred his crew to his prize.
ust in time to see his own ship *Bonhomme
ichard* sink beneath the waves with the
ars and Stripes floating from the mast.
He was the first to hoist our flag upon a
an-of-war. He was the first to raise our
g upon a hostile ship captured in battle.
e was the first to receive a salute from a
reign power. He was the first commander
history who ever landed an American
rce upon the European shore.
Every officer of the Navy should know by
eart the deeds of this undaunted com-
ander. Every officer of the Navy should
el in every fiber of his being the desire to
mulate the indomitable determination of
ohn Paul Jones who strengthened the soul
our people in their great struggle for na-
onality.
John Paul Jones resided in Paris at the
me of his death. His remains was brought
this country in 1905, and later buried
a crypt of the United States Naval Acad-
my chapel, Annapolis, Md., in 1913.
But his true sepulcher will ever rest in the
earts of the American people. The people
e his memorial. He is our hero. He will
ve on in immortal youth. He will live for
l time in our history.

Let's Keep Farmers Going in Farming

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, Mrs. ohn Carlson, of Pinewood, Minn., has mply expressed her deep feelings about he troubles of the family farmer. Under ave to extend my remarks I request ermission to insert these:

Mrs. COYA KNUTSON,
Member of Congress,
House of Representatives,
Washington, D. C.

DEAR COYA KNUTSON: We the farmers have any problems to face today.
One is the egg price Mr. White wrote bout. I do hope something can be done encourage farm folks to keep going.
My husband and I have a farm home. ith prices the way they are, we don't get in paying off debts.
The products we sell like eggs, livestock, gs, milk, and cream, we get no price for—things we have to buy are sky high. It's very discouraging to one starting out like us—and even those who have been farming a long time are locking up and moving away. It's heartbreaking to see so many neighbors and friends leaving because the farm prices are so low.
Can anything be done about this? I hope you will help us so we can keep farmers going in farming. Thank you.
Sincerely,

Mrs. JOHN CARLSON,
PINEWOOD, MINN.

Northeastern Pennsylvania's Oldest Banking Institution Announces Promotions in Its Executive Personnel

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a news story and an editorial from the Wilkes-Barre Record of July 25, 1957, calling attention to and commenting on the promotions made at the Wyoming National Bank of Wilkes-Barre, Northeastern Pennsylvania's oldest banking institution:

[From the Wilkes-Barre Record of July 25, 1957]

Albert M. Bossard, president of Wyoming National Bank of Wilkes-Barre, yesterday announced the election of Leonard J. Walsh, 708 Susquehanna Avenue, West Pittston, as a vice president of the Wyoming National Bank and Frank L. Howorth, 69 South Thomas Street, Kingston, as comptroller. Mr. Walsh, the new vice president, comes to Wyoming National from First National Bank of Pittston; Mr. Howorth has been a member of the Wyoming National staff for the last 31 years. His was one of five promotions.

Other staff members newly elected to official positions are Barry C. Boyer, 146 West Dorrance Street, Kingston, elected cashier; Earl Macarty, 68 East Poplar Street, West Nanticoke, elected an assistant cashier; John Killeen, 466 Walnut Street, Luzerne, elected an assistant cashier; Robert T. Patton, 445 Scott Street, elected assistant manager of the installment loan department.

Leonard J. Walsh, West Pittston, comes to Wyoming National Bank of Wilkes-Barre as a vice president after serving many years with First National Bank of Pittston. He was a cashier at the Pittston bank 12 years and a vice president, carrying out overall management duties, for the last 6 years. Mr. Walsh has been a director of the First National Bank of Pittston since 1945, is a former president of the Pittston Clearing House Association and a former member of the executive committee of the Northern Anthracite Bankers Association. On June 30, 1957, he completed 3 years' service on the State legislative committee of the Pennsylvania Bankers Association.

Mr. Walsh is a Wilkes-Barre native, moving to West Pittston and graduating from the West Pittston High School. He is a graduate of University of Pennsylvania Wharton Extension School. He is a member of the Pittston Rotary Club, director of the Greater Pittston Chamber of Commerce and treasurer of the Pittston Area Industrial Development Fund. Mr. Walsh is married to the former Mary Ellen Williams, of Wilkes-Barre. Their son James is a graduate of Wyoming Seminary and is attending Wilkes College.

Frank L. Howorth, newly elected comptroller of Wyoming National Bank, has been employed with the institution since September 1926. He has served as bank auditor for the last several years. Mr. Howorth is a graduate of Coughlin High School, Wyoming Seminary, Dean School of Business, and the University of Pennsylvania Wharton Extension School. He holds the prestandard and standard certificates from the American Institute of Banking. Mr. Howorth is a member and trustee of Memorial Presbyterian Church of Wilkes-Barre; he is a member of Kingston Lodge 395 F. & A. M., Shekinah R. A. Chapter 182, Dieu Le Veut Commandary 45 Mount Horeb Council, R. & S. M. M., Irem Temple, the directors' staff of the Irem Temple. He is a veteran of World War II, having served in France in the Finance Department, December 1943 to September 1945. He is married to the former Margaret R. Jones of Nanticoke.

Barry C. Boyer, elected cashier, became associated with Wyoming National Bank of Wilkes-Barre in June 1950 and served in various departments of the bank until his entry into the United States Army in February 1953. While in the service, Mr. Boyer served in the United States, in Italy and Austria, assigned to the Ordnance Department. Upon his discharge he resumed his banking career in the consumer and commercial loan departments of Wyoming National Bank. In January 1957 he was elected an assistant cashier, in charge of management and operations. Mr. Boyer is a graduate of Kingston High School and attended the American Institute of Banking. He is a member of Dorranceton Methodist Church. He is married to the former Florence Manko, of Kingston. They have one son.

Earl Macarty, who has been made an assistant cashier of the bank, started his banking career with First National Bank of Plymouth in March 1948. He became a member of the Wyoming National Bank staff upon the merger of the Plymouth bank and Wyoming National Bank in June 1953. Mr. Macarty has served in various bank positions and has been principally engaged in heading up the commercial loan department. He is a graduate of Harter High School and Wyoming Seminary Dean School of Business. He also attended Wilkes College and American Institute of Banking. During World War II he served in the United States Coast Guard. Mr. Macarty is a member of the Nanticoke Lodge 541, F. A. & M., Caldwell Consistory, Bloomsburg, and Irem Temple AA. He is married to the former Nancy Schwall of Luzerne. They have two children.

John Killeen, elected an assistant cashier, assigned to the credit department, joined the staff of Wyoming National Bank in February 1955 as a commercial note teller. He began his banking career with Luzerne National Bank in July 1946 where he had 9 years experience in various departments of the bank. Mr. Killeen attended Wilkes College and holds the prestandard, standard, and graduate certificates of the American Institute of Banking. He is a member of the Sacred Heart Church, Luzerne. He is married to the former Constance Sweetra of Luzerne. They have four children.

Robert T. Patton, elected assistant manager of the installment loan department, came to Wyoming National Bank from the Commercial Credit Corporation in Wilkes-Barre where he was associated 2 years. He is a graduate of St. Mary's High School and King's College; he served 27 months in the United States Marine Corps and is a member of the Marine Corps Reserve at Wyoming, holding the rank of first lieutenant. Mr. Patton is active in the Knights of Columbus, the American Legion, King's College Alumni

and the Holy Saviour Church of Wilkes-Barre. He is married to the former Patrice C. Dougherty of Wilkes-Barre. They have three sons.

The Wyoming National Bank of Wilkes-Barre is northeastern Pennsylvania's oldest banking institution, having been founded in 1829. In June 1953, the First National Bank of Plymouth, founded in 1864, was acquired by the Wyoming National Bank. In March 1953, the Back Mountain Office, a new and modern bank office, was opened on Memorial Highway at Shavertown.

[From the Wilkes-Barre Record of July 25, 1957]

Northeastern Pennsylvania's oldest bank, the Wyoming National of Wilkes-Barre, is making public today six changes affecting places on its staff. Included as a result of election by the board are a newly elected vice president, comptroller, cashier, two assistant cashiers, and an assistant manager of the installment loan department.

Although as a group they are comparatively young, the newly designated officers are already well-established members of the banking community, five of them as able members of the Wyoming National staff and the sixth, the new vice president, as a cashier, vice president, and director of the First National Bank of Pittston. Recognition of his high standing came from fellow bankers when he was elected president of the Pittston Clearing House Association and as a member of the executive committee of the Northern Anthracite Bankers Association. Although he has spent much of his time in the Pittston area, Mr. Walsh in joining the Wyoming National staff comes back to his native city.

We have witnessed many changes in the Wyoming Valley banking realm in recent years. President Bossard said that the Wyoming National staff has been in the process of reorganization since 1953. In mind is a continuance of commercial banking policies which have contributed to the growth of Wyoming National over a long span and which are designed to promote community progress. Management needs also naturally were expanded by Wyoming National's merger with First National Bank of Plymouth in 1953 and the opening of the Back Mountain office at Shavertown in that same year.

Decentralization of Inventory Control Points

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a resolution adopted by the House of Representatives of the New Hampshire Legislature:

Whereas we believe that not only industry of all New England will be greatly affected but also that financially the local area will suffer greatly; and

Whereas the continued decentralization of inventory control points is proven to be of essence in national security; and

Whereas the Portsmouth Naval Shipyard electrical-fittings inventory control division has proven its effectiveness and worth: Therefore, be it

Resolved, That the House of Representatives of the New Hampshire Legislature urgently request the Secretary of the Navy to rescind his decision to remove the electrical-fittings inventory control division of the Portsmouth Naval Shipyard; and be it further

Resolved, That the Secretary of State, be hereby directed to send a copy of this resolution to our Representatives in Congress, Senators Bridges and Cotton and Congressmen Merrow and Bass, and to the Honorable Sherman Adams, Assistant to the President.

[SEAL] W. DOUGLAS SCAMMAN,
Speaker of the House of Representatives.
ERALSEY C. FERGUSON,
President of the Senate.

Attest:

HARRY E. JACKSON,
Secretary of State.

America's Freedom of the Press—John Peter Zenger

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the East Side News on the anniversary of the death of John Peter Zenger:

AMERICA'S FREEDOM OF THE PRESS—JOHN PETER ZENGER, 1697–1746

(By Abe E. Eisenstein)

July 28 marks the 211th anniversary of the death of John Peter Zenger, famous East Sider and New Yorker, printer and publisher, and America's first defender of the freedom of the press.

"Freedom is not a heritage, but a fresh conquest for each generation, and freedom of expression must be vigilantly protected whenever and wherever it is in danger—today as in 1735 when Zenger was the pioneer in this battle."—Arthur Hays Sulzberger, publisher of the New York Times.

John Peter Zenger, a German immigrant, came to this city at the age of 13. His father died on shipboard and his mother, Johanna Zenger, with her three children, moved into a house on Cherry Street.

When he was 14, John was apprenticed to William Bradford, pioneer printer for the Colonies, for 8 years. After his apprenticeship, he was married to Mary White for a short time; and 3 years later he married Anna Catherine Maulin, of Cherry Street. When he was 23 years old, he was made a freeman of the city.

In 1725, John Peter Zenger formed a partnership with William Bradford, but in the following year he set up shop for himself on Smith Street. Eight years later, he moved to Broad Street. The first arithmetic text printed in the colony, Peter Venema's Arithmetica, was brought out by printer Zenger in 1730.

In 1733, he became editor and publisher of the New York Weekly Journal, set up by him and some prominent New Yorkers. The Weekly Journal, unlike Bradford's Gazette, was highly critical of the then Gov. William Cosby's administration.

One of the articles asserted in general terms that the liberties and properties of the people of New York were in danger. Governor Cosby, in 1734, had Zenger arrested and imprisoned for 9 months for criminal libel.

The court proceedings were conducted with the greatest unfairness and Zenger's attorneys were expelled from the bar. His ever-faithful wife, Anna, ran the journal during his stay in jail.

Brought to trial in 1735, John Peter Zenger was ably defended by a famous lawyer, Andrew Hamilton. He demanded: "Shall not the oppressed have the right to complain? Shall the press be silenced that evil government may have their way?" "Not guilty," said the jury.

This was the first successful assertion of the liberty of the press at a time when thought and speech were severely restricted. It led the future Founding Fathers to the free press guaranty in our first amendment to the Constitution of the United States, which became effective on December 15, 1791.

In 1737, John Peter Zenger became public printer for the colony of New York and a year later of the colony of New Jersey. He remained the editor of the Weekly Journal until his death in 1746.

This legal case is a landmark in the history of the freedom of the press in this country. Today this great historic event is depicted with murals, dioramas, historical documents and exhibits in the John Peter Zenger Memorial (started in 1953), on the second floor of the Federal Hall Memorial, in the old Subtreasury Building at the corner of Wall and Nassau Streets, on the site of Zenger's jail.

"Zenger the Printer—his work is done;
Soft be his slumber. Through storm and stress
Guard we the prize of the fight he won—
Bulwark of freedom a fearless press."
—*Arthur Guiterman.*

East Siders and Americans everywhere salute the memory of that courageous pioneer publisher, John Peter Zenger, and his wife, Anna, who led a crusade for freedom of the press.

Jamestown's 350th Anniversary Recalls Aid to Colony by Polish

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks, I should like to insert the following article from the Polish American of July 25, 1957, which recalls the aid given to the young colony of Jamestown by Polish artisans:

JAMESTOWN'S 350TH ANNIVERSARY RECALLS AID TO COLONY BY POLISH

(By Thomas E. Kisaling)

First factory in United States, 1608: Festivities at Jamestown, Va., commemorating the 350th anniversary of the founding of the 1st permanent English settlement there in 1607 recall the fact that artisans from Catholic Poland operated a glassworks there in 1608, the first factory in America. During the year's festival celebration, members of the American Flint Glassworkers Union, dressed in costumes of 17th century craftsmen, will demonstrate how the glass was made.

Jamestown, Va.: The arrival in Virginia of artisans in 1608 from Catholic Poland saved from failure the first permanent English settlement in America.

This is the testimony of the leader of the colonists, Capt. John Smith, recorded in a book published in London in 1630, The True Travels, Adventures, and Observations of Capt. John Smith.

The colony was founded at Jamestown in 1607, by the Virginia Company of London, chartered by James I, and financed in part by lotteries. It was hoped that the colonists would soon be sending back to England imports badly needed for her industries.

However, the "gentlemen adventurers" who accompanied Captain Smith on the first voyage were more interested in searching for gold. They proved unequal to the tough job of chopping out wilderness, and fighting off the Indians. With food and other supplies dwindling, Smith besought his backers in London to send him some carpenters, blacksmiths, masons, and other artisans.

Arriving with the second supply, aboard the 40-ton ship *God Speed*, in October 1668, were "eight Dutchmen and Poles," some of whom were glassmakers and carpenters, recruited by the London Co. in Germany and Poland.

The Poles, the first to come to America, were engaged as artisans and instructors in the manufacture of glass, pitch, tar, soap ashes, and other products.

They immediately set to work and within 3 weeks had a roaring fire going under a glass furnace. This was the first factory in America. Within a short time samples of their work, presumably the green glass bottles and vases of that period, were sent back to England. These were the first "Made in America" items shipped abroad.

Due to famine, pestilence, and attacks by the Indians, the first glass house was soon abandoned. A second attempt to make glass in the colony began in late 1621 and 1622, this time with Italian artisans. However, it met with a similar fate and for like reasons.

The exact location of the original factory was discovered in 1931 by the late Jesse Dimmick, owner of the land known for centuries as "Glass-House Point."

However, it was not until 1948 and 1949 that archaeologists from the National Park Service researched, explored, and excavated the site of the factory. They found the remains of the furnaces, crucible, and pot fragments and melted and marked pieces of glass.

These discoveries, plus study and research in England, enabled the experts to reconstruct the 17th-century glasshouse at a cost of $100,000, the joint project of the Jamestown Glasshouse Foundation, Inc., and the National Park Service, United States Department of the Interior.

During the Jamestown 350th Anniversary Festival, April 1-December 1, this year, glass is again manufactured here. The demonstrators, dressed in costumes of the 17th century, are members of the American Flint Glass Workers' Union, who also contributed generously to financing the project.

Some of the Poles were also engaged in the early years in the manufacture of clapboards and other wood products, which were shipped back to England. Others served as soldiers.

In 1609 it was recorded that when the Indians set an ambush to kill Captain Smith, the Poles saved his life and captured an Indian chief. Mention is also made of "Robert, a Polonian" who in 1616 during Governor Yeardley's administration distinguished himself against the Indians.

There is no mention in the records of the Virginia Company that these first Poles to come to America took the oath of supremacy and allegiance to the King and Church of England, which called for repudiation of the Pope and See, of Rome.

Skilled craftsmen and artisans were so badly needed and so difficult to recruit it is doubtful that they were required to take the oath usually administered to the colonists. It is not disclosed in the official records of the colony that those among them who were Catholic remained Catholic or had their spiritual needs provided for.

Imbued with a capacity for hard work, the Poles also had a flaming love for freedom. It was they who struck the first blow for civil liberty in America. In 1619 when a limited autonomy was introduced into the colony, the first legislative assembly on the American continent met at Jamestown. The Poles, along with some others, were denied the right to vote because they were indentured for the cost of their voyage.

They were so indignant that they refused to work in the glasshouse until they were enfranchised. And thus began the first strike in the history of the United States.

The matter was of such importance that Governor Yeardley reported it to the Council in London. A manuscript in the Library of Congress shows that the Poles won the strike for their political rights. Under date of July 3, 1619, the Court Book of the Virginia Company of London (vol. I, p. 32) records that the "Polonias resident in Virginia" are now "enfranchised and made as free as any inhabitant there whatsoever." And this was their victory for equal suffrage in America.

Statesmanship in the House

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks I include an editorial from the Idaho Daily Statesman dated July 26, 1957. With reference to recent activities in Congress this editorial speaks for itself:

THAT POWERFUL MINORITY

One thing about the Republican minority in Congress. It is able to do the impossible—outvote the majority held by the Democrats. This was true again Wednesday when the House Reclamation Committee voted down the Hells Canyon bill once more.

This committee, as every person in the Nation understands perfectly well, has a Democratic majority. So does every other committee in Congress. The Democrats are in control of the Senate and the House. Therefore they control every committee. Every committee chairman is a Democrat.

Yet the Republican minority in the House Reclamation Committee can outvote the majority Democrats.

How come?

Well, it just happens that the House Reclamation Committee has a couple of Democrats on its rolls who are in favor of free enterprise and opposed to Federal adventures into the field of private business. They have not been taken over by the NEUBERGER, MORSE, PROST crusade to socialize the West. Nor do they want their constituents paying part of low-rated power bills in Oregon and Washington. Apparently they favor Oregon and Washington paying their own way.

A hollow mockery, in view of the committee's vote, is the comment of Senator NEUBERGER, Democrat, of Oregon, whose quoted statement is that, "In the years to come it should never be forgotten that the Eisenhower administration and the Republican Party must shoulder the major blame for this betrayal of the public interest."

The Statesman salutes a couple of strangers to Idaho: Representative SHUFORD, of North Carolina, and Representative HALEY, of Florida. We congratulate them for putting principle ahead of politics, and for their good courage in face of party pressure. We believe Idaho owes them a great debt of gratitude, and we hope Representative BUDGE supports them at every opportunity when they have legislative matters of interest to their home States.

All that is saving this Nation from complete ruin at the hands of the do-gooders and the planners are men of the qualifications and competence evidenced by Representatives SHUFORD and HALEY. They aid in saving the Democratic Party from its own internal decay.

When Senators NEUBERGER and MORSE now blame the Republicans for blocking the Hells Canyon legislation in the House, they will also be blaming two Representatives of their own Democratic identification. Only these men are Democrats in the established traditions. By their presence in the House they honor not only their home States but the Nation as well.

The McGougan Family of Hoke County, N. C.

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. KITCHIN. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the News-Journal of Raeford, N. C., July 25, 1957, on the McGougan family of Hoke County, N. C., which was recently named 1 of North Carolina's 6 "Master Farm Families."

I am proud to call attention to the outstanding accomplishments of the McGougan family, residents of my congressional district.

The article follows:

J. M. MCGOUGANS NAMED ONE OF NORTH CAROLINA "MASTER FARM FAMILIES"

The J. M. McGougan family of Lumber Bridge, Route 1, in the extreme southeastern section of Hoke County, have been chosen 1 of North Carolina's 6 "Master Farm Families" by the Progressive Farmer magazine and the North Carolina Agricultural Extension Service, it was announced this week.

The families are selected from North Carolina once in every 4 years, with families being named from Virginia, South Carolina, and Maryland the other years.

The McGougan family consists of Mr. McGougan, widely known as Sam, Mrs. McGougan, the former Ada Chason of the same section, son, James D., known as Jimmy, who farms in partnership with his father, and Sam's sister, Miss Vera McGougan. Their daughter, Bennie, is Mrs. John S. Gardner of Lumberton.

The McGougans qualify in almost every possible way for the selection on the basis of notable efforts in developing a successful home and farm and for taking an active part in community improvements.

Sam, a graduate of State College in 1924, and Jimmy, a graduate in 1953, work together in many activities to make theirs the balanced and successful operation it must be to be so recognized. They take advantage of all possible help offered by the extension service and other Government agencies, and all their modern farming operations show the progressive and thorough nature of their training.

The McGougan farm is about 500 acres, although they operate considerably more in Robeson County of family land. Most unusual thing about their farm operation is that they do not grow tobacco. Sam says they have a small allotment he got with some land, but that this is in the soil bank, although he does generally believe in the principle of the soil bank. He says he hasn't farmed any tobacco since he was in his teens.

The farm is mostly open and their operation is completely mechanized, with the exception of cottonpicking. They have no sharecroppers, hiring most of their farm work from two families who live on the place.

A model of diversification, outstanding activities on the farm are hard to choose, there are so many that would be outstanding most places. The biggest operation is the production of certified small grain seed oats, wheat, barley, and soybeans, with production running to 5,000 bushels. In addition, the McGougans sell another 10,000 bushels of uncertified seed, which also has a fine reputation among growers.

The flock of 500 pullets which will be layers before long are one of Jimmy's projects, according to Mr. McGougan. There's also a herd of 60 Black Angus cattle, known as a cow and calf herd, where the calves are sold to feeders. These are wintered on roughage and don't have the high protein diet that would be necessary for dairy or beef herds. Sam says he seldom feeds them out for beef except an occasional one for home consumption.

In addition there is a herd of purebred Hampshire hogs which produce from 150 to 200 pigs for slaughter and breeding stock each year.

"Everything we grow is purebred," Mr. McGougan says. "We use registered boars and bulls, and certified foundation seed for our crops."

One of the most attractive features of the farm to a nonfarmer is the lovely, comfortable and tastefully furnished home in which all modern conveniences, including some air conditioning, are perfectly blended with traditional and spacious comfort.

Another high-ranking attraction is the lovely pond which Sam and Jimmy have built with their fellow clansman, Johnny McGougan, on some lowland along the boundary between their farms. The pond is a large one as farm ponds go, and is beautifully laid out. They have a nice pier, and have graded the banks and covered a beach with sand for bathing. They are planning construction of a complete recreation site at the pond with a tennis court and other game facilities, bathhouse and cabin.

Family ownership of the property goes back beyond memory and there's an old family cemetery (no longer used) where tombstones indicate that the last funeral was 140 years ago. Dates on the older stones are indistinguishable.

J. M. McGougan is the son of John D. and the grandson of Duncan B. McGougan. He is a deacon of the Lumber Bridge Baptist Church, is church treasurer and is teacher of the men's Sunday school class. He was Hoke County chairman of the old agricultural adjustment administration for 10 years, and was first secretary of the Hoke County Farm Bureau. Mrs. McGougan is an active member and former officer of the WMU at the church.

Jim got his ROTC commission at State College and served most of his 2 years in the Army in Germany as a battery executive officer in the field artillery. He organized and is the first commander of the medical detachment of the 130th Tank Battalion of the North Carolina National Guard in Red Springs.

Turkey and the Soviets

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, there is no more important area in the free world today than Turkey. It is the anchor in our line of defense in the Middle East.

In this connection, Mr. Speaker, as a member of the Subcommittee on Near East and Africa of the House Foreign Affairs Committee, I should like to bring to your attention an important new book entitled "Turkism and the Soviets," by Col. Charles W. Hostler, United States Air Force—New York, Frederick Praeger, 1957. This brilliant study makes available for the first time in any western language an analysis of the approximately 54 million Turkish-speaking peoples of the world. It is an outstanding and original contribution to the contemporary history of the strategically important and little-known peoples who occupy the "soft underbelly" of the Soviet Union.

This is one of the great "submerged" nations of the world—with about 20 million Turkish-speaking peoples living in the Turkish Republic, about 22 million in the U. S. S. R., and the rest in Iran, Chinese Turkestan, and Afghanistan.

This enormous area is divided by the Soviet southern Iron Curtain. On the one side is the Turkish Republic, military strong, and a firm ally of the West. On the other side the Turkish-speaking peoples occupy Soviet areas rich in oil including the Baku region and the Emba oilfields of the Kazakh S. S. R. If these vast Soviet-Turkish areas were "splintered away" it would be a major disaster for the Soviets, and an important victory for the West.

The role of the Turkish people is examined in this book as an issue intimately connected with the problem of the U. S. S. R. and communism. Two significant factors give this huge ethnic group great importance—its strategic position and the homogeneity and common objectives of its peoples.

The text includes an invaluable and heretofore unavailable Handbook of the Turks of the World. The result is a book of long-range reference and immediate political interest. As indicated by the table of contents—below—the coverage of the book is comprehensive:

I. Introduction.
II. Handbook of the Turkish Peoples of the World:
Origins and Physical Characteristics.
Historical Sketch of the Turkish Peoples.
The Turkish Peoples Now.
The Ottoman or Anatolian Turks.
The Caucasian Turks: Azerbaijanis in the Caucasus; Azerbaijanis in Persia; Other (Non-Azerbaijan) Turkish Tribes in Caucasus.
Turks of the Volga-Ural Area: Kazan Tatars (Turks); the Chuvashes; the Bashkirs.
The Crimean Turks.
The Turks of Western or Russian Turkestan; the Kazakhs; the Uzbeks; the Kara-Kalpaks; the Turkmens; the Kirghizes.
The Siberian Turks: the Yakuts; the Turks of the Upper Altaian, Khakass, and Tuvinian Areas; Other Minor Turkish Tribes (Within the U. S. S. R.).
The Turks of Central Asia Outside the U. S. S. R.: Sinkiang Turks (Eastern or Chinese Turkestan); the Turks of Afghanistan; Turkish Tribes in Iran; Other Minor Turkish Groups.
III. The Emergence and Development of Turkism.
Beginnings of Turkism.
Turkish Nationalism and the Ottoman Empire.
Pan Islamism.
The Young Turks.
Ziya Gokalp.
Kemalist Turkey.
IV. Pan-Turkism:
Turkism and Pan-Turkism in Russia: Beginnings of the Movement: Mergani, Nasiri, and Feizkhani.
Ismail Gaspirali.
The Djadid Movement.
Russian Revolution of 1905.
Pan-Turkism in the Ottoman Empire: Antecedents of the Movement; Role of Western Turkologists and Turkophiles; Pan-Turkists in Turkey: Yusuf Akcoraoglu.
The First World War and Pan-Turkism, Enver Pasha.
Pan-Turkism Between the World Wars: Promethean League; "Prometheus" and the Turks from the U. S. S. R.; Pan-Turkism in the U. S. S. R.; Basmachi Movement; "Nationalist Deviations"; Pan-Turkism in Turkey.
World War II and After.
Diplomatic Negotiations.
Pan-Turkist Leaders and the German-Soviet War.
Turks from U. S. S. R. in the German Armed Forces During World War II.
Youth and the Mass Propaganda of Pan-Turkism.
The Ebb of Pan-Turkism.
Recurrence of Pan-Turkist Feeling.
Pan-Turkism in Post-War Soviet Russia.
V. Summary and Perspectives:
An Estimate of the Current Status of Unity Among the Turks of the U. S. S. R.
Pan-Turanism Versus Pan-Turkism.
The Pan-Turkist Ideal.

APPENDICES

I. Observations on the Future of the Turkish World by Cafer Seydahmet Kirimer.
II. Biographical Sketch of Cafer Seydahmet (Kirimer).
III. Biographical Sketch of Ayas Ishaky (Idilli).
IV. Biographical Sketch of Mehmet Emin Resulzade.
V. Biographical Sketch of Zeki Velidi Togan.
VI. Pact of Caucasian Federation.
Bibliography.
Index.

The authoritative Muslim World attests that—

Turkism and the Soviets is a major contribution shedding new light on an obscure, yet important, subject. Based on Western, Turkish, and Slavic sources, the book gains from personal contacts of the author with pan-Turkish leaders and will become a basic reference work on that part of the world.

I am pleased to see that the United States Information Agency intends to translate this important book into several languages for distribution abroad and will use it for presentation in the

English language to key foreign personalities.

The author, Colonel Hostler, is an outstanding military planner and observer who has had responsible assignments with the United States Government in Turkey, the Arab States, the Balkans, and Europe. He is also a distinguished writer, linguist, and scholar who has studied at the following universities: bachelor of arts, University of California at Los Angeles; law school, University of Bucharest, Rumania; master of arts in international relations, Georgetown University; master of arts in Near Eastern studies, American University of Beirut, Lebanon; doctor of philosophy in political science, Georgetown University.

In addition to his current military assignment as a strategic planner in the Pentagon, Colonel Hostler is a professional lecturer in international relations of the Middle East for the American University, Washington, D. C.

I am pleased to recommend this book to the attention of all persons who recognize the emerging importance of this part of the world and the significance of the enslavement of the Turkish-speaking peoples within the Communist empire.

Legislation Proposing Revision of Federal Sentencing Procedures

EXTENSION OF REMARKS
OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 24, 1957

Mr. CELLER. Mr. Speaker, on July 29, 1957, I introduced 3 bills designed to improve Federal Sentencing Procedures. They were sent to me by the Bureau of Prisons of the Department of Justice. These bills, described more fully below, would, first, permit judges to waive present statutory requirements on parole eligibility; second, extend the Youth Corrections Act to persons of 25 years of age and under; and third, provide for a series of joint meetings or institutes attended by judges and other Government officials for the development of uniform standards in sentencing procedures. This legislation has been carefully considered and approved by the Advisory Corrections Council set up under section 5002 of title 18 of the United States Code. This Council is composed of a United States circuit judge, two district court judges, a member designated by the Attorney General, the Chairman of the Board of Parole and its Youth Division, the Director of the Bureau of Prisons and the Chief of Probation of the Administrative Office of the United States Courts. It is the duty of the Council to make recommendations to appropriate officials for the improvement of the administration of criminal justice, the integration of policies as to the disposition, treatment and correction of persons convicted of Federal offenses as to measures to promote the prevention of crime and delinquency, and to suggest appropriate studies in this field.

There are 94 United States district courts and some 330 district judges, each of whom at one time or another has the duty of imposing sentences upon persons convicted of Federal offenses. It is but natural with this number of judges that there should be some variance in the performance of the sentencing duty. The sentencing judge must necessarily have considerable discretion relative to the use of probation and sentencing the defendant under the several methods which Congress has made available, but the wide disparities presently found in sentences raises many problems connected with the treatment of offenders, the even-handed administration of justice and the control of crime.

One of the bills which I have introduced would provide for a series of institutes and joint councils under the auspices of the Judicial Conference—composed of the Chief Justice of the United States and the Chief Judge of each Federal court of appeals—for the study and formulation of standards for sentencing. The bill provides for the participation in these institutes and joint councils of district judges, United States attorneys, officials of the Department of Justices, criminologists, psychiatrists, penologists and other experts. These conferences could result in the development of standards and of uniformity in sentencing procedures.

Another bill would authorize the sentencing judge to fix the maximum release date and also the time when a prisoner would become eligible for parole provided the minimum date does not exceed one-third the maximum. The present statute, which is section 4202 of title 18 of the United States Code, provides that a prisoner may not be eligible for parole until he has served one-third of the sentence imposed. This is a purely arbitrary limitation and does not take into consideration the varying responses which individual prisoners make to the rehabilitation program carried on in our Federal penal and correctional institutions. It frequently happens that a prisoner is ready for release before the statutory minimum of eligibility is reached. The sentencing judge has the benefit of the presentence report, is familiar with local conditions, and any aggravating or mitigating circumstances involved. In cases where he believes the defendant might respond quickly to the rehabilitation program the proposed bill would give the judge the authority to fix an earlier eligibility date for release. The prisoner would not be released of course unless the Board of Parole felt that he met the other requirements of the statute. It would, however, obviate the need of keeping a prisoner after he has received the full benefit of the program. A prisoner kept beyond that time very often becomes discouraged and bitter, and when he is finally released the benefit of the program often has been lost.

The other bill increases the maximum age of those who might be sentenced under the Youth Corrections Act from those under 22 to those under 26 years. The Federal Youth Corrections Act was passed in 1950. This act set up a special procedure for the treatment and rehabilitation of defendants under the age of 22 years at the time of conviction. It is not mandatory that the court use the special procedure under this act, but the courts are taking increasing advantage of it and its operation has been so successful that it is thought the courts should be given the discretion of using it in the case of young offenders who fall in a somewhat older group and who at the same time are promising prospects for rehabilitation.

The present age group who might be sentenced under the Youth Corrections Act represents about 21 percent of the total commitments. Increasing the age limit to those who have not reached the age of 26 years would give the district courts the discretion to use it in approximately 39 percent of the total commitments. In this wider age group fall a great many young first offenders who are responsive to the special treatment provided in the Youth Corrections Act. In view of the success under the act with its present age limitation, it is felt that increasing the age limit will be fully justified and result in the salvage of a greater number of young offenders.

These three bills are designed to bring about a greater degree of uniformity in sentencing standards, to permit the release under supervision at an earlier date should a prisoner's response to the rehabilitation program justify it, and to broaden the field of the use of the special procedures provided in the Youth Corrections Act.

The bills would not impose any restriction upon the present jurisdiction of the sentencing courts, but would give the sentencing courts additional alternatives, make the sentencing procedure more flexible and provide machinery whereby time actually served for particular offenses can be made to conform more consistently with the needs of the particular offender. They would also assure greater uniformity of sentencing and improve the administration of criminal justice without infringing in any way upon present prerogatives of the courts.

Set out below is statistical data showing the wide disparity of sentencing among the courts throughout the United States with regard to offenses generally and for particular offenses. This data points up the need for uniformity in our sentencing and parole laws.

As to all offenders:

Average Federal sentences for all offenses in 1956 showed wide variations—from 8.6 months, Vermont, to 43.7 months, eastern Oklahoma, and 46.9 months, northern Indiana. Nationwide average 28.9 months.

Percent of convicted offenders admitted to probation likewise vary widely—from 84.2 percent, New Hampshire, to 5.5 percent, Arizona. If local influences eliminated: from 61.6 percent, Massachusetts, to 8.5 percent, western Tennessee.

As to particular offenders:

Average sentence for motor vehicle theft—from 52.3 months, northern Okla-

homa, to 13.8 months, North Dakota. Nationwide average sentence 28.8 months.

Average sentence for liquor law violations range from 3.5 months, Connecticut, to 54 months, Michigan, but taking districts with comparable number of convictions, sentences vary from 7.7 months, eastern Kentucky, or 9.3, Alabama, to 19.7 months, eastern Virginia. Nationwide average 12.0 months.

Average sentences for same offense often varied greatly in immediately adjoining districts:

Automobile theft—middle Pennsylvania 44.8 months, 24 cases; western Pennsylvania 20.5 months, 39 cases; northern Indiana 41 months, 44 cases; northern Illinois 23 months, 34 cases; northern Oklahoma 52.3 months, 35 cases; Kansas 25 months, 29 cases.

Liquor law violations— eastern South Carolina 17.2 months, 82 cases; western South Carolina 9.9 months, 64 cases; western Oklahoma 20 months, 22 cases; northern Oklahoma 8 months, 21 cases.

Forgery—New Jersey 24.3 months, 27 cases; eastern Pennsylvania 11.1 months, 18 cases; eastern Missouri 23.3 months, 36 cases; western Missouri 15.2 months, 46 cases.

Average sentences (fiscal year 1955 figures) varied even more widely between different judges:

For auto transportation—Judge Campbell, northern Illinois, 8.9 months, 8 cases; Judge Forman, New Jersey, 9.2 months, 5 cases; Judge Vogel, North Dakota 9.6 months, 8 cases; Judge Tolin, southern California 46.6 months, 15 cases; Judge Halbert, northern California 48.5 months, 11 cases; Judge Savage, northern Oklahoma 51.1 months, 31 cases.

Sentences vary for same offense between different judges in same district:

For auto transportation—northern California, Judge Murphy, 17.2 months; Judge Halbert, 48.5 months. Northern Illinois, Judge Campbell, 8.9 months; Judge Knoch, 27 months.

Time actually served by Federal offenders for certain offenses longer than for persons convicted of same offense in State courts:

Thus for auto theft—Federal offenders serve 19.3 months, State offenders serve 17 months.

For robbery—Federal offenders 108 months, State offenders 33 months.

Homicide, including murder—Federal offenders 200 months, State offenders 97 months.

Time actually served by Federal offenders for different offenses likewise varies widely thus: Burglary 32.8 months, embezzlement 9.1 months, counterfeiting 23.9 months, income tax 7.1 months, fraud (postal) 13.5 months, forgery (Government checks) 14.4 months.

Case histories also show wide variations in sentences for same offense where facts, motivation, previous record, and so forth, are substantially same. These disparities show most strikingly in cases involving acquisitive crimes such as embezzlement, income tax, fraud, and so forth.

The object of introducing these bills at this time is to provide for wider distribution of the proposals which will give all interested parties an opportunity to study them before the convening of the next session of Congress. I am setting out the alternative approaches to the disparity of sentences problem. These are offered for study only. I do not pass upon their merits or demerits.

Alternative approaches to the disparity of sentences problem:

First. Make sentences reviewable on appeal by the defendant.

Second. Establish a sentencing tribunal as in California and originally proposed for the Federal system supplemented by a diagnostic or classification center.

The sentence prescribed by the tribunal to be within the statutory maximum. This plan can be varied by requiring tribunal to inform court of its decisions within a prescribed time and give the court power to change the sentence to any amount but require court to state reasons for change in writing. Thus final decision as to sentence would remain in court.

Third. Enact an indeterminate sentence law for all Federal offenders providing that the minimum should in no case be more than one-third the maximum. This would involve a reconsideration of all present statutory penalties which would probably be helpful and constructive.

Fourth. Grant the executive branch as well as defendant right to ask for reconsideration of sentence at any time within 60 days after commitment.

Fifth. Grant parole board authority to petition court to remit or reduce sentence at any time.

Sixth. Make all prisoners eligible for parole at the expiration of 1 year.

Seventh. Extend the Youth Corrections Act to include all offenders up to age 25 which would make the flexible sentencing provisions of that act available to about 60 percent of all felony cases coming into Federal courts.

Eighth. Require the Government to make a definite recommendation as to sentence in each case and make these recommendations conform to certain previously established criteria. Make probation officer's presentence report available to United States attorney as well as court. When the court pronounces a sentence varying more than a certain fixed amount from sentence recommended require the court to state its reasons in writing. Final sentence determination to remain nevertheless in the courts in all cases.

A central clearing house for the Government's recommendation could be established.

The court would be required to commit the offender to an institution for observation and diagnosis whenever this requested by the Government. In such cases reports in writing would be furnished by diagnostic clinic to court and United States attorney.

Ninth. Establish an educational program on sentencing for all Federal court officials—judges, probation officers, United States attorneys, parole board members and correctional officers. The program to consist of a series of institutes conducted by a team or task force of carefully selected and respected judges, lawyers, psychiatrists, correctional officials, probation officers, et cetera.

The institute to include talks, illustrative materials, case histories and forums directed to:

Agreeing upon objectives, standards, and criteria for sentencing.

Establishing the content of presentence reports and standards for evaluating these.

Determining the factors to be used in selecting cases for special study and observation in prescribed diagnostic clinics.

Orientation in methods used to determine the importance of psychiatric, emotional and sociological factors involved in the crime and their importance in determining the potentialities of the offender.

Evaluating the importance of various psychological testing methods.

Discussing special sentencing problems involved in cases of treason, violation of public trust, subversion, abnormal sex behavior, indigency, the mentally and physically handicapped, habitual offenders, drug and alcohol addicts, et cetera.

Tenth. Circulating regularly information to all court officials on sentences pronounced generally and in specific cases with occasional comment.

Eleventh. Establish a permanent committee of lawyers, judges, Members of Congress, et cetera, to report from time to time on Federal sentencing policies.

The bills follow:

House Joint Resolution 424

Joint resolution to improve the administration of justice by authorizing the establishment of institutes and joint councils on sentencing for the development of objectives, standards, procedures and policies to be followed in the sentencing of persons convicted of offenses against the United States

Whereas there is now no agreement among Federal courts as to the objectives, standards, and policies to be followed in sentencing of Federal offenders which results in wide disparity in prison terms, fines, and the use of probation; and

Whereas the rehabilitation of Federal prisoners can be facilitated by the development of uniform standards and methods for determining the length of time required for their institutional treatment; and

Whereas a sharing of points of view with respect to factors to be taken into account in pronouncing sentences would improve the equal administration of Federal laws; and

Whereas present policies with respect to inviting and considering the recommendations of United States attorneys and other Federal officials as to sentences vary widely; and

Whereas law enforcement generally, the prevention of crime, and respect for the judicial process can be promoted through wider agreement on sentencing policies; Therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That chapter 15 of title 28, United States Code, is amended by adding the following section:

"SEC. 334. Institutes and joint councils on sentencing:

"(a) In the interest of uniformity in sentencing procedures, the Attorney General

shall from time to time submit recommendations to the Director of the Administrative Office of the United States Courts for the consideration of the Judicial Conference of the United States for the establishment of institutes and joint councils on sentencing for the study, discussion and formulation of the objectives, policies, standards, and criteria for sentencing those convicted of criminal offenses in the courts of the United States including but not limited to: (1) the development of standards for the content and utilization of presentence reports; (2) the establishment of factors to be used in selecting cases for special study and observation in prescribed diagnostic clinics; (3) the determination of the importance of psychiatric, emotional, and sociological factors involved in the crime and their value in diagnosing the potentialities of the offender; (4) the evaluation of various psychological testing methods; (5) the discussion of special sentencing problems involved in unusual cases such as treason, violation of public trust, subversion, abnormal sex behavior, indigency, the mentally and physically handicapped, habitual offenders, and drug and alcohol addicts; and (6) the formulation of such principles and criteria for sentencing as will assist in promoting the equal administration of the criminal laws of the United States.

"(b) Upon approval by the Judicial Conference of the time, place, participants, agenda and other arrangements for such institutes and joint councils, the chief judge of each United States courts of appeals is authorized in invite the attendance of district judges at said meetings for such time and under such conditions as he thinks proper and as will not unduly delay the work of the courts.

"(c) The Attorney General is also authorized to select and direct the attendance at such institutes and meetings appropriate United States attorneys and other officials of the Department of Justice and may also invite other interested Federal officers to participate. He may also invite specialists in sentencing methods, criminologists, psychiatrists, penologists, and other experts to attend the meetings and participate in its proceedings.

"(d) The expenses of United States judges shall be paid from applicable appropriations for the administration of United States courts. The expenses connected with the preparation of the plans and agenda for the conference and for the travel and other expenses incident to the attendance of officials and other participants invited by the Attorney General shall be paid from applicable appropriations of the Department of Justice."

SEC. 2. The chapter analysis of chapter 15 of title 28, United States Code, is amended by inserting before section 331 the following item:

"334. Institutes and joint councils on sentencing."

House Joint Resolution 425

Joint resolution to authorize the court in sentencing a prisoner to fix an earlier date when the prisoner shall become eligible for parole or to except such prisoner from the statutory limitation as to eligibility for parole when in the judgment of the court it might reasonably be expected to facilitate the rehabilitation of the prisoner

Whereas experience in the operation of the program of the Bureau of Prisons for the rehabilitation of prisoners committed to the custody of the Attorney General has shown that many of such prisoners have received maximum benefits from such program prior to the time provided by statute when they may be paroled, and that there is reasonable probability that such prisoners would live and remain at liberty without further violating the laws, and that their release on parole would not be incompatible with the welfare of society; and

Whereas respect for the administration of the criminal laws of the United States and the protection of the public can be promoted by the fair and consistent sentencing of persons convicted of offenses against the United States punishable by imprisonment for more than 1 year; and

Whereas it is in the interest of the general welfare to provide procedures and methods for fixing terms of imprisonment for convicted felons that will deter others from similar acts, promote, wherever possible, the correction and rehabilitation of the offender, and safeguard the convicted person against excessive disproportionate or arbitrary punishment; and

Whereas the wide geographical distribution of the United States courts, the breadth of their jurisdiction, the complexity of the legal, scientific, and behavior problems with which they are confronted, and the speedy and equitable disposition of the business of the courts require that there be established special facilities and procedures for determining terms to be served by persons convicted of offenses punishable by imprisonment for more than 1 year: Therefore be it

Resolved by the Senate and House of Representatives of America in Congress assembled, That chapter 311 of title 18, United States Code, is amended by adding the following section:

"§ 4208. Fixing eligibility for parole at time of sentencing.

"(a) Upon entering a judgment of conviction, except where the death penalty is mandatory, if the court having jurisdiction to impose sentence is of the opinion that the ends of justice and best interest of the public require that the defendant be sentenced to imprisonment for a term exceeding 1 year, the court may designate in the sentence imposed a time when the prisoner may become eligible for parole, which time may not exceed the limitations now provided in section 4202 of this title, or the court may designate in such sentence that those provisions in the said section prescribing a minimum term of service before a prisoner becomes eligible for parole shall be inapplicable. In either event the prisoner may become eligible for release at the time fixed in the sentence or, if no such time is fixed, the prisoner may be released at such time as the Board may determine. The Board may reconsider its action at any time in fixing either the parole eligibility date or the date of discharge on parole.

"(b) Upon commitment of a prisoner sentenced under provisions of subsection (a), the Director of the Bureau of Prisons shall, under such regulations as the Attorney General may prescribe, cause a complete study to be made of the prisoner including a mental and physical examination to ascertain his personal traits, his capabilities, pertinent circumstances of his school and family life, any previous delinquency or criminal experience, and any mental or physical defect or other factor contributing to his delinquency. In the absence of exceptional circumstances, such studies shall be completed within a period of 60 days and shall be furnished by the Director of the Bureau of Prisons to the Board of Parole together with any recommendation he believes would be helpful in determining the disposition of the prisoner. The Board of Parole may make such other investigation as it may deem necessary.

"It shall be the duty of the various probation officers and other Government bureaus and agencies to furnish the Board of Parole information concerning the prisoner and, whenever not incompatible with the public interest, their views and recommendations with respect to the disposition of his case.

"(c) Under such regulations as the President may prescribe, the Board of Parole may discharge a paroled prisoner from further supervision and at any time before the expiration of the maximum sentence imposed may unconditionally discharge such parolee, which unconditional discharge shall automatically set aside the conviction and the Board shall issue to such parolee a certificate to that effect.

"(d) Nothing in this section shall limit or affect the power of any district court to suspend the imposition or execution of any sentence and place the offender on probation or be construed in any wise to amend, repeal, or affect the provisions of chapter 231 of this title relative to probation; the provisions of chapter 403 of this title (the Federal Juvenile Delinquency Act) or the provisions of chapter 402 of this title (the Youth Corrections Act).

"(e) Except as to the provisions of subsection (c) hereof, this section shall not apply to any offense committed before its enactment.

"(f) This section shall apply in the continental United States other than the District of Columbia and Alaska."

SEC. 2. The chapter analysis of chapter 311 of title 18 is amended by inserting before section 4201 the following item:

"4208. Fixing eligibility for parole at time of sentencing."

H. R. 8923

A bill to amend the definition of a youth offender under the Federal Youth Corrections Act to include persons under the age of 26 years at the time of conviction

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5006 (e) of the Federal Youth Corrections Act (18 U. S. C. 5006 (e)), is amended by striking out "22 years" and inserting in lieu thereof "26 years."

At the Grave of Henry Bacon, the Architect of the Lincoln Memorial at Washington, D. C.

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 10, 1957

Mr. FULTON. Mr. Speaker, in the series of articles on Visits to American Cities, by Kathleen Hargrave Frantz and Harry W. Frantz, I liked particularly the article reprinted from the Mulberry (Ind.) Reporter of September 17, 1956, entitled "At the Grave of Henry Bacon."

Henry Bacon was the archiect of Lincoln Memorial in Washington, D. C., who has created not only a monument, but a significant keystone in our American patriotic tradition.

I am submitting this article for inclusion in the RECORD as accurate coverage of an historic development in our capital city of Washintgon, D. C., which I am sure that many teachers and students will be glad to have in the future for reference:

AT THE GRAVE OF HENRY BACON, THE ARCHITECT OF THE LINCOLN MEMORIAL AT WASHINGTON

SEPTEMBER 17, 1956.

Millions of tourists in every year gaze at the splendid Lincoln Memorial, but few

would know even the name of the architect who gave it birth and form.

The monument by the Potomac River has been called a perfect Greek tribute to a perfect Gothic soul. Its harmonious form has become deeply embedded in the imagination of the American people. But Henry Bacon, who made the blueprints of its original design may be remembered only among architects and historians.

Last summer during a vacation we visited at Oakdale Cemetery in Wilmington, N. C., to pay our respects to relatives buried there. What was our surprise to find nearby the lot of the Bacon family.

In this lot is a stone less than 5 feet high, engraved with a pattern of honeysuckles at the top. The inscription reads: "Henry Bacon, 1866–1924, the architect of the Lincoln Memorial at Washington."

A small footstone is marked "H. B." At right (facing the tomb) grew a Virginia creeper vine, recognized by its five-petaled leaves. Back of the gravestone is boxwood, and not far away are gardenia bushes and a water oak tree.

From later research we learned that the gravestone was designed by a brother of Henry Bacon, and that the decorative pattern was suggested by honeysuckle beds that the architect had admired in Egypt.

On the same lot is a family monument about 9 feet high with the following inscriptions:

"Henry Bacon, August 17, 1822; April 12, 1891. (He was the father of the architect and a United States engineer, renowned for construction work in the Cape Fear River near Wilmington.)

"Elizabeth Kelton, wife of Henry Bacon, October 26, 1831; May 21, 1912. (She was the architect's mother.)

"George Fisher Bacon, August 23, 1862; October 22, 1884.

"Henry Bacon, November 28, 1866; February 16, 1924.

"James Hayward Bacon, December 30, 1859; June 4, 1924."

Our visit to Henry Bacon's grave kindled an interest in his career, and upon return to Washington we collected some biographical information.

Bacon was born at Watseka, Ill., on November 28, 1866; and died in New York City on February 11, 1924.

His father, a civil engineer, was employed in the early development of the Illinois Central Railroad. In later years he settled in Wilmington, N. C., where he was a Government engineer in charge of improvements in the Cape Fear River.

The young Henry Bacon attended school in Wilmington, and at the age of 15 went to Boston to enter the Chauncy Hall School. He also attended the University of Illinois for 1 year.

His architectural studies began in a Boston office, and later he joined the firm of McKim, Mead & White in New York.

In 1899 he won a traveling scholarship for architectural students, which enabled him to travel and study 2 years in Europe. After his return to the United States he worked on designs for some of the buildings at the Chicago World's Fair.

He married Laura Calvert on April 27, 1893.

In 1897 he formed a partnership with James Brite, of New York. The firm soon won the competition for design of the Jersey City Public Library. The partnership was dissolved in 1902, after which Bacon practiced architecture in his own name until his death. He was an intense student of Greek architecture, which profoundly influenced his classical design for the Lincoln Memorial. The latter is substantially in form of a Greek temple, modified to open at the side rather than the end.

Bacon was engaged in 1911 to prepare designs for the site of Lincoln Memorial in Potomac Park at Washington. The Lincoln Memorial Commission on February 3, 1912, adopted the site which he chose in preference to alternative proposals for construction on grounds of the Soldiers' Home or at 16th Street and Florida Avenue.

On April 16, 1912, the Commission chose Bacon as architect for the Lincoln Memorial, and instructed him to prepare the final design. The Secretary of War entered a contract with him on June 27, 1913.

The foundation was begun in 1912, and the monument itself was 10 years under construction. On May 30, 1922, at the dedication, Chief Justice William Howard Taft said that it was "a shrine where all can worship."

The cost of the memorial was reported as $2,949,000.

Bacon wrote an article for the press at time of the dedication in which he explained the concept of his design.

"From the beginning of my study," he wrote, "I believed this memorial should be composed of four features—a statute of the man, a memorial of his Gettysburg speech, a memorial of his second inaugural address, and a symbol of the Union of the United States, which he (Lincoln) stated, it was his paramount object to save.

"Each feature is related to the others by means of its design and position and each is so arranged that it becomes an integral part of the whole in order to attain a unity and simplicity in the appearance of the monument."

In a national and public sense, the Lincoln Memorial has been even more successful than its sponsors and the architect himself might have anticipated. To the millions who behold it, the monument inspires a deeper patriotic sentiment, a new feeling for classical forms, and a keener awareness of great human achievement. In Washington, only the United States Capitol attracts more pilgrims.

Dr. Meyer Jacobstein, Ex-Congressman, Does Yeoman Service for the Middle Aged and Aged

EXTENSION OF REMARKS

HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 24, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks I wish to insert in the RECORD an article entitled "All Washed Up At 45?" which appeared in Democrat-Chronicle of Rochester, N. Y., Sunday, July 21, 1957:

ALL WASHED UP AT 45?—PROJECT SEEKS TO RECLAIM SKILLED "TOO OLD" WORKERS

(By Robin Turkel)

"Sorry, too old."

It's getting to be the same old story for the worker over 45 who is out of employment. Jobs go begging while able and skilled people who need them wander the streets or clutter personnel offices.

They wander in a circle. A circle has no beginning, no end. Finally they become burdens to relatives, friends, or the State.

This is an industrialized society, an impersonal society that gets rid of last year's car because it is too old. To some in that society the impersonal attitude toward the older worker is "manpower waste."

Those who have been applying their thoughts to the subject came up last week with the conclusion that reemployment of the older worker is a matter of education. It came from a small but influential group of Rochesterians.

In an all-out effort to save tens of thousands of Monroe County workers from the scrap heap, the newly formed committee for the widening of the employment opportunities of older workers last week sent an urgent plea to 1,000 employers:

"It's good business to hire the older worker."

The committee, headed by 77-year-old ex-Congressman Meyer Jacobstein, is an outgrowth of Governor Harriman's conference on problems of the aging, held at Albany in the fall of 1955. It is nonpartisan, nonpolitical, nonpaid.

Rochester was chosen as the pilot city for the program. If it works here, it will spread to other cities, other States.

Rochester was picked, Governor Harriman said, because of its reputation for employer cooperation. This cooperation is being put to one of its toughest tests.

Consider these facts supplied by the New York State Labor Department.

One out of three persons in Monroe County is 45 or over.

Thirty-eight out of 100 job seekers here are 45 or over.

Rochester's proportion of 45 and older population is fractionally higher than the State average, more than 5 percent over the national.

And these facts reported by the United States Department of Labor:

Between 1900 and 1955, the total population doubled, the 45–64 age group tripled, and the over-65s quadrupled.

As a Nation, our average age is about 35. Getting older all the time.

Forty-five is not the only job cutoff age. In the finance, insurance, real estate, transportation, communications, and public utilities fields, one-third of the job openings in each call for workers under 35.

It was apparent to Jacobstein in the light of those and volumes of other equally grim figures that something had to be done—fast.

He found eager committee recruits among some of the most prominent men in town. Men such as John Bigelow, personnel director of the Delco Appliance Division of General Motors Corp.; Fred Brown, secretary of Central Trades and Labor Council; Swayne P. Goodenough, vice president of Lincoln Rochester Trust Co.; Lee McCanne, executive vice president of the Rochester Chamber of Commerce; Donald McConville, assistant director of industrial relations for Eastman Kodak Co.; Austin Tait, director of industrial relations for Stromberg Carlson Division of General Dynamics Corp.; Assistant Industrial Commissioner George B. Kelly of the State Labor Department. And many others.

"Our program is one of education," Jacobstein said. "We have to educate against the unthinking prejudice of employers who discriminate against the over-45 worker."

Jacobstein served as Democratic Congressman from the 38th District from 1923–29 and was at various times a bank president, economics professor, owner of Rochester Business Institute, and a newspaper publisher.

Here are Jacobstein's figures in favor of older workers:

1. Work performance is better, says the National Association of Manufacturers.

2. Fewer accidents, a United States Labor Department survey shows.

3. Absent less often, Government figures attest.

4. Stay with employers longer, Bureau of Census figures prove.

5. More reliable, the National Association of Manufacturers says.

6. Tone up the work force, State Labor Department advises.

* * * * *

But—says a pamphlet sent by the committee to the 1,000 area employers—there's an iron curtain of indifference standing between industry and the older worker:

1. An unthinking prejudice against the man or woman over 40.

2. Foremen and supervisors who object to adding older workers to their groups.

3. A mistaken belief older workers increase benefit costs.

4. A fear small pensions to short service workers will cause unfavorable public reaction.

5. A failure to recognize experience gained in other companies may be just as valuable as that gained in one's own company.

Who is Meyer Jacobstein?

Every time somebody puts the lid on Jacobstein, he pops up like a jack in the box.

This slight, sprightly man of 77 has had more retirements than most people have had jobs.

Now he's come out of retirement to head a pilot project to employ more older workers.

What makes him go?

Essentially, he loves people.

"It's more than that," says a compatriot at the State labor department. "When Meyer walks into a room, his warm brown eyes light up the place and everybody gets a lift."

Bow-tied Meyer Jacobstein, alert, aggressive, and looking like a man 15 years younger, lives with his wife, the former Lena Lipsky, of Rochester, in a comfortable four-room apartment at 2052 Monroe Avenue, Brighton. They have 2 daughters and 8 grandchildren.

Jacobstein hasn't lived there long.

The last time he retired, in 1955, he moved back home after nearly 2 decades in Washington. He was a researcher in economics and political science for the authoritative Brookings Institution and a research specialist in the legislative reference service of the Library of Congress.

As Who's Who will tell you, Jacobstein was the last publisher of the defunct Journal-American in Rochester. Before that he was president of the First National Bank here, directed Rochester Business Institute for many years and served as Democratic Congressman from the 38th District from 1923 to 1929.

There's more to this engaging man whose trademark is a book clutched under the right arm of his neat blue suit.

Jacobstein was born in New York City, the son of a tailor who moved to Rochester soon after. Here, Jacobstein attended the old Rochester Free Academy and the University of Rochester. He went on to Columbia University to earn his Ph. D. in economics. He was married in 1907.

He taught economics at the University of North Dakota in 1909. He returned to Rochester in 1914 to become the first professor of economics at the University of Rochester.

Later, he was a Federal arbitrator in the clothing industry here.

His intense interest in people, jobs and more people gives Jacobstein a strong drive. At a recent meeting, a friend remarked that one of Jacobstein's trouser legs was rolled up.

"Oh," said Jacobstein, "I only had time to polish one shoe, because suddenly this plan occurred to me."

Michigan Taxes

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 23, 1957

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks, I should like to insert the following story from the Free Press of July 29, 1957, in which Attorney General Kavanagh, of Michigan, brings up some pertinent points about the critics of Governor Williams' tax policies:

KAVANAGH RIPS TAX CRITICS—GOP DOUBLE-TALKS SMALL-BUSINESS MAN

DECATUR.—Attorney General Thomas M. Kavanagh lashed back Sunday at Republican criticism of Governor Williams' tax policies.

Kavanagh, who will don the nonpartisan robes of a State supreme justice January 1, centered his fire on House Speaker George M. Van Peursem, Zeeland, Republican.

"Republican leadership in the legislature is keeping 25,000 Michigan small-business men on the business activities tax roll," Kavanagh told a picnic gathering of Van Buren County Democrats.

"The Republicans proceeded on the principle that what is good for General Motors is good for little business," he added.

Kavanagh lashed out at Van Peursem, who has been traveling around the State as a Republican spokesman against the Williams administration.

"The speaker of the house, I understand, is getting $10,000 to go around making political speeches against the governor," Kavanagh said.

"For that kind of money, he ought to be able to do better than make flimsy excuses to small-business men who have been sold out by the Republican Party.

"One of the first things he ought to explain is his own vote in 1955 to increase the rate of the business activities tax—the same tax he now says is driving business out of Michigan."

"Governor Williams," he added, "refused to sign this tax when it was adopted in 1953, because he knew it was grossly unfair to new business and small business."

Kavanagh disputed Van Peursem's claim that Williams' suggestion to exempt 25,000 small businesses from the activities tax was "part of a package that included the Williams corporation profits tax plan."

"Tax relief for small business could have been enacted without adopting the corporation profit tax," he said.

"This business activities tax tends to discourage business from coming into Michigan because it requires a new enterprise to pay a heavy tax before it gets into profitable operation."

Milwaukee Junior Bar Association Named Outstanding Junior Bar in the United States

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. REUSS. Mr. Speaker, I am very proud of the Milwaukee Junior Bar Association. On July 15, at the annual meeting of the Junior Bar Conference of the American Bar Association in New York, it was named the outstanding junior bar in the country for 1956–57.

The following statement, issued at the time the award was made, summarizes its accomplishments:

The Milwaukee Junior Bar Association was named the outstanding local junior bar in the country for 1956–57 by the Junior Bar Conference of the American Bar Association at its annual meeting in New York City July 12–15. Thomas N. Tuttle was president during the year and represented the association in New York. He also served as president of the Milwaukee Junior Bar Association Foundation, Inc., during the same period of time.

The association, comprised of lawyers under 36 years of age who practice in the greater Milwaukee area, received the award of merit for "its exceptional activities not only in areas directly related to the practice of law but also in civic matters and public issues."

Among the activities which highlighted the association's year were a $10,000 grant from the Fund for the Republic for local activities designed to increase community understanding of the Constitution and the Bill of Rights and the organization of a tax-exempt foundation to administer the grant.

The association also produced a weekly television show devoted to controversial national, State, and local issues, which received awards from the American Heritage Foundation and the Milwaukee County Radio and Television Council. Persons such as former President Harry S. Truman, Vice President Nixon, Senator Estes Kefauver, Senator Joseph R. McCarthy, Senator Wayne Morse, and Governor Averell Harriman, of New York, Governor Vernon W. Thomson, and Mayor Frank P. Zeidler appeared on the program.

The association also celebrated its 20th anniversary with an address by former United States Senator Harry P. Cain, from the State of Washington, on the Federal loyalty-security program. In March, Boston attorney, Joseph N. Welch, spoke before 900 people representing civic groups in Milwaukee.

The association conducted a thorough study of the censorship of motion pictures and literature in Milwaukee which resulted in the enactment of legislation.

During the fall elections the association sponsored a series of television programs and luncheon meetings for the purposes of interrogating all candidates for congressional and major State offices. In addition, the group conducted normal bar activities.

In his presentation to the annual meeting, and an accompanying several hundred page report, Tuttle concluded that these activities, we feel, reflect the philosophy of the Milwaukee Junior Bar Association. We do not confine ourselves to matters of professional interest only. Our aim is to discharge what we conceive to be the larger responsibility of lawyers in their community (whether local, State, or national): To be actively involved in the important issues of the times.

Baltimore, Md., was runner-up for the award of merit and Philadelphia, Pa., received honorable mention. All the major, and many medium and small, cities in the country have junior bar associations.

Higher Air Fares

EXTENSION OF REMARKS

OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Tulsa Tribune on Monday, July 1, 1957, concerning airline fares:

HIGHER AIR FARES

The airline business, one of the most profitable in America, has asked for a general fare increase. It claims that since 1942 air fares have remained steady while railroad fares have been increased 39 percent, bus

fares 25 percent, and the general consumer price index has risen 66 percent.

Opponents of the increase point out that airlines have come from nowhere in the industrial picture to a place of high eminence in only 15 years. Last year, for example, American Airlines was the 10th largest transportation system in America, with operating revenues of $291 million and net income of $20 million.

Why, then, has C. R. Smith, president of American Airlines, requested not only a general fare increase, but a reduction of round-trip discounts and elimination of free stopovers? Mr. Smith says he has to have more money in order to amortize new equipment.

It is a good argument. The old DC–3 cost about $125,000. The Convair was purchased by most lines at $500,000 or above. The new four-engine planes carry price tags of above a million, and the coming jets will cost $5 million apiece. In short, the industry is engaged in an equipment race. The traveling public expects all lines to have the latest and best. To fall behind is fatal, but to stay abreast is expensive.

A good example is the prolbem of TWA, which allowed itself to fall behind its competitors. It retained a number of DC–3's long after most of its transcontinental competitors had sold theirs. When it was finally forced into a heavy four-engine program TWA found itself paying higher prices than its competitors had paid for similar equipment a few years earlier. Last year, although TWA took in a whopping $240 million in revenue, it showed a net deficit of $2 million.

Airline income is wonderful but new equipment might as well be gold plated. The lines have a case for a better-than-1942 fare structure.

Atomic Power Milestone

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Atomic Power Milestone" which appeared in the July 28, 1957, issue of the St. Louis Post-Dispatch:

ATOMIC POWER MILESTONE

A milestone of atomic electric power development in the United States is coming closer. The roadblock to use of public as well as private effort in building and operating commercial-scale plants is on the way to being removed. Specifically, a start on a program of public atomic powerplant construction has been approved by the Senate-House Joint Subcommittee on Atomic Energy, and Democrats on the committee predict Admiral Strauss, the Chairman of the Atomic Energy Commission, will accept it. Admiral Strauss has been the chief deterrent to a public power program so far.

The $58 million which the bill provides compares with $400 million in bills introduced by Senator GORE, of Tennessee, and Representative HOLIFIELD, of California. That larger amount was calculated to build on the order of half a dozen plants. The smaller sum will hardly build more than one life-size plant.

But it is a beginning, and the approach it opens up is potentially the most fruitful one at hand. The opening up has been long delayed in a sterile and needless controversy over ideologies of public versus private power.

This controversy has been produced by private-power extremists who would rather not have atomic energy developed any faster than it can be done by private companies alone. The end of that road could easily have been default of world atomic leadership, and private monopoly of atomic power. Start of a public power program will therefore be of moment in more than one field of public policy.

The joint subcommittee has succeeded in this same bill in prodding the AEC forward in two promising types of atomic powerplant design which the Commission has been neglecting. One is the gas-cooled reactor, the type the British chose for the world's first commercial-sized atomic powerplant at Calder Hall. The gas-cooled reactor possesses the special advantage of using a coolant which permits natural uranium to be employed as fuel. It is, therefore, of special significance to the undeveloped countries. They lack the electrical power and industrial plant to produce enriched uranium for fuel. They do not like the idea of being dependent upon other countries for their fuel supply. Most of them have some natural uranium within their borders. That is why the gas-cooled natural-uranium reactor is the type in which the undeveloped countries, and even industrial France, are primarily interested.

A second type of reactor which the Joint Committee proposes to press upon AEC is one using plutonium as fuel. This type is promising because plutonium is produced in all reactors using natural uranium.

So much of a victory as has already been won is owing largely to the work of such knowledgeable and dedicated members of the Joint Committee as Senator ANDERSON, of New Mexico; Senator GORE; Representative MELVIN PRICE, of East St. Louis; and Representative HOLIFIELD. But most of all this breakthrough now in progress is due to a tough old Missourian, CLARENCE CANNON, chairman of the House Appropriations Committee, who used the congressional power of the purse to compel the high-handed Strauss to listen to Congress.

The start the joint subcommittee has made, we hope, not only will be completed, but also will be followed by legislation to build still more public plants—at least enough to take care of most of the AEC's own requirements—and to achieve full-scale development of other promising reactor types.

Private enterprise is one of America's strong arms. Public enterprise is the other. It is good that, even though belatedly, our country seems finally on the way to putting both hands to the atomic wheel.

Flight to Cities Troubles World

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. HAYS of Arkansas. Mr. Speaker, every country in the world is now witnessing a flight from the farm to the city. We recognize that the days of the purely rural economy are over, but we must not neglect the possibility of making rural life more satisfying. I have been sponsoring legislation to provide for rural industries which would offer part-time employment for farm families and a ready market for agricultural products. Such food and timber processing plants would increase the levels of income of the agricultural regions and generally improve living conditions. At the very least, this would keep the flight to the city within manageable proportions until adequate facilities are available to handle the influx. There is also a good chance that improved rural opportunities will enable many people who love farm life to remain out of the congested urban areas. Malvina Lindsay has written a thought-provoking article on this problem which should be studied by everyone concerned about social progress in the 20th century.

Under leave to extend my remarks, I should like to include her article, as follows:

FLIGHT TO CITIES TROUBLES WORLD
(By Malvina Lindsay)

Even aside from the atom bomb the world is having its troubles. It is getting too many people. Too many of them are descending on the cities. About half the world's children have no schools. Juvenile delinquency increases. Disease refuses to be conquered.

All this has come out at the global stock-taking now going on in Geneva by the United Nations Economic and Social Council.

An incidental contribution to this dark picture was a portrayal by the Soviet Union delegate of the downtrodden masses of the United States. He was worried about the growing gap between millionaires and masses, and the increasing class inequality in this country.

In the next breath he urged development of personal contacts and large-scale exchange of experts between countries. This of course would permit Soviet visitors to the United States to see at first hand the vanishing middle class here turning the highways into rainbows of shiny, colored motorcars.

They might also see other evidences of how since 1929 the United States has moved 60 percent of the way toward an equality of income.

However, the Economic and Social Council did not take up the plight of the American middle class. It had more serious problems, chief of which were how to keep production in step with population and how to keep more people down on the farm, at least until the cities were ready to receive them.

While cities in the United States are losing population to their suburbs, rural populations in less prosperous areas of the world are converging on cities in search of work and other opportunities to improve their substandard living.

Yet generally neither they nor the cities are prepared for such meetings. The cities have not developed the industries, public utilities, housing, schools, social techniques to handle this influx of untrained people. Hence unemployment increases, ghettos develop, social problems, including disrupted families, and juvenile delinquency, result.

Yet this trek to the cities is here to stay, Council delegates agreed. The purely rural economy is outdated. Sir Samuel Hoare, the United Kingdom delegate, told the Council. The problem now is to keep the movement to urban centers from getting out of hand. If it can be slowed while urbanization is being developed, the social toll will be lessened. Chief means of doing this is to increase rural opportunities, as in the village development project of India.

The toughest question the Economic and Social Council is facing is how living standards in the world can be raised or even maintained in an exploding global population. This will require miraculous strides in production.

The Netherlands delegate, J. M. A. H. Luns, pointed out that the world's population might be doubled by the year 2000, which meant that present levels of nutrition would be barely maintained. Thought might be given, he said, to a transfer of persons to underpopulated areas to insure improved food supplies.

Back of the need for more food and better standards of living is the basic need of energy. Traditional sources of this are being depleted. The split atom holds much promise but the Economic Committee of the Economic and Social Council feels that the search for energy should be further extended. Wind and solar energy especially should be actively explored. Hence it has proposed that an international conference on this subject be called early in 1959.

The social picture of the world that has emerged at the Geneva meeting is not bright. Civilized man, so-called, has held forth on the globe for possibly 5,000 years and has little to show for it in social progress. G. F. Davidson of Canada described the present social picture of the world as a dark and desolate road with only a tiny ray of light to give the traveler hope and spur him on to greater efforts.

Yet the fact that men of many nations are willing to confront this picture and to recognize that it concerns them no matter where they live, holds promise that it will improve eventually.

The Current Situation of Debt in the United States

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 10, 1957

Mr. FULTON. Mr. Speaker, I would like to submit an article from the Washington Evening Star giving the current situation of debt in the United States in relation to the gross national income.

The question of debt management is one about which the American people should be individually concerned as it is the debt of each citizen and taxpayer of the United States.

The article follows:

DEBT LESS BURDENSOME, BURGESS TELLS CONGRESS

W. Randolph Burgess Under Secretary of the Treasury, told Congress today the national debt is becoming somewhat less burdensome.

Mr. Burgess took the offensive against Democratic critics on the Senate Finance Committee with a 33-page prepared statement and a series of charts giving the administration's position on its debt management policies.

He told the committee the national debt now is $251 less per capita than it was 10 years ago.

Further, he said that in 1946 the debt was one-third larger than national income, but that now it is only about three-fourths of national income.

"In this way we are gradually growing up to the debt, so that even though the dollar amount of debt is not declining as much as we might wish, the debt still becomes somewhat less burdensome," he said.

DEFENDS REFINANCING

He termed the Government's recent refinancing of $24 billion of the debt successful. The refinancing was at interest rates of 4 percent, the highest paid by the Government since 1933.

Mr. Burgess conceded, however, that last week's big refinancing operation would add $250 million annually to interest charges on the national debt.

The Under Secretary, soon to leave his Treasury post, has had special responsibility for debt policies in his 4½ years in the Treasury. He is the second witness in the Senate committee's broad inquiry into the Nation's financial condition.

Several Democrats on the committee have sharply criticized the refinancing operation. They have said the 4-percent-interest rate offered would mean increased interest charges throughout the economy.

However, Mr. Burgess told the committee the new securities were priced closer to the bond market than any Treasury issue since 1951.

CALLS PLAN SUCCESSFUL

He said he believed his presentation showed the Treasury does not force rates up, as sometimes stated.

"It has always been our policy," he declared, "to sell our securities at the lowest interest rates at which the maturities offered can be sold."

In calling the big refinancing successful, Mr. Burgess explained that the cash turn-in on this refunding (preliminary figures) was the smallest percentage of publicly held maturities turned in for cash of any refinancing since March a year ago.

He added that the Treasury also sold $2.5 billion of the new 4-year notes, which he said helped keep the debt on a longer term basis.

Mass Transit Investigation

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mrs. GRANAHAN. Mr. Speaker, a resolution has been introduced in the House this year, House Resolution 231, to create a select committee for the purpose of investigating existing and probable future mass transportation problems in the great urban centers of our country. This resolution seeks to achieve the goal of locking the barn door before the horse is stolen rather than after, it seeks to find the solution to the mass transportation problems in our large metropolitan areas before these problems strangle our cities to death.

Recently the three cochairmen of the Greater Philadelphia Movement, an organization of outstanding Philadelphia businessmen seeking to aid our own city to solve the problems of today's complex urban structure, wrote me in support of House Resolution 231. These gentlemen, Mr. Gaylord P. Harnwell, Mr. P. Blair Lee, and Mr. Henderson Supplee, Jr., wrote me that they support this resolution for the following three reasons:

1. The survival of the great commercial sections of America's metropolitan areas, particularly in the northeastern part of the United States, is dependent on efficient and reasonably economical mass transportation.

2. The construction program soon to be underway as a result of the Federal Aid Highway Act of 1956 will affect the future pattern of mass transit use in a variety of ways.

3. A number of States, including Pennsylvania, have urban mass transit studies underway and a congressional study at this time could use much of the information and data developed by the respective States.

Hoover Commission Recommendations

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. BOLAND. Mr. Speaker, as one of the sponsors of H. R. 8002, a bill which embodies Hoover Commission recommendations, and would place the Federal Government's budgeting and accounting procedures on an annual accrued expenditure basis, I would like to further call to the attention of my colleagues editorials favoring the measure: Waterbury, Conn., Republican of June 10, 1957; the New Bedford, Mass., Standard Times of June 11, 1957; the Boston, Mass., Herald of April 18, 1957; and the Springfield, Mass., Union of April 17, 1957. Under leave to extend my remarks, I would like to have these editorials printed in the Appendix of the RECORD.

The editorials follow:

[From the Boston Herald of April 18, 1957]

ACCRUED EXPENDITURE

Senator KENNEDY, of Massachusetts, and Senator PAYNE, of Maine, have again introduced a bill to permit the executive branch to present budget estimates on an annual accrued expenditure basis. This year they have gotten 48 other Senators to join with them in sponsoring the reform.

So technical a measure is not going to attract much public interest or backing, but the stubbornness with which the New England Senators are pushing it is good evidence of its importance.

The purpose of the bill, which is an outgrowth of the second Hoover Commission studies, is to focus the budget on work programs for a particular year rather than on long-term obligations and programs. It is to restore annuality to our fiscal planning.

This kind of procedural reform doesn't necessarily save any dollars. Or rather, it doesn't save any directly. But by enabling Congress, and others dealing with the budget, to see their way a little more clearly it may lead the way to tremendous economies. Some optimists have put the possible dividends at upward of $5 billion.

The immediate goal, in any case, is improved budgetary control. And this would be desirable even if it were known that no money would be saved. We are, or should be, at least as concerned with the efficiency of our spending as with its size.

Control of the budgetary process has declined as our spending has increased. Neither Congress nor the Executive can really keep tabs on a $72-billion budget, no matter how hard they try. The task has just gotten too big. But we can do a lot better by adopting better procedures. And one of these would be an annual accrued expenditure approach.

It will, at least, reduce the overall confusion if Congress knows that what it appropriates is for the coming year and not for 2, 3, or more years ahead. It will help if the Budget Bureau plans in terms of what can

actually be spent in 12 months, not what can be obligated.

We hope that this year the House, which should be particularly interested in such problems, will support the upper Chamber, instead of finding niggling objections. This is a reform which deserves to be tried.

[From the New Bedford (Mass.) Standard Times of July 11, 1957]

KENNEDY BILL IS "MUST"

If one word could be used as the keynote of the 1957 Congress, that word is "economy."

And if one bill could be selected as more important than any other in the field of economy, that bill is the one sponsored by United States Senator JOHN F. KENNEDY which would make major revisions in the budgeting procedures of the Federal Government.

Senator KENNEDY and the bill's cosponsor, Senator PAYNE, of Maine, did yeoman work in getting the measure through Senate committees and to the Senate floor, where it was approved on a voice vote June 5 and sent to the House.

The bill would place the Government on an annual accrued expenditures basis; that is, Congress would appropriate funds for 1 year only, thus eliminating the pyramiding surpluses in Government agencies that now total about $70 billion.

Senator KENNEDY, who spearheaded the drive for Senate passage of the bill, summed up the situation on April 12 when he told the Senate Government Operations Subcommittee: "We can no longer afford the luxury of budgetary procedures which do not assure us the maximum control and review of Government expenditures."

And on May 29, in urging early action on the bill by the Senate, KENNEDY called the proposal the single, most important (Hoover) Commission recommendation. Its enactment would save the taxpayers $4 billion a year, the Commission estimated.

The American people, alarmed by mounting costs of Government, owe Senator KENNEDY a vote of thanks for his sponsorship and untiring support of the accrued expenditures bill. Now it's up to the House to approve the measure and make the savings not just a dream, but a reality.

[From the Waterbury (Conn.) Independent of June 10, 1957]

THE KENNEDY BILL

One of the key recommendations of the second Hoover Commission report is at least halfway to being achieved. The Senate on June 5 passed the Kennedy bill (S. 434) and we hope the House will act similarly.

One of the most fundamental reforms in governmental budget practices in more than 30 years is embodied in the Kennedy budgeting and accounting bill. Its intent, based on the second Hoover report, is to place the Federal Government's budgeting and accounting procedures on an accrued expenditure basis.

The measure requires that all agency budgets be determined on a cost basis, that agency accounts be kept on an accrual basis, and that appropriations be made on an annual accrued expenditures basis.

Under the plan, converting appropriations on an annual expenditures basis, Congress would actually appropriate for each fiscal year on estimates of expenditures actually to be made during that year.

In simpler language, Congress presently appropriates funds for various agencies, many of which wind up the fiscal year with unexpended balances. In sum total, these unexpended moneys amount to billions of dollars each year and are simply carried over by the agencies. Congress has virtually no control over such practices, once the appropriations are made.

The Kennedy bill had strong support in the Senate. It was cosponsored by Senator BYRD, of Virginia, and Senator PAYNE, of Maine, and had the unqualified backing of 48 other Senators. Lauding the Hoover Commission for its work in highlighting this particular problem in governmental economy, Senator KENNEDY said recently:

"The benefits which will result from the enactment of this bill, in terms of financial savings and more complete understanding of the operations of the various governmental departments, will be most significant."

Affirmative House action on so important a bill, in this session of Congress, is imperative. The only possible result of such legislative action will be more economical and more efficient Government, sorely needed.

[From the Springfield (Mass.) Union of April 17, 1957]

BUDGET REFORM

Senator JOHN F. KENNEDY has introduced a bill providing authority to the executive branch to present budget estimates on an annual accrued expenditure basis. This bill is also sponsored by Senator BYRD and 49 other Senators. It has the strong support of former President Hoover, President Eisenhower, Treasury Secretary Humphrey, Budget Director Brundage, and other top officials.

Senator KENNEDY rightly claims that his bill would not only put governmental budgeting on a more businesslike basis and provide much better controls over expenditures, but would reduce large carryovers of unobligated balances of prior year appropriations which are estimated at the beginning of fiscal year 1958 to be almost $80 billion. There should be no further delay in acting on this measure, which, according to some experts, would save $4 billion on the annual cost of Government.

Magical though the sum may seem, a comparable magic has been worked in private industries which have applied close accrual accounting to the so-called controllable items of expense. Accrual accounting has saved as much as 8 percent or 10 percent on costs in private industry.

There is nothing mysterious about an accrued expenditure system of budgeting—it simply consists of keeping an accurate record of the charges for goods and services received in a given year and using that record as the basis for budgeting for the year ahead. Industry is used to doing this; Government is not.

With the introduction of longtime appropriations by Government for big bombers, big atomic installations, and big foreign aid programs, vast sums accumulated from year to year. Thus when President Eisenhower asks for appropriations for a given year, he is asking for money that might not be spent in its entirety for some time to come. When obligated sums outpace actual annual disbursements for goods and services, the pipelines of future spending become clogged. The figure for unexpended appropriations at the beginning of fiscal 1958 is estimated by Senator KENNEDY at $80 billion, as stated above.

With such a carryover, Congress has little control over the amount of money spent in any given year. Nor does it get any informed review of how Government agencies run their businesses. The agencies merely tell Congress how much of their past funds has been obligated, and how much is needed for obligations in the future. Obligational budgeting tells Congress nothing of the "squirreling"—i. e., hiding way—of funds already received. Unspent money left over is kept by the department affected and is listed as costs.

A system of accrued expenditure budgeting would change the obligated system of counting unspent money as costs. Under accrued expenditure budgeting the Army, say, would go to Congress with a detailed statement of what it had spent for tanks, guided missiles, etc., during the past year. Congress would see that expenses had dropped or risen, and it would see what sums remained in Army coffers to be spent on tanks, guided missiles, etc. At this point it could say to the Army: "Stop. You've got more than you can spend on missiles and tanks this year. If you think you need more a year from now, come back to us then."

The proposed accrued expenditure system of budgeting, concentrating on accrued costs for the year just past and accrued expectations for the year ahead, would result in a close-meshed relationship between appropriations and spending. Since only enough would be appropriated at a time to cover a single fiscal year, and since all unexpended funds would revert automatically to Congress for reallocation every June 30, carryovers would disappear.

Government, of course, is not entirely analogous to private industry, which has the whip of competition to force it to save, once accrual methods have indicated a way. But even if only a part of the estimated billions in savings were to become a reality the taxpayer would obviously be well ahead of the game. And regardless of savings it also seems obvious that Congress should be supplied with better tools for keeping close tabs on the biggest annual business in the world.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Resolutions of the State Bar of Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. JOHNSON of Texas. Mr. President, I have received from Mr. William E. Pool, of Austin, Tex., executive director of the State bar of Texas, copies of four separate resolutions adopted by the membership of the State bar of Texas at its annual convention at Fort Worth, on July 6.

I ask unanimous consent that the text of the four resolutions be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

Whereas the judicial business of the United States district courts in the State of Texas has materially increased in recent years, due to the increase in population, and the increase in business and industrial activity, and as a result thereof the dockets of these courts have become overcrowded, the time in reaching trial in detrimentally prolonged and burdensome and injurious to litigants, and the judges are unduly harassed by the demands upon their attention, all of which results in serious deterioration in the administration of justice, to the disadvantage of the general public; and

Whereas the number of courts to handle this litigation has not been increased sufficiently to keep pace with the volume of business; and

Whereas the Judicial Conference of the United States made a study of this situation and has confirmed the need for additional judges in this State, and has recommended the creation of three additional judgeships for this State, which if created will possibly be sufficient to reduce the time interval between filing and trial of cases to 6 months, which will be a great improvement over the present condition of our Federal dockets; and

Whereas there is now pending before the Congress of the United States legislation that would create three additional United States district judgeships for the State of Texas, among others, being H. Res. 3813 in the House of Representatives and Senate bill 420 in the Senate, and the bills are now before the respective Judiciary Committee of each House, and hearings thereon are to be held to determine the need for this legislation: Now, therefore, be it

Resolved by the State bar of Texas in annual general convention assembled, held at Fort Worth, Tex., on July 4 to 6, 1957, That the members of this bar find that the creation of additional United States district judgeships for this State is sorely needed, that the delays resulting from the present condition of the United States district court dockets is injurious to the rights of litigants, that the burden cast upon our existing judgeships by the extraordinary volume of business they are now handling is far beyond that which is proper to impose upon them, and does not allow them adequate time to consider the many questions for determination before them, and that the present conditions are contrary to the public interests; and accordingly, be it further

Resolved, That the Congress of the United States is urged to alleviate these conditions by enacting into law immediately the legislation now pending which will create, among others, three additional United States district court judgeships for Texas, being S. 420 and H. R. 3813, and that certified copies of this resolution be furnished to the Judiciary Committees of both Houses and the Senators and Congressmen representing this State.

Whereas actual courtroom experience is deemed necessary and desirable in producing that continuity of decision ordinarily expected at the hands of our court of last resort, we hold the experience of the judge and trial lawyer needful in attaining such end and in the formation of such decisions: Therefore be it

Resolved by the State bar of Texas, That we urge that the President not appoint and the Members of the United States Senate not confirm men for positions on the Supreme Court of the United States who are without at least 10 years' experience on the bench as a judge or before the bench as a practicing attorney in the trial or appellate courts, State or Federal.

Whereas important decisions of the Supreme Court of the United States have occasionally been made by an incomplete Court, with less than a majority of the membership of the Court concurring.

Whereas cases argued on their merits in the Supreme Court should be heard by as many Justices or Judges as there are members of the Court, so that the possibility of important minority decisions will be minimized: Now, therefore, be it

Resolved by the State bar of Texas, That an appropriate statute be enacted by the Congress providing that for hearing cases in the Supreme Court in which nine Justices are not available because of disqualification, illness or any other cause, judges of the United States Courts of Appeals shall be designated to serve, in rotation as to circuits and excepting the judges of the courts hearing the matter below, and that such designation be made as provided by law.

Know all men by these presents:

Heretofore the Congress of the United States properly has recognized the professional educational attainments of physicians, dentists, and veterinarians serving in the Armed Forces of the United States, by according them special allowances of pay and provision for promotion. The prerequisite educational requirements of attorneys approximate or exceed those of physicians, dentists, and veterinarians; and the field of attorneys serving in legal positions in the Armed Forces of the United States is broader in scope than that of the average Government attorney who receives a greater salary.

It is a matter of common knowledge that it is difficult to obtain and retain competent attorneys to serve in legal positions in the Armed Forces, and that most service attorneys are dissatisfied with their positions because of the existing discrimination against them in the matter of pay and resulting prestige, in contrast to the special pay and promotion allowances afforded physicians, dentists, and veterinarians in military service. This situation will not and cannot be corrected until comparable pay and promotion inducements are provided which will equalize the existing disparity between service attorneys and service doctors: Now, therefore, be it

Resolved by the State bar of Texas in its annual general convention assembled and held in Fort Worth, Tex., on July 4 to 6, 1957, That the Congress of the United States is hereby petitioned to amend title II of the Career Compensation Act of 1949, as amended (37 U. S. C. 232 et seq.) to accord to attorneys serving in legal positions in the Armed Forces of the United States the same provisions for special pay and promotion as are now accorded to physicians, dentists, and veterinarians in military service by the provisions of section 234 of title 37, United States Code.

I certify that the above and foregoing are true and exact copies of the resolutions adopted by members of the State Bar of Texas in convention assembled in Fort Worth, Tex., on July 6, 1957.

[SEAL] WM. E. POOL,
Executive Director, State Bar of Texas.

Merchant Vessel Construction Subsidy Funds

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. BUTLER. Mr. President, last week I wrote to President Eisenhower and urged him to initiate a supplemental budget request in the amount of $91,500,000 for merchant vessel construction subsidy funds. This supplemental appropriation is urgently needed now if our merchant vessel replacement program is not to founder on the rocks of false economy. Early this session, the administration requested these funds, but the House deleted them and no serious effort was made to restore them although everyone recognized we were saving nothing, merely deferring a vitally needed expenditure.

I ask unanimous consent to have printed in the Appendix of the RECORD a copy of my letter to President Eisenhower and a copy of a previous exchange of correspondence between the Secretary of Commerce and me concerning this same matter.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

JULY 26, 1957.

THE PRESIDENT,
The White House.

DEAR MR. PRESIDENT: It would appear that a serious crisis is developing within your administration which would work irreparable damage to the American merchant vessel replacement program authorized by the Congress. Because this is a matter vitally affecting the health and future of our merchant marine, I am taking the liberty of bringing it to your personal attention.

The deletion of adequate funds from the fiscal 1958 Commerce Department budget has seriously injured the long-range vessel replacement program. Moreover, if reports reaching me are reliable, the Secretary of Commerce is contemplating omitting from his departmental budget for fiscal 1959 appropriation requests for new merchant vessel construction. Such a course of action would cripple our maritime industry and make the United States a second-rate maritime nation. It would also break faith with American shipowners who have already committed themselves to replace their fleets with vessels built in American yards.

From studies made by the Department of Commerce, the Department of Defense and the Congress, we know that in order for our shipyards to maintain their minimum defense potential, they must build at least 50 oceangoing ships each year. Since it costs between 30 percent and 50 percent more to construct such vessels in American yards than in foreign yards, the United States, under the Merchant Marine Act of 1936, has found it in the national interest to participate with private parties willing to build vessels here. The Government's part of the bargain necessitates direct appropriations to cover the cost differential and thus make it economically feasible for private construction in our shipyards.

Appearing before a House subcommittee on July 10, the Secretary of the Navy said that "a large, modern, and well-balanced American merchant marine is positively vital to our defense planning, as without it, in time of war neither the military effort nor the war economy of our Nation could be supported." I am certain you concur in this conclusion.

Any administration decision having the effect of breaking faith with the owners and operators of American-flag vessels—some of whom have committed themselves to build in American yards over 100 ships at a cost to them which will exceed $500 million—would advance the proposal for a Maritime Administration separated completely from the Department of Commerce.

It is my hope that you will personally survery this vital problem and I most respectfully urge that you give serious consideration at this time to initiating a supplemental appropriation request for at least the $91.5 million for the merchant ship construction funds Congress deleted from your fiscal 1958 budget. It is my considered opinion that the Congress will now look favorably on such a proposal and that it will be approved before the end of the current session.

As to the future, an examination of the entire situation, which I regard as crucial, should convince you that if we are to replace our aging merchant fleet with vessels built in American yards, annual ship construction funds must be budgeted by the Department of Commerce and appropriated by the Congress.

Respectfully,

JOHN MARSHALL BUTLER,
United States Senator.

JUNE 21, 1957.

The Honorable SINCLAIR WEEKS,
Secretary of Commerce,
Washington, D. C.

DEAR MR. SECRETARY: I am extremely disturbed by reports which have reached me to the effect that you are contemplating not including in your departmental budget for fiscal 1959 provisions for funds for new vessel construction. In view of the pressing replacement problems facing American shipowners, I was surprised that the Commerce Department and the Maritime Administration did not register sharp protests against the recent drastic cuts which Congress made in the vessel construction funds for fiscal 1958.

If the reports as to your intentions for fiscal 1959 are correct—and I sincerely hope they are not—it would be impossible for me to avoid concluding that your Department, and this administration, are closing their eyes to the very apparent danger of such a policy. With the increasing possibility that our national defense will become more and more dependent upon conventional armaments, the role of an up-to-date American merchant marine assumes greater importance with each passing day.

In my opinion, the Maritime Administration, through its phased program of vessel replacement, has met in most commendable fashion the serious threat of block obsolescence now facing American shipping. But, as you know, timing is an absolute essential in this program. To refuse the projected funds for fiscal 1959, after permitting a major cut from fiscal 1958 funds without protest, would pose a threat of serious proportions to the entire program.

I urge you to give the fullest consideration to the dangers inherent in any further slash of ship-construction funds. If we do not begin now to replace our dry cargo fleet, all too soon we will find ourselves in a position where our shipyards and our financial resources will be unequal to the mammoth job before us.

Sincerely yours,

JOHN MARSHALL BUTLER,
United States Senator.

THE SECRETARY OF COMMERCE,
Washington, June 27, 1957.

Hon. JOHN M. BUTLER,
United States Senate,
Washington, D. C.

DEAR JOHN: Just to set the record straight, the appropriation request of the Department of Commerce for fiscal year 1958 made provision for shipbuilding funds in the amount of $94,500,000. The House of Representatives allowed $3,000,000, all of which was earmarked either for research or for the acquisition of one traded-in vessel.

In spite of the House's action and in spite of the fact that no formal restoration request was made to the Senate, and at my direction, Under Secretary Rothschild and Maritime Administrator Morse presented the full maritime picture to the Senate Subcommittee on Appropriations. No change in the House allowance was made as a result of this presentation.

I am of the belief that this important segment of the American economy deserves to have a consistent policy on the part of the Government so that the industry may know how to plan its own affairs. We are now exploring at several levels of the executive branch every possibility which would lead toward such a program of consistency. No conclusions have as yet been reached.

Thank you for the complimentary words you had to say about the work of the Maritime Administration. I, too, believe that their program for overcoming the problem of block obsolescence is a good one.

Sincerely yours,

SINCLAIR WEEKS,
Secretary of Commerce.

The Civil-Rights Debate and Consideration of Other Measures

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. THYE. Mr. President, I hope before the day is out the Senate will act on the extension of the Small Business Administration. All disaster laws are administered by that Administration.

Mr. President, appearing in the Washington Post of today there is an excellent and timely editorial, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

SENATE IN A KNOT

It really is absurd that the Senate has been prevented from laying aside the civil-rights debate long enough to continue the pay of Government employees. More than 4 million persons, on the basis of the figures quoted yesterday by President Eisenhower, may be inconvenienced by the failure of the Senate to authorize continuation of their salaries past last night. Another 1,200 employees in the Small Business Administration have no assurance that their agency itself will continue, let alone their pay. One may hope with the President that they will remain at their desks. But the effect on morale can well be devastating, as legislators themselves would soon conclude if their incomes were suddenly to cease while bills mounted.

This is a high price to pay for the obstinacy of Senator MORSE in blocking a unanimous-consent resolution to lay the civil-rights bill aside temporarily, however sincere is Mr. MORSE's conviction that nothing should interfere with the civil rights debate. Various strategems failed yesterday to produce the necessary respite. Is the Senate powerless to prevent one of its Members from tying it in a knot?

There is another point that relates to the civil-rights argument itself. Ultimately the issue may come to a naked test of votes on one side and the other. But it would be much better for the country, and for the atmosphere governing the protection of civil rights generally, if sincere men could compose their differences amicably. Up until Tuesday the debate had been notably free of personal rancor and animosity, and there seemed to be at least a chance of compromise which, if it would not satisfy either side completely, would at least be acceptable. Honest men have been struggling earnestly to find means to allay their own misgivings. For all those who are coping with the problem in good faith a short break might help greatly to clear the air.

High Freight Rates

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. NEUBERGER. Mr. President, high freight rates over long geographic distances have acted to retard industrial and economic development in the Pacific Northwest. An effective editorial in the East Oregonian, of Pendleton, Oreg., of June 14, 1957, describes the efforts of Howard Morgan, Oregon State Public Utilities Commissioner, to try to bring about a more equitable and reasonable structure of freight rates.

An article in the news columns of the same newspaper for the next day, June 15, 1957, contains a speech by Paul E. Hochelle, freight traffic consultant and manager of the Columbia Basin Traffic Bureau, in which Mr. Hochelle has described to the Pendleton Chamber

of Commerce how certain existing freight rates favor eastern manufacturing plants at the expense of those which might be located along our Pacific seaboard.

I ask unanimous consent that the editorial entitled "Howard Morgan's Battle," and the news item entitled "Freight Rates Favor East, Says Transportation Expert," both published in the East Oregonian, of Pendleton, Oreg., be printed in the Appendix of the RECORD for the information of my colleagues.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the East Oregonian, Pendleton, Oreg., of June 14, 1957]

HOWARD MORGAN'S BATTLE

Although some substantial industries in the Northwest have built and constantly expanded markets for their products in the Eastern United States, it is nevertheless one of the hard facts of life that one of the most formidable deterrents to industrial expansion in the Northwest is the freight-rate structure.

The battle to get a more favorable structure for the Northwest has been going on a long time and through the years the Northwest has constantly lost ground. The cumulative total of freight rate increases since 1947 amounts to between 109 and 114 percent higher freight rates than those existing in 1947. The average Oregon shipper today is faced with differentials between his own costs and those of his eastern producers averaging about $1.12 per hundred pounds freight shipped.

The Interstate Commerce Commission now has before it a petition from the railroads which asks for a 22 percent increase in freight rates nationwide. This is the largest request the railroads have made in a series of freight rate increase applications covering the past 10 years.

Oregon's public utilities commissioner, Howard Morgan, has filed a motion with the ICC asking that agency to dismiss the railroads' petition. Mr. Morgan makes a strong case against granting of a freight rate increase because he goes beyond the immediate effect upon Northwest shippers. He points out that increases in freight rates have been damaging to western railroads as well as western shippers.

Recent studies show, Mr. Morgan says, that an average of 26 percent of all transcontinental eastbound traffic by rail from Oregon and the Mountain-Pacific region is composed of agricultural products. These transcontinental shipments of bulk commodities constitute the financial backbone of every western railroad. Mr. Morgan cites figures which show that shipments of apples to the east coast have declined more than 43 percent, rye and barley have declined by 73 percent, fresh vegetables by more than 48 percent, and wheat flour has declined more than 54 percent, with similarly heavy decreases in the tonnage of canned goods and other western produced commodities.

Mr. Morgan also points out that discriminatory long-haul freight rates have benefited gulf ports to the disadvantage of Pacific coast ports. Eastern industries that have goods to ship to the Orient have found it less expensive to route shipments through gulf ports than Pacific coast ports.

Freight rate increases have widened the gap between eastern and western producers to a drastic degree. Mr. Morgan does not overstate his case when he says, "The cumulative effect of this widening of the gap has been to create massive discrimination against western shippers and receivers of freight."

We would not want to predict whether Oregon's public utilities commissioner can win this fight. But it is evident he has a good case and those who know him are certain that he will fight until the last bell rings.

Oregonians who have been concerned about the economy in their State will watch Mr. Morgan's progress in this battle closely. Granting of a 22-percent increase in freight rates on top of Oregon's current troubles would be a lethal dose of bad medicine.

[From the East Oregonian, Pendleton, Oreg., of June 15, 1957]

FREIGHT RATES FAVOR EAST, SAYS TRANSPORTATION EXPERT

(By Jim Eardley)

"The interest of the public lies in getting transportation at the lowest possible cost," Paul E. Hochelle, freight traffic consultant and manager of the Columbia Basin Traffic Bureau, told those attending a Pendleton Chamber of Commerce luncheon meeting Friday.

"If the cost of transportation could be reduced to zero, that is, if transportation could be put in the class of free goods, society would be the gainer," said Hochelle.

This must forever be impossible, however, since the movement of goods from place to place requires the expenditure of energy, human effort, which when interpreted is money, the consultant said.

BETTER ORGANIZATION NOTED

Lower freight rates from the East to the West are the result of better organization, more volume, and better paid traffic management in the East, said Hochelle.

Russia, said Hochelle, lacks the transportation facilities to achieve the industrial power the United States has.

Discrimination in freight rates favoring the East has been constantly increasing, pointed out Hochelle.

He cited as an example, a movement of canned goods from Pendleton to New York compared with one from Green Bay, Wis., to New York.

RATE DIFFERENTIAL NOTED

On a movement of canned goods from Pendleton to New York, the rate in 1946 was $1.02 per 100 pounds, and canned goods moving to New York from Green Bay, Wis., had a rate of 51 cents per 100 pounds, or a difference of 51 cents per 100 pounds. Today that differential is $1.03 per 100 pounds, or an increase of 102 percent.

If carriers get the increase they are requesting, pointed out Hochelle, the increase will be 118 percent.

This is true, also, of wheat flour, lumber, and other products, Hochelle said.

"Forces are constantly at work to alter the relative advantages of particular locations," he pointed out. "The advantages may be absolute or relative and the carriers are quite aware of this."

RATE HIKES HURT SPECIALIZATION

Transportation problems are not peculiar to any one type of industry, it was stated.

Increases in freight rates which are taking place now and have since 1946 have made it impossible for many communities to specialize as had been their custom, Hochelle said.

"Since cheap transportation contributes to the prosperity of society by making possible the production of more goods at less cost," emphasized Hochelle, "it follows that the public interest requires the lowest possible freight rates. The lower the freight rates, the greater will be the benefit to society."

There is almost always a possibility of specialized production in a given region if transportation charges could be reduced, he said.

RAIL SERVICE EMPHASIZED

"It is natural," he said, "for the railroads and other modes of transportation * * * to divert attention from the rate level and emphasize the importance of good service."

This, he said, is because the cost of providing the service imposes limits to the reduction of charges.

The increasing cost of transportation since 1946 has reached a point where today that cost has become the important factor in marketing, he said.

The chamber luncheon meeting was the last until late September or early October.

Brussels World's Fair

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 1, 1957

Mr. JOHNSON of Texas. Mr. President, the United States will play a leading role at the World's Fair to open in Brussels, Belgium, next spring. The theme of that exposition, says a thoughtful editorial in the Bryan, Tex., Daily Eagle, is hope.

The hope, says the editorial writer for the Eagle, is that "while time exists, man can find a broad common path of peace and fruitful labor."

I ask unanimous consent that the editorial from the Bryan Eagle be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Next April in Brussels, Belgium, the first world's fair since the New York event of 1939–40 will be opened. All the early signs indicate that it will be a highly imaginative-stimulating fair which may well leave a strong positive mark on the world's peaceful endeavors.

Inevitably, fairs of worldwide scope stress industrial and commercial progress as well as cultural development. But the Brussels exhibition seems dedicated to a deeper, fuller expression of man's urgings toward a better world.

With the globe turning in the shadow of the threat of nuclear warfare, there could be no more suitable moment to declare faith—as the Brussels fair does—in man's ability to mold the atomic age to the ultimate advantage of all nations and peoples.

While the world's newspapers tell of guided missiles and atomic warheads and radioactive fallout, at Brussels the big word will be hope. Pervading all the major industrial, scientific, and cultural exhibits will be the hope that while time exists man can find a broad common path of peace and fruitful labor.

That the nations of the world are eager to join in a display of this spirit, in an expression of this overriding faith in man's future, is clear from the warm response organizers of the Brussels exhibition have received.

Some 50 countries and at least 7 international organizations plan to take part in the fair. The great nations particularly appear bent on giving the world a convincing demonstration that they prefer to orient their talents and energies toward rewarding peaceful pursuits rather than sterile, destructive war.

Especially heartening from this vantage point is the fact that the United States, heretofore never notable for ambitious participation in the fairs of other lands, will be a leading contributor to the Brussels event. Its pavilion will be the biggest free-span circular building ever erected.

The people of Belgium are to be commended for their enterprise and vision in

planning and preparing a world's fair dedicated so earnestly to human betterment in a time of trial. It deserves the support and attention of millions from many lands.

The Rural Development Program

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. THYE. Mr. President, appearing in the Minneapolis Star of Monday, July 29, 1957, there is an excellent article entitled "A Plan To Help Farmers Help Selves," written by George L. Peterson. The article refers to the rural development program, which is beginning to go into effect not only in Minnesota, but also in Michigan and other States of the Union. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A PLAN TO HELP FARMERS HELP SELVES—RURAL DEVELOPMENT PROGRAM IS BEGINNING TO GET UNDERWAY IN NORTHEASTERN MINNESOTA

(By George L. Peterson)

GRAND RAPIDS, MINN.—George A. Rossman, once rotund publisher (he's lost 35 pounds in recent months) of the Grand Rapids Herald-Review, is one of Itasca County's most consistent boosters. But he shakes his head a bit dolefully when the subject of northeastern Minnesota agriculture comes up.

"Grand Rapids is growing. The tourist industry is expanding. Iron mining and forestry are doing fine in this area. But look at the figures on farming," he challenges.

The figures show that in 13 northeastern counties[1] the number of farms decreased by almost half between 1940 and 1955—from 30,095 to 15,400. The average farm size increased from 103 acres to 163 in that period and the acres of cropland per farm from 28 to 56. Yet between 1950 and 1955 the total farm acreage dropped 274,000 acres.

There are some prosperous farms in this region. The 1954 Federal farm census showed that 254 of them had sales of more than $10,000 each. Another 3,700 had sales of $2,500 to $9,999 each. However, 77 percent of the farms had less than $2,500 of sales. In the 13 counties sales per farm averaged only $1,845 against $6,436 for the other 74 Minnesota counties.

Northeastern Minnesota farming isn't as badly off, incomewise, as some Southern States. But it is badly off enough to be classified as a low-income area by the Department of Agriculture and to be included in the rural development program authorized by Congress in 1955.

Aim of that program is to improve the income of farm families by teaching better farming methods, by adding land to make more economic farm units, or by helping farmers to better themselves on jobs off the farm.

The program in Minnesota is being run by the extension division, University of Minnesota, with Ed Becker, former Carlton County agricultural agent, as area rural development agent. A dozen other agencies are cooperating in the project. Each participating county has a committee of 60 to 90 officials and citizens to present problems and review progress.

Headquarters have been provided at the Grand Rapids branch of the university's school of agriculture. Three pilot counties, Carlton, Hubbard, and Itasca, have been designated and each has a special extension agent assigned to rural development.

The special agent for Itasca, George Saksa, has been working lately on a creamery project in the Bigfork-Effie part of the county. The Bigfork creamery used to have 185 patrons, now is down to 70. Butterfat brings 65 cents a pound and goes exclusively into butter. The skimmed milk is fed to livestock. At Grand Rapids the price of butterfat is $1.25 a pound when produced as grade A milk.

Neither the Bigfork creamery nor the farmer patrons are making money. Saksa is finding out whether enough farmers are interested in producing grade A milk to make the change to the modern equipment required. If the farmers aren't interested in the shift, the creamery is likely to go out of business, and many of the farmers as well.

Farmers might be able to keep going without dairy cows, but the chances aren't good. In the 13 counties as a whole about 60 percent of the farm income comes from dairy income and the sale of dairy cattle. In many communities the percentage is much higher.

Better cows are a part of the development program. Butterfat production of 300 pounds per year as a herd average is considered necessary for a profitable operation. Yet in some northeastern counties the average butterfat production per cow is only 180 pounds.

Farm income has improved in northeastern Minnesota. It hasn't kept up with income in other lines, however. The result has been, naturally, that many farmers have left the land and that others supplement their farm income with mining, pulp cutting and other jobs.

Many farmers cut pulp timber during the winter and earn a few hundred dollars each year. The pulp mills in the area are eager to keep a goodly number of farmers on the land for this very reason.

The farmers send a steady stream of logs to the mills. Otherwise lumberjacks would have to be brought in, a more expensive and less certain way to get the needed raw material for paper and building board.

The development program is just getting organized. Ed Becker, who farmed in Rice County until a back injury put him into extension work, warns against high hopes.

"Don't expect anything spectacular," he says. "Many other projects to help farmers have been tried up here. We will use every method known. If they don't work for an individual farmer, we will present to him the alternative of a job off the farm. We'll train him for such a job if necessary."

Looking out across the lush experimental fields of the Grand Rapids school—which prove that this area has considerable agricultural potential—he emphasizes: "But we won't make a decision for anybody. We'll give him all the facts we can muster. He'll have to decide if he wants to farm or do something else."

Oil Imports Adversely Affect All Business Economy

EXTENSION OF REMARKS
OF
HON. RALPH. W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a series of three outstanding and thoughtful essays on the disastrous effects of the flood of foreign oil imports on the entire busfness economy. The articles are written by my good friend, Frank O. Hall, the oil editor of the Wichita Falls (Tex.) Daily Times and Record News. The Wichita Falls newspapers have consistently shown a great interest not only in the welfare of Texans, but in the good of all America. The newspaper is this year marking a half century of progress, during which time it has demonstrated broad vision, bold and fearless leadership, and a complete coverage of local and world affairs.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

OIL IMPORTS EFFECT FELT IN NORTH TEXAS

(EDITOR'S NOTE.—This is the first of a series of three stories on the effect of excessive foreign oil imports on the domestic petroleum industry and general business conditions in north Texas. This article deals specifically with some of the problems faced by the independent oil operator.)

(By Frank O. Hall)

Excessive foreign oil imports are having a real impact on the domestic petroleum industry in north Texas.

The independent operators are being "squeezed" hard by such things as the 13-day production pattern, selective buying and pipeline proration.

They frankly blame the situation upon too great a volume in foreign oil imports and contend that if this "squeeze" continues some will be forced to quit the business of producing oil and many will be forced to curtail their activity drastically.

In one way, north Texas is fortunate, in that it has many marginal wells, a number of water floods and county regular fields which are exempt from shutdown days.

But there are also a lot of prorated fields in north Texas and operators who have production in these areas are finding it increasingly difficult to make "both ends meet" with the Texas 13-day pattern—the lowest in the State's history.

There is little incentive in trying to find more oil if you can't find a market for that crude after it is located and produced. That is exactly what is happening today.

Numerous operators have completed wells in recent months only to discover there is no one to purchase the oil. And oil which cannot be sold can be one of the most worthless commodities in the world.

Some major purchasers of crude have made drastic reductions in their purchases. Even some truckers have suspended purchases temporarily, because they have no place to

market the crude after it is gathered from the wells in the field.

Many leases in north Texas have no pipeline connections and cannot get them. No oil can be sold from these leases, even by truck, for there is no market for the oil.

Some secondary recovery projects in this district face a real threat in the loss of market for oil recovered through operation of a water flood. Operators fear that irreparable damage may result to some water floods if they are forced to be shut down even temporarily.

In recent years, it has become more and more difficult for the domestic producers—such as those in north Texas—to compete against cheaply produced foreign oil.

The independent operators realize there is a need for imports—up to a certain point. But they believe that point was reached a long time ago and that imports now are supplanting domestic production rather than supplementing it.

REAL THREAT POSED

This situation, they say, poses a real threat to national security, pointing to the need for discovery of new reserves which this Nation would sorely need in event of any national emergency.

They stress the oft-repeated warning that "there is no security for our Nation in foreign produced oil."

But it is hard for the independent to continue his wildcatting activity in search of new reserves if he cannot market the crude after it is discovered.

Foreign oil costs much less to produce than domestic crude. The average productivity of oil wells in the Middle East and in Venezuela are many times that of wells in north Texas.

The same factor applies to the costly process of locating new reserves. Each foot of exploratory drilling has located more than 13,000 barrels of oil in the Middle East and about 700 barrels in Venezuela, but only about 20 barrels in the entire United States.

Independents feel that if a definite policy on imports would be formed by the national administration—defining in what proportion they should be in relation to domestic production—that both the domestic industry and the importer would be in a lot better position. Each would then know exactly what could be expected in the future.

There are reports that some independent operators are now finding it difficult to meet their bank commitments because of the production cutbacks, loss of market, and rising operating costs.

FUTURE OUTLOOK

But as one Wichita Falls independent operator explained:

"Even if an operator is not hard pressed financially now, he can see the possibility of such a situation developing in the future under present conditions. That means that he is going to 'draw in his horns' and reduce his development work in the future.

"That will result in more idle rigs and more idle drilling crews. That will mean difficult times for the drilling contractor and will force many drillers and roughnecks to seek a livelihood in some other field of endeavor.

"And that will mean a generally unfavorable impact on all lines of business in Wichita Falls and north Texas."

The domestic producer, not only in north Texas but in the entire Nation, is now at the crossroads. His future is uncertain and it certainly is not bright.

The blame can be placed at the doorstep of excessive oil imports.

IMPORTS HURT DRILLING DIVISION OF OIL INDUSTRY

(EDITOR'S NOTE.—This is the second of a series of three stories on the effect of excessive oil imports on the domestic petroleum industry and general business conditions in north Texas. This article deals specifically with some of the problems faced by the drilling contractor.)

(By Frank O. Hall)

The drilling contractor—the working arm of the petroleum industry—is really hurting because of the mounting flow of foreign-produced oil into the United States.

He has been experiencing the effects of excessive imports for many months and the situation is becoming more critical by the day.

Domestic producers in Texas have curbed their drilling activity because of the 13-day production pattern for July and August and because there is an inadequate market for their crude.

This simply means there is less work for the drilling contractor since he must depend upon the wildcatting and development programs of the producers for his livelihood and the livelihood of his drilling crews.

There can be but one answer, and that is stacked rigs (drilling rigs in storage). A survey shows that today rigs are being stacked in every north Texas county.

Figures can tell the story more graphically.

During the past week, according to figures furnished by the Hughes Tool Co. to the American Association of Oilwell Drilling Contractors, there were 929 active rigs in Texas, a decrease of 63 active rigs from the 992 that were operating in this State 2 weeks ago.

Here is the picture in north Texas:

Last week there were 313 rigs operating in north Texas. Two weeks ago there were 362 operating in north Texas—or a decrease of 49 in the 2-week period.

These figures are indisputable evidence of the effects of excessive oil imports upon the drilling contractors in the entire State of Texas and in our own north Texas district.

These stacked rigs not only mean the cessation of profitable operation by the drilling contractor. They mean idleness for many scores of drillers and roughnecks and these men must keep working if they are to support themselves and their families.

Lack of contract drilling work is not the only headache being experienced by drilling contractors.

COSTS MOUNT

Equipment costs continue to mount. For instance, the price of drill pipe was increased $15.50 per ton on July 1. There is a possibility that the prices of bits and tool joints may be hiked.

Labor costs have also mounted. It is estimated that these costs have increased from 6 to 8 percent in the past 2 to 3 months.

However, these increased wages mean nothing to the driller and roughneck if his boss or company has no wells to drill. In fact, according to the contractors, many roughnecks and drillers have left North Texas in an effort to find employment elsewhere. Many are reported to have forsaken the oil industry to take up other vocations.

Drillers and roughnecks cannot afford to loaf for months, waiting and hoping for some action by the national administration to curb imports to the point where they will supplement and not supplant domestic production.

They have become the victims of the failure of a so-called voluntary plan on the part of importers to stem the flow of imports to a reasonable amount in proportion to domestic production.

NEED ACTION

Contractors, drillers, and roughnecks certainly realize that industry statesman has failed in this respect. They realize that the only solution to the imports problem is some kind of positive action by the national administration or by Congress to curb excessive imports if the domestic oil industry is to be saved from further deterioration.

But the story of stacked rigs goes even further.

Supply companies and manufacturers cannot sell equipment and supplies to a drilling contractor whose rigs are idle. This will eventually result in a payroll reduction for those companies, also.

When operators curb their oil search activities and the drilling contractors start stacking their rigs as a result, it will also mean a decrease in work for independent geologists and seismograph companies.

Thus, it becomes a vicious economic circle with no one benefiting except the oil importer.

REASONABLE MARGIN

During the past few years, the drilling contractors have found it increasingly difficult to earn a reasonable margin of profit—and that is essential if any industry or business is to survive in this day of keen competition.

Many have attempted to obtain interests in oil production or have drilled for oil on their own in an effort to provide an economic bulwark against the present unfavorable economic picture for their industry.

Drilling contractors who have production properties are certainly in much better position than those who do not have any oil production. In many instances, this may prove to be their only chance at survival, but with markets for the crude being gradually reduced there are crevices appearing even in this bulwark.

It is the consensus of north Texas drilling contractors that the time for positive action to bring about a cutback in imports has long since passed. The need for such action is imperative as far as they are concerned.

If something isn't done to dam the excessive flow of foreign oil into the United States the small independent drilling contractor may soon become just another figure in yesterday's history.

OIL INDUSTRY PINCH AFFECTS ALL SORTS OF BUSINESSMEN

(EDITOR'S NOTE.—This is the final of a series of three stories on the effect of excessive oil imports on the domestic petroleum industry and general business conditions in north Texas. This article deals specifically with the businessman who may think he has nothing at stake in the present crisis facing independent oil operators and drilling contractors.)

(By Frank O. Hall)

Wichita Falls and north Texas businessmen are only kidding themselves if they think they have nothing at stake in the present crisis facing the domestic petroleum industry because of excessive oil imports.

They have as much at stake as the independent oil operator and drilling contractor.

It's true that they may not be feeling the effects greatly now, but they will if the present situation continues a few more months.

It's a situation that is of vital concern to every drygoods merchant, groceryman, druggist and jeweler. In fact, it makes little difference in what business you may be engaged. If you are located in this heartland section of the independent oil industry you should be giving serious thought to the foreign crude that is now flooding this Nation.

You say that you have no oil holdings, no royalties, no land to lease.

That may be true, but there are plenty of reasons why you should be concerned.

Regardless of the type of your business, a large portion of your revenue comes from those persons engaged in some segment of the domestic petroleum industry, if you are operating in Wichita Falls or north Texas.

WORKMEN IDLE

Already, many drillers and roughnecks are idle because it has become necessary for

their employers to stack their rigs, since fewer and fewer wells are being drilled in north Texas and elsewhere as independent operators curb their wildcatting and field development programs.

Independent operators have been forced to do this because the market for their crude is dwindling almost daily as foreign-produced crude supplants rather than supplements domestic oil production.

These idle drillers and roughnecks can only mean one thing to the businessman who casts an appraising eye on the situation. These men are being seriously crippled, financially speaking.

That means their purchasing power is dwindling and that means that the cash registers in every place of business will not jingle as often nor as loud as they would if the domestic oil industry continued to be a prosperous industry.

It's a situation, and it already exists, which deserves the discerning attention of every businessman in Wichita Falls and north Texas who wishes to maintain his present sales volume in the future.

Drillers and roughnecks are not the only ones who will be financially crippled by the present imports plague which is sucking the lifeblood from the domestic oil industry, much like a plague of locusts would lay bare an agricultural crop.

CONTRACTORS

As operators decrease their activity, they likewise will have less money to spend. Drilling contractors who stack their rigs are finding themselves in a similar situation.

Royalty owners are already receiving a diminishing return upon their oil holdings. Landowners who find it increasingly difficult to lease their land because of slackening drilling programs will have less money to spend with "the butcher, the baker, the candlestick maker."

There is another angle to consider, both for the businessman and the so-called man in the street.

Texas has only 13 producing days for prorated oilfields in July. A similar pattern has been adopted by the railroad commission for August. This is the low point since the start of World War II.

For the month of July, the tax loss to the State was estimated at $1,500,000, as compared with June, because of this drastic oil-production restriction.

A similar reduction in tax revenue to the State is certain for the month of August.

RAILROAD COMMISSION

The Texas Railroad Commission cannot be blamed for the situation. It is the duty of that body to set a production pattern consistent with the market demand for Texas-produced crude.

The only answer is too many imports—foreign oil is "hogging" the market, leaving independent operators without buyers for the crude they produce here in north Texas and the remainder of the State.

This loss in taxes to the State can only mean one thing. If domestic oil operators cannot pay the tax bill because they cannot produce and sell their petroleum, somebody else will be called upon to pay the difference.

That means that the businessman—and you, the worker not engaged in any segment of the oil industry—will eventually be called upon to "fork up" the difference in some other form of tax that will dig deeply into your pocketbook.

So, if you don't think excessive oil imports mean anything to your particular line of business, you had better take another look, because they do.

It might well be said that it's later than you think.

A vital industry to north Texas—the domestic pertroleum industry—is being engulfed by an increasing flow of foreign oil into the United States.

As this domestic petroleum industry deteriorates as a result of these imports, your business will also deteriorate.

Overseas Dependents

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. NEAL. Mr. Speaker, the following editorial calling attention to the American Taxpayer's contribution to the peoples of other lands refers to the obligation of just one agency of our Government.

Investigation of the little known commitments by other agencies involved in our foreign policy activities might reveal equally interesting facts involving Government's liberality in the distribution of American tax dollars.

OLD-AGE CHECKS MAILED OVERSEAS

(By Fulton Lewis, Jr.)

WASHINGTON, July 24.—This column will make you mad, but read it anyway.

You are footing the bill for nearly $30 million a year in Federal old age insurance checks, being mailed out every month to recipients in 35 foreign countries. A major portion of the payees are not even American citizens. Many of them have never set foot on United States soil.

Several thousand are in Communist Yugoslavia. Additional thousands are in other Iron Curtain countries, although these checks are not actually mailed. The money is held in escrow, because Mr. Marion Folsom's Department of Health, Education, and Welfare cannot be sure of delivery in such countries. If the payee is able to get to the free world, however, the money is waiting for him.

There are elderly mothers in Italy who visited children in New York City for as little as 18 months, the while being listed on the family payroll over here as housemaids. Back in the old country again, they draw as much as $200 a month in crisp American lettuce which, in terms of exchange and cost of living, is reasonably comparable to the salary of the late King Victor Emmanuel. At 200 United States "buckos," the Italian Government would take a second look at an offer to buy the Coliseum.

Also, there is the Hindu in New Delhi, who was No. 3 houseboy at the United States Embassy. He's in, too. And the ditchdigger in Athens who worked for the American contractor building the resplendent new farmers' market there, which is part of our foreign-aid program, at a cost of millions. He likewise gets his, even though he's never been out of sight of the Parthenon.

As of January 1 of this year, the rules were tightened somewhat, thanks to Delaware's accountant—Senator JOHN WILLIAMS, who happened across the racket and blew his Republican top. But all who were on the rolls prior to that time—whether they had begun receiving the pensions or will become eligible in the future, as they reach 65 years of age—are on for the ful treatment. And over the past 20 years American payrolls have pretty well plastered the civilized world.

Note, for example, the postwar reconstruction, the Marshall plan, the foreign-aid program, the NATO airbases, the United States diplomatic operations, standard and special, the hundreds of millions spent by the Ford Foundation and similar funds.

Senator WILLIAMS got the pooh-pooh treatment from the State Department. He was told that $27 million a year is a mere drop in the bucket and not worth worrying about.

Need for Inventory of Water Resources

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. JOHNSON of Texas. Mr. President, it is encouraging to see more and more States taking a realistic look at their water problems and setting out with determination to solve those problems.

Recently it was announced that the State of Massachusetts will undertake a comprehensive inventory of all its water resources. I am pressing for similar action in my own State of Texas.

A Texas newspaper, the Dallas Times-Herald, urges editorially that other States follow the example of Massachusetts. I ask unanimous consent that this wise and sensible editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OTHER STATES SHOULD TAKE CUE FROM MASSACHUSETTS WATER STUDY

One glaring truth has been brought home to millions of southwesterners and other Americans as a result of the long drought and this year's recordbreaking floods. It is that water-harnessing projects over most of the Nation have been far too little and too late. There is renewed determination on the part of many local, State, and national leaders to correct this dangerous lag in conserving and controlling the Nation's most valuable natural resource.

Water project dollars have been precious in the past and will continue to be so in the future, as the struggle goes on to keep these projects abreast of growth in population, agriculture, and industry. Ironically, the future likely will disclose that many of the dollars that have been spent for water storage, flood control, soil conservation, sewage disposal, and major distribution and treatment facilities have been spent unwisely.

The reason is that our water efforts have, in most instances, been half blind and not according to overall, coordinated planning. Even today, there is lacking the basic knowledge that is absolutely essential to charting a sound future course for water utilization. Of major significance, therefore, is the recently announced plan of the Commonwealth of Massachusetts to undertake a complete inventory of its water resources, above and below the ground.

This will be no hasty or superficial study. It will spread over 25 years. It will cost millions of dollars. It will give Massachusetts the final answers it needs to how much water it will have in the future for industry, irrigation, and all other uses; and it will be a solid basis upon which that State can plan

to put every drop of its water to maximum beneficial use of its people.

That, of course, is the kind of study which has long been needed in Texas and every other State. Not until such inventories have been made can intelligent master plans be devised by legislatures and local governing bodies. Every water project that is built in the meantime may, eventually, prove to be a costly error. Massachusetts is wise. Its leaders know that efficient use of water will, more than any other factor, insure the State's future progress. They are going all out to pave the way. Texas and other States will only be fooling themselves if they do not buckle down and do likewise.

San Angelo Project, Texas

SPEECH
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. Res. 359) providing for the consideration of H. R. 2147, a bill to provide for the construction by the Secretary of the Interior of the San Angelo Federal reclamation project, Texas, and for other purposes.

Mr. ENGLE. Mr. Chairman, I wish to say that I support this project. Our Subcommittee on Irrigation and Reclamation has given the project very careful consideration. We sent a subcommittee to Texas to look at the project, a subcommittee headed, as chairman, by the distinguished gentleman from Colorado [Mr. ASPINALL] and the ranking minority member and former chairman of our committee, Dr. MILLER. So they not only heard the testimony on this project but they went to Texas and looked it over. The committee, on the basis of their study and on the basis of the recommendation of the Department of the Interior, has approved it.

I think all of us know something of the disaster which has been inflicted upon some areas of Texas due to floods on the one hand and drought on the other. The purpose of this bill is to equate the drought and the heavy runoffs of water so that the floods are used to take care of the dry spells which have brought so much distress to large areas of Texas.

The project falls squarely within the precedents of our committee and legislation which has been heretofore adopted under reclamation law.

Some $11 million of the total cost is allocated to irrigation. All other uses of the project, flood control, municipal water and other purposes, are less than that amount. Although it is true that the municipal users will to some extent help the irrigators repay, that is not unprecedented under reclamation law. This Congress has many times authorized projects of that character.

So I do believe that this is a good reclamation project. It does fall within the precedents for the authorization of projects under reclamation law and I hope the committee today will act favorably on it.

Mr. VORYS. Mr. Chairman, will the gentleman yield?

Mr. ENGLE. I yield to the gentleman from Ohio.

Mr. VORYS. I note on page 12 of the report a letter from the Secretary of the Army, in which they say that—

The Department of the Interior has not submitted its final report on the San Angelo project under established procedures.

It goes on to say that—

The Bureau is not in a position to appraise the merits of the proposal.

That letter was dated March 11. The report is dated June 28. Is that report of the Department of the Interior now before the committee and before the House?

Mr. ENGLE. Yes. If the gentleman will look at page 2 of the report he will see that the statement was made that the report referred to was submitted to the Congress on April 12, 1957.

Mr. VORYS. May I ask one other question? On page 11, the Associate Director of the Bureau of the Budget says that—

The Corps of Engineers in estimating the flood-control benefits attributable to the plan have found that local interests should contribute $350,000 in recognition of enhancement of land values.

Is that incorporated in the legislation?

Mr. ENGLE. I yield to the gentleman from Colorado [Mr. ASPINALL] to answer the gentleman.

Mr. ASPINALL. Mr. Chairman, if the gentleman will yield to me, it is not contributed directly. On the other hand, there is provision made for the establishment of the conservation district in the area, and also the town is going to enter into a contract with the Secretary of the Interior and will take care of the contributions which, in my opinion, will amount to far more than $350,000.

Mr. VORYS. There are a number of contributions, but the suggestion is that there should be a contribution of $350,000 for enhancement of land values in estimating the flood-control benefits. Is that provided for in the legislation?

Mr. ASPINALL. I understand that indirectly it is, yes.

The CHAIRMAN. The time of the gentleman from California has expired.

How Much Longer Will the United States Try To Buy Friendship?

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. BEAMER. Mr. Speaker, under unanimous consent I include in the Appendix of the CONGRESSIONAL RECORD a statement from Exclusive, published by Special Reports, Inc., dated July 17, 1957. When representatives of the State Department and other interested Federal agencies appeared before our Interstate and Foreign Commerce Committee in consideration of these proposals, the logical question in the minds of many of us was, "How much longer will the United States continue its futile efforts to buy friendship?" In these instances, the United States privately owned airlines are the ones that are penalized for the benefit of foreign government-owned airlines.

The statement follows:

Expect mounting protests by business groups over the State Department giveaway program of valuable United States air transport routes. The chamber of commerce takes the lead in protesting the recent agreement between the United States and Australia. This follows earlier disadvantageous agreements with the Dutch and West Germans, now seems a regular pattern.

Under the latest arrangement, Australians are permitted to fly the heavily traveled San Francisco-New York route to Europe.

The exchange: The United States was granted impossible routes such as the run between Autsralia and South America via Antarctica.

The apparent reason: Preservation of friendly foreign relations?

Labor Missionary Expounds Yankee Ways in Japan

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. ASHLEY. Mr. Speaker, while the debate on the proposed $3½ billion mutual security program was raging in the Congress, the Wall Street Journal, an eminently respectable newspaper, on May 27, took occasion in one of a series of articles to extoll some of the constructive aspects of Uncle Sam's activities in winning foreign nations over to the American way. The article paid singular tribute to the noteworthy and impressive contribution which the American labor movement is making in the field of international relations through its emissary in Japan, Einar Edwards, State Department foreign-aid adviser on labor productivity.

At a time when the Senate Investigating Committee is focusing so much public attention on the abuse of high office within the American labor movement, this laudatory article comes as a refreshing and wholesome antidote. The article is interestingly written and well worth reading and I commend it to the attention of my colleagues, particularly those who are of the opinion that American labor is corrupt and racket-ridden.

HUSKY FEDERAL AID EXTOLLS LABORSAVING MACHINERY, VIRTUES OF BARGAINING

(By Henry Gemmill)

TOKYO.—The State Department's foreign aid adviser on labor productivity stood there, 185 pounds of muscular nudity. The Japanese maiden stood there, too—shrieking.

Let it be hastily said that no more than a misunderstanding—a clash of cultures—was involved. The big blond American was Einar Edwards, making his first visit to a Japanese inn, near the temples of Kyoto. After shucking his Western clothes and donning a light kimono, he had been led by the jet-haired maiden to the bathing chamber, where he urgently motioned her to depart.

But just as he had one ankle in the steaming tub, he heard a horrified feminine voice; she had reappeared through the sliding wall. She hauled him back, doused him with buckets of icy water, handed him the soap, saw to it that he began working up a lather, and vanished. Well soaped, he was about to try for the tub again, but she returned screeching as loudly as before. Again she drenched him with cold water, until the suds were gone.

Then, with a gracious smile, the maiden gestured Mr. Edwards his welcome to the tub.

OTHER STARTLING DIFFERENCES

Thus did Einar Edwards receive his knowledge that in Japan one must never get in the bathtub until one has already had one's bath. And that modesty is measured a mite differently here. Since then he has discovered many other startling differences between the United States and this island empire. In matters of labor relations it is his job to acquaint the Japanese with Yankee ways, but he has learned a lot himself and enjoyed nearly every minute of it.

Even this early misadventure, last year, paid dividends. When he returned to his paper-walled room at the inn, where he was to confer with a group of local labor leaders, he found them sitting on the woven straw floor roaring with laughter—for the unabashed young lady had been running back to report round-by-round on her encounter with the barbarian. Mr. Edwards has as hearty a laugh as anyone, as he proved, and the Japanese working men immediately decided he was a wonderful fellow. His reputation has spread; nowadays he is almost constantly traveling, and whenever he steps off a train he finds a throng of union folk waiting to greet him.

Japan will receive only a small part of the $3.8 billion total United States foreign aid expenditures in this current fiscal year. And Mr. Edwards' labor office is only a fragment of the Operations Mission to Japan. But he is so earnestly convinced the $195,000 budgeted for his task this year is being usefully spent that he has induced his superiors to request nearly a quarter-million dollars—$240,000, to be precise—for his use in the coming year. What he gets, of course, may depend on the outcome of the current congressional fight over foreign aid.

TEAMS OF LABOR LEADERS

Lion's share of the money—$139,750 this year, more next—is for sending teams of Nippon's labor chieftains on trips to the United States, where they visit everything from Harvard University to Los Angeles aircraft plants, spending much time, of course, talking with American unionmen. Mr. Edwards lines up the expeditionary forces, and before they depart briefs them on such weird United States habits as the tipping of waiters. When the union executives return they often go on the lecture circuit. Recently a number spoke in Tokyo, with 1,300 jammed in the hall and an overflow audience listening to loudspeakers outside.

Judging by this session, the reports are favorable. "I was surprised at seeing the high productivity in America in reality," declared Kumazo Nakachi, vice president of All-Seamen's Union. "Before I went to the States, I always wondered what kind of people Americans would be," said Kazuo Maekawa, vice president of Tokyo Electric Power Workers Union. "I found them to be opportunistic and friendly. Wherever we went, restaurants, sightseeing places, and so forth, people replied to our requests kindly. I was convinced that they work in earnest and have happy family lives."

Indeed, some of these leaders return with perhaps overrosy impressions. Kinshiro Tanaka, chief of the executive committee of Odakyu Railway Workers Union, described United States wage bargaining sessions: "In the negotiations the unions submit the fair demands on the precise (statistical) materials, and the management—admitting the fairness—usually accepts the union demands."

AN INVITATION TO REUTHER

Another bit of cash—$25,250 this year, more next—is set aside for intercontinental travel in the opposite direction. Among those slated to arrive here soon to conduct conferences, discussion groups, and seminars are Bill Gomberg, who made his reputation as a time-motion study expert with the International Ladies Garment Workers, and Andrew Pettis, vice president of the Shipbuilding Workers, an expert on negotiating techniques. "I want to get a good labor woman over here, too," says Mr. Edwards.

Rather surprisingly, the United States will also finance trips here for a couple of German labor leaders, still to be chosen. Informally, and not at Government expense, Mr. Edwards has been trying to get his good friend, Walter Reuther, to visit Japan.

The rest of the money—$80,000 this year, $50,000 next—is tagged for salaries of Mr. Edwards and his full-time staff, their travel within Japan, and such services as translation and printing.

Personal contact—as informal as possible—is the way to get ideas across, Adviser Edwards believes. Most any night he's in town, if you go to the American compound a few blocks behind the Embassy, you're likely to find his prefab house jumping, a Japanese-American party in full swing.

"It's no use just seeing these labor fellows in your office," says Mr. Edwards. "I get them to come home. Of course I have hot sake (Japanese wine) for them, but before long they're trying highballs and cokes as well. My wife, Anne, gets up the kind of little fishy dishes they're used to, but we introduce them to hot dogs and hamburgers. Spaghetti they're crazy about."

"We even get some wives to come—almost unheard of in Japan."

HIS DUES BOOK

Though he works for the State Department, Einar Edwards is roaringly popular with Japanese workingmen because he is so obviously not a diplomat. His square face and big hands would convince them of that—but, to nail it down, when he meets a labor man he whips his own shipyard workers dues book out of his pocket and shows red stamps pasted in through July 1957.

He is, essentially, a union man, and it would appear difficult to find anywhere overseas a more impressive representative of what the American labor movement stands for, at its best. Time and again he startles leftist labor meetings in Japan by detailed descriptions of living standards which United States workers have won through hard work and hard bargaining under the free enterprise system—and by telling them how many workers move up into top management jobs, a phenomenon almost unknown in this land.

This rugged labor missionary was born 48 years ago on Oslo fjord in Norway, was brought to Philadelphia when he was 7. After finishing eighth grade he went to work in a hosiery mill, where he met and married coworker Anne. He plunged into activity with the AFL hosiery workers, soon decided that effective negotiations demanded more education. In 6 years he whipped through both high school and college (Temple University), attending classes and doing homework at night, holding down full daytime jobs in textile factories, working for the union on Saturdays, playing professional soccer on Sundays. He averaged about 5 hours sleep nightly, and by the time he finished with school in 1941 was worn down to a skin-and-bones, 137 pounds.

BACK TO PHILADELPHIA

He switched to working in the booming shipyards, but was soon in the Navy, and served on an attack transport in the Okinawa invasion. He first briefly glimpsed Japan after the surrender. "All Tokyo seemed to be in ruins," he recalls. "It's unbelievable how everything has been rebuilt so quickly." The war over, he became Philadelphia regional director for the CIO shipyard workers.

He moved into foreign aid almost by accident—the Government started out by asking him to escort teams of Danish and Dutch union men on brief trips around the States. But in 1950 it became a career; he went to Germany with HICOG, Austria with ECA, Washington with FOA, and finally come to Japan with CIO. The different initials mean little; his task was essentially the same in each place; working on the labor side of foreign assistance. Wherever he goes, whomever he meets, he engages in some pretty plain talking.

Sample: In Nagasaki, arriving to address a conference of transport workers belonging to the right-wing Zenro movement, he found a sound truck parked outside the hall blaring Russian workers' songs. A score of left-wing Sohyo unionists were heckling folks entering the meeting. "I told the conference chairman we had run into this situation in the United States many times and I had a suggestion," Mr. Edwards recalls. "I told him in the States we would anounce to these people that they would have 5 minutes to get their truck away from there or we would come out and haul it away for them." The hint was adopted, and—as it turned out—succeeded without the cracking of heads.

"I LET THEM HAVE IT"

Sample: Expounding that unions are better off without too much government help, Mr. Edwards cited to an Osaka gathering the example of what happened to workers in Hungary. One union officer asked whether the revolt there hadn't been provoked by Fascists and American spies. "Boy, I let him have it. I told him how I had gone to Austria's border with Hungary, and seen with my own eyes the barbed wire, the watchtowers, the searchlights, the machineguns, and the mine fields. I told about Hungarian refugees I had seen in Austrian hospitals, their feet blown off while escaping. This guy sat down with his head bowed, and the crowd cheered."

Sample: In a huge steel mill on the southerly isle of Kyushu, he met with a dozen local leaders of the leftist Sohyo national union. "I asked them why they pursue the policy of calling strikes twice a year simply because the calendar shows it is April or October; they laughed and said this was the only way they could get any wage increase. I asked if they had ever tried honest and sincere collective bargaining." This scene is repeated again and again throughout Japan. "These people strike at the drop of a pin," says Mr. Edwards. "I say it's all right to strike if you have to, but let's have a little negotiating first. Management needs to be told to bargain, too, and I tell 'em."

Sample: In a shop south of Tokyo, he found machinists working while their safety goggles dangled on the wall. "I told their union officers that in America we'd slap a stiff fine on a union man doing that." He rebukes management just as heartily, as in a Nagasaki shipyard where he found workers in the heavy steel plate shop wearing felt slippers instead of metal-tipped safety shoes.

"I don't think I've created enemies," he remarks. "I think I've made friends."

Just how much of his nudging of labor and management has produced results is unknown. "I get so many invitations to go new places that I've never felt free to go back to any of the old ones," he observes. "That's one reason we're asking Washington

for another good labor man to come out here and work with me."

At the moment his full-time staff numbers only three. A Japanese gentleman, Mr. Yasuda ("I can never remember his first name; I call him Henry.") goes with him as interpreter, though Mr. Edwards himself is making a vigorous attempt at learning Japanese. Miss Helen Flynn, a handsome Kansas girl with a penchant for tweeds and large earrings, is his secretary right now, hoping for a transfer to India, Miss Atsuko Ogura, a slender, smiling Japanese who has studied 2 years at Smith, does translating and can handle many secretarial duties except those involving "classified" material. ("None of my stuff is classified," says Mr. Edwards, "but all sorts of intelligence reports go over my desk.")

"Japan is booming right now—more prosperous than ever in its history," says Mr. Edwards' boss, Sylvester Olson, a lanky Yakima, Wash., lawyer who is assistant director of foreign aid here. "You may wonder why it's necessary to have an assistance program."

PREVENTIVE MEDICINE

"Well, it's preventive medicine, rather than drastic surgery. Crash programs are always expensive, and you can imagine what it would cost us to put one into this country of 90 million people if we let things get in a bad way. Japan has to import 20 percent of its food and almost all its raw materials. It's had money to do this the last few years largely because of United States military spending here and a tremendous demand for such exports as ships. But with a 10 percent drop in world trade, the country could be in real trouble, because a lot of its products like machinery are priced too high. Our only chance is to help the Japanese slash unit costs of production by boosting productivity."

Labor missionary Edwards figures there is so much room for productivity improvement that, as it is accomplished, Japanese industry can cut its prices and yet pay higher wages and earn more profits. One of his assignments is to battle ingrained union resistance to introduction of labor-saving machinery and of schemes aimed at job-overmanning.

"We don't kid 'em. There'll be some layoffs, we tell labor frankly, it will have to become mobile," he says. "That involves a major change in thinking here. It's really a feudal system. A man takes a job for life, and he would be considered a traitor if he quit to work for a competitor."

"And this sentiment works both ways; there are examples here of firms putting in new machinery, but feeling obliged to keep workers on doing nothing until they die or retire at 55."

LEADERS ARE INEXPERIENCED

Trade unionism was nonexistent in Japan at the end of the war, and inevitably its leaders today are inexperienced. Einar Edwards, who has made a point of meeting most of them, notes the key men tend to be in their thirties, and that includes both Adira Iwai, the quiet man who is secretary general of the wild Sohyo, and Haruo Wada, who holds the similar key role in the conservative Zenro.

Back in 1953, leftist Sohyo had captured around 56 percent of all organized workers, but that has dropped to something like 45 percent and the trend continues, while the conservative Zenro, though still smaller, has been picking up some groups formerly independent. What impresses expert Edwards, is that while Sohyo's national leadership takes many an anti-American position, a scattering of its chieftains in particular plants are beginning to visit America and come back enthusiastic, addressing him as "Brother Edwards." He has the feeling some of these are building up to toss out present Sohyo executives.

There's little danger the Japanese workers will go Communist, in Mr. Edwards' opinion, even though the Red, World Federation of Trade Unions has been pouring money in here. The problem is not to keep the Japanese away from communism, but to show them how to reap the benefits of an efficient capitalism, he says.

INTRAGOVERNMENTAL COORDINATION

Mr. Edwards' crew is far from being the only United States Government group in Japan dealing with labor affairs. "There's Ed Skagen, the labor attaché, he's another union man, belongs to the machinists. Our work is different; he's getting information and I'm giving it."

"Then there's Frank Welsh, the Labor Information Officer with the United States Information Service—I believe he has some claim to union membership, was a member of the Newspaper Guild or something. USIS has a larger staff than we do—covering the whole gamut of cultural affairs—they've got about 16 centers around this country. Welsh provides them with movies on how American unions operate, and books, and he feeds material to the labor press. Skagen and Welsh and I get together for biweekly sessions with George Morgan, head of the political division here, to make sure we aren't conflicting, and to exchange tips on where we can do things.

Despite all the complexities, both Einar and the sparkling Anne, love life in Japan, as does 15-year-old Einar, Jr., who is getting judo instruction from their chauffeur-cook, Iwama-san. The family is served also by a maid, Rumiko-san ("San" is the universal Japanese suffix, meaning "honorable"). Mrs. Edwards can do with the help, because she's busy half days in the American school teaching English and geography to both Western and Oriental youngsters. Some of the latter, she notes incidentally, are growing Elvis Presley sideburns.

Their four-bedroom house, supplies with government-issue furniture plus some of their own bric-a-brac picked up in Europe, is American in style but Japanese built; the construction is fine except that folks here haven't a foggy idea how to make safe fireplaces. As a result, the Edwards' got burned out of another house in the compound about a month ago, and might have burned up with it in their sleep except for the yowling of their short-tailed Japanese cat.

Any United States Government family here on a modest salary can, of course in certain ways, live better than pretty prosperous people of private income in either the States or Japan. As consumers, they have the best bargains of two worlds.

At the Army post exchange they can pick up cheaply things that are cheap in America—or even in Europe; for instance, Mr. Edwards is able to give guests the best Dutch beer. And things that are cheap in Japan can be bought on the open market. Item: Mr. Edwards pays the yen equivalent of 9 cents to have a shirt laundered. Item: Mrs. Edwards has just set out blooming pansies along her front walk, at the yen equivalent of 3½ cents per plant.

Pleased with both his life and his labor, Mr. Edwards is inclined to believe he'll be willing to stay on longer than his pledged 2-year tour of duty.

Qualities a Merchant Marine Officer Should Possess

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, August 1, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following commencement address by Rear Adm. Gordon McLintock, USMS, Superintendent, United States Merchant Marine Academy, at the Marine Maritime Academy, Castine, Maine, on July 15, 1957:

QUALITIES A MERCHANT MARINE OFFICER SHOULD POSSESS

(Commencement address by Rear Adm. Gordon McLintock)

Senator Leavitt, Admiral Glick, distinguished guests, parents and friends, and members of the graduating class, I am very happy to be with you on this auspicious occasions. When Senator Leavitt asked me to come, I accepted with alacrity because I believe that the nautical schools should work together and pull together, for we are all in the same boat. We must convince the Nation that a strong and efficient merchant marine is vital to our future.

I bring you greetings and congratulations from the corps of cadets at my own school, the United States Merchant Marine Academy. (My cadets are a bit envious of you, for they still have 2 months to go, mostly of final exams.) We enjoyed having your color guard participate in Merchant Officers' Day at Kings Point 2 years ago. I had your superintendent as my guest at a joint conference last year, and we would join together in many more affairs if we were geographically nearer.

The rock-bound coast of Maine has sent forth its finest sons to the calling of the sea, and Maine Maritime Academy takes justifiable pride in the fact that its graduates are renowned throughout the world for their seamanship. It is proper that these graduates should achieve distinction in this fine art, for they are the heirs of a glorious tradition going back to the very earliest days of our country's history. In the comparatively brief history of this fine institution, Maine Maritime has contributed its share of officers to the merchant marine and the Navy, and many of its alumni have been cited for meritorious service during World War II and the Korean war. The builders of tradition have not been idle, and much of the stature which this academy enjoys today is owed to the splendid men who have gone forth to their ships from the shores of Castine Bay.

Seafaring still calls the adventures and the daring, and the lure of the far horizon still finds men ready, willing, and anxious to face all the perils and hardships which may arise as they push their ships into the unknown. Despite the marvels of this modern age, with radar eyes to penetrate the blankets of fog or the darkness of night, and loran to make its seemingly magic calculations to determine unerringly where a ship lies on the pathless sea, there remains the need of the vigilant, alert, dependable seaman.

More than technical competence is needed in our modern merchant marine. There

must be, first and foremost, a genuine love of the sea in the heart of a man, a desire to do considerably more for the ship than he is paid to do, and the ability to be a leader. The sailors' adage, "One hand for the ship and one hand for yourself—the best one for yourself," is only intended to apply when you are up aloft.

What are the qualities of a leader at sea today? He must be forehanded and efficient, and he must know how to obey and to command. He must be interested in his subordinates and always must put them ahead of himself.

I should like to give you a little advice, nothing too complicated. Always remember that you will not get ahead by doing just the work that is expected of you—you must do considerably more. Work hard, and play hard, and as you go through life, when you see a rope that is splayed, put a whipping on it; when you see a coil lying wet in the scuppers, lift it out and hang it on the pin rail; and when you see a stanchion bending under a strain, shore it up.

You are going to sea as officers in an honorable profession and in a position of trust. You will have the responsibility for millions of dollars of property as well as for the lives of men. Earn your title of officer by shouldering that responsibility and by showing a personal sense of interest in the owner's investment. Show the man you work for that you are glad to do a little more than you are paid for. Put into your work your best, put it in cheerfully, and you will be surprised to find that this is a boomerang and your best surety for advancement.

Leadership consists of three qualities: Sensitivity, integrity, and perseverance. Let me elaborate on these just a little. No man has ever risen to lead others unless he has developed a great sensitivity for their feelings. This is the first element of leadership. If you do not have sensitivity, your leadership is doomed.

The second element of leadership is even more personal. It is integrity. A leader's sense of integrity is the thing that conditions the integrity of the whole organization. Once his people get the idea that his integrity is not "all wool and a yard wide," that his word is only as good as his written bond, he is doomed. His word has got to be 10 times as good as his bond. In no other way can he build the affection and respect which he must have if he is to obtain the greatest result from his men.

The third quality is perseverance. The weak man falls by the wayside, and no one bothers with him. Only the man who is moving toward a goal attracts others to go along with him. Unless he has the force of persistency, he cannot succeed in leading others. Once he gives up, once he loses enthusiasm, the whole organization starts to go down.

Above all he should be a gentleman. What is a gentleman? Let's take it apart. He should be gentle—that is, he should not be loud and boorish—he should be kind and considerate and show good manners. And he should be a man—a man of honor, a man of courage, a man of iron. It sounds easy perhaps to be an officer and a gentleman, but it is neither easy nor commonplace. Yet it must be your hallmark, the stamp your school has put upon you, the stamp your State has put upon you.

I am not preaching at you, I know you possess these qualities, I am reemphasizing them.

I come myself from a long line of seafarers, and I have from the time I was a boy delighted in the stories of the officers and gentlemen of Penobscot and Portland and Rockland and Castine who sailed against fearful odds in sailing ships often less than a thousand tons burden. Generation of seamen have put "salt" into your veins and "sand" into your souls. The qualities of a good officer are inherent in you, and in fact you have up here a natural biological advantage. I tell my own young midshipmen these same things. We are blood brothers and wear the same cloth, and serve the same eternal sea. I have always advocated a closer unity between our schools, and that is why I accepted Senator Leavitt's invitation to come here today.

I congratulate the graduating class. God bless you and send you following winds—good sailing, heirs to a great tradition, graduates of a fine school—officers and gentlemen.

Reducing the Federal Waistline

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. BATES. Mr. Speaker, under leave to extend my remarks, I include the following interview between the distinguished minority leader, Hon. JOSEPH W. MARTIN, Jr., and Edward A. Sherman, of Boston, regional director of the Citizens Committee for the Hoover Report, in a broadcast over radio station WEEI of Boston on Sunday, July 21, 1957:

Mr. SHERMAN. Attempts to reorganize and improve the management of our Federal Government are as old as the Republic itself. Over the years many investigative groups have recommended courses of action to bring about economies of operation. But practically no reorganization attempts ever accomplished anything until 1949 when a program of organized citizen action resulted in the adoption of about three-fourths of the nearly 300 recommendations of the first Hoover Commission.

Because leaders in both political parties had become equally concerned about the increase in the cost and size of our Federal Government, in July 1947 Congress passed without a dissenting vote the Lodge-Brown Act which created the first Hoover Commission.

This 12-man team of 6 Democrats and 6 Republicans was composed of 4 members chosen by the President of the Senate, 4 by the Speaker of the House, and 4 by President Truman. Now the Speaker of the House in 1947 was JOSEPH MARTIN, JR., of North Attleboro, Member of Congress from our Massachusetts 14th District, and it was he who selected 4 of the members of the first Hoover Commission—among them our former President Herbert Hoover who, of course, was the logical chairman of the group.

After public service as a member of both the Massachusetts House of Representatives and the Massachusetts Senate, in 1924, JOE MARTIN was elected to the 69th Congress. Over the years Congressman MARTIN has accumulated an outstanding and distinguished record of service to his country.

In both the 80th and 83rd Congress, Congressman MARTIN was our Speaker of the House of Representatives.

Thanks to the invention and development of television, the picture of JOE MARTIN with gavel in hand is indelibly engraved in the minds of countless millions of Americans. I am sure it is easy to understand how privileged I am to have this opportunity to discuss with our great Republican leader from Massachusetts some of the more important measures that are now before Congress designed to carry out recommendations of the second Hoover Commission.

Congressman MARTIN, a lot of water has gone over the dam since the last time you and I discussed Federal reorganization over the air.

Mr. MARTIN. Almost 6 years—and during those 6 years were carried out, as you just said, more than 70 percent of the recommendations of the first Hoover Commission. Not only that, but because of the success of the first Hoover Commission and because the first Hoover Commission did not interest itself in certain phases of government, for example, matters of policy, in 1953 Congress again voted unanimously to create a study commission constructed along the lines of the first Hoover Commission. The Congress charged this team of 12 outstanding men (including former President Hoover) with the job of surveying our Government in order to find new ways to prevent waste and duplication and to bring about a more efficient and economical administration of the public's business.

Mr. SHERMAN. Congressman MARTIN, as you know, there is before Congress right now waiting for action one-hundred-seventy-odd bills designed to effectuate Hoover recommendations. Now I have selected a few which I will greatly appreciate discussing with you, at least as many as we have time for. And the first, and by far the more important, certainly the most important from the standpoint of possible dollar savings, is the budgeting-and-accounting bill. Described as the Kennedy-Payne bill, this measure passed the Senate unanimously. What can you tell us about that bill?

Mr. MARTIN. The bill, H. R. 8002, is designed to cause our Federal budget to be submitted on an annual-accrued-expenditure basis. It is, as you say, an important piece of legislation and also is 1 of the 6 measures whose adoption was recently urged by the President.

Mr. SHERMAN. As I understand the proposal carried out by this bill, it is to the effect that we would appropriate for an item like an aircraft carrier year by year and not in one lump sum. This would enable Congress and the American people to assess results each year. But isn't it also pretty important that the passage of this bill would restore to Congress the control of nearly $50 billion of unexpended balances that under our present system of appropriating has been carried over from previous years?

Mr. MARTIN. Congressional control of the national purse has been described by President Hoover as being one of the very foundations of freedom itself. Not only President Eisenhower approves this bill, but also in favor of this legislation we find the Secretary of the Treasury, the Director of the Budget, the Comptroller General of the United States, the American Institute of Accountants, the Comptroller's Institute, and practically all similar groups of professional accountants.

Mr. SHERMAN. Lots of folks believe that the second most important measure before Congress which would carry out Hoover recommendations is the measure which would eliminate unnecessary government competition with private business. Now the Hoover Commission task force that investigated the Government's administrative agencies looking for activities which unnecessarily compete with private industry, found some 3,000 business-type enterprises in which the Federal Government is engaged. But most important, they found that many of these compete directly against the livelihood of private citizens. It seems to me that here we have one of the most easily understood findings of the Hoover Commission—this matter of unfair and unwarranted and, in many cases, ridiculous invasion of the Government into activities which rightfully belong to private business. Furthermore, since the biggest part of our tax dollar

is spent by the Department of Defense, the Commission naturally found the Pentagon to be the worst offender in this respect. This particular Hoover task force found that our Defense Department runs cobbler shops, ice plants, saw mills, bakeries, aluminum sweating plants, motion picture studios, dental manufacturing establishments—all these various types of enterprises which manufacture just about everything from clothing to ice cream, eye glasses, paper, rope, and rum, and bakery goods.

Mr. MARTIN. As you know, there are bills before both the House and the Senate designed to affirm the policy of Congress to restrict and curtail enterprises which unnecessarily compete with private industry. Also in this same field is legislation which would gradually terminate the postal savings system.

Mr. SHERMAN. The Hoover Commission said in so many words that it makes little sense for the Department of Defense to run laundries in communities where there are plenty of privately operated laundries or coffee-roasting plants in such large ports as New York City or Oakland, Calif., where coffee is roasted commercially every day. Also, don't you think, Congressman MARTIN, that we have outlived our need for the postal savings system?

Mr. MARTIN. The postal savings system, of course, was created back in 1910 to furnish banking facilities in small towns where there were no banks. But, as I understand it, the Hoover Commission found that 90 percent of all deposits as well as depositors live in large cities and towns where there are ample private banking facilities.

Mr. SHERMAN. The task force that studied all Government personnel brought in a report that Mr. Hoover personally considers the most important of any of the Hoover Commission studies. Now, although the Hoover report on personnel did not point out much in the way of direct dollar savings by improving the management of the public business, it is generally believed that ultimately we will realize benefits that are more important than important dollar savings if we improve personnel management in the Federal Government.

Mr. MARTIN. I have always been interested in people in government. I understand that the Hoover Commission keynoted its report on personnel by saying that the task force had found that the Government's personnel on the whole were competent, faithful and, in numerous fields, distinguished. But they found that there was great need of improvement in the management of personnel. Ever since our 2 major party political system was developed in this country over 150 years ago, the American people have tried to achieve a workable balance between 2 vital requirements in the management of personnel in government. Now, one requirement is that the officials responsible for establishing and defending Government policies and programs—I refer to the noncareer executive—should be selected by the successful party. The other requirement is that there must be an adequate supply of trained, skilled, and nonpartisan employees in the Federal service to provide continuity in the administration of the Government's activities, no matter which party comes into power. Now the correction of this situation is found in the recommendation that there be established a senior civil service composed of politically neutral, well-paid career executives of exceptional skill and experience for continuing service in all departments and agencies. Now this senior civil service personnel would have personal rank and be subordinate only to appointive heads of departments and agencies. Of course, one of the results of the carrying out of this recommendation is that it would attract and hold a better type of young person and would furnish incentives for competent young people to build a successful career in our Federal service.

Mr. SHERMAN. And, incidentally, would reduce the terrifically expensive turnover rate which now ranges between 25 and 35 percent.

Didn't the Commission also find that there existed serious confusion between the activities of officials with political responsibilities and the activities of career officials who remain in the Federal service no matter which political party is in power?

Mr. MARTIN. That is so. Too often, career administrators have been thrust into the position of having to defend agency policies, programs and activities. Now obviously a career official should not be asked to take political responsibility for a program. And of course, on the other hand, purely political officials should not be mixed in with the permanent administrative structure of our career service. And I suppose it was very logical that the Commission recommended that there should be a clear delineation between career and noncareer posts with enough noncareer executives at the department level to take over all political and partisan responsibilities.

The Commission recommended new methods and policies designed to attract and hold skilled employees for careers in public service and to improve morale and reduce the heavy turnover in personnel. These new procedures would include salary increases for top managers, adequate training programs for employees to improve job skills and develop promising workers for advancement; also greater use of merit increases; wider advance public notice and better arrangements for promoting and handling examinations and applications for job openings, and so forth.

There are bills in both houses designed to provide a system for establishing a flexible core of highly competent, nonpolitical career administrators. There is also a bill in the Senate which would modernize the civil service methods and procedures to make careers in Government more attractive at all levels in Federal employment.

Woolen and Worsted Manufacturers Seek Relief From Constantly Rising Foreign Competition

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter directed to President Eisenhower by Mr. John Chupka, general secretary-Treasurer, Textile Workers Union of America, AFL–CIO.

The letter follows:

TEXTILE WORKERS UNION
OF AMERICA, AFL–CIO,
New York, N. Y., July 26, 1957.

The PRESIDENT,
The White House, Washington, D. C.

DEAR MR. PRESIDENT: Our organization, both independently and in conjunction with American woolen and worsted manufacturers, has repeatedly petitioned your administration for relief from constantly rising foreign competition.

We have pointed out in great detail the effects of unrestricted imports upon this already beleaguered industry. They are reflected by an unending stream of mill liquidations which are shrinking the industry's production capacity to a point where it may no longer be able to fulfill the Nation's need for military fabrics in the event of a national defense emergency. This development, in turn, has produced increasing unemployment and short time for American woolen and worsted workers; I believe I don't have to detail the misery that brings and the damage that does to the national economy.

In view of the industry's extreme distress, I am shocked and dismayed to learn that the United States Army's Uniform Quality Control Bulletin No. 6 lists Japanese concerns as certified suppliers of wool fabrics for American manufacturers of United States Army uniforms.

In behalf of this organization, I strongly protest such a practice and urge you to take steps to rescind it immediately. There certainly is no justification for referring American manufacturers of military uniforms to foreign sources of supply when domestic goods are available in great abundance in our own country.

Very truly yours,

JOHN CHUPKA,
General Secretary-Treasurer.

Changing the Stephen Foster Songs

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. HERLONG. Mr. Speaker, the ridiculous decision of the television and radio networks to ban the age-old folk songs of Stephen Foster unless such lovable words as "darkie," "massa," and "mammy" are eliminated has caused considerable comment in the South and elsewhere. Many letters have been written to editors of newspapers protesting the action as absurd. Mr. Speaker, one of these letters recently appeared in the Orlando, Fla., Sentinal, and I think it such an excellent commentary on the situation that I want to include it in my remarks for other Members and possibly the networks to read. The letter follows:

PALEFACE, INDEED

EDITOR: I see by the papers that the NAACP in conjunction with the major radio and TV networks has decided low and degrading terms such as "darkie," "massa," "mammy" and such slurring phrases as "Old Black Joe" shall hereinafter be verboten on the airways.

I myself have suffered no end from the unwarranted epithets loosely bandied around on radio and TV. Just recently in watching the Last of the Mohicans a character named Uncas (who is a copper-toned aborigine) referred scornfully to my race as "palefaces." Boy, was I ever frustrated and degraded? Paleface, indeed. And only a few nights later reference was made to an Irishman as being a "Mick." To cap the climax it was only one program later that a party from north of the Mason-Dixon line was jeeringly called a "Yankee." They came right out and said it real plainlike. Now that sort of thing has got to stop. Whither are we drifting?

It's difficult to realize what all of this degradation and slurification will do to a guy. Publicly reviled as a "paleface" and with ancestors who are "Micks" and my own daddy having been a Yankee, surely you can see

I'm in one awful fix indeed. Do you suppose NBC or Columbia can help me, or is it too late?

CHARLES E. CROZIER.

CLERMONT.

Kansas Seeks Best Wheat

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an article by Bill Colvin of Manhattan, Kans., which appeared in the Christian Science Monitor on Thursday, July 11, 1957. This particular article is one of the most comprehensive I have been privileged to read concerning the 1956 and 1957 conditions in southwestern Kansas and I believe it clarifies many details for those who are unfamiliar with the problems of the wheatgrowers, and pays tribute to the great pride we feel in growing the best wheat in the world.

The article follows:

KANSAS SEEKS BEST WHEAT

"Kansas grows the best wheat in the world." Will this boast again be true, as it was during the twenties? Almost always a leader as far as quantity of the bread grain produced was concerned, Kansas based its slogan on fact, as farmers, grain men, and millers acknowledged in those days.

Came the dry early thirties and Kansas, like all the midland grain States, was fortunate if it produced any appreciable quality or quantity in wheat. Then came the big push for production in the years before and during World War II. Kansas lost its claim to fame for growing the best wheat in the world.

NORTH DAKOTA MOVES UP

Generally speaking, the more prolific the variety the lower the quality. And the United States wanted wheat—in quantity. The Sunflower State's millions of acres ideally adapted to wheat production were seeded down to the borrow pits along the roads. The weather pattern changed and assisted in the bountiful harvests.

For 20 years, then, Kansas didn't grow the best wheat but it grew the most. More than any one other State in the Nation. In some years the expanse of flatlands produced one-third of all the wheat grown in the Nation. Now Kansas appears about ready to drop from that rank for the first time in two decades.

North Dakota is the candidate most likely to succeed to the top rung occupied so long by Kansas. And Montana has a good chance of beating out the long-time champion for second. On the basis of the June 10 crop estimates by the Department of Agriculture, North Dakota's wheat yield this year will be 105,629,000 bushels; Kansas' 101,680,000. Montana is in third for the Nation on the basis of the estimate with 98 million bushels in prospect.

With 1957 the best growing year since 1952, why should Kansas fall off its perch? The experts say it's the Sunflower State's heavy participation in the soil bank. Weather always is a major factor in wheat production but these observers point out that with exception of the far western section of the State, fall planting conditions (the Kansas crop is practically all winter wheat planted in the autumn) excelled—or at least were as good—as any of the 3 or 4 previous years.

And there is no doubt that the spring growing months this year were the best since Kansas produced its all-time high of wheat, 307 million bushels, in 1952. So the answer apparently is the soil bank.

PERCENTAGES VARY

Kansas was allotted 10,593,958 acres by the USDA for planting the 1957 wheat crop. At the same time 37,711 acreage reserve agreements were being signed by farmers on 4,260,007 acres of land to be put in the soil bank. That is 40.2 percent of the total amount of all the land allotted to Kansas for wheat production.

The Government's crop experts point out that not all the 4-million-plus acres were taken from wheat production but they agree that practically all of it was. That soil banking land makes for a fairly ripe harvest itself is shown in the Agricultural Stabilization and Conservation office figures. The total maximum aggregate payments for the 4,260,007 soil bank acres is $79,406,680, according to the State ASC office in Manhattan, Kans.

Although the statewide average of banked land to that allotted for wheat is roughly 40 percent, there are numerous heavy wheat growing counties where the percentages run considerably higher. Gray County in the high plains of western Kansas was allotted 208,495 acres for wheat. It had 164,794 in the bank—79 percent. Several others are in the 70 percent bracket.

The percentages vary widely from county to county, with Sumner, in the south central section, always either the leader or one of the top ones in production. That county has only 11 percent of its wheatland in the soil bank.

CROP RISK AVERTED

But for the 10 top wheat producing counties, with a total of 1,980,772 acres allotted for wheat, there are 979,307 in the acreage reserve for a percentage of 49. The reason for the wide variance of participation in the soil-bank program is directly traceable to last fall's weather—and weather at seeding time has a heavy bearing on the next harvest season's prospects.

The young wheat plants attain a few inches of growth in the fall and their root formation is pretty well determined then. During the severe winter months, the plants are dormant, as is grass, and with the spring they resume growth toward the eventual harvest in early summer.

In the far western part of the State, fall of 1956 was dry—desperately so; another in a series of drought years. To the farmers in the region prospects didn't appear that they would make back their seed if they sowed wheat. Whereas they might have gambled in the previous years, in 1956 they had the soil bank.

Since the days when Mennonite immigrants from southern Russia introduced Turkey wheat to the State 100 years ago, Kansas has been able to produce the grain in huge quantities and of good quality. Demand for production made it more profitable to plant varieties for bushels. The high protein, hard wheats went by the board. Since World War II no small amount of Kansas wheat has been undesirable for milling.

States such as Nebraska have stressed durum varieties that were snapped up at a premium by the mills for their best flour and other products. In some areas of Kansas the farmers are returning to similar varieties. The research facilities at Kansas State College of Agriculture in Manhattan and its experimental stations throughout the State are doing more and more to develop and improve the hard varieties which are more resistant to the many diseases that attack the better bread grain.

Kansas State, with the only milling industry degree available in the United States, feels it has a heavy stake in promoting the swing back to quality on the grain producing acres of Kansas. Research too is proving that good wheat can be almost as prolific as the less desirable.

If so, Kansas may well find itself being able to boast once again that it grows both the best and the most wheat in the world.

Teaching Self-Reliance

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. AVERY. Mr. Speaker, the following article appeared in the Gas Sector, the official publication of Capitol Post No. 1, the American Legion, Topeka, Kans. This very outstanding post is the home of two former national commanders of the American Legion—Ralph T. O'Neil and Harry W. Colmery. I cannot improve upon the excellent and constructive thoughts presented in this article. I join with the author of this article in commending the American Legion in their child-welfare program for teaching self-reliance to our children. This article merits the attention of all Members of Congress.

The article follows:

TEACHING SELF-RELIANCE

The American Legion, which has been a consistent leader in child welfare for more than 30 years, is kicking around a new idea in youth training, which this newspaper believes has lots of merit. We hope the American Legion can crystallize its thinking into a practical project—but it will call for a lot of cooperation on the part of parents and teachers.

The idea is that American children at all age levels should be taught the pioneer virtue of self-reliance. In other words, the American Legion believes much good would come if children were taught to do things for themselves—to solve their own problems through their own efforts and thinking. It would certainly be a good antidote for the growing trend to pass the buck to our Government on every problem that besets an individual's life.

Self-reliance based on hard work, thrift, and initiative is on the decline in these modern days. Life has become too easy for most of us. We are living in prosperous times. Credit is lavish. Most of us have got into the habit of not denying ourselves any luxury that is within reach at nothing down and so much per month. Frugality has given way to abandoned mortgaging of the future. If things go wrong, there is always the clamor for the Government to step in and solve all problems.

Our children are growing up in this happy-go-lucky environment. They are denied few things that they want. Too many decisions are made for them. They find it unnecessary to plan for themselves. If junior wants the family car for an evening date, he expects dad also to cough up the money for gasoline and expenses—and usually gets it. Raising our youth into a notion that somebody owes them a living isn't conditioning the yougsters to stand on their own feet

and to cope with the inevitable frustrations of adult life.

Our forefathers developed the character to take all difficulties and obstacles in their stride. If they hadn't been self-reliant they would never have been able to wrest a living—and build an empire—from a wilderness.

Let's face the fact. We are raising a generation that is more and more vulnerable to the blandishment of a welfare state, more and more susceptible to swapping their rights and freedoms for messes of benevolent handouts from a paternalistic Government willing to relieve the individual of his personal responsibilities and decisions.

We commend American Legion thinking on teaching self-reliance to our children, to all parents and teachers. A good place to start is to require junior to earn his own gasoline and expense money when he wants to borrow the family car.

Let's get back to standing on our own feet. Let's throw away some of these Government crutches, or we will eventually lose the ability to walk like free men.

The place to start is with junior at home and in school, and by good example.

Mr. Wilde's Philosophy

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. MAY. Mr. Speaker, the people of Connecticut can well be proud of the recent discussion of the possibility that Mr. Frazar B. Wilde was being considered for the post of Under Secretary of the Treasury.

Mr. Wilde possesses one of the outstanding financial minds in the United States today and it is most regrettable that he has said that he is not available for this position.

I feel it most appropriate, Mr. Speaker, to place in the RECORD at this time an exposition of the philosophy of Frazar B. Wilde, which I believe deserves the consideration of the Members of the Congress as well as the people of this great Nation.

MR. WILDE'S PHILOSOPHY

Frazar B. Wilde, president of the Connecticut General Life Insurance Co., says he was one of the several men who were asked whether they would be available for nomination as Undersecretary of the Treasury. It is understandable that his name would come up in Washington when the filing of this important post was being discussed.

Mr. Wilde is a veteran fighter against inflation. With rising Federal and State budgets, a reocrd cost-of-living index and a gradual but steady increase in per capita income, the United States is in need of some kind of protection against sudden deflation.

Five years ago Mr. Wilde contributed a guest editorial for this page, Money and Inflation. Here are some quotations from it, which economic developments since it was published make particularly apposite:

"If, somehow, the dollars all of us have are doubled overnight, we shall be no better off. The supply of things we buy with these dollars will not have increased. Prices will rise and we shall be able to buy no more food, clothing, cars, or houses than before.

"The production of our country in 1941 was estimated * * * to total $126 billion, while in 1951 the comparable figure will be about $325 billion. [The figures for 1951 had not been announced in January 1952 when this editorial was published.] These figures seem to indicate that we now have 2 to 3 times the quantity of food, clothing, automobiles, etc., that we had in 1941. Common experience indicates that this is not true. * * * These national product figures are deceiving. Our total production * * * has not increased to the same extent as our dollar measurement of it. * * *

"Inflation not only distorts out statistics, but it is cruel and unjust to those who live on fixed incomes or whose incomes do not increase as rapidly as prices. Part of the inflation difficulty was hard to avoid, but much of it need not have happened. Why did it happen? Because too many of us have not tried hard enough to understand what inflation really is, what its causes are, and how to prevent it, and consequently we have not given our representatives in Washington the guidance they need. * * *

"The best way to prevent (inflation) or to cure it is to increase production, and this we must do to our utmost. In a rearmament economy, however, this alone cannot lick the problem because a great many of the goods we produce are for war purposes. Therefore, if we are to maintain the buying power of the dollar, we must attack the other side of the problem. We must, as a group, cut our spending. As individuals we can and must spend less and save more.

"On the national front we can urge our representatives to insist upon better fiscal, credit, and debt management policies. What do these terms mean? Essentially, that Government expenditures be maintained at a level which will be equaled by income and that the amount of credit used by us as consumers be strictly rationed.

"Direct controls may be temporarily helpful * * * but they cannot be successful for long in restraining basic inflationary forces. Furthermore, direct controls long continued produce distortions and are not consistent with the maintenance of a free, democratic society. If we are to achieve the dual goal of adequate rearmament and sound money, we must do it the hard way."

"Rearmament" has now been replaced by "defense" as a term for the reason for military spending. Except for that slight change, Mr. Wilde's editorial of 1952 might have been written yesterday.

The American economy is still basically sound, but it needs firm direction. Mr. Wilde is an able, experienced financier and economist with a conservative attitude toward spending of all kinds, public and private. It is easy to understand why his name came up.

The Late S. Homer Covey

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. WRIGHT. Mr. Speaker, I should like to pay homage to the memory of one of Texas' truly outstanding citizens. I refer to the tragic passing last week of my good friend, S. Homer Covey, of Fort Worth.

We are all here on this earth for an extremely short time, the mere flicker of an eyelid in the broad sweep of history. Most of us, I fear, leave few lasting contributions as memorials to our efforts. Occasionally, however, a person emerges whose life was a selfless effort expended in behalf of his church, his neighbors, his community, and his country. Such a person was Homer Covey.

His great contributions to Fort Worth and to Texas insure that his memory will shine on untarnished for many years, and it will take redoubled efforts of a great many lesser men to compensate for the loss his death will bring to southwestern civil and religious endeavors.

Our feelings at this time are well summarized in a recent Fort Worth Star-Telegram editorial, and it is with deep regret and profound respect that I call this editorial today to the attention of my colleagues and the American people.

The editorial follows:

S. HOMER COVEY

Few men have left a more impressive calendar of civil and religious achievement than S. Homer Covey, who died Saturday after a long illness.

Mr. Covey, who rose to success from lowly origin as a farm boy in central Texas, summed up his career in his statement to a Baptist preacher in Dallas that "you've only got two more moves to make—to Fort Worth and to heaven." When Mr. Covey sold out his business in July 1955, he planned to devote all his activities to civic and religious work, but illness frustrated that plan.

High spots in a fruitful career were three terms as president of the Fort Worth Chamber of Commerce, the only instance of that recognition in this city; the Exchange Club Golden Deeds award for 1952; and the presidency of the Baptist brotherhoods of Tarrant County and Broadway Baptist Church. No civic cause in his community lacked his liberality and active participation.

His answer to commendation for that service was that he had been honored "for simply doing what I think people ought to do." Duty thus was to Homer Covey a privilege. His cheerfulness was a tonic to his associates, and his example an inspiration to many. His teeth-rattling handshake was the trademark of a citizen who found so much in life by giving so much to others and to worthy causes.

Tyranny: Where To Look for It

EXTENSION OF REMARKS
OF
HON. RUSSELL W. KEENEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. KEENEY. Mr. Speaker, under leave to extend my remarks, I would like to include an address given by the Honorable Lowell B. Mason, former member of the Federal Trade Commission, to the 85th Republican Club. His wealth of experience in Government service eminently qualifies him for keen observation and I recommend his address for reading to the membership of the House.

The address follows:

ADDRESS OF LOWELL B. MASON TO THE 85TH REPUBLICAN CONGRESSIONAL GROUP, SPEAKERS' DINING ROOM IN THE CAPITOL, WASHINGTON, D. C., JULY 24, 1957

I have not been able to find a good account of just what a Congressman must do. A search at the Library of Congress on this subject uncovered six speeches on What Makes a Good Congressman, but all of them

were copies of a single eulogy delivered in 1916 on the retirement of Champ Clark. As the speeches were delivered 4 or 5 years apart, no one caught on to the repetition.

Of course, there is plenty of material on how to get elected and no one—but no one—gets more advice on pending measures than you distinguished Members of the Federal Legislature. Yet, in spite of all this, your oath of office is completely devoid of directives, instructions, or outlines as to how you should support the Constitution. Once you are sworn in you may go to bed and pull the covers over your head for 2 years, with no one to command you otherwise.

However, Professor Dexter, of MIT, points out in his recently published thesis, Congressmen and the People They Listen To, this fascinating thing about your job: "No matter if you work 24 hours a day, there is too much legislation for any Congressman to pay attention to most of it." Then there is the personal service for constituents, which must make great demands on your time.

This is necessary and important for, "popular impressions to the contrary, a fair proportion of those services involve rectification of injustice which no one but a Congressman can or will do, to eliminate." This means that what you do must be a matter of choice, for none can do all that his constituents want done.

Undoubtedly, many of you allocate a great portion of your time to fighting governmental tyranny.

Of all the duties pressing upon the shoulders of a Congressman, I believe there are none so important today as that of protecting the people of his country against tyranny.

In the hopes of reducing your time spent in that field and perhaps to increase your efficiency I respectfully offer a few rules of thumb on where to look for tyranny and how to quickly recognize it in its subtlest form.

In the first place, we must stop gloating over how much better off we are than other people.

You may remember Dickens' description of Mr. Pecksniff as he sat with his two daughters, Merry and Cheery, inside the stagecoach en route to London one cold, wintry day. Mr. Pecksniff observed that the Lord in His infinite wisdom, provided seats outside as well as inside the stagecoach so that those who were fortunate enough to be inside could better appreciate the warmth and comfort of their own lot.

Seth Pecksniff was a sanctimonious old rascal and I don't mean to suggest we consider our own good fortune only when comparing it to Hungary's slavery.

But while it is nice to be satisfied with our Government I doubt if we should be content about it because the horrid question keeps recurring—"Are we in America actually riding on the inside of the coach of liberty, and if so, for how long?"

John Lord O'Brian, in his National Security and Individual Freedom, sounds the warning of "a constant trend in governmental policy which is in conflict with our traditional standards of justice and with the fundamental principles of American fair play."

Listen to Herbert Hoover last August 21:

"In our generation we have seen mankind's hope of freedom threatened * * * by * * * the spread of a host of new ideas dangerous to free men.

"* * * Among these are the ideas of * * * centralization of government away from men's control * * *.

"Today the greatest issue in America and all mankind is the encroachments of Government to master our lives."

The answer to these disturbing thoughts lies not in gloating over the protections to liberty our ancestors left us, but in a serious and perhaps tiresome audit to see how many are being carried on our books as assets which we really don't own any more or which are heavily mortgaged without our knowledge.

We should be fed up with all this bragging about freedom of speech, freedom of worship, freedom of assembly, to petition Congress, and the other freedoms that are on everybody's tongue today. We might as well brag about freedom from the guillotine, from the farming out of taxes, freedom from the ducking stool and the stocks.

Let's get up to date. The old tyrannies, at least in the United States, are long gone. Nobody quarters troops in our homes in times of peace. In fact, today's tyrannies cannot be identified by any of the outward earmarks that made yesterday's tyranny so easy to recognize.

I wish we could mount all tyranny on a black horse and all liberty on a white one. Unfortunately, the battle is not always between bad and good. It is often between good and good, with the choice resting not on goals which may in both cases be the same, but on the route taken to achieve them.

It is the route you have to watch, so you can save a lot of time knowing where to look. This involves the applictaion of a very simple rule that I have been expounding for the last dozen years.

Everybody knows Adam Smith's law "Competition is the Life of Trade" and Gresham's law "Bad Money Drives Good Money Out" then there is the law of "Supply and Demand" and the law of "Diminishing Returns" these need no explanation. Only recently the London Economist presented a new law called Parkinson's law. Briefly, Parkinson's law is that bureaucratic work expands so as to fill whatever time is available. This law was evolved by a British civil servant, but recently the National City Bank of New York applied it to the increase of Government workers in our own country. It submitted figures from the National Bureau of Economic Research which found that between 1900 to 1950 the total labor force arose about 125 percent, while the number of Government employees increased almost 500 percent. Today 1 out of every 8 works for the State compared with 1 out of 25 back in 1900.

This means in Federal bureaucracy alone, we have 2½ million employees.

How can a Congressman survey the acts of 2½ million Government employees in his search for tyranny? The answer is very simple—by a series of eliminations.

But first: We cannot read national significance into every petty injustice imposed on a man.

The world is full of injustices. People are always getting thrown in jail who don't deserve to be there, and the streets are full of rascals who should be imprisoned but aren't.

As a matter of fact, a study of the administration of criminal law would be about the most unreliable and misleading method that could be used to get a true barometric reading of a country's trend either toward or away from totalitarianism.

Russia during her worst period of militant communism treated those charged with crimes of violence and offenses involving moral turpitude with tolerance and circumspection. On the other hand, those accused of violating the State's political economic commands were sentenced to death or exiled to Siberia without any semblance of trial as we know the word here in America.[1]

It is my opinion that the most effective way totalitarianism can ever be achieved is through complete governmental control of the common everyday acts of all people—not the extraordinary uncommon indiscretions of the few. What field of activity concerns nearly everybody? Business trade and commerce, of course.

It is my thesis that court decisions are being quietly built up today in the world of commerce which can be used as precedents in the future to justify and excuse totalitarian tactics in all phases of a man's private life.

An amusing and certainly an up-to-date example comes to mind in your present legislative problem on civil rights. Whether you were for or against the so-called civil rights bill, certainly most of you must have been greatly impressed by the fact that supporters of the bill urged that there are many precedents setting aside the right of trial by jury.

But suppose you wished to set aside any other judicial concept firmly rooted in our Anglo-American system of justice. For instance, (1) that every man is presumed innocent until proven guilty, (2) or the statutes of limitations which prevent a man from being charged with offenses dating so far back that he would be unable to marshall testimony in his favor, (3) or prohibitions against ex-post-facto trials, that is, Congress may not legislate a man into jail, (4) or against conviction by hearsay, (5) or the requirement that findings of facts against a man must be made on legally acceptable evidence, (6) or the right of everyone to have his day in court, (7) or the prohibition against prosecutors as judges in their own cases.

These and many other fundamental concepts of Anglo-American jurisprudence are the breath of life in America.

I shall not burden you in this short discussion with a citation of the administrative law cases approved by the courts which give precedents for the violation of everyone of these rights. They are in every law library in the country, if you care to check. You will find these precedents established in a very narrow orbit of Government agencies dealing with the relationship between business and the state, rather than in the relationship between persons and the state, as Senator JOSEPH C. O'MAHONEY so cogently pointed out in the Senate last Tuesday and your own Congressman RUSSELL W. KEENEY in the House the month before.

I'll give you precedents by page and docket in administrative law decisions in business cases wiping out and setting aside every one of the fundamental rights I have enumerated above. Using them you may do anything you want to do to people's private lives.

Where do you find them?

Don't bother to look for precedents justifying tyranny in those agencies of Government which are authorized to use definite means to accomplish definite ends such as pumping water, delivering mail, hauling garbage, collecting taxes, building streets, and caring for the sick. You may find favoritism there. Veniality? Maybe. Waste? Probably. But tyranny? Forget it.

Tyranny comes only when the agency of Government is brought into life under such a broad statutory command that it not only invents the means by which it accomplishes the legislative goal, but because the legislative aim is so broad, the agency often shapes

---

[1] Acts against economic orders of the Soviet Government are known as counterrevolutionary crimes. Under section 46 of the Criminal Code a distinction is made between these offenses and "all other crimes." For economic offenses the court may not reduce but can increase penalties up to death. For "all other crimes" the courts may reduce the penalty but may not go above a certain specified maximum.

Under section 58 of the Soviet Code, "any act intended to weaken * * * the basic economic * * * conquest" of the state falls within the first category (the Soviet Union—Vladimir Gsovski).

its own goal to fit its own end. Here's where Mason's law comes in. Parkinson's law says bureaucracy will arrogate to itself all employees available, under the budget allowance regardless of the limitation of the task. Mason's law holds that bureaucracy will arrogate to itself all power available under a statute regardless of the limitations against tyranny in the Constitution. This it will do so quietly and unobtrusively through decisions at the lowest rung of the judicial ladder where the issues seldom meet the eye of the public. How many people ever see a cease and desist order of a quasi-judicial commission except the few affected by it? As Biencourt points out in The Coming Caesars:

"Americans will accept immense, almost autocratic power over them so long as they do not have to see it in a transcendent authority. * * * What they will always seek to cut down is not effective power but its awe-inspiring character."

There is nothing very aweinspiring in a minor agency's quasi-judicial decision, nor does it publicly appear to have transcendant authority, but:

"Through the gap thus opened between appearance and reality, the coming Caesars will march in if left free to do so."

That old and trite saying, "Constant vigilance is the price of liberty" needs amendment. It takes more than vigilance—it takes the vigilance of those who know where to look and can do something about it—you—the elected representatives of the people. Otherwise it will be as the Times put it:

"From remonstrances despised, from grievances treated with ridicule, from powerless men oppressed with impunity and overbearing, and tolerated with complacence, springs the tyrannical usage which generations of wise and good men may hereafter perceive and lament and resist in vain; hence the necessity of denouncing with unwearied and even troublesome perseverance a single act of oppression. The country has allowed it, and when it is at last provoked to late indignation, it finds itself gagged with the record of its own ill compunction."

This quote is not from the New York Times. It's from the London Times of 1846. It is an old forecast but more valid today than a century ago.

Oil Industry Should Hike Crude, Refined Oil Prices

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following newspaper article which appeared in the Tulsa Tribune, Tuesday, July 30, 1957, entitled "Oil Industry Should Hike Crude, Refined Oil Prices," by Andrew M. Rowley:

OIL INDUSTRY SHOULD HIKE CRUDE, REFINED OIL PRICES

(By Andrew M. Rowley)

The petroleum industry should have increased prices of crude oil and refined-oil products effective July 1. The amount? Small, probably between 5 and 10 cents a barrel on crude oil. But the price should have been advanced. This dispite the fact Senator O'MAHONEY still contends he will start an investigation of the increases in crude-oil and refined-oil prices last January.

In this column of last January 28, headed "The Reason for Investigations: If Oil Handled Increases as Others Do, Congress Wouldn't Bat an Eye," we urged a new policy in the matter of making price adjustments for crude oil and refined oil products; that is a new policy as far as the oil business is concerned, but not new for other industries. We urged that oil companies do as the steel industry and other do—when wages are increased, announce prices of products must be increased at the same time and put increased prices into effect.

We pionted out that steel prices were increased 4 times during the period crude oil prices were raised just once, but Congress started investigating the petroleum industry on that one advance while nothing was even said about the 4 substantial raises in steel prices.

The reason, we said, was that in advance of decisions of wage increases, the steel industry announced any increase in pay for workers must be followed by higher prices for steel. So, people expected the raises in steel prices when they were announced—and they were made effective the very day the wage increases went into effect—so no one was surprised and no one complained. Not a peep was heard from Congress.

But, when the petroleum industry raised prices of crude oil last January followed by a 1 cent a gallon increase in gasoline prices—the first crude price raise in 3½ years and only the second in 9 years—numerous bills were introduced into Congress immediately to investigate the whole oil business. During that period between crude price raises, steel prices, a most important factor in oil industry operations, had gone up substantially 4 times and pay for oil industry workers had been advanced 3 times.

Wages in the steel industry go up and prices are advanced immediately and this happens every time there is a hike in pay for steel workers. But the petroleum industry is investigated when it raises prices once after 3 pay hikes and 4 raises in prices of one of the principal items in its operations.

We pointed these things out in the column of January 28. The American Petroleum Institute had that column reprinted and sent reprints to all members of the Oil Information Committee throughout the country.

We feel the column influenced, to some extent, action of refiners in June when they raised wholesale prices of gasoline about two-tenths of a cent a gallon, giving as the reason the 6 percent increase in pay granted workers as of May 1.

Anyway, this was the first time we can remember when a pay raise was given as reason for an advance in oil prices.

Weeks ago, the steel industry announced that if wages to workers were advanced, prices of steel would have to be advanced. That was the usual policy of the steel industry, to make such an announcement. True to form, and as had been the case every other time wages were hiked, the steel industry raised prices of steel, effective July 1, immediately following the raise in pay to workers.

Everyone, including Members of Congress, expected the increase in steel prices, so nothing much has been said about it and Congress has not started any investigation of the steel industry.

Oil company executives should have announced at the time steel made its announcement, that any increase in prices of steel must result in an advance in crude oil and refined oil prices because steel is one of the biggest costs in petroleum industry operations.

The advance in steel prices, on oil industry tubular goods and the types of steel used in the oil and gas business, averages $9.26 a ton. The industry uses approximately 4 million tons of steel products a year. That means an increase in costs of just this one item of $37 million a year.

The 6 percent increase in pay to oil workers averaged about 4 cents a barrel in crude oil production. The industry should have raised crude oil prices by that amount when the wage hike went into effect May 1.

As we said in the column of January 28 "The petroleum industry should raise its prices more often, not just as a policy, but as often as increased costs of operations warrant higher prices. It is silly for an industry to go 3½ years absorbing greatly increased costs of operations without raising prices of products."

We have been encouraged in our stand by the attitude of Robert L. Wood, president of the Independent Petroleum Association of America. In the July issue of the IPAA monthly, he says: "The raise in steel prices follows immediately the recent increase in oil industry wages. These two developments alone should be reflected in an upward adjustment of about 5 cents per barrel in crude oil prices which have consistently lagged behind increasing costs since World War II."

The Aluminum Company of America announced today an increase in prices of aluminum of 1 cent a pound effective August 1 when wage increases to workers goes into effect. The wire story says "The hike in aluminum prices was expected."

Oil men, take note.

Wisconsin—A Great State in Which To Live a Happy Life

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. WILEY. Mr. President, the Nation's old-age and survivors insurance system is a great instrument of justice for tens of millions of Americans.

There are, however, inadequacies in it; and it is my hope that next year we shall still further improve the social security program.

Naturally, it is a source of pride to me that my own State of Wisconsin was a pioneer in providing for those who might not be in a position to look after themselves.

Wisconsin was the first in the Nation to provide for aid to the disabled—in 1945.

Going back further, Wisconsin was the second State in the Nation to provide for old-age assistance—in 1925.

Together with a number of other States, Wisconsin was the second in the Nation to provide aid to dependent children—all the way back in 1913.

And, together with other States, Wisconsin pioneered in the program of aid to the blind—back in 1907.

Wisconsin has always regarded its greatest resource as its people.

In this connection, I was pleased to note a very splendid report on the part of Mr. Thomas J. Lucas, director of the division of public assistance, of Wisconsin's State Department of Public Welfare. The report is entitled "Wisconsin

Travelers on Life's Highway—Encouraged by Your Help From Day to Day."

The report shows how Wisconsin helps the inexperienced travelers, such as dependent children; the aging travelers; sightless travelers; infirm travelers; and others, so as to enable them to realize for themselves their true birthright as Americans.

I send to the desk excerpts from the report. It represents a summary of services for the biennium period from July 1, 1954, to June 30, 1956.

I ask unanimous consent that these excerpts, preceded by a list of the able persons who serve in the Division of Public Assistance, be printed in the Appendix of the RECORD.

I hope that other States will continue to be inspired by the pacemaking of Wisconsin in the advancement of their human resources, as well.

There being no objection, the list and excerpts were ordered to be printed in the RECORD, as follows:

STATE DEPARTMENT OF PUBLIC WELFARE, WILBUR J. SCHMIDT, DIRECTOR—DIVISION OF PUBLIC ASSISTANCE, THOMAS J. LUCAS, DIRECTOR, CYNTHIA L. STOKES, ASSISTANT DIRECTOR

SOCIAL SERVICES

Field administration: Joseph A. Kexel, supervisor.

Administrative reviews: John Norby, supervisor.

Staff development: Joseph O. Wilson, supervisor.

Medical services: Edward Lawver, supervisor.

Standards and procedures: Aimee Weinstock, supervisor.

Institution program services: C. Raymond Bowers, consultant.

Audits and accounts: Joseph E. Bires, chief accountant.

Administrative services: Robert C. Graewin, administrative assistant.

Statistics: Chester J. Best, chief statistician.

Legal: William A. McNown, chief examiner.

District supervisors—public assistance: Lester Fry, Ashland; Lyman C. Haunschild, Eau Claire; Russell A. Duket, Fond du Lac; Frank L. Fieschko, Green Bay; Michael A. Casey, La Crosse; Robert S. Baldwin, Madison (1); Kenneth W. Kringle, Madison (2); George McDowell, Milwaukee; Robert J. Walsh, Rhinelander; Robert Andrews, Stevens Point.

Services to the blind: E. Leonard Hoskins, supervisor.

Social services: Philip Dumbleton, supervisor.

Business enterprises: Douglas I. Segaard, supervisor.

Vocational rehabilitation: A. H. Kummerow, supervisor.

Employment counselor: Carl Williams, Milwaukee.

Home teachers: Mrs. Doris Baer, Ashland; William P. Carney, Green Bay; Richard J. Hunt, Madison; Gloria M. Ristow, Milwaukee; Gordon Haldiman, Milwaukee.

Vocational rehabilitation counselors: Lester Loken, Eau Claire; Omar L. Miron, Green Bay; G. R. Maki, Madison; Francis F. Awe, Milwaukee.

THE INEXPERIENCED TRAVELER

These are our children, upon them rests the future of Wisconsin and the Nation, for them, even under normal conditions, the road ahead is not always a smooth one, loss of the father's support because of death, divorce, incapacitation or imprisonment makes traveling the more hazardous.

A TYPICAL STORY

When you are 7 years old it is hard to understand why your father must die. Death is difficult even though sickness has been in the home for a long time.

Jimmy tried to comfort his mother but there wasn't much he could do besides helping with the housework, which he had been doing ever since his father had been brought home from the hospital 2 years before with both legs paralyzed following a severe automobile accident. There had been no insurance and the hospital bills had drained the family savings. Jimmy knew his mother was upset because she cried often, especially when there was little food in the house or the rent was due. She tried working for several weeks, leaving Jimmy and his sister with a neighbor in the afternoon. But her shoulder hurt so badly that she had to give up the work. The doctor called it bursitis and warned her to rest as much as possible.

There followed days when Jimmy and his sister scarcely ate unless neighbors brought in food. Their shoes wore out. Their coats became threadbare. Then one afternoon after school Jimmy came home to find a strange woman talking to his mother. He heard only the last few works as the woman was leaving—"They'll pay it back some day by being good citizens." Soon after, monthly checks arrived. Jimmy and his sister got the clothes they needed. They began to eat more vegetables and fruit and milk.

Jimmy grew into sturdy adolescence, made the school honor roll. After graduation he worked in the town's factory and his sister worked in the local department store, both helping to support their mother. Thus came an end to the monthly check that had made it possible for this once-forlorn family to remain together, giving each other strength and security.

THE CLIMAX

During June 1956 there were 21,185 children like Jimmy, living in their own homes or in the homes of relatives, receiving financial assistance in the form of aid to dependent children at an average of $145.09 per family per month—including payments to vendors for medical, hospital, dental and other services. The average monthly money payment amounted to $129.59 per family and $35.49 per person. In many instances the payments included the adult caretaker and often the incapacitated father.

However, 1,645 children were even more unfortunate than Jimmy in that they had no parents or relatives to provide a home for them, making it necessary for them to be placed in foster homes at an average cost of $55.14 per child per month. The help given to these children came at a crucial time, at a moment when the molding of these children's lives might have taken distorted shapes. The money was important in itself, the total cost for the biennium amounting to $27,195,899. But, beyond that, it showed that someone cared for these children. Eventually, they too, will grow into adults, taxpayers, citizens, paying back to their State and Nation many times over the aid they are now receiving, not alone in money but much more in good citizenship and enlightened participation in community life.

EDUCATIONAL AID

Jimmy was on the high-school honor roll, the type of student who would have benefitted from a college education. It is possible that his earnings were insufficient to permit even small monthly savings with which to continue his education. It is possible, and very probable, that he was not aware that the State legislature has provided funds from which loans may be made to needy and qualified Wisconsin boys and girls who would do otherwise be unable to continue their education.

During the biennium, loans were made to 264 students in various colleges in the State to the total amount of $70,899 and an average of $268 per student. Without such loans, these young boys and girls would not have had the opportunity to prepare themselves for such professions as medicine, engineering, and public welfare, in all of which the need for workers is so great at this time. That this temporary financial assistance is not only appreciated but paying off in dollars and cents is evidenced by the fact that during the biennium, former students who are now practicing their professions, paid back into the State treasury a total of $50,786 as principal and $5,029 as interest.

THE AGING "TRAVELERS"

These are our aged citizens who yesterday helped to build a better State and Nation. Now some of them are ill or in need, without friends or relatives able to help them as they approach the end of the road. It is well that we provide for them a safer and happier highway.

A TYPICAL STORY

Mrs. Scott, in her early seventies, is a widow. Shortly after her marriage her husband bought land which they cleared for farming in a central Wisconsin county. They were respected and active citizens in their community. Mr. Scott served in various township offices and at one time was a member of the county board. Two children were born to them but died in childhood.

Over the years the Scotts improved their farm buildings and bought more land. Following several years of poor health and low income, a mortgage on the farm was foreclosed. They moved to a nearby village and Mr. Scott worked at odd jobs while his wife did catering and housework for families in the village.

At 66 years of age Mr. Scott applied for old-age assistance since he could no longer work because of health reasons and his wife's earnings were insufficient to meet the medical expenses. When Mr. Scott died, his wife was 60 years old. She moved to a single housekeeping room to cut down expenses and continued catering and part-time domestic work for various families. She added to her income by cooking at church suppers. When she was 68 years old, she applied for old-age assistance because she was no longer able to do hard and regular work. She is in fairly good health now and still interested in her church activities and keeps her social contacts with many long-time friends in the community.

THE CLIMAX

During the month of June 1956, 41,400 persons were receiving old-age assistance. The average grant per person was $67.43, and the average monthly money payment was $53.18 per person. The total cost of the program was $65,329,744 for the biennium.

COUNTY HOME CONSULTANT SERVICE

The population of Wisconsin has doubled since 1900, while the number of individuals 65 years of age and older has quadrupled. About one-sixth of this aged population is found in the county homes or private nursing homes of the State. Many aged persons who have enjoyed an active and vigorous life in their younger years find it difficult to adjust to isolation, economic insecurity, spiritual insecurity and the infirmities of advanced age, thus developing new problems for society. This resultant loss in human and economic resources as well as the emptiness in the lives of many of these senior citizens was recognized by the 1953 legislature which provided for an activity consultant in the division of public assistance to assist county home administrators in planning an activity program.

Recreation has been defined as finding joy in living. In developing planned ac-

ivity based on the emotional and environmental needs of the residents of the county homes of the State, an effort has been made to provide a program offering: a sense of belonging; companionship; pleasure; adjustment to change of environment; security within their environment; a feeling of usefulness and that of being needed; retaining and renewing old skills; stimulating curiosity and a desire to learn new skills; an opportunity to continue and practice the religious faith of their own choosing; to develop opportunities for the residents' expression in social communication.

SERVICES PROVIDED

During the biennium 17 workshops were held to train volunteer workers to enlarge the services and 23 sessions dealing with activity training were offered to employees of county institutions to enable them to do more effective work with volunteers in the activity program in general. The division issues the Oldsters newsletter bimonthly, which contains information on hobbies, social recreation, news about activities within the county homes, and information regarding books and sources of material. It is mailed to all county home administrators, county welfare directors, supervisors, and others interested in the activity program within the county home.

PROGRESS

As of June 30, 1956, 30 of the 36 county homes had availed themselves of the activity program; 15 had definitely planned programs and 24 had programs in the process of development, offering organized activities to enrich the lives of some 2,500 residents; 9 had developed active volunteer groups to aid in offering their residents a more complete activity program. In 3 homes volunteers rendered 9,500 hours of work, bringing happiness to residents residing within the institutions reporting.

THE SIGHTLESS TRAVELERS

Combined with other handicaps or disability, partial or complete loss of vision may be the culminating cause of dependency and the need for society's help and support. With courage and undimmed spiritual vision many individuals have scaled and gone past this surmountable obstacle called blindness. For those in need of aid in satisfying their basic wants and for those of an age and will to venture into the fields of attainment, hence independence, Wisconsin maintains a diversified program of aids and services.

A TYPICAL STORY

Mr. Jones was carefully weeding a small flowerbed as a caller came up to the house and spoke to him. He offered a cheery greeting, calling the visitor by name. This activity of itself does not seem to be unusual except that Mr. Jones is blind. He distinguishes the flowers from the weeds by feeling the leaves and blossoms and recognizes visitors by the sound of their voices.

About 6 years ago, at the age of 56, he lost his eyesight while dynamiting stumps on his small farm. Medical science could do nothing to restore his sight. When medical expenses exhausted his meager savings, he applied for blind assistance. When he first came to the welfare department for help, he was encouraged to carry out his idea of trading his farm for a cottage in the village. He walks to the store and church unaided except for a white cane. A small radio and talking books obtained from services for the blind give him many hours of pleasure.

When a serious illness confined him to a hospital, he worried about the expense until he learned that his medical needs would be paid through the blind assistance program. He is back in his own home, caring for himself, participating in community and church activities, and finding many ways to make his life pleasant and interesting in spite of his lack of sight.

THE CLIMAX

During June 1956 1,112 persons were receiving a grant of blind aid. The average monthly grant per person was $74.05, while the average monthly money payment was $59.43 per person. The total cost of the program amounted to $1,857,211 for the period July 1, 1954, to June 30, 1956.

SERVICES TO THE BLIND—A TYPICAL STORY

Eddie had made his living driving a cab. He had no more than normal worries about supporting his young family of five. But one morning he awoke to a world of persistent haze and stabbing pain in his eyes. His eye doctor told him he had contracted "glaucoma." Like a bad dream, there followed months of intensive treatment and emergency surgery. Medical science did its best but finally he had to face the shattering facts. Eddie had no job, his savings were exhausted and he was totally and permanently blind. It was no consolation to be told that just such a thing could happen to anyone.

Then a lot of things began to happen—good things that Eddie, through his taxes, had helped pay for but which he never knew existed. Through public assistance his family was provided with funds to meet the basic costs of living. He was referred to the Department. Its representative who began to visit him quite frequently was himself blind. It wasn't easy at first, but they talked hard facts about the problems which are faced by others like Eddie. Soon he was being taught many things which made him increasingly less dependent on others. He learned to type and could write letters faster than before. He learned Braille so that he could read. He learned to travel alone about his neighborhood with a white cane. He began to read more books than he ever had before. He found it more pleasurable to listen to a talking book than it had been to read a printed book.

All this was a good start, but Eddie wanted somehow to earn a living again, so he talked it over with people at an agency serving the blind. He found to his surprise that except for the secretaries most of these people were blind themselves. One of them took him into the workshop and showed him a machine which he thought he could learn to run. He could, and he worked there for a month. He realized vaguely, too, that the agency was doing many things during this period to learn his abilities, disabilities, aptitudes, and interests. Then he entered a trades school where he took a special intensive course in the operation of machine tools. All of his training expenses were paid for him and his family's needs were met through public assistance during the training period. A week after completing the course he was offered and accepted a good job as a punch-press operator with a manufacturing concern.

Today, a year after he lost his sight, Eddie supports his family independently on good wages. He is equally independent in his traveling, reading, and writing. For hobbies and interests he bowls in the Blind Bowling League, swims with a group at the YMCA, and has developed new friends all over the country through corresponding with them by tape recordings. His interests and activities, while radically changed, rival those of any normally sighted person. All the services Eddie and his family received were provided through tax funds.

FACTS CONCERNING SERVICES TO THE BLIND FOR THE PERIOD JULY 1, 1954, TO JUNE 30, 1956

Seven thousand nine hundred and twelve contacts were made with 3,606 blind persons for instruction in typing braille, homemaking, crafts, and travel.

One hundred and eighty white canes were distributed free of charge.

Eight hundred and ninety-five talking book machines were distributed as new or replacements, bringing the total to 1,247, or 1 in every 4 blind persons in the State.

One hundred and thirteen persons were trained in trade schools, colleges or on the job.

One hundred and forty-one blind persons were placed in occupations ranging from unskilled to skilled and professional positions.

Two hundred and seventy-three persons examined low-vision aids to determine whether magnification helped them.

Sixty thousand three hundred dollars was spent on these and other services to the blind persons.

Twenty-two State-owned vending machines were operated by blind persons; $490,000 in merchandise sold; $96,600 netted by operators; $4,600 in average earnings per worker.

One hundred and ten blind persons were employed at the workshop; $229,000 in manufactured products sold; $121,636 paid to the blind workers; $13,408 in wages paid to 12 homeworkers, at a cost to the State of $103,600 in maintaining the workshop.

THE INFIRM TRAVELERS

The totally and permanently disabled are a small segment of the total population. However, they require special care and consideration in order that each individual may utilize his limited abilities to the fullest extent possible.

A TYPICAL STORY

Robert M. has required constant and continuous care all of his life. At the time of his birth, 62 years ago, medical science had made little progress in the treatment of cerebral palsy and modern methods of physical and vocational rehabilitation were not available in his case. His mother cared for him until she was 81 years of age and then a housekeeper was employed to assist her. When the mother's financial resources were exhausted, she was given old age assistance and Robert has received disabled aid since the beginning of the program in Wisconsin.

After his mother's death, Robert wished to remain in his own home instead of moving to a nursing home. Robert is mentally alert, has friends in the village and is able to get around town in a wheelchair. A male relative, who is partially handicapped, agreed to keep house and care for him. The caretaker is a congenial companion and a good cook and housekeeper. A home care allowance is provided to supplement the disabled aid payment and this plan enabled Robert to remain in his home community and to continue his usual mode of living.

THE CLIMAX

During June 1956, 1,210 persons were receiving a grant to the totally and permanently disabled. The average monthly grant per person was $102.25 while the average monthly money payment was $65.89 per person. The total cost of the program amounted to $2,572,613 for the period July 1, 1954, to June 30, 1956.

OTHER UNFORTUNATE "TRAVELERS"

These are the people who have suffered some social or economic setback, often temporary in nature, which makes it difficult to go on without financial help. They do not qualify for assistance under any of the social security aid programs. Lawmakers have recognized since territorial days that illness in a family, industrial layoffs, strikes, and other maladjustments of our social and economic system may cause financial reverses. Local public relief for dependent persons has been on our statute books as long as our State has existed.

A TYPICAL STORY

The Jones family is about as normal as most families, but it is larger than many, and

the monthly income just manages to cover family needs for food, housing, clothing, and other items of daily need. Consequently, when the doctor discovered that Joan, the youngest daughter, had leukemia, the whole family was thrown into a state of shocked consternation.

Little could be done for Joan except for a prolonged period of hospitalization and the use of new and expensive drugs in an attempt to halt the ravages of the disease. At first the family tried to carry the mounting expense for medical care by reducing expenditures for other things to a bare minimum, but as the medical bills rose higher and higher and food and clothing supplies grew shorter and shorter, Bill Jones had no recourse but to go to the city to ask for help.

For the 3 months left of Joan's short life, the family's misery was reduced somewhat by the absence of worry about medical bills, and when her suffering was ended by death, the financial burden of the grieving family was lessened by the fact that it did not have a crushing load of debt to make life harder.

THE CLIMAX

During the month of June 1956, 19,928 persons received public financial aid in the form of general relief from Wisconsin units of government. This aid, which averaged $31.06 per month per person and totaled $18,123,641, for the biennium, helped many of the families aided to become self-supporting units in the community.

STATE DEPENDENTS

This term "State dependents" refers to those dependent persons who do not have a legal settlement within any county in this State and who have resided in the State less than 1 year. The granting of relief to such dependent persons is a responsibility of municipalities or counties. Claims for reimbursement for the cost of relief granted to State dependents are filed by the county treasurer.

Prior to 1953, the appropriation for State dependents as provided by the legislature was specified as a "sum sufficient." This assured 100 percent reimbursement to counties for all claims approved.

The 1953 legislature limited the appropriation for the biennium of 1953–55 to $75,000 for each fiscal year, making it necessary to prorate the amount appropriated among the counties according to the amounts due them. For the fiscal year 1954–55, the counties received only 41.74 percent of the amount due them. The 1955 legislature increased the appropriation to $125,000 for each fiscal year of the 1955–57 biennium. This resulted in the counties receiving reimbursement of 76.497 percent of the amount due them for the second fiscal year of this biennium.

For the fiscal year ending June 30, 1955, claims were filed in the amount of $231,862 of which $34,340 was disapproved because the relief granted did not meet statutory requirements of eligibility for reimbursement. The net total due all counties, after deductions for recoveries reported and field audit exceptions, was $192,317.

For the fiscal year ending June 30, 1956, claims were filed in the total amount of $205,678 of which $39,225 was disapproved. The net total due all counties after deductions for recoveries reported and field audit exceptions, was $163,405.

RELIEF TO NEEDY INDIANS

The 1951 legislature provided for the payment out of State appropriation for the cost of relief granted needy Indians residing on tax-free lands. Relief is granted by the county agency designated by the State department of public welfare and pursuant to rules and regulations promulgated by the department.

During the month of June, 1956, 432 persons were receiving relief under this program. The average monthly grant per family was $53.05. The total cost of the program for the biennium was $196,085.

Life's highway—Maintenance costs in Wisconsin, July 1, 1954, to June 30, 1956

Type	Total	Federal	State	Local
Total public assistance	$125,202,825	$45,832,021	$36,269,689	$43,101,1
Old-age assistance	65,339,744	30,156,770	22,808,778	12,364,1
Aid to the blind	1,857,211	586,729	688,325	362,1
Aid to the disabled	2,572,613	817,937	993,703	760,9
Aid to dependent children	27,195,899	10,553,382	9,187,493	7,455,0
General relief	18,123,641	[1] 22,000	524,013	17,577,6
Cost of administration [2]	10,123,717	3,425,203	2,117,377	4,581,1

Economic Conditions in Newton County, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. YARBOROUGH. Mr. President, 7 years of drought followed by 70 days of rain in Texas and the Southwest have driven home to the people the fact that fresh water is our greatest natural resource.

In many areas the people are taking steps to help themselves. The courageous and resourceful people of Newton County, Tex., a county settled early by such distinguished families as the Ragans, the Lees, and others, are taking the lead in east Texas, in order to help themselves. In this forward-looking action, they are opposed by powerful interests.

This fight by the people of Newton County is narrated in the July 25, 1957, issue of the Newton Herald, at Newton, Tex., an independent weekly newspaper.

Mr. President, I have visited Newton County many times. The people there are hospitable, generous, patriotic, and support good government at local, State, and national levels.

I ask unanimous consent that the article entitled "Newton County's Big Question," in the July 25, 1957, issue of the Newton Herald, be printed in the Appendix to the RECORD today.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEWTON COUNTY'S BIG QUESTION

Will the people of Newton County stand together and fight for their right to operate their government, build their economy to the desired level, share in the vast industrial expansion that is taking place throughout east Texas, and the right to live and work in Newton County if they so desire; or will they bow to the desires of the big out-of-county landowners, their hired hands, and political stooges.

This is the big question. This question will directly affect every man, woman, and child now living in Newton County as well as all future generations.

This is a question that should be given a vast amount of consideration from every conceivable angle; it should be discussed thoroughly with family, friends and neighbores and the truth about all angles should be known before a final decision is made by anyone.

In order to bring everyone up to date on what is taking place in Newton County, let's go back some 5 years to the beginning of this crusade that the common people of Newton County are carrying on which has been, we think quite appropriately labeled "Operation Bootstrap."

Some 5 years ago some of the more forward sighted people of Newton County began to talk among themselves concerning the present and future economic outlook for Newton County. All persons were especially concerned over the fact that neighboring counties and cities to the south were experiencing a tremendous industrial growth as well as comparable growth in population and related business, but Newton County continued to show a decline in all of the same.

In order to find out why these things were happening, an organization was formed and a check was made with the Orange Industrial Development Committee, the East Texas Chamber of Commerce, the United States Chamber of Commerce, and other related organizations.

Through these sources it was learned that counties, cities, and communities acquire the things they desire through a cooperative effort in hard work, good planning, and by furnishing the necessary environment conducive to attracting the things wanted and needed, which include such things as electrical power, natural gas, good water, good schools, good churches, adequate transportation facilities, and some other miscellaneous related facilities.

After a thorough study of this situation, it was the conclusion of this organization that Newton County had all of the desired facilities including good water, and that there was an adequate amount of this water if it could be controlled, to take care of any immediate foreseeable industrial growth.

Immediately after arriving at these conclusions an engineering firm was contacted which agreed to work up all necessary plans and specifications and make a feasibility study for projects on Big and Little Cow Creeks. The State Board of Water Engineers were contacted and a feasibility study permit was granted for this purpose, also a bill creating the Newton County Water Supply District was drawn, introduced by former State Representative Robert Patten and passed during the 1955 session of the legislature.

Following this, an election was called to determine whether or not the people of Newton County would approve a bond issue in the amount of $2.5 million dollars to construct dams on Big and Little Cow Creek. The election was held and carried by a vote of 1,492 for and 420 against the bond issue which shows that 77.8 percent of the voters in the county favored the action.

Based on these actions the district board of directors proceeded with the further organization of the district by completing plans for the first dam to be constructed on Big Cow Creek, and secured a permanent permit from the State Board of Water Engineers. They also proceeded on the work of working up final plans on Little Cow Creek dam and to set up their tax structure and issued $750,000 in tax bonds to start the land purchase and work on the dams.

At this stage the fireworks began.

Everyone that is familiar with the sale of bonds, knows that most bond brokers hes

ate to handle the sale of bonds for any organization, if the total issue exceeds 10 percent of the established property valuation. In this case the county valuation, which is based on approximately 10 percent of the real value and which amounted to less than 10 million, was the only guide at the time.

It was decided by the water board, after consultation with a great many people, groups, and organizations in the county that the feasible thing to do was to establish a more equal and higher valuation on all property and lower the intended original tax rate of $1.50 per $100 valuation which would have the effect of making the bonds easier to sell and would also save the taxpayers money by being able to sell them at a lower rate of interest.

For these reasons the higher valuation method was chosen and a fair and impartial valuation was placed on all property and the tax rate for the present outstanding bonds was established at 40 cents per $100 valuation. The board estimated from a study made of the entire structure that a rate of 45 cents per $100 valuation would be adequate to take care of the indebtedness when the full $2.5 million in bonds are sold.

At this stage the big out-of-county landowners stepped in and protested the valuation placed on their land, which will possibly average some $25 per acre. They also refused to pay their taxes and through their local hired hands and stooges began a clamor for a recall election on the bond issue. An ad was run in the Newton Herald advising local people to refuse to pay their taxes. A propaganda campaign was begun throughout the county using statements not based on truth trying to cause dissention and dissatisfaction. After they saw this was not going to work they really began to get worried and decided that maybe they had better use their big guns.

At this stage they had their legal departments draw up a bill and slip up to Austin where the State legislature was in session and through the cooperation of the local representative and senator they tacked this bill on as an amendment to the big water bill without having a public hearing or giving anyone a chance to protest.

The provisions of this bill permit a recall election in a county with a population of over 10,000 but under 11,000 according to the 1920 census if as many as 50 voters sign a petition requesting it. (The large out-of-county landowners have more than 50 employees in Newton County and the population basis is discrimination in its worst form, since there is not another county in the State that the bill fits except Newton County.)

This bill also provides that if the recall election carries, the board of directors of the district will be dismissed or dissolved and the county commissioners court will take over and buy and collect a sufficient tax to pay off the indebtedness incurred by the district. This means that the people will have to pay their money for nothing, and that the big landowners would get their evaluations lowered to the extent that the local people will pay most of the money and the big wigs would continue to dictate the policies under which the county has operated for years, as well as continue to drain all natural resources off without doing anything to help the economy of the county.

These same smart boys also dug up some antique law that was slipped through the legislature years ago and has never been tested, that provides that in a recall election, the people who live in an incorporated city or town can't vote in the election. This law, which must be abided by, would prohibit people of Newton voting in any recall election. The people who live in Newton say that they are a part of the district. They have been assessed for their share of the taxes and have paid these taxes, and any attempt to prevent them from voting is a violation of constitutional rights inasmuch as it constitutes taxation without representation.

The common people of Newton County do not think that the main issue in this battle is taxation. They believe the real issue is their control of local government. It is a known fact by all the people in the east Texas area that for years the big outside landowners, through their local hired hands, have run the whole area just as they saw fit. Now that the people are waking up to this fact and are beginning to demand their just rights, these people are trying desperately to hold on to their dictatorial position and they have shown already that they will use any and every method within their power to do so.

The people of Newton County are banding themselves together and pledging to fight this dictatorial monopoly until they win their freedom to run the county as they see fit for their own as well as for future generations.

The Little Taxpayers League of Newton County is calling for "every man, woman, and child in Newton County to get behind this crusade for freedom movement and let's all pledge ourselves, that so long as God lets us live we will fight for our rights and that we will build our county into a place that we will all be proud to live and a county in which we can all make a living that is on a scale with the rest of our Nation."

The Jury Trial Amendment

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following editorial which appeared in the Newark Star-Ledger on August 1, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EISENHOWER STANDS FIRM

President Eisenhower emphasized at his press conference yesterday his strong objection to any jury trial amendment to the civil-rights provision permitting judges to employ contempt punishment to safeguard the right to vote. The President insisted he is opposed to a jury trial amendment.

There may have been a reasonable argument against contempt powers to enforce school integration and other social phases of the civil-rights bill, but the argument would not apply to the purely political phase of the bill—the safeguarding of the right to vote.

It is the hope of many people that the effective enforcement of the right to vote will ease the way for the realization of other civil rights and make drastic Federal action unnecessary. If, however, the right to vote is frittered away by stalling tactics, the whole civil-rights program will be frustrated.

The right to vote is the basic right, guaranteed by our Constitution but made a dead letter by usage and practice. The courts should be able to act with dispatch if this now theoretical right is to come to full life in the South.

The Play's the Thing

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PORTER. Mr. Speaker, I wish it were possible for each Member of this House to visit Ashland, Oreg., during the month of August. That city of nearly 9,000 is right now one of the busiest spots in the world as residents and summer-long visitors participate in the 17th Annual Oregon Shakespearean Festival.

The 1957 season, which extends from August 1 to August 31, will find Shakespearean enthusiasts coming from all parts of this Nation to southern Oregon. They will have opportunity to view five outstanding productions: As You Like It; Two Gentlemen of Verona; Henry the VIII; Othello; and Pericles, Prince of Tyre. The wise men and women who plan this festival make it possible for those attending to view a different play each evening during the week. Personally, I can think of no finer way to spend the better part of a week, and I hope that it will be possible for me to see at least one of the plays.

The festival predates both the Connecticut and Canadian Shakespearean festivals. Its founder is Angus L. Bowmer. The plays are given in the Ashland Civic Elizabethan Theatre, an exact replica of the theater Shakespeare knew. Staging, costuming, and preplay entertainment are like that of Shakespeare's time. The National Broadcasting Co. carries portions of the festival across the Nation.

This year, 393 years after the birth of Shakespeare, the Ashland players opened their 17th season today with As You Like It. Among the honored guests tonight will be the special representative of Great Britain's Queen Elizabeth, Mr. J. McDonald, C. B. E., British consul for Portland, Oreg. Mr. McDonald was especially designated to represent his Queen by the British Government, through the efforts of Senator RICHARD NEUBERGER.

Mr. Speaker, prime among the outstanding qualities of the Ashland festival is the ingenuity of its supporters. Recently I received an invitation to attend the opening performance, and, regretfully, I had to decline, but I would like to share the wording of the unique greeting with my colleagues at this time:

OREGON SHAKESPEARE FESTIVAL ASSOCIATION—TUDOR GUILD OF THE SHAKESPEARE FESTIVAL

This message greets you well, and bids you to good cheer with William Shakespeare his fellows before the acting of his pastoral-comical play called As You Like It, on the 1st day of August, anno domini MDCDVII. The company is piped to supper in the great Park of Master Corry beside the water in Ashland town at 6 of the clock after midday. A fine dish of roasted meats, hot and hot, is served forth on the green, and new bread buttered, fresh from the oven; sallets of garden greens, jellies, and cheeses and all manner of creams and spiced stuffs for to warm the inward of mankind.

For drink the company shall have the good ale and beer of the countryside, and sweet liquor from the coco plants in the South of the New World.

Steward William Patton must reckon up the partakers of the feast: pray you then, let him know within the week the numbers of your company, and let him have the trifle of 3 crowns or so ($2.50) to reward the service withal. And I heartily commend you to all things merry.

ELIZABETH R.

By our hand on the 8th day of July 1957.

Spain and NATO

EXTENSION OF REMARKS
OF
HON. JOSEPH L. CARRIGG
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. CARRIGG. Mr. Speaker, an exceptional service in the interest of a sensible approach to a strengthening of the North Atlantic Treaty Organization and the buttressing of the position of the United States in the current disarmament talks, now going on in London, was provided by Representative HUGH SCOTT last March. At that time Mr. SCOTT introduced and the House approved overwhelmingly a resolution calling for the admission of Spain to NATO. In light of the fact that the talks are now dragging deplorably—and plus the fact that the President has seen fit to send the Secretary of State to London to bring some order out of chaos—I think it is appropriate to submit here an editorial from the Bethlehem Bulletin, of Bethlehem, Pa.

The editorial follows:

CANDLELIGHTER

With the announcement of a 50,000-man cutback in the United States Armed Forces, the need for beefing up NATO grows more apparent. And that reminds us: Whatever happened to that resolution calling for the admission of Spain to NATO, which was passed by the House last March under the leadership of Representative HUGH D. SCOTT, Republican of Pennsylvania?

In pressing for its passage, Mr. SCOTT pointed out that such a measure would seal the Western defense line from the North Sea to the Mediterranean, that security against the Communists is the overriding mutual problem of the nations of the free world, and that a mutual-defense link with Franco involved no endorsement of his internal political philosophies. He rejected the idea that such an alliance was a bid for help at any price. Rather, he said, it simply recognized the demand of the American people that their Government face the facts of life in a divided world.

The Communists, argued SCOTT, would block any realistic efforts at disarmament and sneer at NATO as a deterrent to war as long as Spain is kept at arm's length by the organization presumably dedicated to the preservation of peace. All in all, Representative SCOTT insisted, the honest acceptance of Spain as a sympathetic ally would cut the cost of Western defense to United States taxpayers, revitalize the sagging spine of the United States as NATO's guiding force, and give Russia a more genuine interest in the disarmament proceedings.

But the Scott resolution languishes in the Senate while the London talks become more desultory, and the glaring weakness in European unity and geographic solidity remains on view for all—and especially the Reds—to see. Why the Senators have failed the administration and the American people in this obvious need is anybody's guess. We hear the inane excuse that since NATO has rocked along without Spain thus far, why stir things up. Others have slyly intimated that Mr. SCOTT introduced the resolution only to ingratiate himself with the White House.

This last explanation won't wash. Representative SCOTT is no coattail rider or sycophant—as Americans, both in and out of politics, should remember. It should be remembered that, in 1948, as chairman of the Republican National Committee, he had the courage to face up to both the political skulduggery and the entrenched position of the New Deal, and to say to his party: "It is better to light a candle than to curse in the darkness."

And as Shakespeare said: "How far yon little candle throws his beams. So shines a good deed in a naughty world." How about it, Senators? Couldn't you find time, somehow, to pass Mr. SCOTT's resolution before you cut for home?

The Proposal To Establish a New Self-Supporting Government Agency To Be Known as the Railway Equipment Agency To Lease Equipment on an Amortized Cost Basis to the Nation's Railroads Is Heralded as a Potential Boon to the Railroad Industry and of Sufficient Importance To Warrant Study by Congress

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. VAN ZANDT. Mr. Speaker, during his appearance, July 24, 1957, before the House Interstate and Foreign Commerce Committee, President James M. Symes, of the Pennsylvaina Railroad Co., proposed the creation of a new Government agency to be known as the Railway Equipment Agency, the purpose of which would be to lease railway equipment to the Nation's railroads at a basic rental sufficient to amortize the cost of the equipment over periods of 10, 15, and 20 years.

Under the Symes proposal, participation in the leasing plan could be made optional with initial capital of $500 million being augmented by additional capitalization as warranted in operating the newly created Railway Equipment Agency.

At this point in my remarks, I wish to call attention to the following press service dispatch together with an analysis of the so-called Symes plan designed to enable the railroad equipment industry to engage in mass production in keeping with the demands of this industrial age and at the same time assuring American railroads of the opportunity to modernize equipment and maintain their position in the field of transportation as a strong arm of our national defense program:

SELF-SUPPORTING FEDERAL AGENCY TO LEASE ROLLING STOCK TO CARRIERS IS PROPOSED

WASHINGTON.—A self-supporting Federal agency to lease rolling stock to the railroad industry "immediately providing new locomotives, freight and passenger cars which the Nation requires for peacetime progress and national defense" was proposed to Congress Wednesday by James M. Symes, president of the Pennsylvania Railroad. He called the plan, which he presented on behalf of 10 eastern railroads, "vital to an adequate expansion of the Nation's indispensable rail services."

Testifying before the House Committee on Interstate and foreign Commerce, Mr. Symes said "a new reservoir of capital is necessary to make it possible for the railroads to meet the continually increasing needs of the Nation for economical rail transportation. Less than half of the true need for new railroad equipment can be met by existing sources," he said. "Because low earnings by the railroads have practically eliminated any chance for equity financing, a constantly increasing proportion of railroad debt is in the form of equipment trust obligations which fall due every year—and must be met with cash." "This," he said, "is what is holding back railroad purchases of new equipment."

PRACTICAL SOLUTION

"A rail cars for progress and defense plan is the practical solution," he said. The plan he described calls for the creation of a new Federal agency with initial capital of $500 million, which would purchase and then lease railroad cars and locomotives to the individual railroads at rental rates sufficient to make the agency self-supporting.

Pointing out that "railroads are in a position to furnish mass transportation at the lowest true cost of any form of transport," he said that "costs of transportation to the public will inevitably be much higher than necessary if railroads are not in a position to grow with the growing needs of the present conditions. The Government gives subsidy to American economy under other forms of transportation and maintains punitive restrictions on our business freedom," he said. "So the railroads, which are the recognized low-cost transportation, are the only form that is not growing. All of the high-cost forms of transportation are growing rapidly. This can mean billions of dollars a year in increased costs to industry and household consumers unless this trend is arrested," Symes told the committee.

He emphasized the fact that the rail cars for progress and defense program would cost the Government nothing. Rentals paid by the railroads would be such as to "pay the costs of administration and give the Government a return on its funds, and, ultimately, the return of its initial capital."

AID TO EFFICIENCY

As a further advantage, Mr. Symes said that "much of the railroad capital now consumed in equipment financing would thus be freed for investment in other improvements, such as push-button yards and centralized traffic control. These would increase the efficiency of railroading, improving its service to shippers and help to offset the spiraling costs brought on by the built-in inflation of long-term wage agreements."

The proposed Railway Equipment Agency would be provided with initial capital of $500 million, and would be authorized to borrow up to four times that amount. Railroads could apply to the agency for long-term net leases for equipment needed, with a fixed term of lease for each type of equipment, based on its economic life.

Rentals would be such as to amortize during the term of the lease the complete cost of the equipment, less estimated scrap value at prices prevailing at the time of the lease, plus an interest factor one-quarter of 1 percent above the estimated cost of the money to the Government agency. While the agency would retain title to the equipment, all repairs would be the responsibility of the leasing railroad.

When a lease expired, the Government body responsible for stockpiling strategic materials for national defense would have the option of buying any equipment thus freed from the equipment agency. What is not purchased for stockpiling would be sold by the equipment agency for scrap.

"Under present conditions the railroads simply do not have the resources to buy the large amounts of equipment needed," Mr. Symes said, "and even if they did they could not find takers for that amount of equipment trust obligations in the present market. During the next 10 years railroads need to buy on the average 2 to 3 times as much equipment as they have bought in the last 10 years. If the railroads are to meet the challenge of the future," he said, "some means must be found for them to triple their equipment purchases. The rail cars for progress and defense plan is a simple, practical answer and would work out to the advantage of all concerned—the Government, American industry, and the general public, as well as the railroads themselves."

PROPOSAL COVERING CREATION OF GOVERNMENTAL AGENCY FOR FINANCING RAILROAD EQUIPMENT

PLAN

1. A new Government agency shall be created, to be known as the Railway Equipment Agency, or with some similar nomenclature, with initial capital of $500 million, with the understanding that more will be advanced by the Government from time to time as may be needed.

2. The railroads shall have the right to apply to this equipment agency for long-term net leases for such new equipment as they may desire. The exact length of such leases shall be on the same basis for all companies, but shall be varied in term, taking into consideration the true economic life of the type of equipment in question. For example, diesels probably should be leased for 15 years and frieght cars for 20 years, and passenger equipment perhaps on a 10-year basis.

3. The basic rental shall be determined in accordance with the following principles:

(a) During the term of the lease, the rental shall be sufficient to completely amortize the cost of the equipment, less the estimated scrap value of the equipment at present-day prices.

(b) The interest factor shall be one-quarter of 1 percent above the estimated cost of money to the agency for the length of period involved.

(c) Interest shall be calculated on the declining balance with respect to that portion of the cost which is amortized, and on a straight line basis with respect to the portion that is not amortized, i. e., estimated scrap value.

(d) The rental shall be absolutely net and all repairs of whatsoever nature shall be made by the leasing railroad.

4. The agency shall have the right to borrow up to four times its capital; in the other words, up to 80 percent of the cost of the equipment. At the end of the lease for any equipment, the governmental body having control over the stockpiling of strategic materials for national defense purposes shall have the option of purchasing any equipment it desires from the transportation agency at the fair value of the equipment, to be determined at that time. Any equipment not thus purchased for stockpiling for defense purposes shall be sold for scrap by the transportation agency, with the proceeds recaptured by the transportation agency.

5. Any lessee, subject to the approal of the equipment agency, may assign its lease to any other railroad in the event it no longer has a demand for the equipment, but in no event shall the new lessee receive a lease other than for the balance of the period remaining to the original lessee. Also, in the event that any lessee defaults under the terms of its lease, the equipment agency may recapture the equipment and re-lease it to another railroad for the remaining balance of the term, but in no event for a longer period.

6. In the event there are more applications for equipment than can be handled expeditiously (this is particularly likely to be true not only at the outset but in the event of emergencies or in periods of an upsurge in traffic), the principle of allocation shall apply.

ADVANTAGES OF PLAN

A. From the standpoint of the Government

1. The plan as outlined will not cost the Government anything, as contrasted to the subsidies handed out to other segments of the transportation industry. In addition, it is probable that the one-quarter of 1 percent interest differential, plus the differential between the current estimated scrap value and the ultimate scrap value or proceeds realized from sale to the Government stockpiling agency, should be sufficient to pay the costs of administration, give the Government a return on its funds, and ultimately the return of its initial capital.

2. The Government will be assured that the railroad industry will be maintained in first-class condition, prepared for any emergency, and with adequate capacity.

3. The Government will have an opportunity to stockpile a substantial amount of equipment against a war emergency at a relatively low cost.

4. The Government will be assured of protection of the capacity of the railway equipment industry, so vital in the event of an emergency.

5. Maintenance of the physical condition of the railroads at a high level will serve as a stimulant to the peactime economy and should bring in additional revenues in the form of income.

B. From the standpoint of the railroad industry

1. It should be possible for the railroad industry to put its entire plant in first-class condition without damaging its credit. This is true not only with respect to rolling stock but road as well, since funds thus released from the equipment budget will be available for modernization of yards, signal control, and the roadway generally.

2. Such a program should make it possible for the industry to expand its capacity, thus insuring its participation in the expanding economy and stimulating the latter by providing a modern, efficient, low-cost transportation system to serve its needs properly, and also further aiding the economy through its increased purchases, and on a more regularized basis, from the whole railroad equipment industry.

3. With a modernized, efficient plant, the industry should operate more efficiently, thereby keeping costs of transportation at the lowest practicable level and at the same time earning greater profits.

4. As a result of the Government agency placing the orders for much of the equipment, a far greater degree of standardization of equipment should be possible, thus reducing the overall cost of equipment and thus holding down the cost of transportation.

5. Through the program outlined, the railway equipment industry should be able to put its production on much more of a mass-production basis, expand its capacity, and strengthen its position.

6. If the Government finds itself in the position of leasing equipment to the railroads, then obviously, because of its financial stake in the railroad industry, it will naturally have an interest in the railroads' welfare.

7. This plan embodies the principle of the user paying full cost for Government services rendered. Therefore, if it goes through, it should strikingly point up by comparison the fact that certain other segments of the transportation industry are not paying their way.

8. By virue of the fact that the proposed lease arrangement would be with a Government agency rather than a private corporation, all tax questions are automatically resolved. The lease arrangement would provide what is tantamount to realistic depreciation geared to the actual economic life of the equipment. Of course in this connection we would get the depreciation in the form of tax deductible rental.

9. An additional objection to the present pattern of leasing equipment from a private corporation is that it is costly by reason of the loss of the residual value. Under this plan the railroad at least gets credit for the estimated scrap value of the equipment.

C. From the standpoint of the public

1. The public in general, both individually and through industries, will thus be assured of the finest in low-cost mass transportation at the lowest possible cost.

2. This is adopting 100 percent the Eisenhower administration policy that industry should pay as it goes for services rendered by the Government.

Overall, the simplicity of the plan itself has much to recommend it, together with one other important fact, namely, that it is possible to work it out on a completely voluntary basis. It is not necessary for all railroads in the industry to approve of the plan or to participate in it, but it would be available to all, and over a period of time it would appear almost a certainty that the industry as a whole would utilize it.

Railway Equipment Agency schedule of rentals—Interest factor, 3¾ percent plus ¼ percent (4 percent)

Type of equipment	Cost of equipment	Present day scrap value [1]	Cost to be amortized	Term of lease (years)	Annual return on scrap value	Annual amortization	Annual rental due under lease	Total rental due under lease
Freight cars	$70,000,000	$10,300,000	$59,700,000	20	$412,000	$4,341,243	$4,753,243	$95,064,860
Diesels	20,000,000	700,000	19,300,000	15	28,000	1,713,117	1,741,117	26,116,755
Passenger cars	10,000,000	325,000	9,675,000	10	13,000	1,175,456	1,188,456	11,884,560
Total	100,000,000							133,066,175

[1] Government would be the beneficiary of difference between present day scrap value and value at the end of the lease.

ANNUAL RENTAL

1st to 10th year	$7,682,816
11th to 15th year	6,494,360
16th to 20th year	4,753,234

Railway Equipment Agency schedule of rentals—Interest factor, 5¾ percent plus ¼ percent (4 percent)—Continued

UNIT RENTAL

Type of equipment	Unit cost	Present day scrap value	Cost to be amortized	Term of lease (years)	Annual return on scrap value	Annual amortization	Annual rental due under lease	Rental	
								Monthly	Daily
Freight cars	$8,500	$1,250	$7,250	20	$50.00	$527.20	$577.20	$48.10	$1.60
Diesels	200,000	7,000	193,000	15	280.00	17,131.16	17,411.16	1,450.93	48.37
Passenger cars	140,000	4,500	135,500	10	180.00	16,462.46	16,642.46	1,386.87	46.23

NAACP Says Virginia Vote Not Denied

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. TUCK. Mr. Speaker, each day we hear charges and countercharges about Negroes being denied the right to register or vote. This allegation is untrue with respect to Virginia.

Mr. William B. Foster, Jr., of the Richmond News Leader, has made a thorough investigation of this matter and published an article which presents clear and specific evidence to prove that no efforts are being made in Virginia to prevent Negroes from registering and voting. Under leave to extend my remarks in the RECORD, I include the text of Mr. Foster's article, which is as follows:

NAACP SAYS VIRGINIA VOTE NOT DENIED—PROTESTS CLEARED PROMPTLY

(By William B. Foster, Jr.)

No serious or effective efforts are made in Virginia to prevent Negroes from registering or voting, according to W. Lester Banks, secretary of the State conference of branches of the National Association for the Advancement of Colored People.

Banks was asked for comment today in light of charges and countercharges being aired in the Senate in debate over the pending civil-rights bill.

"Since 1951 and 1952," he said, "most complaints we have heard have been minor in nature." He added that all such complaints had been cleared up promptly by telephone calls either to individual registrars or to Levin Nock Davis, secretary of the State board of elections.

Banks cited as examples two complaints his organization had received in which disputes arose over the payment of poll taxes by Negroes applying for registration for the first time. In each case, he said, the applicant complained that a registrar was misinterpreting the law that permits registration without paying the tax in the case of a person becoming 21 years of age between January 1 and the November general-election date.

LEGAL EXEMPTION

Banks said that Davis' office instructed the registrars as to the legal exemption and registration was effected. Banks said these cases may well have reflected a lack of knowledge of the law, rather than racial discrimination on the part of the registrars.

Banks said his organization "hasn't had any complaints of intimidation or acts of violence to prevent Negroes from voting," but said there had been a few instances called to his attention in which election officials "apparently tried to make it a little more difficult for Negroes than for whites."

These cases, he said, involved demands for production of poll tax receipts by Negroes who had been regular voters for years. Banks acknowledged, however, that similar demands also are made of white persons and said he did not regard such challenges as serious efforts to interfere with voting rights of Negroes.

Banks said he believed that the NAACP probably would be the agency to which most Negroes would turn for help if they felt that discriminatory practices were being attempted.

The NAACP secretary said some instances had been called to his attention in which Negroes in rural communities are reluctant to go alone to the residence of a white woman registrar to qualify themselves to vote.

"This isn't a discriminatory act on anybody's part," he said, "but it's a kind of psychological reluctance on the part of some Negroes to go to a big imposing house where a white woman is the registrar unless somebody else goes along with them."

Banks said this situation is being eliminated as more and more counties turn to centralized registration, where books are kept at a registrar's office, open for business at specified times and operating under a uniform system of procedure.

In counties where this is not done, Banks said, some Negroes have complained about irregular hours for receiving registrants and some varieties in procedure from one registrar to another.

In such circumstances, Banks said, he is unwilling to say whether registration difficulties stem from racial discrimination, lack of knowledge of the law by the registrar, uncertainty on the part of prospective voters, or general laxness of the system.

Regardless of causes, he said: "We haven't had to do anything about irregularities except to call them to the attention of Mr. Davis. Usually, things are straightened out pretty quickly."

Swiss Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. MULTER. Mr. Speaker, the Swiss are today celebrating their independence day.

It is pleasant to think that, in the perpetual shifts and uncertainties of the international political scene, here is a country whose history of independence can be traced back for over 6½ centuries.

This history could offer many lessons to the contemporary world. It began with the famous "oath brotherhood" of 1291 which bound together the original 3 republics of the Swiss confederation. The members of these three communities held in common, beliefs in freedom and self-government based on individual initiative and self-reliance.

The principal purpose of the oath brotherhood was defense against aggression. For this a system of collective security was provided. But even in those relatively primitive times the Swiss were wise enough to go further: They pledged themselves at the same time to the peaceful settlement of disputes.

Through the intervening centuries the Swiss people have strengthened and enlarged their liberties. These liberties now have as their principal element a cherished individual freedom, protected by an intricate network of political and economic safeguards.

Another element in the Swiss brand of freedom is the ingrained tolerance which has been developed, sometimes through agonizing experience. Thus the French and German and Italian cultures have been blended into a unity, unique in its diversity. So, too, the Protestant, Catholic, and other religions, all thrive side by side.

May Swiss independence flourish in the long centuries of the future as it has in the past, and may its spirit live forever in the hearts of the Swiss people and give courageous inspiration to all mankind.

Coming Education Crisis

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, August 1, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the following editorial which appeared in the Sacramento Bee on July 17, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMING EDUCATION CRISIS

The vast wave of youth which has been bursting the country's elementary schools and is beginning to overcrowd the high schools is destined by mathematical certainty to produce an extremely serious and perhaps tragic crisis in education within the foreseeable future unless aggressive steps are taken at once to meet it.

That is the fact hundreds of thousands of American youths desiring and having the capabilities for an education beyond the high school level will have no place to go because of the lack of college facilities.

In some States within 15 years, it is estimated, 1 out of every 2 high-school graduates wanting to acquire a higher education will be denied the opportunity.

Senator CLIFFORD CASE, of New Jersey, who is sponsoring a bill to provide Federal aid for junior college expansion, stated:

"It means that despite their hopes and dreams, many of our finest youth will be denied equality of opportunity. They will have to miss out on adequate education for life, for a profession and for citizenship. The Nation will lose the benefits of their talents and brain power and this can be counted in discoveries unmade and in service unrendered."

The Case measure deserves the most serious consideration. In this highly competitive world of man against man and nation against nation, America cannot afford to fall short in this vital field.

Speech of John D. Rockefeller III at the Washington State International Fair

---

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. MILLER of California. Mr. Speaker, a well-balanced foreign trade is essential to world peace. Nations profitably exchanging their goods and products are always anxious to work in comity with other nations.

While our foreign trade represents less than 10 percent of our overall production today, we are prone to underestimate its actual importance to the economy. In years when most of our energies are directed to producing the munitions and tools of war we are not in a position to vigorously press for our rightful share of foreign trade. As we phase out of war production we must find markets to absorb the great capacity of American industry. We must, of necessity, then turn to world markets and through the talents of American salesmanship garner business that will absorb our surpluses. The percentagewise relationship of foreign trade to domestic consumption will then rise and assume its rightful place in our economy.

Offshore trade can be the difference between our potential production and short shift operation of our factories. This can be interpreted in terms of jobs—the true yardstick of the good life.

Nations, new and old, who surround the Pacific Basin want our hard goods. We can trade with them for they have a great reservoir of natural resources. Their hard woods, fibers, oils, tin, and other things they have in abundance complement our production. They have what we need; we have what they want.

To maintain and protect our own interest in foreign trade we must control the principal tool of that trade—ocean shipping. Our merchant marine is as important to us in offshore trade as our internal rail system is to our domestic trade.

The important place that foreign trade plays in our economy is best testified to by one so highly qualified and so knowledgeable in this field that none can challenge his right to speak on it. I am happy, therefore, to make available to you a speech made by Mr. John D. Rockefeller III at the opening night banquet of the Washington State International Trade Fair in Seattle, Wash., on May 17, 1957.

Mr. Rockefeller said:

International trade fairs are always exciting and this one is particularly so to me because so much of it revolves around an area of the world in which I have a deep and special interest—namely, Asia.

The primary objective of a fair such as this one is, of course, increased foreign trade. I am sure that the many hundreds of commercial buyers who will come here will make an important contribution toward the achievement of this goal. Maybe almost as important are the untold thousands of the general public who will visit the fair and gain some knowledge and understanding of other lands and other peoples. Robert Ingersoll once said: "Commerce is the great civilizer. We exchange ideas when we exchange fabrics." There is no question that trade serves more than a purely economic end. The contact with other peoples and their cultures is a rewarding and enriching experience.

I understand that your fair renders services to participants which go much further than is normally the case. Particularly I have in mind the assistance by officials of the fair to foreign exhibitors in the handling of problems which they face in this country. Also, I am informed that a course is given at the university in such subjects as the handling of merchandise, salesmanship and the like. Such services are most farsighted and desirable, and I am sure are much appreciated by those who benefit by them.

To put on a fair such as this one which we are opening tonight is a major undertaking. It represents the untiring effort of many people over a long period of time. The results speak for themselves. I should like to express my sincere congratulations to those who have been responsible for this important undertaking, the effects of which will be felt in many lands and in many ways.

In presenting my subject this evening I plan to concentrate on Asia. I do this because Asia is an area of the world with which I am particularly familiar, and also because I believe what I say will be more effective if I do not try to cover too much ground geographically.

In March, my wife and I returned from a trip to southeast Asia. It was a heartening and stimulating experience. We came back with a warm and friendly feeling toward the countries we visited. We were impressed by the friendliness and courtesy of the people whom we met.

We came back with the feeling that the people in these countries valued their recently acquired independence and were prepared to defend it. Nationalism was running strong but is that not essential in countries just starting out on their own? There would be reason for concern if this were not the case. And, along with the national spirit, paradoxically there is a growing international spirit, a growing desire to be an active member of the family of nations. This promises well, for these nations need an expanding trade and increased foreign investment to support their own growth.

As we traveled through the countries of southeast Asia, we were impressed with the courage and accomplishments of the leaders. Men like the late President Magsaysay, of the Philippines; President Diem, of Vietnam; and U Nu, Prime Minister, of Burma, have rendered incalculable service to their countries. They are an inspiration to all men everywhere. History, I believe, will place them among the truly great leaders of our times. When my wife and I heard of President Magsaysay's tragic death after our return home our hearts were very heavy.

Also, my wife and I were impressed by the urge for education on the part of the young people of southeast Asia. Education is vital in enabling an area to make effective use of its vast but little-developed natural resources. With effective leadership, a growing supply of trained manpower and abundant natural resources, the area's possibilities for economic growth are very real.

As one visits these nations and learns of the problems and the needs one has the greatest respect for what has been accomplished to date. Think of the difference between their early years of independence and our own. They were born into the atomic age and the cold war with all that that means in the way of external forces and pressures. They were born at a time when people everywhere are realizing that they can improve their living standards and hence their governments are under pressure to produce results quickly if they are to survive.

The problems these nations face are very real. They are seeking their economic goals with most inadequate tools compared to those of the highly industrialized nations. Particularly, there is an acute shortage of managerial and technical manpower. Progress is being made in overcoming the need, but training takes time, and time is at a premium in Asia today.

Another major shortage is that of investment capital. Most of the financing of development projects must, of course, come from local private and Government investment. Even in Burma where about 20 percent of the gross national product is being saved and invested, domestic investment falls short of the level of capital formation that is needed for rapid economic advance.

So far I have focussed my remarks on southeast Asia because of our recent trip there and the fact that our impressions are so vivid. It is dangerous, obviously, to generalize about Asia as each country is separate and distinct. However, the attitudes and problems which I have mentioned are common to many countries of the area, particularly the economic problems.

During the last few years I have been to Asia a number of times visiting most of the countries more than once. Increasingly I have become convinced that the future of the United States and of Asia are inseparable. So many of our respective problems are in reality mutual problems. So many of our respective needs are in fact complementary. Our joint futures depend on solving these problems and meeting these needs. If we proceed in an atmosphere of mutuality and teamwork, our chances of success are great. Much is at stake for all concerned.

When I speak of the problems and needs of the United States, I refer to the fact that our increasing need for raw materials can only be met by very substantial increases in the production of raw materials around the world, and to the fact that our need for constantly expanding foreign markets can only be met by corresponding growth in the economies of all other countries. As the head of a large corporation with foreign interests expressed it recently: "If more of the better things of life are to come to America, they must also come to other people as well." To me, this is fundamental to progress. It is unreasonable to assume that we can remain an island of plenty unless others also face the probability of substantially improving their economic position. In this process Asia will inevitably be a major factor.

What, then, can be done to expand trade between the nations of Asia and the rest of the world? The problem is that to benefit substantially by foreign trade, a nation must have a sufficient volume of exportable items to offset its imports needs. With countries whose economies have been only partially developed a major effort must be made to build and strengthen basic services and production units. Experience has shown that in this connection foreign aid and foreign investments can make an important contribution as a supplement to local effort.

Thus, as we think of expanding foreign trade as the basic approach to the solution of the economic problem of Asia and the United States, we must also think of foreign aid and foreign investment if progress is to be made with the speed and the assurance which is required by the current world situation.

Net United States economic aid in Asia since June 1950 has totaled almost $4½ bil-

lion in the form of grants and loans in dollars and local currency, technical assistance, teacher and student exchange programs, etc. The area as a whole is now by far the most important recipient of United States nonmilitary aid. In 1956, net United States economic grants and loans totaled $1,078,000,000, three times the aid to the Near East which ranked second.

There is no question that our postwar aid program has been an important factor in helping recipient countries meet basic needs for which their own resources were not adequate. The Marshall plan in Europe was the outstanding example. There is no question also in my mind that our aid program should be continued and expanded. Its value would be very appreciably increased if greater continuity could be provided and if redtape could be drastically cut, particularly through giving more discretion to field directors.

To me personally, however, the principal concern is on the psychological side. A number of years ago when I was in South Africa I had the privilege of meeting General Smuts. In the course of our conversation he remarked to me that he thought our lend-lease program was one of the greatest acts of altruism in history, one of the most unusual contributions toward the well-being of mankind. I was deeply impressed by what he said. General Smuts recognized by his own words that our basic objective was a peaceful and better world for all.

This statement is a far cry from the atmosphere in our country today toward mutual assistance. It almost seems as if the human factor had been removed. In its place is political expediency. The emphasis is on the value to us, to safeguard and protect us. Little is heard about those to be directly benefited or about the mutual nature of foreign aid.

I believe very sincerely that a basic motivation of the American people is not only to help a neighbor in trouble but also to share with others and work toward a peaceful and better world for all. This is a part of our tradition. It is one of the finest qualities of our culture. We must not lose it because of short-sighted political considerations. Interestingly enough, a recent survey made by the National Opinion Research Center at the University of Chicago showed that 85 percent of the voters favored aid to the underdeveloped countries. Government aid to the nations of Asia is only part of the story. United States private investment in Asia is also important even though such investments to date total only $600 million and almost all of this is in four countries: India, Indonesia, Japan, and the Philippines. For the non-Communist area as a whole, United States investment works out to 75 cents per person as against $40 per person in Latin America, or $425 in Canada.

Although the absolute level of United States investment in Asia is still very low, recent trends are encouraging. Investments in the area doubled between 1950 and 1955, while total United States private investment abroad rose only 65 percent.

As I have already said, Asia's capital needs will have to be met largely from within the individual countries. But, a limited amount of private foreign capital supplementing it can be crucially important, particularly if it is invested on a partnership basis; for the foreign partner would supplement his investment by bringing in new production and marketing methods. Technical knowledge spread by private overseas investment may be as important to the recipient country as the inflow of capital itself.

That foreign capital investments in Asia are so limited, even though they could mean so much to the area's economic development, is understandable. Both sides must be sympathetic and aware of the concerns and fears of the other.

To the Asian "colonialism" and "exploitation" are words which still have unhappy implications. Will foreign investment, they wonder, lead to foreign economic domination?

In this connection, it is helpful to remember that the United States has invested billions in Canada, but the amount is only 10 percent of Canada's total invested capital. In Latin America, United States investments exceed $6 billion—yet this amounts to only 8 percent of the total. These United States investments have helped greatly to strengthen the economies of Canada and the Latin American Republics and to promote their growth. Far from dominating their economies, they have increased the national sense of economic self-reliance.

The early days of our own country provide another example of foreign investment. By the middle of the 19th century 20 percent of the securities issued by American firms was owned by foreigners. And, interestingly enough, half of this capital was supplied by Britain.

If the fear of economic domination is to be allayed, it is essential that the foreign partner identify himself with the life and growth of the host country. The interests of that country must always be a primary consideration.

Another source of Asian concern is that the economy of the country will be weakened if the foreign investor takes home earnings each year in dollars or other foreign currency. The Canadian and Latin American examples indicate that the very opposite is true. American capital, particularly when invested on a partnership basis, can increase a nation's foreign exchange reserves by increasing production and exports. The record shows that American investment increases exchange earnings by more than the amount needed to compensate American investors, and at the same time leaves the local economy as the principal beneficiary of the bargain. In 1955 the net gains to Latin America from the operation of United States-financed companies was $3½ billion, or about 10 percent of the area's total income.

From the point of view of the foreign investor there are factors which make him reluctant to assume risks of investment outside his own nation. These include limitations by recipient countries on the nature of foreign investment, high taxation, fear of political instability and nationalization, and limitations on the remittance of earnings to the United States. Other factors are the scarcity of available capital for investment, attractive opportunities for investment in the United States, and lack of knowledge of investment opportunities.

In my opinion, these difficulties can be largely resolved. They are primarily a matter of misunderstanding based on lack of information and knowledge. Too much is at stake to let the present situation continue without forthright effort to rectify it.

It is encouraging to remember that a number of very successful partnerships between Asian and foreign firms already exist. These partnerships often started with reservations, fears, and suspicions. But they disappeared with actual experience. Today in many instances the Asians and their foreign partners enjoy mutual confidence and respect and are working together on a mutually profitable basis.

There have been intelligent accommodations on both sides. Patience and understanding are needed if economic maturity of this sort is to spread through the business communities of Asia and the United States. The psychological barriers are more formidable than the economic ones, but they are in no sense insurmountable once the overall problem is seen clearly. As we work together in the economics field, or any other field for that matter, we must realize that joint interests and activities can be carried out without infringement on each other's way of life.

Personally, I feel much would be gained if a small group of Asian and American businessmen, with the blessings of their respective governments, were to make a study of the joint ventures which already exist. Such a study would deal with what has actually taken place and not with the theoretical fears of either side. Special attention might be given to how other Asian firms can meet competition from these joint enterprises. The findings of this group should be helpful in allaying fears and in developing positive recommendations as to means to encourage the flow of capital into joint ventures.

And now I want to speak of foreign trade itself—a primary factor in economic growth. The nations of Asia are dependent on export earnings for foreign exchange with which to purchase imports essential to the development of their economies. For this reason it is disturbing to note that the trade of these nations has not kept pace with the growth of world trade. Not including Japan, they accounted for over 10 percent of world exports in 1938, as against less than 6 percent in 1956. Meanwhile imports, which reached a peak in 1949–51, were paid for at the expense of the nations' foreign exchange holdings. In 1953–56, imports were reduced as reserves dwindled.

This decline in exports in recent years has been largely due to the fact that world demand for raw materials presently exported by these nations has not grown. In some cases the reason is that industrialized nations have substituted synthetics for natural raw materials. In others the exporting nations have followed policies that kept prices of their export products above the world market—so users in other nations turned to alternative sources. Over the long run, these nations must expand their export earnings to meet the rising needs of their expanding economies.

Expansion of Japanese trade is a problem separate from that of other Asian countries, though it is closely linked with them. Before the war, Japanese exports accounted for 5.4 percent of total world trade. This dropped to 1 percent in 1949 during the post-war period when severe restrictions were placed on Japanese trade. Last year, Japan's exports had risen to 2.7 percent of the world total. However, to continue the remarkable economic growth of the past decade, Japan must appreciably increase her exports.

Expansion of trade within Asia would mutually benefit Japan and southern Asia. Japan can supply many of the industrial goods needed for economic development programs while Asian nations can provide some of the food and raw materials which Japan must import.

In addition, trade between the United States and Asia is important to both areas. It is therefore of concern to note that in recent years trade between the two areas, including Japan, has not kept pace with Asia's total trade. United States purchase of Asian exports declined from 21 percent in 1948 to 18 percent today. At the same time, their imports from us dropped from 27 percent of their total imports to only 20 percent.

It is also a matter of concern that last year the United States exported to Asia $600 million more than was imported from the area. The figures were $2.3 billion exported against $1.7 billion imported. Foreign aid and foreign investments helped offset this imbalance. However, for the long run, it becomes fairly obvious that these countries which buy from us so substantially will have to increase their sales to us.

The growing import requirements of the Asian nations offer a real oportunity for the United States to promote expanding trade with the area. If the United States

economy is to continue its phenomenal growth, an expanding trade is essential to provide the raw materials we need, and in the process to furnish expanding markets for our industries and farms. While trade is a small part of our total national production (in 1956 we exported 8 percent of all the goods we produced), it is nonetheless important to the maintenance of a healthy economy. It would be difficult for us to continue to maintain a high level of employment if our trade did not expand as rapidly as our domestic activity. While 8 percent seems like a relatively small figure, it is big enough to make the difference between a prosperous high employment economy and an economy facing serious problems of readjustment. Moreover, there are a great many individual businesses where exports provide the margin needed for successful and profitable operations.

There is no question in my mind that any nation must approach its foreign trade from the point of view of its own best interests. How can it sell the maximum amount of its own products at the best possible price? How can it buy needed raw materials and other products at a minimum price?

At the same time, however, the farsighted nation will work to remove the barriers to trade in order that buyers and sellers at both ends of the transaction can profit. The great virtue of trade conducted on as free as possible a basis is that it benefits all parties concerned.

There is always great political pressure in any nation to eliminate, or at least control, imports which compete with locally made products. At the same time, little thought is given to the relationship between imports and exports. Take, for example, the sale of cotton textile goods in the United States. There has been much concern expressed in this country as to the effect of such sales on our domestic production. Total cotton textile imports from Japan amount to less than 2 percent of our own output, although in certain lines the percentage has been higher. Also, last year, Japan sold us $29 million of cotton textiles, and during the same period purchased $170 million of raw cotton from us.

Another illustration relates to sewing machines and Japan. Since 1953, the Japanese have prohibited the import of all household sewing machines of any sort. Meanwhile, the sale of Japanese-made machines abroad has increased rapidly. Last year 675,000 machines were imported into the United States alone, or roughly between 35 and 40 percent of total sales.

Such transactions do not lead to happy, long-range trade relationships. Accommodations must be made on both sides to meet reasonably the problems and the needs of the other party. I realize that such an approach requires adjustments within the economies of the countries concerned. There is no question that from time to time, individual businesses will be temporarily hurt. The situation is exactly the same as with scientific progress. Here also the maker of the product overtaken by scientific development must adjust. With an expanding economy and ingenuity such adjustments, such hardships can be reasonably met.

Our Government has taken the lead in attempting to reduce barriers to international trade and to create machinery to foster it. As Secretary of State John Foster Dulles said a few days ago:

"Trade, from the earliest days, has been one of the great upbuilders of economic well-being. Therefore, this Government advocates trade policies which promote the interchange of goods to mutual advantage."

We need to keep pressing ahead in carrying out this policy. The figures show that last year, United States exports were 50 percent greater than imports—obviously, a very favorable balance of trade. But, in the long run is this really in our best interests? The only sound basis on which we can continue to expand our exports is through a corresponding expansion of imports. This means, as I have indicated, making adjustments in our economy in order to accommodate the foreign products.

We have no alternative to this course. We are 1 country in a world made up of about 100 nations. Our prosperity and our future is closely linked with theirs. In the last analysis, the strength and viability of their economies will depend on their ability to sell on the world market. The United States has a great responsibility or, as I would rather put it, a great opportunity. If we are to successfully meet the challenge, I believe each one of us must feel a personal concern and obligation to do our part.

Why Stop There?

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. MOORE. Mr. Speaker, the First Congressional District of West Virginia, which I have the honor to represent, is one of the richest industrial areas in the United States. In addition to producing coal, steel, chemicals, and many other raw materials and manufactured goods, this area produces some of the finest glassware and pottery to be found anywhere in the world.

In recent years, due to the harmful effect of the so-called reciprocal trade agreements, our Nation has been flooded with cheaply made foreign goods which has had a very depressing effect on industries in West Virginia and throughout the Nation. In this regard, I would like to call attention of the House to a very cogent editorial which appeared on July 31, 1957, in the Wheeling Intelligencer, Wheeling, W. Va., which very ably states the case for sensible revision of tariff and import quotas to protect American workers and industry from destruction. I hope members of the House Ways and Means Committee will especially take notice of this editorial and will react accordingly to report legislation which will stop this onslaught on our vital industries:

WHY STOP THERE?

President Eisenhower's threat of a Government limitation on petroleum imports unless the industry agrees to voluntary curtailment brings into focus anew the whole question of foreign trade policy.

The White House directive calls for an oil import cutback to 10 percent below the 1954–56 average for the last half of this year and the first half of 1958. But as imports have increased sharply since that period the new average would represent a 20-percent cut from the present import level of 1,275,000 barrels a day.

The reasoning back of the order is that excessive imports have impaired the domestic industry to the point where national security might be endangered in case of war which would find foreign sources cut off and the home industry insufficiently developed to meet the demand.

If this argument is sound with respect to an activity like the petroleum industry and an exhaustible resource like oil, how much more forcibly is it true of manufacturing. Relatively speaking, industries like oil production and coal mining can adjust themselves readily to new and sudden demand. The basic product is there. And while it takes time to increase mining capacity and oil output and refining facilities, the time element is not so important as in general manufacturing. If a low tariff policy pursued over a period of years has stimulated imports to the point where a domestic industry has been seriously curtailed, the resilience is not there to meet the sudden demand of a war shutoff. There is not only the problem of building new plants and fabricating new machinery, but the more difficult and time-consuming problem of training manpower.

For more than a quarter of a century the official policy of the American Government has been to encourage the importation of manufactured goods through the progressive removal of tariff protection. The result has been very serious impairment of a long line of industrial operations involving chiefly the handcrafts, the skills which once distinguished American industry, that great segment of our economic system known as small industry. Our pottery and glass workers, machine toolmakers, textile workers, shoemakers, skilled artisans of a score of callings, have been thrown out of work or reduced in numbers because imports have taken over the market for the wares they fashion to the point where we would be hard put to make up the void they have left were the flow of imports suddenly shut off.

This newspaper is all for protection of the oil and coal and other basic industries from the destructive competition of undercutting imports, not alone from the standpoint of defense, but also and more particularly from that of the maintenance of a sound domestic economy. But it is even more concerned, and for the same reason, for the welfare of that part of our manufacturing industry that has been gravely weakened by a nonprotective tariff policy. It rejoices that the President has seen fit to take steps to protect the oil industry. It would be happier still were he to advocate a return to the simple doctrine of protection and advocate a tariff schedule designed to equalize selling costs on the American market between all domestic products and their imported counterparts.

Equal Rights for Women

EXTENSION OF REMARKS
OF
HON. DeWITT S. HYDE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. HYDE. Mr. Speaker, I strongly urge that you use your good offices to prevail upon the chairman of the committee to hold hearings and report House Joint Resolution 127 which provides a constitutional amendment granting equal rights to women.

We are constantly amending Federal and State laws to remove inequities therein with respect to women. So far as I have been able to discover, there has never been any serious objection to such proposals. There seems to be no good reason why we should not take care of all such inequities with one stroke. The matter of discrimination against human beings in various areas of Government has been a subject of heated discussion in Congress this session. In

all of these discussions, little or nothing has been said about discriminatory laws against the women.

Again, Mr. Speaker, may I respectfully urge your assistance in having House Joint Resolution 127 brought to the floor of the House before the adjournment of this session of the 85th Congress.

The Fourth of a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. MICHEL. Mr. Speaker, today I should like to insert the fourth editorial letter of the series written by F. F. McNaughton, publisher of the Pekin Daily Times, Pekin, Ill.

The editorial letter follows:

[From the Pekin Daily Times of July 25, 1957]

THE EDITOR'S LETTER

(By McNaughton)

"Is education free all the way?"

I had heard this at home.

Couldn't believe it.

Nor could I believe it when our guide said, "Yes" and when she "proved it" by several other people.

I said: "I want this information from your top educators."

So (as everything else I asked) they arranged it.

They (with great help in design and construction from students) have built a new 32-story university in Moscow. It is a beautiful thing, and a vast structure. Among other facilities (sports, library, art, laboratories) they have living-in quarters for 6,000 students.

And now, in Russia, a bright boy or girl gets free education all the way through college, university, and professional school. That means through medical or engineering schools, or any schools. (I twitted back a bit by saying, "except theological.")

Here is the deal:

A really smart youth or girl not only gets all this education free, but gets paid while going to school. Cost to the state of supporting these brilliant young people in school is partly reduced by having those 6,000 beds at the new university, and a school kitchen.

If a student is smart but not brilliant, he may have to pay some of his way (or work it out). That depends on whether his share of his family's income is under 700 rubles a month.

Let me explain:

If a family's income is 3,000 ($300 a month) and there is only 1 child, then that child's share of the family income is 1,000. That is more than 700, so that child might have to pay part of his costs in medical or other school. But if there are 3 children in that family, that would make 5 (counting parents), so 1 child's share would be only 600 ($60 a month), and because that is under 700, that student would not pay anything.

America needs doctors.

Tens of thousands of American boys would become doctors if they could afford the schooling.

Russia is only a little larger than the United States of America in population, but every year it turns out seven times as many physicians as the United States of America.

Everybody knows they are turning out scientists and technicians faster than the United States of America.

Good teachers?

Indeed. A professor in Russia is paid several times as much as a laborer.

Over and over I have told you how the masses rebelled against the way the rulers, the landlords, and too often the church kept them in ignorance. Now they have determined to be the best educated people on this earth; and that may make them the greatest nation on this earth.

Meanwhile millions of bright boys in America have no change for higher education.

America may pay for that.

A Bill To Limit Inspection of FBI Files

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. MOORE. Mr. Speaker, I have the honor of being a member of the special Judiciary Subcommittee selected to undertake a study of the recent Supreme Court decisions which have caused so much concern here in Congress and to the American people throughout the Nation.

Since this subcommittee was appointed, we have been diligently holding hearings and drafting legislation to plug the legal loopholes which were created by these far-reaching edicts of the High Court. One of the first cases our subcommittee reviewed was the Jencks decision, in which the Supreme Court ruled the FBI files must be opened to inspection by a defendant if these records deal with the testimony of a witness called to testify by the Government during the trial. Because the subcommittee deemed this matter of such importance, legislation was immediately drafted which would limit the inspection of FBI files and prevent known criminals from conducting a fishing expedition through the secret records of the top investigative agency of our Government. The full Judiciary Committee reported this bill, H. R. 7915, to the House on July 5, and a rule was requested on this legislation on July 15. In spite of repeated proddings by myself and other members of the Judiciary Committee, the Rules Committee has not yet seen fit to report this most important legislation so that it might be considered by the House before adjournment.

I sincerely hope the chairman of the Rules Committee, my good friend, Congressman HOWARD W. SMITH, of Virginia, will take action to grant a rule on this legislation without further delay, because every day we wait the cause of justice is hamstrung by the decision rendered in the Jencks case. In this regard, I want to call attention of the House to an extremely timely editorial which appeared in the Wheeling News-Register on July 30, 1957:

WHAT OF THE FUTURE?

During the year ending June 30 last, the Federal Bureau of Investigation reached a high tide of effectiveness. That is, a greater number of cases investigated by the Agency resulted in convictions, percentagewise, than during any other year of the past decade. In a report to the Attorney General FBI Director Hoover reported 11,218 convictions in which his men had a hand. More than 94 percent of these represented guilty pleas. Of those who elected to go to trial, 96.7 percent were convicted.

We wonder what the record will be a year from now if nothing is done to counteract the effect of the Supreme Court's decision which in effect opens up the secret records of the FBI to inspection by a defendant if these records deal with the testimony of a witness called to testify by the Government during the trial. Already the Attorney General's office has called off a number of prosecutions rather than subject secret files to fishing expeditions which the underworld might use to great advantage.

It is quite unlikely that the Supreme Court intended its decision to have the effect which law enforcement officers say it is having all along the line in the endless war between crime and law and order. It, therefore, Congress can devise a law which will make possible the continued effective use of confidential informers in the preparation of cases subsequently supported by testimony and other evidence in open court, it is to be supposed the Supreme Court will seek a constitutional means of justification.

Crucial Defeat for School Aid

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. UDALL. Mr. Speaker, since the defeat of the school bill last week the editorial writers have been busy passing judgment on what transpired. One of the most pointed—and one of the fairest—analyses of the vote on this legislation appeared in the July 27 issue of the Christian Science Monitor.

I present this editorial for evaluation by our colleagues, as follows:

CRUCIAL DEFEAT FOR SCHOOL AID

Last year partisan conflict killed school aid. This year responsibility rests chiefly on Republicans who refused to support the President and to fulfill their platform pledge.

Many political and economic cross-currents entered into the result. But at the time the House of Representatives killed the bill it had before it an amendment which would have accepted the excellent Eisenhower formula. And the motion to kill—offered as an alternative—was opposed by 57 percent of the Democrats, supported by 59 percent of the Republicans.

The issue was more clearly drawn than at any previous time. For by various steps many of the objections to earlier school-aid proposals had been removed. The House had emphatically declared its intention to leave local control of education unimpaired. The measure was limited in time and amount. It was confined to the sole purpose of building new classrooms. And finally the Democratic managers had accepted the President's plan for distributing funds according to actual need and the size of State efforts to meet the need.

The bill was still burdened with an anti-segregation amendment attached by a Republican who opposed the bill itself. This amendment naturally intensified the opposition of Southern Democrats and made it simpler to justify at home their opposi-

tion to a measure which would have helped build schools. The provision to deny aid to segregated schools would not have beaten the bill had all who favored it voted also for the basic measure to which they attached it.

This newspaper believes that schools are traditionally and rightly a local responsibility. It holds that Federal aid should be a last and strictly limited resort. It has frequently pointed out that many of the States do not need Federal help. Giving them school aid simply means Washington takes more tax money and sends a portion back as a deceptive and expensive political sop. This was the type of aid offered both last year and this year by the majority leaders in Congress.

But for 5 years there has been accumulating evidence that a few States are not meeting their school needs. And several are devoting to schools a far larger share of their resources than do the richer States. These circumstances have convinced us that a carefully limited Federal-aid measure was justified. The President proposed precisely this type of bill. The Democrats in Congress pushed their own measure, simply alloting funds to all States according to their pupil population. A short time ago a compromise was arranged by which both formulas would have been used—on a 50–50 basis.

Then on the final day the Democratic House leaders accepted the Eisenhower plan completely. Even then a combination of Republicans and Southern Democrats killed it. We believe that some were influenced by economy pressures. There is reason to believe that the President's plan could be carried out for half the $1.5 billion proposed. It seems to us that the best chance now would be for advocates to limit the amount as well as the purpose to deal only with the clearest needs.

Prosperity?

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 9, 1957

Mrs. KNUTSON. Mr. Speaker, without comment, I request unanimous consent to insert in the RECORD comments on Mr. Weeks' prediction that 1957 is going to be "the best yet." I should say, "with only this comment, 'the best yet—for whom?'" The article is taken from Washington Window of July 26:

The article follows:

IS 1957 A GOOD YEAR?

Secretary of Commerce Sinclair Weeks is predicting that 1957 is going to be "the best yet."

That may be true for certain sectors of the economy, but there are strong reports that for a good many millions of workers throughout the country the economic shoe is beginning to pinch.

The cost of living is still on the upward march. Far from being the cause of inflation, workers are complaining that they are the victims of it.

Personal income of Americans is still climbing but payrolls for production workers are slowing down as gains in average weekly earnings are more than offset by a "continuing decline in employment."

Some of the Nation's most highly paid groups—aircraft in the West and automobiles in Detroit—are being hard hit by layoffs and a drop in overtime income.

Nor do any of the normal economic indicators show the economy expanding at anywhere near the rate that is needed to absorb newcomers in the labor market or maintain the extremely high individual income level that was characteristic of 1955 and 1956.

Take these factors in order:

For the 10th straight month the cost-of-living index has gone up. For millions of workers this represents an actual cut in wages. Even for those who have escalator clauses in their contracts it means that they are barely holding their own.

Business economists insist on placing major blame on high wages despite much evidence being developed by the Kefauver committee clearly showing that the administered-price industries have been setting prices to suit their own purposes, irrespective of labor costs.

There is evidence also that individual workers feel that profiteering companies are basically responsible for the current boost in prices, beginning with steel and oil.

The Department of Commerce reports that personal income in June was almost $1 billion higher than in May, and that it is running at a rate $17 billion higher than during 1956. Yet the fact remains that this increase has been severely eroded by increases in the cost of living. Real purchasing power of factory workers—that is, the amount of goods that actually can be bought—has fluctuated up and down since the first of the year, with much of the gain made in 1955 and 1956 being wiped out.

One of the major drags on the economy has been the severe layoffs and drop in working hours that have marked certain industries. The layoffs in the Detroit region have created a serious problem for the State of Michigan, where unemployment is expected to rise to 235,000 shortly. So serious is the unemployment picture that Gov. G. Mennen Williams has declared it a public emergency and is providing road jobs for the unemployed.

A new area of distress has developed on the west coast in the aircraft industry, involving both layoffs and a sharp drop in overtime. Most dramatic event has been cancellation by the Air Force of North American Aviation's Navaho guided-missile project. This is expected to throw more than 10,000 workers out of jobs.

Again strict economy instructions by the Defense Department have cut sharply into overtime such as has built up pay checks for the past few years and made possible an unusually high standard of living. The Wall Street Journal recently reported that the ban on overtime which cut hours in many cases from 45 down to 40 has had a real impact on workers' income—as much as $25 a week in many cases.

As Department of Commerce reports continue to point out, the 1957 economy is at record levels, but much of this can be attributed to increased dollar value due to inflation rather than actual physical output.

Study of the Department's own economic indicators shows a flattening out of business even though activity remains high.

Total industrial production, for example, which shot up so fast after the recession of 1954, has flattened out during the past year, and, in fact, has dropped during the first 6 months of 1957.

Manufacturing payrolls for production workers have correspondingly dropped, while employment in manufacturing is virtually at the same level at is was back in 1954. Due to an advance in the hourly wage rate and escalator clauses, average hourly gross earnings in manufacturing have increased since 1954 but have been flattening out since the first part of 1957.

Average hours per week now barely average 40 after having been well above that for the past 2 years.

John L. McClellan

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. TRIMBLE. Mr. Speaker, at the State convention of the American Legion, Department of Arkansas, on July 26, Senator JOHN L. MCCLELLAN was given a most distinguished service citation. This is an honor well deserved by our senior Senator, who has brought honor not only to himself and his family but to all the rest of us by his work in the Congress and for our State.

I was not privileged to be at the convention. However, my good friend Ulys A. Lovell, of Springdale, Ark., retiring State commander, has sent me a copy of the citation, his remarks introducing Senator MCCLELLAN to the convention, and the Senator's address accepting the citation, all of which I insert in the RECORD:

Nationally the American Legion has for a number of years conferred on distinguished citizens of the United States a most distinguished service citation. These citations are based upon the contribution of the recipient to the principles of Americanism. Among the very first principles of the American Legion, as shown in its preamble following the words: "For God and country we associate ourselves together for the following purposes" are:

1. To uphold and defend the Constitution of the United States of America.
2. To maintain law and order.
3. To foster and perpetuate 100 percent Americanism.

This distinguished service citation is given by the American Legion to that citizen, veteran or nonveteran, who the American Legion feels has contributed most to Americanism. Here in Arkansas we haven't as yet until tonight made an award of this nature. When I canvassed my policy committee and other distinguished Legionnaires in Arkansas as to the man on whom we should confer this citation, they were unanimous in recommending Senator JOHN L. MCCLELLAN.

Senator MCCLELLAN has a distinguished Legion background. He entered the service August 26, 1917, and was discharged February 4, 1919. He was commissioned after serving due time as a buck private and attended the Second Officers Training Camp, a first lieutenant in the Signal Corps of the United States Army.

Immediately after his discharge he organized the American Legion Post at Sheridan in 1919. When he moved to Malvern he transferred his membership in the American Legion to the post in that city. Since living in Camden he has been a member of Robert Jackson Post, No. 45, of Camden, continuously. He is a member of the 40 et 8 Voiture, at El Dorado. He has been continuously a member of the American Legion since organizing the post at Sheridan so that when his 1958 dues are paid he will be a 40-year member of the American Legion.

JOHN MCCLELLAN was born with a deep burning ambition. An ambition to make something of himself; an ambition to rise above the humble surroundings of his birth; not that there was anything wrong with those surroundings for there wasn't, but an ambition to achieve a status in the world whereby he could improve the lot of those in whose surroundings he was born. He was always interested in the law and poli-

tics; studious, with a sense of understanding far beyond his years of what was going on around him he passed the bar examination at the age of 17 and a special act of the legislature had to be passed so that he could be admitted to practice. He early became interested in politics as a natural implement of his legal education. He served his city, county, and district in various offices of those governing units and in 1934 was elected to the House of Representatives. In the House of Representatives that ambition to be of service to the people he served began to achieve fruition. He was the author of a great deal of constructive legislation of national interest dealing with schools, labor relations, Internal Revenue Code and budgeting procedure to effect substantial economies in governmental operation. In November 1942, he was elected to the high office of United States Senator and is now serving his third term as senior Senator from Arkansas. The willingness to work and a burning desire to do something for people still hasn't deserted Senator MCCLELLAN. He is a member of 3 standing committees; 2 special committees, and 13 subcommittees. His determined opposition for more than 20 years to totalitarian aggression has made him a leader of the free world's fight against communism both in the United States and abroad. When it looked as though the liberals, wooly heads, and fuzzy thinkers in our Government might work out a plan whereby Communist China could be admitted to the U. N. JOHN MCCLELLAN grabbed the ball and put through the Senate a resolution stating that it was the sense of the United States Senate that those representing the United States at the United Nations, should do all they could to keep Communist China from being admitted to the United Nations. In a great many hearings his painstaking, thorough research has flushed from cover a number of Communists and the work that he has carried on has given to other committees and to their members, leads whereby they have been able to flush out Communists in our country.

Yet, with all his desire to flush out communism in Government or out, he has been meticulous in protecting the rights of individuals under our Constitution. He has no patience with those, however, who would attempt to use the Constitution to cover up their Communist ties. Senator MCCLELLAN'S thinking on Americanism is balanced. He is now engaged in the Senate in digging out corruption and graft as related to the labor movement and I am sure he will mention in his remarks the fine response he has gotten from the laboring people themselves. Senator MCCLELLAN has been one of the most ardent advocates of our public-school system and has used every effort to improve the free public-school system in this country and yet at the same time, keep the hand of bureaucracy off them.

Recently I came across a statement which I think sums up Senator MCCLELLAN'S public life better than any other:

"It is almost impossible to make a single-valued judgment of Senator MCCLELLAN'S kaleidoscopic activities. He is one of those rare gadflies who can keep the public intelligence from lethargy and its conscience from indifference."

Based then on Senator MCCLELLAN'S contribution to Americanism in the State of Arkansas, the United States, and the world as exemplified by his words and deeds in the Congress of the United States, it gives me a great deal of of pleasure to award to Senator JOHN L. MCCLELLAN, on behalf of the Arkansas Department of the American Legion, our first annual Most Distinguished Service Citation and plaque which accompanies it. The citation is as follows:

"MOST DISTINGUISHED SERVICE CITATION—HON. JOHN L. M'CLELLAN

"Whereas Senator MCCLELLAN has waged an unceasing and an unrelenting fight in the United States House and Senate against atheistic communism in all its forms; and

"Whereas Senator MCCLELLAN is an ardent advocate of the separation of powers as ordained by our Founding Fathers; and

"Whereas no public figure excels him in respect and admiration for the Constitution of these United States, and no public figure excels him in contempt, disdain, and ridicule of those who attempt to negate the Constitution; and

"Whereas Senator MCCLELLAN has by his untiring and herculean efforts on behalf of the common man, earned the approbation of all those who believe in the dignity of man; and

"Whereas Senator MCCLELLAN has, by his unselfish devotion and service to the peoples of Arkansas and these United States, fostered and helped to perpetuate a 100 percent Americanism; Now, therefore

"The American Legion, Department of Arkansas, is proud to award to JOHN L. MCCLELLAN, Arkansas' senior United States Senator, its first annual Distinguished Service Citation in recognition of his contribution to the American way of life and in recognition of his devotion to the principles of Americanism.

"This the 26th day of July 1957.

"THE AMERICAN LEGION,
DEPARTMENT OF ARKANSAS,
"By ULYS. A. LOVELL,
"*Department Commander.*

"Attest:

"JOEL A. BUNCH,
"*Acting Department Adjutant.*

REMARKS OF SENATOR JOHN L. MCCLELLAN, "ALL-STATE" BANQUET, AMERICAN LEGION AND AUXILIARY, LITTLE ROCK, ARK., JULY 26, 1957

Distinguished Legionnaires, members of the Legion Auxiliary, my friends and fellow citizens of Arkansas, the honor you have so graciously conferred upon me in the presentation of this citation award and plaque has aroused within me emotions of gratitude and sentiments of appreciation that mere words and beautiful phrases are inadequate to express. When I say that I am thankful, overjoyed, and happy, it comes from the depths of my heart.

This recognition I had not expected. It is one, I know, many others are more deserving to receive. The nature of the award, and your authorship of it, strike many tender feelings in my being. There is no other patriotic organization that could confer such an honor upon me from whom I would rather receive it. I shall always cherish it.

I accept this award and the honors associated with it with grateful appreciation and in profound humility. But I accept it not alone for myself, my wife, and family but also for and in the name of the fine citizens of our great State, whose quality of patriotism and Americanism I am proud to acclaim as being of the highest and best and unexcelled anywhere in the world.

I accept in that spirit because I want to give credit where credit is due—credit to you, the members of the American Legion and the Legion Auxiliary, and to all the people of Arkansas who have in the exercise of their franchise elected me to the high office of United States Senator and afforded me the opportunity to labor conscientiously—and I hope sometimes effectively—in the vineyard of service to our country.

So, I say to you tonight with all the emphasis I can command that my gratitude for the high privilege and honor of serving our wonderful State in the greatest and most majestic law-making body in the world deepens and increases with the passing years.

Each succeeding session of the Congress has thrust upon me new duties and added responsibilities. The workload of your Senators and Congressmen mounts higher and higher as the Federal Government grows bigger and its problems become more complex and complicated. This accelerated growth is only in part due to international commitments we have made and obligations we have assumed in the fight against the Communist, worldwide conspiracy and in our struggle to maintain and preserve peace.

This so-called cold war conflict has necessitated enormous expenditures for military preparedness here at home. We have generously assisted other countries for the purpose of aiding them to withstand and resist any totalitarian threat of aggression and conquest. Currently, the cost of our national defense program and foreign commitments is approximately $45 billion annually.

But there are many other contributing factors to the swollen cost and bigness of our Government. In response to popular demand, many new domestic programs have been, and are being, initiated and existing programs expanded and increased governmental services are being provided. All of these make for astronomical Federal expenditures and burdensome taxation of our people.

This huge spending by Government is generally acknowledged to be one of the causes of inflation, but there are other pressures in our economy that contribute mightily to the continuing rising prices and high cost of living.

The leapfrog process of large increase in wages, and then a corresponding increase in the cost of products to consumers keeps the spiral of inflation ascending upward and onward to new plateaus of greater danger. This, in my judgment, is one of the gravest domestic problems we face.

Your Government has tried, and is trying, some measures to combat these forces, but none so far have proved to be adequate or very effective. Many ideas have been advanced and proposals made by leading economists, and by our best statesmen. Some of them may be worthy of application and if tried might prove helpful, but I regret to say as of now we have not found the answer to this most vexing and continuing problem.

Unless we do find a way to check these inflationary forces and stabilize our economy, we may have to pay a terrific price in unhappy consequences. Out of these consequences, many people will suffer the loss of their financial security.

If we are to avert those consequences, it may become necessary to apply some very harsh remedies, the nature and extent of which cannot now be foretold; but I do regard this problem of inflation and ever-rising cost of living as the gravest domestic problem and challenge that is facing our Government today.

So, it is no wonder that the Federal Government is today so big, so complicated, and so cumbersome that it is beyond the capacity of the finite mind of any one man to know and understand all of its ramifications, or to keep current with all aspects of its activities and administration.

On occasions like this when speaking at home, I find it impossible in a brief address to discuss all matters and subjects relating to Government, in which my audience may be interested. So, tonight I shall largely confine my remarks only to two other matters of current, major concern and of great national interest.

The first I shall speak of is presently referred to in Washington and by a large segment of the press as the big issue. It relates to the abominable so-called civil-rights bill, which passed the House of Representatives and is now being heatedly and extensively debated in the United States Senate.

Last year on 2 or 3 occasions in speeches to groups in Arkansas, I commented about a similar bill then under consideration before House and Senate committees, and I stated at that time that it was the most vicious piece of legislation that I had ever seen presented to the Congress. That was

not an exaggerated statement, and it applies with equal emphasis to the bill now under consideration.

The language of the present bill was so cunningly contrived and arranged as to reflect that the intention of the author of it was to conceal rather than to reveal its true objectives and the results that it would achieve if enacted into law. The craftsmanship in drafting it definitely indicates the handiwork of an artful deceiver.

This measure was presented to the Congress as a moderate bill. The administration, through the Attorney General, and through congressional advocates of the bill, claimed that its principal objectives was to make secure the right to vote. Many among the very elect were at first deceived into believing that to be true. But they now know it was in fact grossly misrepresented to them.

If that were all the bill provided, there would not be strong opposition to it. It would be of little concern to us here in Arkansas, for I know of no qualified voter in Arkansas who is denied, or who is likely to be denied, the right to vote in elections in our State.

But the public did not know, and a majority of the Members of the Senate did not know, of the many evils the bill contains until southern Democrats began to expose them in Senate debate.

The public did not know, and were not told by the sponsors of the bill, that its primary purpose was to implement the Supreme Court's decision on segregation and thus force integration of the races in the public schools of the South.

The public did not know, and the proponents of the bill did not tell us, that the bill contained the hidden authority for the President of the United States, or for someone designated by him, to call out the Armed Forces of this country to force integration in our schools at the point of a bayonet.

The public did not know that this bill contained an infamous device that would destroy the right to trial by jury as guaranteed by the Constitution to everyone accused of crime.

The public did not know, and a few Members of the Senate seemed to know, that this bill was so cunningly contrived that it would substitute the injunctive processes in a court of equity and contempt proceedings thereon for our traditional system of indictment by a grand jury and by trial of the accused before a jury of his peers.

The public was not told, and did not realize, that this bill gives to the Attorney General the power, and makes it his duty, to file suits in the name of the United States, and at the expense of the taxpayers, against any citizen who someone may charge has deprived him of, or hindered him in securing, any of his so-called civil rights.

I could continue on and on to point out how this measure is a radical departure from our traditional constitutional system of jurisprudence and justice. I could point out that this bill would virtually set up a gestapo department in the Department of Justice, that it would establish a commission, at unlimited expense to the taxpayers, with authority for 2 years to hound, harass, and intimidate good law-abiding citizens of this country.

I could say much more about it, but the foregoing are just some of the evils we have already exposed. I can assure you that others will follow, but these exposures so far have been sufficient to shock the conscience of this Nation and to demonstrate that the bill was designed and intended as a punitive measure against the people of the South.

These exposures have been sufficient to cause many Senators to change their views, and with the happy result that part III, which contained some of the most vicious provisions of the bill, was stricken from it by a vote of 52 to 38 last Wednesday. Of course, what the Senate strikes from it could well be restored by the conferees, and I understand some of the leading proponents in the House are saying that in conference they will accept no Senate amendments. In other words, what has been stricken from the bill could again be restored, but I am encouraged to believe that unless the jury-trial amendment is adopted and the bill is reduced to a purely right-to-vote measure, it will never become a law.

I have taken the position that if the abolition of the process of grand-jury indictment for crime and trial of the accused by a jury, as guaranteed by the Constitution, is a necessary procedure to apply against a citizen of the South for alleged violation of someone's civil rights, then the same law should be made to apply to the Communist conspiracy in this country that would destroy the liberty and civil rights of us all.

Certainly, to organize, teach, and conspire to overthrow the Government of the United States by force and violence is a much graver crime than that of denying some individual the right to vote. Accordingly, I have offered an amendment to the bill that would apply the same procedure to the Smith Act and against the Communist conspirators. It is my opinion a vote on this amendment will be a test of the sincerity, good faith, and consistency of those who want to adopt this unorthodox—and in my opinion unconstitutional—procedure in so-called civil-rights cases.

If it is proper to apply such remedies against a good American citizen of a Southern State, then it is a thousand times good as a remedy against the Communists who are enemies of us all.

One of the added duties with increased responsibilities assigned to me at this session of Congress is that of chairman of the Senate Select Committee To Investigate Improper Activities in the Labor or Management Field. I am sure you already know something of this committee and its activities. I doubt, however, that the general public yet fully understands and appreciates the full scope of the committee's jurisdiction and the magnitude of the task assigned to it.

When the committee was created, it was given 1 year in which to carry out its mission, but it soon became apparent that it would be impossible to get the job done within that period of time.

During the past 6 months that this committee has been in existence we have received more than 50,000 letters and communications. Some 40,000 of them are from members, and from the wives of members, of labor unions. Of these, not just hundreds, but literally thousands of them, make complaints regarding the corruption in their union or improper practices that they know exist. To examine all of these, and to analyse and screen out those complaints that have little or no merit, requires meticulous work; and after doing that we find there are hundreds of them that do have sufficient merit as to warrant the committee's attention.

Since the committee began holding public hearings on the 26th of February, this year, it has had some 75 open sessions at which it has heard more than 125 different witnesses, with the result that much corruption, criminal and improper practices have already been exposed in a number of large unions, and some in local areas.

Presently major preliminary investigations are underway in 8 or 10 other States involving different unions and covering some new and different aspects of the problem to those heretofore disclosed by our inquiry. These include collusion and improper practices of management, racketeer control, and secondary boycotts.

Three of these separate areas and inquiries are now ready for public hearings. Others will soon be ready and this committee will continue to hold hearings from time to time during the rest of the year and throughout the recess period of the Congress. It will take the committee until December or January to process in public hearings the preliminary investigations that are now underway. Beyond that, there are complaints and charges in other areas and other unions that we have already determined will require committee action.

As I give you this report on the committee's activities, I want to emphasize again and again that there are many, many honest unions and honest union officials. It is not the purpose of this committee to destroy unionism. If the committee can carry out its true mission, and have its work and recommendations implemented by proper legislation, the result should be the elimination of the rats, the thieves, and racketeers that are now preying upon the honest working people by misappropriating and stealing their funds and by arbitrarily and dictatorily imposing practices that deny to the union members their constitutional right of democratic processes in the election of their officials and in determining union policy.

It is interesting to note that less than 2 percent of all the communications the committee has received are critical. The other 98 percent applaud and commend us in the work we are doing.

It is also extremely gratifying that Mr. George Meaney, president of the AFL–CIO, and many presidents and high officials of other international unions are cooperating with the committee and have manifested a desire and purpose to help eradicate from unionism those undesirable elements and forces that the committee has been exposing and will continue to expose.

By its working cooperatively with the committee, we can aid the AFL–CIO in the implementation and making effective the excellent code of ethics it has adopted with the purpose of preventing improper practices and improving the standard of unionism.

I think most of you know that I have had a little previous experience in conducting investigations. This one, however, is the most difficult of any that I have heretofore experienced. We have found that we cannot get much cooperation from those who have misappropriated union funds and engaged in other improper practices. In fact, we encounter considerable obstruction and finally, in many instances, we are confronted with the Fifth Amendment device that is becoming so prevalent today among people who engage in wrongdoing or who use that as a pretext to keep from telling what they know on others.

Then, too, in exposing the racketeers, extortionists, and those who are preying on the innocent and hard-working, honest labor union members, those who are misappropriating union funds for their private gain, we are dealing with, in some instances, goon squad characters, hoodlums, and gangsters. They will do anything that they think they can get by with to obstruct or wreck the committee's efforts.

I knew this was a tough assignment when I took it. I knew the individual members of the committee would be sniped at, and possibly smeared, and that there would be those who would attempt to sow seeds of discord among us and stir up strife between us in the hope that they could disrupt the committee and impair its usefulness and the thoroughness of its work. I have seen some evidence of sniping at the committee from some minor segments of the press. I am happy to say, however, that both the press and the public generally have given us enthusiastic support and cooperation in this job that must be done.

I am also glad to report to you tonight that the committee is working harmoniously and that up to now we have been able to keep it truly bipartisan. There is no place in this job for partisan politics.

Those forces and elements of evil that are now operating in the labor-management field

must be checked, and adequate and effective laws must be enacted to deal with them. We cannot be indifferent or complacent and do nothing and permit these forces to gain their objectives of a gangsterism economy in America. The committee will do its best and, with the overwhelming support and approval of all decent people in both management and unions, we will make America a better place in which to live.

Natural Gas Act

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. ASHLEY. Mr. Speaker, the controversial natural-gas bill is again consumming the time and energies of Congress, repeating the experience of other years when it has been considered in the closing hours of the legislative session.

Month after month passed by in the early part of the session with little legislative activity. In midsession proponents of natural-gas legislation, principally industry forces, announced agreement had been reached on legislation acceptable to industry.

As the Representative of a gas-consuming area, I deplore the necessity of considering legislation which serves no public interest and which will result in higher gas prices in my community.

I want to commend my distinguished colleagues, Hon. RAY MADDEN of Indiana, and Hon. JAMES DELANEY of New York for their vigorous efforts to probe the necessity of this legislation in the Rules Committee.

The following article by Drew Pearson in his Washington Merry-Go-Round article which appeared in the Washington Post of yesterday completely discusses the action which took place this week in the Rules Committee of the House of Representatives.

The article follows:

GAS BILL HITS COMMITTEE SNAG

(By Drew Pearson)

The natural gas legislation, which in these days of inflation will add about $800 million annually to the consumers' gas bill, hit a couple of snags in the House Rules Committee last week.

The gas and oil lobbyists were all set to see the gas bill slide through Chairman HOWARD SMITH'S Rules Committee like greased lightning when it ran full force into the adamant figures of Congressmen RAY MADDEN, of Gary, Ind., and JIM DELANEY, of Long Island City, N. Y.

Chairman SMITH started the Rules Committee hearings in a big hurry. SMITH is the Congressman who used to represent George Washington's old home, Alexandria, just across the Potomac, but had to move to more rural Virginia when this area got too progressive. He is head of the Dixiecrat-Republican coalition which just killed the school bill and his Rules Committee is the all-powerful group which decides whether a bill shall be sent to the full House of Representatives for a vote or not.

Congressman OREN HARRIS, of Arkansas, author of the gas bill and longtime friend of the public utilities, appeared as a witness.

"What is the reason that this bill comes to us during the closing days of Congress?" asked MADDEN, whose Indiana district, just outside Chicago, consumes millions of dollars worth of gas.

SMITH WIELDS GAVEL

"You had all of January, February, March, April, May, and June to bring this bill in, but now you bring it in a few days before adjournment," MADDEN continued. "Is this because you want to rush it through during the closing excitement of adjournment when nobody is paying too much attention? This is what happened last year. After all this delay why the big rush?"

Chairman SMITH fussed and fumed. He held his gavel in hand as if ready to bring it down on the slightest provocation.

"How much time do you plan to take?" he fumed at MADDEN after the Indiana Congressman had asked many more questions.

"Now, Mr. Chairman," replied MADDEN, "we sat here for 2 weeks while you went into the housing bill and for 4 weeks while you considered the civil-rights bill. Now comes along a bill which will take close to $1 billion out of the pockets of the American consumer and yet you want to rush it through in 1 hour."

The hearings by now had passed well beyond the noon hour, when the House goes into session. It was 1:30 p. m., and Congressman CLARENCE BROWN, Republican, of Ohio, had slipped out for lunch. Noting this, MADDEN told SMITH:

"Now, Mr. Chairman, you're not going to starve us just because you want to rush approval of this gas bill. The rest of us want some lunch, too. And after that we'll want to go over to the floor and take part in defeating the school bill."

Committees are not supposed to sit while the House is in session, so reluctantly SMITH bowed. He adjourned the gas hearings until next day.

PUT DOWN THAT GAVEL

Next day the same thing happened. Nervously, hurriedly, Chairman SMITH held his gavel aloft, trying to rush the witness.

"Mr. Chairman," said JIM DELANEY, "I wish you'd put that gavel down. * * * I'm afraid it might fly off and hit somebody."

Congressman TORBERT MACDONALD, of Malden, Mass., another Democrat, was the witness. He has waged a vigorous, uphill battle to show that his fellow progas Congressmen were simply doing what United States Steel did for inflation by increasing the price of gas. He now told an amazing story of how the gas lobby had drafted the bill, how Chairman Kuykendall, of the Federal Power Commission, supposedly the protector of the public, had worked with them.

Congressman JOSEPH O'HARA, a Republican from Minnesota, which needs natural gas, referred to a letter from Mr. Eisenhower supporting the bill. O'HARA is also for the bill.

"Wouldn't you say the President was a little bit for the bill and a little bit against it?" remarked MADDEN after the letter was read.

Everybody laughed.

"We passed this bill last year," continued MADDEN, "and then the President vetoed it. A lot of Congressmen were put in a box. Isn't it going to be awfully embarrassing for us if we get in this box again? Don't you think we ought to look at this carefully?"

Finally Chairman SMITH gave up. What discouraged him was the statement from alert young CHARLES VANIK of Cleveland, that several other Congressman wanted to testify. Later VANIK came up with a list of 24 Congressmen.

SMITH is now continuing the hearings. But he is still determined to push the gas bill through during the closing days of this session. In fact, strategy is all set to vote on a Friday when the big city Congressmen from New York, Philadelphia, and Brooklyn are home weekending.

The Handicapped Make Good Workers

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. FULTON. Mr. Speaker, it has been a matter of real satisfaction to me to be actively interested in the field of rehabilitation of our physically handicapped citizens and friends. The Federal Office of Vocational Rehabilitation and the State bureau of vocational rehabilitation are to be highly complimented for the wonderful record they have accomplished in the year ending June 30, 1957. It is really inspiring to know that by teamwork Pennsylvania leads the Nation in preparing and placing physically handicapped people in gainful employment.

We in Pittsburgh, Allegheny County, as well as western Pennsylvania, are doubly proud of the accomplishments of this area. The Pittsburgh office of the State bureau of vocational rehabilitation made the best record last year of any of the 10 district offices in Pennsylvania.

Congratulations to the teamwork provided by the office personnel both State and Federal, and a whole basketfull of orchids for the Pittsburgh employers and physically handicapped workers for giving such a good name to our community and adding to the highest standard of living for all of us.

I hope that America never forgets that the handicapped make good workers and in many instances the handicapped make the best workers.

[From the Pittsburgh Post-Gazette of July 31, 1957]

THE HANDICAPPED MAKE GOOD WORKERS

Pensylvanians should find much satisfaction in the good record their State is making in the important field of vocational rehabilitation. The Federal Office of Vocational Rehabilitation has announced that during the year ended June 30 Pensylvania led the Nation in preparing and placing physically handicapped citizens in gainful employment.

The value of this program may be weighed in practical as well as in humanitarian considerations. The latter tell us that in a civilized society we do not follow the jungle code of the survival of the fittest. And from the practical point of view, when a disabled person is rehabilitated and becomes a taxpayer, he repays the cost of his rehabilitation through Federal income taxes alone in a matter of only 7 or 8 years.

Continuing surveys show that the quality and quantity of work done by properly placed handicapped workers is as good, or better, than that of the nonhandicapped. The handicapped worker is so eager to make good that he frequently compiles a better record, in such matters as attendance, than others.

Of the 10 district offices run by the State Bureau of Vocational Rehabilitation, the

Pittsburgh office made the best record last year. It rehabilitated and placed 1,287 handicapped persons, more even than Philadelphia.

All who have had a part in this humane and constructive program—including in particular those enlightened employers who accepted the handicapped in their offices and plants—deserve the admiration of their fellow citizens.

Austin, Tex., Likes Emma

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. THORNBERRY. Mr. Speaker, the Christian Science Monitor recently gave signal recognition to the city of Austin, Tex., which is my home, by publishing a story by Glenn Klein which tells of the splendid service rendered by Mrs. Emma Long, as a member of the City Council of the City of Austin. Mrs. Long has completed her fourth full term on the Austin City Council and was recently unopposed in an election which will extend her service to 10½ years. She was the first woman elected to a city council of a major Texas city. The story is as follows:

[From the Christian Science Monitor of July 18, 1957]

AUSTIN, TEX., LIKES "EMMA"

(By Glenn Klein)

AUSTIN, TEX.—A long, continuous ringing pulled Emma Long out of bed one midnight. Upon opening the door, she saw a complete stranger standing in the rain. He excitedly explained that his wife had been arrested, adding "you must do something about it."

Mrs. Long invited him in and, after listening to his story, decided that his wife was innocent. Mrs. Long, who is always ready to help, dressed and went with the man to town where he made bond and got the woman out of jail. In the morning, Mrs. Long sent her lawyer to the woman. It was found that her arrest resulted from a case of mistaken identity.

Mrs. Long, the first woman elected to a city council post in a major Texas city, seems to have become a habit with Austin. She spends much of her time helping citizens solve their problems, both personal and public. She is called on both day and night to help in matters ranging from difficulties in drainage and street repair to personal problems.

Around Austin, the catchword is, "If you want something at city hall, call Emma." Her friends say that she is always glad to help.

HELPS NEIGHBORS

She once worked several weeks on the problem of a neighborhood feud. One person in the area was receiving as many as 100 anonymous telephone calls a day.

By checking with the telephone company and tracing calls, she discovered who was doing the calling. She then talked to the caller and found that a children's squabble had started the trouble. She organized a conference between the families and the feud soon ended.

Getting people out of jail, recovering dogs, having dogs penned up, explaining the workings of city hall, and just listening to troubles are not unusual items on Mrs. Long's daily agenda.

One man called and told her that he had never voted for her as he did not believe in women being involved in politics. But he added, "I like what you did about getting my street repaired, so you have my vote from now on."

Known as Emma to most of her 180,000 constituents, Mrs. Long has been elected five times to the council, the first when councilman HOMER THORNBERRY resigned to run for Congress. Since she was active in several organizations and the Democratic Party at that time, several people asked her to run for the council position. She finally agreed because of her interest in civil government and in the people of Austin.

DEFEATED FOR SENATE

Last summer Emma tried for election to the State senate, but ran a close second for her first political defeat. She took it good-humoredly, saying, "The voters gave me a mandate to stay on the city council."

The unpaid job as city councilman (the charter says she's a councilman) fills the spare time Emma has from her job of taking care of 2 sons and a home at 813 Park Boulevard, and her part-time work as a reporter for her husband's State Capitol News Service for Texas newspapers. She says her husband "has a very good attitude about my being on the council. He is interested in the council and is very helpful."

RAN UNOPPOSED

Mrs. Long has completed her fourth full term on the Austin City Council, and was recently unopposed in an election which will extend her service to 10½ years.

During her long tenure as councilman, Mrs. Long often has been a storm center as minority member of the 3 councils in the 1949–55 period. Her major projects have been the reorganization and enlargement of Brackenridge Hospital, adoption of ordinances to require pacing of all new streets opened by subdividers, improvement of wages and working conditions of city employees, and, most of all, "to see that every citizen gets equal treatment."

Mrs. Long was Emma Jackson, of Hereford, Tex., when a student at Texas University. The red-haired Texan's major was history and her minor was government. This is where she got her background for her full-time hobby, as she calls her council job. She was married in 1936 to Stuart Long soon after her graduation.

Emma worked on Texas newspapers as a capitol correspondent with her husband as associate editor of six newspapers they formerly owned in west Texas. During the war she worked with the Army Security and Intelligence and, after the war, she operated a printing business in Austin.

United States Savings Stamps Used as Trading Stamps

EXTENSION OF REMARKS
OF
HON. JAMES P. S. DEVEREUX
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. DEVEREUX. Mr. Speaker, I would like to call to the attention of my colleagues in the House a unique use of United States savings stamps which have been used by a constituent of mine in place of the popular trading stamps, which are so well-known throughout the country.

A dry cleaner in my district by the name of Irvin Hackerman, of Pikesville, Md., has instituted a plan whereby he gives 60 cents in United States savings stamps to each customer who purchases $20 worth of dry-cleaning services from his establishment. Although the plan does not have the official backing of the United States Treasury Department, it has been done with their knowledge and approval.

I think Mr. Hackerman is to be commended for his originality and initiative. There are all kinds of stamp plans, but this is one that will help our Nation and will encourage thrift on the part of us all.

Blough Sights Fourth Quarter Steel Pickup

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. FULTON. Mr. Speaker, when a business executive reports to his stockholders and the American people with the public confidence, outstanding competence, and background of Roger Blough, chairman of the board of United States Steel, such considered statements should be given attention by the American people.

It is a pleasure to insert in the CONGRESSIONAL RECORD a front-page article from the Journal of Commerce entitled "Blough Sights Fourth Quarter Steel Pickup." This article sets out the comments of Roger Blough at the time of the issuance of the report of the United States Steel Corp. for the second quarter of 1957.

As a personal friend and admirer of Roger Blough, I would like the Congress to have the benefit of his keen analysis and predictions on the future of the steel industry in the United States.

The article follows:

BLOUGH SIGHTS FOURTH QUARTER STEEL PICKUP

(By Sidney Fish)

Steel operations will improve in the fourth quarter, but the gain will be small compared with present levels, owing to the anticipated trend among steel consumers to reduce their inventories, Roger M. Blough, chairman of the board of United States Steel Corp. said in issuing its report for the second quarter.

The report showed that United States Steel earnings for this period were slightly better than in the first half and set a record for any quarter, although dollar sales failed to set a new record during this period. For the first half, sales and earnings also set alltime records.

COMPARED TO OTHER FIRMS

But Mr. Blough said that these earnings, while representing good performance by United States Steel, should be gaged against the earnings of other major companies.

A recent tabulation by a national magazine showed, he said, that United States Steel, among the 500 largest companies in this country, was ranked 123d in the size of its earnings as expressed in percentage of dollar sales, and stood 243d when its earnings were expressed as a percentage of capital invested in the business.

The steel industry, Mr. Blough said, would operate between 80 and 85 percent of capacity during the second half of this year, with some pickup shown in the final quarter partly as a result of improved demand from the auto industry.

Some evidence of improved auto demand has already made its appearance, he said. For United States Steel, operations for the third quarter will average a little less than the current rate of 84 percent, owing to vacations.

In the fourth quarter, United States Steel's operations should be a little better than 85 percent of capacity, Mr. Bough said.

SEEK TO CUT INVENTORIES

Reviewing the outlook for the second half, Mr. Blough said that the major factor during this period, as he interpreted the situation, was not the expected gain in automotive orders for steel, but the continued tendency of consumers to cut their inventories.

"Our concept is that inventories grew in the first quarter and continued to grow in the second quarter," he said. "By the end of the year, they should be back where they were at the beginning of the year.

"This means that there should be reasonably good business in steel consuming industries during the rest of this year."

NET INCOME UP

United States Steel reported net income for the second quarter of $2.04 a share on its common stock, compared with $1.83 a share in the June quarter of last year, and with $2.03 a share in the quarter ended March 31, 1957.

For the 6 months ended June 30, net was $4.07 a share, against $3.66 a share in the first 6 months of 1956.

United States Steel was the only one of the five largest steel producers to show a gain in net profit in the second quarter, compared with the same period of last year.

"Income for the second quarter of 1957 is reported as $115.9 million, or a return of 9.9 percent on sales of $1,170.3 million," Mr. Blough said. "Income for the first 6 months of 1957 is reported as $231.4 millions, or a return of 9.9 percent on sales, which compares with income of $208.6 million, or a return of 9.2 percent on sales, reported for the first 6 months of 1956.

SHIPMENTS SHOW RISE

"Shipments of steel products in the second quarter of 1957 amounted to 6,402,898 net tons. Shipments for the first 6 months totaled 13,022,691 net tons, which compares with 13,585,054 net tons shipped during the first 6 months of 1956.

"Production of steel ingots and castings in the second quarter of 1957 averaged 89.5 percent of capacity, which compares with production during the first quarter averaging 95.7 percent of capacity. The tonnage produced in the second quarter is equivalent to an index of 127.2 in terms of the 1947–49 average production as 100.

"Increases in wages and benefits which became effective July 1, 1957, under the terms of the 3-year labor agreements reached with the United Steelworkers of America in August 1956, together with appropriate increases for salaried employees not under union contract, will increase United States Steel's employment costs by an estimated 6 percent.

"Announcement has been made of an accompanying increase in carbon and alloy steel prices, effective July 1, averaging about 4 percent, or approximately three-tenths of 1 cent per pound.

"MORE FOR EXPANSION

"Expenditures for additions to and replacements of facilities totaled $141 million for the second quarter of 1957. At June 30, 1957, authorized projects to be completed required a further expenditure of $775 million.

"Working capital of the corporation and its subsidiaries at June 30, 1957, after deducting the current dividend declarations and the amount of $525 million set aside for payment of property expenditures, was $623.4 million, compared with $740.1 million at June 30, 1956.

"Long-term debt at June 30, 1957, exclusive of amounts due within 1 year, was $243.3 million, compared with $277.9 million at June 30, 1956."

CALLS RISE CONSERVATIVE

Mr. Blough, who will testify next week before a Senate judiciary subcommittee on the recent price rise in steel, said he felt that the July 1 price boost of around 4 percent was conservative and was less than many steel oonsumers had expected.

He added that there was no resistance to the rise, and he knew of no price shading or waiving of extras by other steel producers.

Asked whether United States Steel's administered price rise was not the result of other price boosts and cost advances, Mr. Blough said:

"Practically all prices in industry are adminstered prices, and our prices are dependent on what the other fellow does about his prices. This is true not only of the steel industry but of every industry that I know of."

IMPACT OF SCRAP PRICES

The price situation, Mr. Blough said, was influenced by such factors as a rise of 20 percent in scrap prices, in the 60 days prior to the steel price rise. Scrap is purchased in large qauntities by steel companies.

United States Steel, Mr. Blough said, had invested $3 billion on new plants since World War II. Approximately two-thirds of this amount came from depreciation charges, and the rest from retained earnings. During this period, the corporations investments were greater than its earnings.

Directors declared the usual quarterly dividend of 75 cents a share on the common stock, payable September 10.

The Sesquicentennial Year at Somerset, Ohio

EXTENSION OF REMARKS

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 1, 1957

Mr. HENDERSON. Mr. Speaker, many of my colleagues who travel United States Route 22 through southeastern Ohio have been impressed with the attractive community of Somerset in Perry County. As with all visitors, however brief their stay may be, they recall the statue of Gen. Philip H. Sheridan, the Civil War hero, which dominates the village square. This statue of Somerset's most famous son reminds us of the legacy which this village holds from its illustrious past.

This is the sesquicentennial year at Somerset. During the week of September 22 through 28, the residents plan a celebration which will suitably mark this 150th year. These are the families of American pioneers whose forefathers found in the natural riches and scenic rolling hills of Perry County the site which succeeding generations have fashioned into a thriving and gracious village. Like the parents of Phil Sheridan who, as immigrants to America in the 1830's, found in Somerset the better place to live which they had sought, so it is today that the people of this community in the heart of our Nation, express their thankfulness for the blessings which are theirs.

I am sure that my colleagues here in Congress, from every State in the Union, join me in extending congratulations to this Ohio community, not only for having survived 150 years, but for having grown, prospered, and served as the birthplace for so many outstanding Americans, and a welcome home for all who have come there.

Lust for Taxes

EXTENSION OF REMARKS

OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 1, 1957

Mr. JOHANSEN. Mr. Speaker, I am sure that the American people today, as in the past, always welcome the sound and patriotic counsel and wisdom of General of the Army Douglas MacArthur. His reflections and admonitions to his fellow citizens are now, as always, offered with the interest and welfare of his country as the sole and sincere motive.

Accordingly, I count it a privilege, under permission to extend and revise my remarks, to include the following extracts from remarks made by General MacArthur, as chairman of the board of directors, at the annual stockholders meeting of the Sperry Rand Corp., in New York City, July 30:

The world is entering an age of evolution greater than it has ever before known. Never in the 2 billion year history of human life, in the 5 billion years in which the earth has spun through the black vacuum of space from the sun, has man's faculty for learning assumed such immense new scope and power. We are acquiring an ever-greater degree of control and mastery over the processes of nature. We are now exploiting, not only scientifically but practically, the cosmic energy. We are graduating from earthly to universal dimensions. This evolution has happened so quietly and naturally—without ceremony or undue emphasis, without great debate or acid controversy—that we hardly know the exact instant that the change occurred. The tick of the clock sometimes sounds so softly we do not hear it; yet we now know the hour has struck. Vast panoramas will unfold before us, wave following wave, of a magnitude and diversity not as yet fully comprehended. Machines and mechanical devices will more and more operate other machines in an endless growing cycle, defined as automation, of labor-saving and multiple production systems.

To believe that this will be an evil, threatening mass unemployment and a consequent social upheaval somewhat similar to the disorders individual labor temporarily sustained in the industrial revolution of the 18th and 19th centuries, would be illogical. Such an attitude would manifestly discount completely the relative slowness of the development and the corollary and beneficent im-

provements which always accompany progress. There will be changes in jobs requiring adaptation of the labor force but nothing to cause a large volume of unemployment. Actually, the productivity of the economy can be expected to grow at the rate of 3 to 4 percent a year while the number of new workers, due to growth of population, will be only about 1.5 percent.

Nuclear energy and electronic advances cannot fail to bring an age of relative plenty. For the first time there will be provided the tools which promise to mankind the satisfaction of his basic economic and material needs. Some of you may well live to see the day when we will be drawing energy not only from the sun but from the tides and the winds; will be creating unheard of synthetic materials; will be purifying sea water; will be mining ocean floors for basic minerals; will be celebrating a life span of a hundred and more years; will be launching space ships to reach the moon; will see poverty for the first time faced with possible extinction. Living standards will be the highest, scientific advances will be the most revolutionary, world affairs will be the most exciting in all history.

* * * * *

If businessmen were to be allowed a wish, I am sure it would be unanimously for lower taxes. The tax burden now is so oppressive as to be almost confiscatory of venture capital. As Secretary of the Treasury Humphrey recently testified before a congressional committee, "* * * the present heavy tax burden will seriously hamper necessary economic growth," adding that "* * * spending under existing Government programs will rise as fast as the increase in revenues resulting from economic growth unless Congress and the administration alter and reduce those programs."

Taxes for 1956 came to a staggering total of more than $100 billion. The Treasury received $70 billion and State and local governments the other $30 billion. This means that the cost of government consumes almost one-third of the national product which is the sum of all goods and services by the entire population of the United States. The Government's appetite for taxes has grown steadily and inordinately. In 1885 the per capita tax take was $1.98. In 1917 it was $7.92. During World War I it rose to $35.70. In 1932 there was a drop-off to $12.48. The high point of World War II was hit in 1945, at $312.86. Last year, the fiscal year of 1956, was the costliest of all, $446.86 per head for every one of us. Such jet-propelled figures are difficult to comprehend. Much is hidden from direct view in the form of unseen nibbles at the pay check after payment of the direct income tax. You never know you are paying because they appear as part of the purchase price of the items you buy. For example you pay in this indirect way: 20 percent of the cost of your food; $800 on a $3,000 automobile; half the cost of a package of cigarettes; nearly nine-tenths of the price of a bottle of whisky.

Taxes have grown so rapidly in recent years that now they are the largest single item in the cost of living. Americans will pay for government this year more than they will spend on food, clothing, medical care, and religious activities combined.

Before you sit down to a meal, morning, noon, or night, this is what happens:

The tax agent collects from the farmer who grew your food. He collects from the fertilizer companies and farm-equipment manufacturers who supplied the farmer. He collects rail and truck transportation taxes, manufacturers' excise taxes, telephone taxes, property taxes, sales taxes, income taxes, social-security taxes, gasoline taxes, license fees, inspection fees, permit fees; all these—and so many others that nobody even knows what they are.

When you buy a dozen eggs you pay at least 100 tiny taxes which do not appear on the bill. There are 151 taxes on a loaf of bread, at least as many and maybe more on a pound of beefsteak, a box of soap, a can of beans. Billions a year are drained off which should be invested in new or enlarged enterprises or spent on the products of these enterprises. I do not hesitate to predict that if Government continues to wrest from the people the basis for future industries and businesses our rapidly increasing population may eventually outgrow the number of jobs available and industrial labor will then face its greatest threat.

There seems to be no restraint in this lust for taxes. It began with the Federal income tax law of 1914 which gave unlimited access to the people's wealth, and the power for the first time to levy taxes not for revenue only but for social purposes. Since then the sphere of government has increased with a kind of explosive force. Thomas Jefferson's wise apherism, "That government is best which governs least," has been tossed into the wastebasket with ridicule and sarcasm. Whether we want it or not, we pay now for almost unlimited government; a government which limits our lives by dictating how we are fed and clothed and housed; how to provide for old age; how the national income, which is the product of our labor, shall be divided among us; how we shall buy and sell; how long and how hard and under what circumstances we shall work. There is only scorn for the one who dares to say, "The government should not be infinite."

Actually, the national budget now governs the economy. Unfortunately, it is becoming more and more abnormal. For years we have been spending far beyond our means. Our indebtedness is now estimated to be nearly $700 billion, a sum greater than the combined debt of all the other nations of the world. And, it has been charged without challenge that our Government this year proposes to spend as much as all other governments put together.

The Russian dictator, Lenin, that implacable foe of the free enterprise system, predicted as early as 1920 that the United States would eventually spend itself into bankruptcy. How many of our leaders still hear the echo of Thomas Jefferson's voice when he warned with reference to the future of this country:

"I place economy among the most important virtues and public debt as the greatest of dangers to be feared. To preserve our independence, we must not let our leaders load us with perpetual debt. We must make our choice between economy with liberty, or profusion with servitude. The same prudence which in private life would forbid our paying our money, forbids it in the disposition of public money. We must endeavor to reduce the Government to the practice of rigid economy to avoid burdening the people and arming the magistrate with a patronage of money which might be used to corrupt the principle of government. * * * The multiplication of public offices, increase of expense beyond income, growth of the public debt, are indications soliciting the employment of the pruning knife. * * * It is incumbent on every generation to pay its own debt as it goes."

How incomparably different in philosophy from Karl Marx, that patron saint of communism, who 50 years later, while planning the destruction of all constitutional government, said:

"The surest way to overturn the social order is to debauch the currency."

He referred, of course, to the process of inflation, induced by extreme taxation; the process of controlling economic conditions and thereby controlling the lives of individuals—a control of fiscal, monetary and general economic forces which produces higher prices and a gradual devitalizing of the purchasing power of money. The continuing rise in the cost of living is due to our drift deeper and deeper into inflation until today our whole economic, social and political system is infected by an inflationary mentality which approaches a point where the very foundations of our structure are threatened. "Taxation," with its offspring, inflation, said Lenin in support of the basic thesis of Karl Marx, "is the vital weapon to displace the system of free enterprise"—the system on which our Nation was founded—the system which has made us the most prosperous people of all history—the system which enabled us to produce over half of the world's goods and with less than one-seventh of the world's area and population—the system which gave our people more liberty, privileges and opportunities than any other nation ever gave its people in the long history of the world. No wonder Herbert Hoover recently exclaimed in reviewing our situation, "the spirit of Karl Marx no doubt rejoices. * * * He recommended some such actions as the road to socialism." And by socialism he meant the forcing of a centrally controlled economic life upon all persons in the nation, under an authoritarian monopoly that is politically managed.

Chief Justice John Marshall warned as early as 1819 that "* * * the power to tax involves the power to destroy." And he might have added that the road to destruction is the road of socialism. Its evidences which we see and talk about so much—the collectors and dispensers of socialistically used funds, the planning committees and enforcement bodies, the services they presume to render and the pyramids they build, the votes they coerce to maintain control—all these expressions of socialism are but the offspring of excessive taxation. If we want economic liberty—want to be free to work most productively and to have what we produce—our concern must focus on the tax roots to shut off the revenue which nourishes the disease. To work at the other end and merely bemoan the detailed projects of socialism or damn the persons who happen to be manning those projects at the moment, or even to change political personnel, would be about as effective in stopping socialism as changing undertakers would be to stop death.

Excessive taxation produces results somewhat resembling the evils of slavery and serfdom in days of old. To illustrate: The Government takes in taxes over a third of the income of the average citizen each year. This means that he or she is required to work entirely for the Government from January 1 until May 10. This begins to resemble the Soviet forced-labor system. It practically reduces the citizen for protracted periods to what amounts almost to involuntary servitude. It is indeed the modern although humanized counterpart in the 20th century of the abandoned slavery and serfdom of the preceding centuries. We will be fortunate if it does not finally reduce individuals to the universal status of robots.

The present tax structure is even now probably adequate eventually to socialize the United States. Our tax take is already greater than that of the admitted national socialistic countries, whether on this or the other side of the Iron Curtain. The effects may not yet be fully evident to the superficial eye, but the erosion of incentive, ingenuity, and integrity that results will be as deadly as the hidden cancer is to life. It can in time change the basic character of this great Nation as it has every other nation where it has become indelibly affixed.

In the last two decades our tax system has resulted in a creeping inflation which has devitalized the American dollar to 40 percent of its previous purchasing power. If

the present trend continues, the dollar may well sink to half its present value within another decade. Those who suffer most from such fiscal debasement are the men of small means—those living on fixed incomes, wages, annuities, or pensions—especially the workingman. But inflation does even more than debauch a nation's currency; it also debauches a nation's morals. It creates a false illusion of prosperity; it discourages thrift and honest effort; it encourages the kind of speculation that expects something for nothing. History shows how difficult it is for a nation to recover once it is in the sway of an irredeemably depreciating currency. The tendency is for prices to go higher and higher, the value of money to go lower and lower.

The inflationary forces which undermine the Western World of today are the same forces which were at work 1,700 years ago during the decline of the Roman Empire. Just as in Rome, our civilization is living beyond its means. It is living more and more for the moment, trying to anticipate today the pleasures of tomorrow. Why save, asks the citizen, if savings are likely to be expropriated through taxes and inflation? Why wait for the day when we can afford a house, or a car, or a TV set, if we can buy these things today on credit? It is no longer enough that our economy grows annually faster than the increase in population; the call is for twice this growth. Wages must rise faster than productivity; the standard of living faster than income. This is the folly known as inflation; yet many prominent economists and innumerable others still preach the desirability of what they call, limited inflation. Few know that Lord Keynes, generally regarded as the modern apostle of inflation, because of his famous treatise on finance, is said to have remarked just before he died that he must write another book to warn the British people that "* * * there is danger in inflation." Even ex-President Truman, a main protagonist of high taxation and free spending, recently wrote:

"I do not wish to minimize the serious consequences of the type of inflation we are now experiencing. It has already brought hardships to a large segment of our population, in the cities as well as on the farm, and especially to those who have to live on pensions and fixed incomes." What a change is there, oh, my countrymen. What a difference it would have made had it come at the zenith of his Presidential power rather than in the dismal aftermath of a paid newspaper column. But inflation is not a question of partisan politics. It can be controlled only if both political parties really wish to stop it; only if both parties are determined to limit spending so as to be within our means.

If financial output has to be increased in one segment it must be correspondingly decreased in another. If defense spending has to go up, other spending, whether for housing, roads, schools, farm aid, or social benefits, must be curtailed accordingly. This is only commonsense. But, even though tax receipts have doubled during the postwar era, total public spending continues to exceed revenues. Promises continue to be made to expand all sectors of the economy at the same time. Some are 42 percent larger than they were in 1953–54. Literally dozens of welfare projects little understood by the general public are hidden in the more than 1,000 pages of the budget which has grown so big that nobody has any clear idea how much waste it actually contains. Some almost incredible and fantastic falsities have been progressively foisted upon public opinion with reference to it. One is that it is a perfect example of scientific fact, that it is as true as 2 and 2 make 4, that it is arithmetically a perfect equation which cannot be disputed, that its preparation is rooted in such learned hands as to be quite beyond the comprehension of the ordinary citizen. This is all complete bosh and nonsense. The national budget is but the guesswork of a small group of individuals, temporarily gathered in Washington by administrative assignment, whose previous training and experience has little to do with acquiring any specific knowledge of the Nation's need. Each one, engrossed with the superimportance of his own function and power, estimates a maximum that he deems he can utilize, irrespective of extravagance. The sum of these, with some modification, becomes the budget unless someone at the top lowers the estimates to correspond with the actual resources expected to be available. The problem a balanced budget, instead of being a mystic and untouchable phenomenon, is actually the commonest and most universal one in the world. It faces the head of every household every year of life. It is simply, how much can be spent safely on living expenses. The question is not what can be luxuriously used, not even what may be actually necessary, but what can be obtained with the money available without injudicious borrowing. If one's natural desires were followed, they would always amount to much more than could be actually afforded. But the householder is forced to exercise prudent restraint and practice thrift or eventually he will face disaster. He must be able to say "No" to excess items when everything in him wants to say "Yes."

It is exactly the same basic problem in government, with the vital difference that the money involved is not that of his own but that of others collected by taxation. But what a monumental difference this makes. Instead of being frugal, one becomes lavish. Instead of being careful, one becomes reckless. Instead of being conservative, one becomes radical. Temptation assails one from every angle. Ambition becomes every human, indeed, the pressure of political currents, the blandishments of powerful lobbies, the allurements of expanding horizons, the disease of power, all play their potent part. At the best the result is but a guess, a speculative estimate with little or no controlling influences. How wrong it can be is testified to by the surpluses that have accumulated over the years. These surpluses, the overestimates in the national budgets of actual needs, glut our warehouses from coast to coast. They are not limited to agricultural products but exist in practically every field and every commodity. A member of the Hoover Commission which studied the matter estimated to me that in the last decade perhaps $100 billion worth of surplus had accumulated. A large portion of this, he said, could probably never be gainfully used. This is but one facet depicting the frailty, the inaccuracy, and the extravagance of the casual budget. I know from actual experience these frailties. For 5 years I made up the budget for the Army and Air Corps when I was the chief of staff, and for 6 years supervised the Japanese budget when Supreme Commander for the Allied Powers in the Far East. The estimates submitted to me were astronomical compared to the moneys available without borrowing; but, it may interest you to know that the largest yearly budget I put in for the Army and Air Force, which were then combined, was approximately $400 million, and the highest for the entire Japanese nation of more than 80 million people was less than $2 billion. Yet, I can say confidently that the security of the United States was as relatively safe then as now, and that Japan's present prosperity, built on its postwar occupation budgets, has never been surpassed in modern times.

Only a month ago, Senator BYRD, the most potent financial voice in Congress, warned that he feared the country would "go over the precipice of financial disaster if the rise in Government spending were not curtailed." He said the country faces a "great potential danger because the Government has exhausted its power to tax and exhausted its power to borrow," that it has "no reserves."

Our swollen budgets constantly have been misrepresented to the public. Our Government has kept us in a perpetual state of fear—kept us in a continuous stampede of patriotic fervor—with the cry of grave national emergency. Always there has been some terrible evil at home or some monstrous foreign power that was going to gobble us up if we did not blindly rally behind it by furnishing the exorbitant funds demanded. Yet, in retrospect, these disasters seem never to have happened, seem never to have been quite real.

Another of the great illusions is that the Government gives the people free much of what they get from its services. I am convinced that the average citizen has no idea who pays for big government and how much. The painful truth is this: The Government produces nothing of itself. Whatever it spends for people it must previously take from the people in the form of taxes. Moreover, whenever the Government gives a service to people, it must at the same time take away from the people the right to provide and decide for themselves. And the amount which Government doles back to the people or spends to promote welfare is always only a fraction of what it takes away, because of the excessive cost of governmental administration. It is the little people that pay the largest part of the bill. Eighty-five percent of all the billions of dollars paid in income taxes comes from the lowest rate—the 20 percent paid by all persons with taxable income. Only 15 percent is added by all the higher rates up to 91 percent. Indeed, it has been suggested that one reason for the steep graduation of the income tax is to make the public think that people with high incomes pay most of the taxes. It is another illusion to think that excessive rates of a graduated income tax tend to redistribute the wealth. It merely prevents its accumulation and thereby blocks expansion of the Nation's economic strength. The very source of new and better jobs thus disappears. This is economic folly based on the false proposition that growth can be maintained through continuous inflation.

But, even greater issues are involved than any I have yet mentioned. Some years ago, the late President Woodrow Wilson made the following statement:

"The history of liberty is the history of the limitation of governmental power, not the increase of it."

The contest for ages has been to rescue liberty from the constantly expanding grasp of governmental power. The great patriots of the American Revolution revolted not so much against the actual taxes imposed upon them by a British King but against the concept of government behind the taxes; the concept that government had unlimited power to do what government thought proper. They had a deep suspicion that government, if permitted, would waste the labors of the people and ultimately curtail the power of the people, always under the pretense of taking care of the people. That is why they tried to bind the Government down with the modest restrictions of a Constitution, limiting the Government's powers to the performance of carefully specified responsibilities.

Daniel Webster said on the floor of the United States Senate:

"All republics, all governments of law, must impose numerous limitations and qualifications of authority; they must be subject to rule and regulation. This is the very essence of free political institutions. The spirit of liberty is a sharp-sighted spirit; it is a cautious, sagacious, discriminating, far-seeing intelligence; it is jealous of encroachment, jealous of power, jealous of man. It demands checks, it seeks for guards, it

insists on securities; it fortifies with all possible care against the assaults of ambition and passion. It does not trust the amiable weaknesses of human nature, and therefore it will not permit power to overstep its prescribed limits, though benevolence, good intent, and patriotic purpose come along with it. Neither does it satisfy itself with flashy and temporary resistance to authority. Far otherwise, it seeks for duration and permanence. It looks before and after; and, building on the experience of ages which are past, it labors diligently for the benefit of ages to come. This is the nature of constitutional liberty; and this is our liberty if we will rightly understand and preserve it. Our security is in our watchfulness of executive power. It was the constitution of this department, which was infinitely that most difficult part in the great work of creating our present Government. To give to the executive department such power as should make it useful, and yet not such as should render it dangerous; to make it efficient, independent, and strong, and yet to prevent it from sweeping away everything by its union of military and civil authority, by the influence of patronage, and office and favor; this indeed was difficult.

"I do not wish to impair the power of the President as it stands written down in the Constitution. But * * * I will not blindly confide, where all experience admonishes me to be jealous; I will not trust executive power vested in the hands of a single magistrate, to keep the vigils of liberty."

He spoke those words 123 years ago; but they could as well have been spoken yesterday.

There are many who have lost faith in this early American ideal and believe in a form of socialistic, totalitarian rule, a sort of big-brother deity to run our lives for us. They no longer believe that free men can manage their own affairs. Their central thesis is to take your money away from you on the presumption that a handful of men, centered in government, largely bureaucratic not elected, can spend the proceeds of your toil and labor to greater advantage than you who create the money. Nowhere in the history of the human race is there justification for this reckless faith in political power. It is the oldest, most reactionary of all forms of social organization. It was tried out in ancient Babylon, ancient Greece and ancient Rome; in Mussolini's Italy, in Hitler's Germany, and in all Communist countries. Wherever and whenever it has been attempted, it has failed utterly to provide economic security, and has generally ended in national disaster. It embraces an essential idiocy, that individuals who, as private citizens, are not to manage the disposition of their own earnings, become in public office supermen who can manage the affairs of the world.

The Soviets have tried to legislate the perfect society; and today the average Soviet citizen has little more freedom and less comfort than the inmates of American jails. The old American philosophy of government more effectively promoted the ideal of human freedom, with greater material abundance for more people, than any social system ever propounded; freedom to live under the minimum of restraint—freedom to make your own mistakes if you will. The fundamental and ultimate issue at stake therefore is not merely our money, it is liberty, itself; the excessive taxation of an overgrown government versus personal freedom; a least common denominator of mediocrity against the proven progress of pioneering individualism; the free enterprise system or the cult of blind conformity; the robot or the free man.

On September 12, 1952, Senator Robert Taft conferred at Morningside Heights with his successful convention rival for the nomination for the Presidency of the United States, General Eisenhower. They later issued a manifest containing the following statement:

"There is and has been one great fundamental issue * * * it is the issue of liberty against the creeping socialization in every domestic field. Liberty was the foundation of our Government, the reason for our growth, the basis of our happiness, and the hope of our future. The greatest threat to liberty today is internal, from the constant growth of big government through the constantly increasing power and spending of the Federal Government. * * * The essential thing is to keep our expenditures * * * at a percentage of our total income which will not destroy our free economy at home and further inflate our debt and our currency."

How I wish that instead of my feeble voice I could sound those words as though they were written in blazing rainbow colors on the arch of the sky.

Republican Record of Accomplishments by Executive Departments, 1953–57

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 1, 1957

Mr. METCALF. Mr. Speaker, in the Republican Record of Accomplishments by Executive Departments, 1953–57, we find these words:

Coupled with the achievements of the Eisenhower administration, history demonstrates that the Republican Party laid the groundwork for much of the natural resources legislation now on the books. For example, the Republicans:

Put through the first Reclamation Act in 1902 providing that all moneys received from the sale and disposal of public lands in 16 Western States should be set aside in a special Treasury fund for irrigation projects and reclamation uses.

Provided for the first installation in 1906 of hydroelectric power in reclamation projects with preference in the sale of such power to public and municipal users.

It is true that the Republicans helped put through the first Reclamation Act, but the party has been of scant assistance in making it effective in the more than 50 years that it has been on the books.

It is true that the Republicans included a preference clause in the 1906 act. But for the past 20 years, and particularly in the Eisenhower administration, Republican policy has been to destroy preference.

The history of Federal preference acts is not one continuous stream, but similar threads run through. The early-preference clause—1906—was apparently based on the simple, but now challenged, belief that if and when electric power was generated from reclamation dams, nonprofit, public groups had first call on this nonprofit public power produced at publicly financed projects.

Later preferences such as those in the TVA Act, the Reclamation Act of 1939, the Flood Control Act of 1944, and the Bonneville Act of 1938, as well as the preference in the Atomic Energy Act of 1954, all stemmed from a later and more conscious use of preference as, first, in the 1906 act and, second, as an anti-monopoly, competitive yardstick device to force the monopolistic private-power industry to look to its P's and Q's on costs, not unit profits, in other words, an abundance of power at low cost, and marketing policies designed to achieve this end. Moreover, in the later acts nonprofit cooperatives were given preference along with local and State governmental units and the Federal Government itself.

The passing years have made it more and more clear that a preference to purchase power is of limited value to small, nonprofit systems unless transmission lines are provided either to actually transmit the power out to the load centers of these small systems, or to serve as a bargaining lever to compel private-power companies to wheel—transmit—power over their lines at reasonable prices.

Another aspect, which was to result in controversy, was over whether preference was to be a continuing preference, that is, whether the increasing requirements of preference customers could be met by withdrawing power from non-preference customers—after reasonable notice—or whether preference was a one-shot deal and once the power was marketed a right to its continued use became vested in the purchaser, preference or nonpreference.

Another complication has been related to the fact that in a great many hydropower installations the most economic use of the water is to install large capacity in terms of kilowatts with the result, especially where streamflow is erratic, that such capacity can be used for peaking purposes. Although this is the most economic use of hydro installations, it poses real problems for small nonprofit systems who do not have thermal capacity which will enable them to use the peaking capacity or to firm up the secondary energy which flows from the generators in periods of more than normal waterflow.

The attempts to negotiate reasonable contracts with private power companies, trading them valuable peaking power for firming or other capacity have been beset with sabotage, and efforts to get thermal power built by Federal agencies to firm up such power have been unsuccessful in every instance except in the case of TVA, due to the bitter opposition of the power companies.

A further aspect, which deserves consideration in any discussion of preference, is the manner in which Federal wholesale power rates are determined. Where power companies could get the power, they wanted it cheap. Where only the power companies had transmission lines into the dams, they wanted it cheap. But where preference customers had access to the power, the power companies and their numerous fronts have cried about subsidized power and have attempted to get the price of the power raised so high that it would in fact be unattractive to preference customers.

One means has been to jack up the allocations of joint costs of projects to power. Another has been to impose a purely artificial accounting system. Another has been to attempt to force power rates to be fixed on the basis of the cheapest alternative source, that is, private power company rates in the adjoining area.

Preference has no meaning if there is no new power coming on the line from Federal projects. Therefore, one way to harpoon this antimonopoly instrumentality is to dry up the source of new funds either by withholding appropriations, or by destroying feasibility on which authorizations must be based, or by instituting some kind of partnership scheme whereby control of the power produced is shifted to private interests.

Under the Eisenhower administration few stones have been left unturned to bulwark the private-power interests at the expense of their nonprofit, competitive yardsticks.

Basic to this achievement has been the attempt, so far unsuccessful, to establish a partnership between power companies and the Government.

The revised A–47 and the Executive orders under which Federal agencies such as the Corps of Engineers now carry out feasibility studies illustrate the extent to which the administration has gone in an effort to destroy feasibility, prevent authorization of new projects, and dry up Federal sources of power.

The Eisenhower partnership policy is designed to destroy preference and any real element of yardstick competition in the power industry by turning over the hydro resources of the country to the private-power companies.

By August 1953, the Department of Interior had abrogated the policy views of earlier administrations in a formal document full of doubletalk.

In September, Assistant Secretary Fred G. Aandahl in a speech at Fargo, N. Dak., announced the "reverse" yardstick. He said that within a few years the cost of Federal power would be so close to that of private-power companies that preference customers would have no advantage in getting Federal power.

In September 1953 the Department of Interior in its "marketing criteria for the Missouri Basin" sought to destroy the "continuing" nature of preference and contract away all Federal power not tied up in preference contracts to the private power companies. This criteria still exists—but the Langer-Kefauver hearings forced an abandonment of the contracting in fact.

In the Southwest the first Ike Republican Congress abrogated the contracts SPA had with the cooperatives. The cooperatives were saved from destruction only by the courageous investigations of Representative EARL CHUDOFF and the subsequent action of a Democratic Congress in repudiating this breach of faith.

In the Bonneville area (with Bonneville having the strongest, clearest, and most unequivocal preference provision of any Federal act) "Giveaway" McKay evaded preference by placing a 10,000-kilowatt limitation on new loads of preference customers, sold an important Oregon transmission line to private utilities, and in general did his best to destroy the rights of preference customers.

In Georgia, the Department of Interior attempted to force contracts on the rural electric systems which would have effectively eliminated their preference rights. This was so outrageous a violation of law that even Attorney General Brownell felt called upon to issue an opinion stating that the contracts were illegal and "flouted the will of the Congress."

Federal Water Storage Makes Local Public Dams Possible

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to the editor of the Reader's Digest by Senators WARREN G. MAGNUSON and HENRY M. JACKSON and me concerning an article in the August 1957 edition of that publication entitled "Pacific Northwest Stands on Its Own Feet."

This is an extremely deceptive article that the Reader's Digest has published at a time when legislation to authorize Federal construction of a high dam at Hells Canyon on the Snake River is before the Congress. This article is deceptive, Mr. Speaker, as it reaches the totally illogical conclusion that since two State of Washington public-utility districts are building power dams on the Columbia River, Federal construction of such projects should be disregarded in the future. In my opinion, this article keynotes a new attack on vitally needed power projects in the Northwest such as the high Hells Canyon Dam. It seeks to mislead the public into believing that there no longer is a place in the hydroelectric power development of the Columbia River and its tributaries for Federal multipurpose projects, which, in fact, make the dams being constructed by various non-Federal entities possible.

The letter to the editor of the Reader's Digest follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., July 31, 1957.

EDITOR, THE READER'S DIGEST,
Pleasantville, N. Y.

DEAR SIR: This is in reference to the article in the August edition of your publication by Mr. William Hard, entitled "The Pacific Northwest Stands on Its Own Feet."

Mr. Hard does an excellent job in commending the two local public utility districts in the State of Washington, Chelan P. U. D. and Grant P. U. D., which are now undertaking the construction of two power projects on the Columbia River.

We support the efforts of these local utility districts to bring the benefits of the development of the resources of the Columbia to their local service areas. Under the Public Utility District Act of the State of Washington, these governmental groups are charged with the responsibility of developing these resources which lie within their county borders.

In the 83d Congress, the undersigned were sponsors of legislation in the House and the Senate which "deauthorized" the Priest Rapids-Wanapum project as a Federal development and permitted the Grant County Public Utility District to go ahead with construction of these dams. The Rocky Reach project did not require legislation by the Congress, never having been authorized as a Federal dam. These developments, however, were among projects in the Army 308 Report on comprehensive utilization of the resources of the Columbia and its tributaries.

We wish to emphasize a point entirely disregarded by Mr. Hard's article, in which he reaches a conclusion that these two public utility district projects prove that Federal development of the Columbia should be discarded in the future.

This point is that neither Rocky Reach nor Priest Rapids-Wanapum could have been built without the upstream water storage and river flow control provided by the Federal Grand Coulee, Albeni Falls, and Hungry Horse Dams.

Neither could such private utility dams as Cabinet Gorge, Thompson Falls and Kerr in the upper reaches of the Columbia River system be feasible without the water storage and river flow control provided by Hungry Horse Federal Dam in Montana.

This combination of Federal multi-purpose projects plus largely power-only dams built by non-Federal entities is a working reality only because the water storage benefits exist through initial Federal development.

We feel that Mr. Hard's article, making the entirely illogical conclusion that the local utility districts should take over total development of the Columbia and its tributaries, is misleading and deceptive.

Just as Grand Coulee, Albeni Falls and Hungry Horse make downstream projects possible, so would the high Hells Canyon Dam utilize the river system's resources to the fullest. A high Hells Canyon Dam would provide 400,000 more kilowatts at site than the low dams proposed by the Idaho Power Co. In addition, and this is a point ignored by the opponents of high Hells Canyon Dam, such a project would provide an additional 436,000 kilowatts of generation at the dams downstream on the Snake and Columbia Rivers.

This is the crux of the fight for the high Hells Canyon project. Contrary to Mr. Hard's conclusion, the issue is not public versus private power development. The issue, instead, is the full development of these public resources as opposed to the partial utilization envisioned by the Idaho Power Co. projects.

Sincerely yours,

WARREN G. MAGNUSON,
United States Senator.
HENRY M. JACKSON,
United States Senator.
DON MAGNUSON,
Member of Congress.

Tribute to Elton J. Layton

SPEECH
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. DOLLINGER. Mr. Chairman, I am pleased to have the opportunity to join with my colleagues on the Interstate and Foreign Commerce Committee in extending every good wish to Elton J. Layton.

Elton will retire on October 1, 1957, as clerk of our committee. He has served our committee for more than 36 years. They have been years of faithful and outstanding service on his part. His extensive knowledge of the work of our committee, history of legislation, long term of office, all made him invaluable to us. During the time that I have been a member of the committee, I have found him to be more than willing to be of assistance when I have called upon him for help. He has been a loyal and fine public servant in the highest sense of the word. He will be sorely missed.

I wish for Elton J. Layton and his wife many years of happiness and good health. Elton has more than earned the leisure hours which it will now be possible for him to enjoy.

Important Information Concerning Lung Cancer

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. ABBITT. Mr. Speaker, there has been much controversy in the press, over the television, and otherwise regarding the recent so-called lung cancer scare. I have received a letter from Dr. Joseph Berkson, who is with the Mayo Clinic at Rochester, Minn.

Dr. Berkson also enclosed to me a copy of a letter that he had written Hon. JOHN A. BLATNIK, chairman of the Legal and Monetary Subcommittee of the Committee on Government Operations of the House of Representatives. This subcommittee has been holding hearings recently regarding false statements in cigarette advertisement.

Dr. Berkson points out in his letter to the chairman of the subcommittee important information that I think the people should have.

Under leave to extend my remarks in the RECORD, I desire to include both of Dr. Berkson's letters:

MAYO CLINIC,
Rochester, Minn., July 30, 1957.

Hon. WATKINS M. ABBITT,
New House Office Building,
Washington, D. C.

SIR: I have been informed that as chairman of the Tobacco Subcommittee of the House Committee on Agriculture, you will be interested in a statement which I sent to Congressman Blatnik, on the question of smoking in relation to lung cancer. A copy of this letter is enclosed.

I should like to say, that I have no interest in this question other than the scientific truth, but I have been dismayed at the one-sided representation that the question has received in public and even in Congress. The statement enclosed has, I understand, been inserted in the records of Mr. BLATNIK's committee, but not in the CONGRESSIONAL RECORD, as I expected it would be. If therefore, after reading it you believe that it should be inserted in the CONGRESSIONAL RECORD, I am glad to give you my permission to do so.

Your sincerely,
JOSEPH BERKSON, M. D.

JULY 21, 1957.

Hon. JOHN A. BLATNIK,
Chairman, Legal and Monetary Subcommittee, House Committee on Government Operations, Washington, D. C.

SIR: I refer to your request, transmitted through Mr. Curtis Johnson, to appear before your committee on July 23, 1957. I regret that professional obligations do not permit me to attend this hearing. In lieu of my personal appearance, I am hereby transmitting this statement.

I have studied carefully the evidence that has been advanced for the theory that smoking causes lung cancer. Attached is a paper which I wrote 2 years ago, pointing out that the evidence put forward up to then was inconclusive. Furthermore, there were some aspects of the findings which indicated that the statistical association of smoking and lung cancer might be spurious, due to selection and invalidity of the data. Since then, more data have appeared, which I have studied carefully. I am myself engaged in some related studies, which are not yet ready for publication. I find no reason to modify my previous opinion that the evidence, taken as a whole, does not establish, on any reasonable scientific basis, that cigarette smoking causes lung cancer. On the contrary, I have found more and stronger reasons to doubt this conclusion.

With regard to the contrary opinion expressed by some statisticians, I have full respect for their sincerity and general competence. My criticism is that they have not allowed time for careful critical analysis of existing data, let alone time in which to consider results of investigations now in progress. Consider only the following facts: The second report of the American Cancer Society study on which the opinion that smoking causes lung cancer largely rests, has as yet been published only in newspaper form, and will not appear in a technical journal, for scrutiny of scientists until fall. Then again the United States Public Health Service now has underway an extensive statistical study on the subject, for which it has not yet issued even a preliminary report.

The problem of cancer is one of the most baffling ever attacked by science. Time and time again, conclusions as to its cause or cure have been prematurely published, only to be disproved later. This not only discredits science and confuses the public, but does immeasurable harm in creating an atmosphere in which true scientists cannot work effectively. I have no interest except the advancement of scientific knowledge by research. I should not wish to obstruct its progress, or to jeopardize my own reputation to boot, by questioning the conclusion that smoking causes lung cancer, if I did not sincerely believe that there is serious doubt as to the scientific validity of that conclusion.

While I have this opportunity to address your committee, I take the liberty of presenting another thought. I have every respect for the wisdom of this committee, and I consider it commendable in every way that it should be trying to get the facts about smoking and lung cancer, especially since these are germane to the question of cigarette advertising. However, since this is a scientific question, I respectfully call to your attention the fact that we have in this country a body to which one naturally turns for an authoritative opinion on a scientific problem; namely, the National Academy of Sciences. I therefore suggest that the committee could obtain a more competent estimate of the scientific evidence linking smoking to lung cancer than is now available by requesting such an evaluation from the National Academy of Sciences.

A copy of this statement is being sent to Dr. Detlev Bronk, president of the National Academy of Sciences.

Yours respectfully,
JOSEPH BERKSON, M. D.,
Mayo Clinic, Rochester, Minn., Section on Biometry and Medical Statistics.

Make Way for the Navaho

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. UDALL. Mr. Speaker, in many ways the Navaho Indian Tribe is making the most remarkable record of any Indian group in the United States today. This tribe of 80,000 people occupy a huge reservation in parts of Arizona, New Mexico, and Utah which is as large as Vermont, New Hampshire, and Connecticut combined. No tribe still under trust supervision by the Federal Government has such a large population or land area. Ten years ago their desperate plight attracted the sympathy of the entire country during one bitter winter.

It is generally agreed that the Navahos have made more progress during the past decade than during any comparable time in their history. As the author of the article below, J. R. Challacombe, has said so well:

> The most exciting, poignant story in the West today is the stirring of a major Navaho renaissance.

What accounts for this renaissance? It gives me pride to state that Congress itself deserves considerable credit for in 1950 we enacted the Navaho-Hopi long-range rehabilitation—Public Law 474, 81st Congress. Likewise many devoted men who have served in the Bureau of Indian Affairs in recent years—particularly the present Commissioner, Glenn L. Emmons, who comes from the Navaho country—have given invaluable guidance and assistance.

However, the main factor, in my opinion, has been the spirit and determination of the Navaho people themselves. Under their council system of representative government abled and far-sighted leaders have emerged from the ranks to provide both wisdom and sound business judgment. This has been a most heartening development.

The magnificent story of the Navaho renaissance was told with insight by Mr. Challacombe in the August 1957 issue of the magazine Arizona Highways. As an interim report to the Congress on these people—who rely so much on congressional good will and appropriations—I am pleased to present this article:

Make Way for the Navaho

(By J. R. Challacombe)

The most exciting, poignant story in the West today is the stirring of a major Navaho renaissance. At one time in history it was the Indian who taught the white man to grow corn and live in a wild land. Now the tables are turned. And we had better watch out. The clever Navahos have a long history of outstripping their teachers.

To most of us surrounded by television, tricky cars, and vitamin pills, the Navaho—the blanketmaker—is something very distant, left over from the Dark Ages of Custer's Last Stand, our own 19th century colonialism and that sort of thing. But take another look.

Instead of conveniently wasting away to a shadow like some tribes, the Navaho has increased phenomenally from 8,000 in the late 1860's, when subdued by Kit Carson, to 80,000 today. Their wild arid domain sprawls over adjoining parts of Arizona, Utah, and New Mexico and is as large as Vermont, New Hampshire and Connecticut lumped together.

Like their vast painted desert mesaland, the Navahos have remained a colorful, rugged, bypassed desert in the midst of our educational map. During World War II 88 percent of the 4,000 Navaho men drafted were classified as illiterate. At the same time we were providing schoolrooms and teachers for about one-fourth of a possible 20,000 school-age young Navahos. And out of 20,000 children only 100 were in high school. The rest of the Navaho scholars after an average of 2 or 3 years of schooling had returned to a Stone Age subsistence culture while the American white man exploded atom bombs in the deserts nearby.

Today, however, 24,000 Navaho children out of 26,000 are crowding into newly built schools. Only 3 years ago most of them would have been tending sheep or gathering pifion nuts. The suddent mass broad jump from the Stone Age to the modern world is a stirring, important event. How did it come about?

Let us meet the People as the Navahos call themselves.

The Navahos have a ruddy brown skin—the kind of color you'd like to have after a summer at the beach—glossy black hair, and sometimes an oriental cast to their features. Some are stocky from intermarriage with the Hopi, and others are tall and wiry like the original hunters they once were. The women dress strikingly in full, glossy sateen skirts and velveteen blouses—the colors of which are bright and often contrasting: purples and golds, reds and greens, blues and maroons. The men dress in levis, cowboy shirts, and high stetsons. Both sexes wear as much silver and turquoise jewelry as they can afford: bracelets, belts, rings, necklaces, and earrings. Their jewelry is their savings account: in the lean seasons they pawn it at the trading posts for food. One trader asked me, "What other people so desperately poor would take such care to dress brilliantly and happily?"

With occasional jet planes whistling overhead the Navahos live on their windswept, canyon-cut plateau country in a near Stone Age fashion. Their homes, sturdy six- and eight-sided dome-topped huts, chinked and plastered with red adobe, are called hogans. Herdsmen with flocks of sheep and goats for the last 200 to 300 years, the Navahos barter the skins, wool, lambs, and wool blankets to the trading posts for the white flour, kerosene, wagons, harness, lanterns, soda pop, jewelry, and what else they may want. Currency is still little used.

The dry humor of The People shows them warmly human. A Navaho horseman drove in a great herd of lambs belonging to the trader. Seeing me around again he asked the trader in Navaho if I was hired to help him herd lambs the next day. The trader answered something and the Navaho made a saucy reply, his eyes twinkling. When I heard the translation, we both laughed: he had welcomed the outsider. He had said, "I don't know about this man. He looks like he might go to sleep on me."

Since they have never lived in villages, like the Pueblos or even the white man, but in isolated family groupings scattered across the brilliantly colorful high desert country, they do not understand what we find valuable in competition. They are taught to cooperate intensely, the whole group sharing with and helping the individual. To spurn a relative's call for aid or to gather great wealth while others lapse unfortunately into poverty indicts one as a witch.

The Navaho has an enormous capacity for learning. Consider the many Navaho singers. These so-called medicine men have for years been curing psychosomatic diseases (and othere too) while we were still hopefully gulping pills. These singers have phenomenal memories. Just one sing (a complex of ceremonies, herb treatments, sand paintings, chants, and so forth) lasting 9 nights is compared in length to a full Wagnerian opera, all parts, stage directions, orchestral scores, and changes of costume. A singer may well know three or more full-length sings and other shorter ones. The sings are used to treat not only the body but also the mind of the ailing Navaho. A sing surrounds him with love and beauty. It assures him of his place in the bosom of his family and his holy people.

Navaholand today, however, rumbes with turmoil. The land is so arid and windwhipped to a powder that grazing sheep on the sturdy sagebrush will no longer support the redman's growing numbers. Many Navahos, men and women, are now forced to seek jobs, often the most menial, in the strange hurly-burly competitive white man's world.

In addition to this natural uprooting, young Navaho servicemen and war-workers of World War II, some 20,000 of them, had a thoroughly eye-opening experience in the outer world and found themselves joined side by side with the whites in a common struggle. During the war Navaho radiomen also earned special laurels; they talked to each other in Navaho and confounded German and Japanese listening posts. Little known and better than any code, the precise Navaho language is the most difficult in the world.

The thousands returning from their years on the outside awakened their people to the imperative need to learn English in order to get good jobs and the need to absorb usable crafts and ideas from the cultures about them. In absorbing ideas the Navahos were once unequalled; they may be again. Only 400 years ago they were loose bands of hunters who had wandered south from Canada. They learned horse and sheep husbandry from the Spanish; corn growing and blanket weaving from the Pueblo Indians; raiding and looting (which led to their collision with Kit Carson) from the Apaches; silversmithing from the Mexicans; and their women's costumes from our American post-Civil War dress styles. In all cases the Navahos outdid the teachers. Smarting from their concentration camp years of the late sixties, however, and the subsequent bungling, politics, and vacillation of the "Great White Father" (who changed his mind every 4 years if not oftener), the Navahos retired into themselves and learned something there too, patience, and forbearance.

The story of Navaho education has been hectic and downright scandalous. Under the treaty of 1868; solemnly promising a room and teacher for every 30 children, the Government built a small school and a few children were bribed to attend classes taught by young women fresh from the East. No one bothered, or thought, to impart to the people a real incentive to learn English or the use of money. Since the Navahos continued to barter without money and dealt only with Navaho-speaking traders, the school was a failure. Furthermore a school full in the fall might be empty in the spring as the families followed the sheep to better grazing grounds. What was needed, it was later pointed out, were frontier-type men who could live with the Indians, follow them, and teach them, young and old, as trusted companions. But this was not to be. Desperate Government agents even kidnaped Navaho children at one period and shipped them off reservation to boarding school; some of them died of the white man's contagions and others froze to death in the mountains trying to escape back home. Those who did return home alive and educated after many years found themselves incapable of making a living on the reservation in the hardy Navaho way.

The people became proud to be illiterate of the white man's paper and his money and were happy to be unlittered with his confusions and changes of mind.

But now they desire mightily to achieve the literacy. During September of 1950 and the beginning of the school years following Navaho children, their clothes and belongings packed for boarding school, crowded eagerly around the buses sent out to pick them up. But many turned back in tears when the loaded buses drove off without them. The schools were not big enough for all the little Navahos. It appeared that many had to content themselves with being shepherds.

In their struggle to create a new culture for themselves the Navahos have, at long last, been aided by the Government. In 1953 Eisenhower appointed Glen Emmons, a banker from Gallup, N. Mex., Commissioner of Indian Affairs. Here was the trusted companion the Navaho had long needed. Emmons knew the Navaho as a real human being and understood his complex problems. Matching the Navaho's enthusiasm for new ways and new learning, he pushed his Navaho emergency-education program through Congress. As a result a whole rash of new schools and practical ideas of schooling these seminomadic people has gripped the reservation in the last few years.

Great effort is now made to keep the children as close to their parents as possible. Teachers travel from hogan to hogan holding nursery-type classes for preschool youngsters. Trailer schools for beginners follow families from one range to another. Determined Navaho children walk 7 and 8 miles each day to attend elementary day schools. Others whose families live in the remote roadless canyons come to stay in local boarding schools and live in clean but crowded dormitories. A young child of 6 or 7 who is away at boarding school must be visited several times a month though such a round trip may mean a 4-day journey by wagon. To let a month go by without a visit can be disastrous: I heard stories of children who ran to hide when the teachers introduced strange men and women as their fathers and mothers. No parent wants his children to forget him.

Wanting to visit a typical local boarding school, I walked through the play yard of the Shonto Springs Community School, deep in the primitive western half of the reservation. Although I was a total stranger looking for the principal, the children, 6 and 7 years old, stopped their play and began calling, "Hello. Hello. Hello." I called back "Hello's" and rubbed the short hair of the boys' heads. They all grinned wildly and laughed. The strange English word had worked like a magic spell, bridging a gap none of us cared for.

Later, when I asked different ones their names—some of whom still bore on the back of their heads the flat mark of the cradle-

board—they would tell me in a soft voice, "Irene Manygoats" or "Albert Laughter" or "Joe Salt." Then they would scamper off like squirrels only to dash back in a few seconds.

I found a big red handkerchief in my car and gave it to the children to play drop-the-handkerchief. They had their own rules, however, which were Navaho. Instead of the boy with the handkerchief trying desperately to tag the one who dropped it so the latter would be "it" again, they both raced happily around the circle together, effervescing with laughter. After they had circled, the boy with the handkerchief went on to drop it himself. "The idea of competitiveness," Carol Breedlove, the beginner's teacher, explained to me, "has to be taught to them. The Navaho does not think it nice to make a show beating his fellow Navaho."

While at Shonto I heard of a little 6-year-old girl who had inadvertently missed out on the first weeks of school. She was living in the faroff, roadless wilderness of big Tsegi Canyon. Being a hiker, I thought perhaps I could bring her out. But Sherman Breedlove, the principal, decided to send a Navaho, Trixie Calamity, with me. As we bounced over stretches of bedrock trail and at times plowed like a boat through soft sandy wastes, Trixie told me of his exciting Army life driving prime mover trucks and giant tanks in the ordnance yards. Beyond the end of the trail we hiked to the edge of the canyon and searched sheer red sandstone cliffs for a sign of the trail. Across the spacious canyon great arches had been carved into the cliffs by water and wind. Down in the canyon we saw the hogans and corral of the Austin family, our goal. But how to get down some 500 or 600 feet of airy dropoff?

We never found the trail. Before long, however, Trixie had us out on the face of the cliff, hanging on by our toes and fingers. He went down like a squirrel. I made work of it, my big camera bag scraping on the cliff, pushing me outward. Calamity yelled up good-naturedly, "No be scared." I called down that I wasn't exactly scared but that I now know how timid a mountain goat must feel."

Safely down, we walked to the hogans and found the mother baking round layers of "fry bread" on a grill over hot ashes. In the Navaho way we stood at a little distance and did not interrupt her immediately. When Trixie had told her our mission, she called the little girl who had been shooing roosters from a blanket full of drying corn and began to shampoo her hair with a bar of white soap. I wanted a picture of this for my story and Trixie told me to ask the mother myself, that she understood English.

I did and stocky brown Bertha Austin, kneeling on the bare earth, her bright blue skirt flowing about her said slowly in perfect English and with real dignity, "Oh, we're too ugly to have our picture taken."

"Oh, no," I said firmly, "I think you're both handsome people." I was taken aback nevertheless and glad that the camera was still in the bag.

I slowly told her how much I liked to live in the out of doors and how interested I was in all the Navaho children going to school. After the little girl's dress was changed to a clean one and Bertha had put on some turquoise jewelry, she told Trixie in Navaho, I could take a picture of her combing Virginia's hair.

All four of us climbed out of Tsegi on an exciting trail of footholds cut into the sheer cliff. At one point, we crawled straight up a ladder wedged into a vertical crack, a long pole with foot notches. Little Virginia climbed easily and made me ashamed to catch my breath looking at the depths.

At the truck Bertha told her child that she would visit her soon; there is no Navaho word for "goodby." Wide-eyed and silent, Virginia rode back with Trixie and me over the rough truck trail to Shonto. Only after supper did the little girl break down and sob to Carol that she wanted to go home. The next morning when she dressed in 1 of her 3 pretty new dresses and eagerly helped to pull on her brandnew pair of shoes, she appeared reconciled. In the beginner's kindergarten-type class, she played with the strange piano, modeled little clay figures, drew charming Matisse-like men, and made a start at learning to count in English. Several days afterwards, still sober and shy, she was playing in the schoolyard by herself. I took her to the swings and asked Irene Manygoats to swing Virginia. As other children came to watch, the little girl from the far-off Tsegi broke into a delighted smile.

Privations none of us would care for our children still face the little Navahos who want schooling. Sturdy clothes are furnished them by Government, missions, and the tribe; the food is varied and nourishing; older Navaho men and women supervise the dormitories, teach games, and group singing. Small undernourished bodies fill out, decayed teeth are repaired, and TB quickly spotted. But the experience of growing up in a family is weakened. To whom he or she owes loyalty, devotion, and obedience can become confusing to the young Navaho for a while. The task of bridging the chasms between the red man's and the white man's cultures is a formidable one for little legs.

As the children grow older they are transferred from local day and boarding schools to distant central boarding schools and finally to high schools, usually off the reservation. Once off reservation the young Navahos are forced to speak English all the time. They write long letters in English home and then wait months for answers from parents and friends who live in remote canyons like Tsegi. The local trader or one of his literate Navaho helpers often has to translate the letters and write answers. I read several touching, friendly letters from a 13-year-old girl to a trader's wife: glad to be in school, she was yet homesick and wanted letters from home and about old friends oftener than she could expect from her family. The Navaho parents in turn can only hope that their young ones will come back not as strangers to them.

In spite of the dangers to the family and the old Navaho ways, children are filling the new schools. Here is how the enrollment has risen dramatically. In 1882, 75 children out of a tribe of 16,000 attended school. In 1903 there were 300 schoolchildren from a population of 23,000. As late as 1943, however, only 5,762 out of 20,000 children were enrolled and several years later Congress withheld sufficient funds, closing various day schools. Young Navahos left their schoolrooms to drive herds of sheep. An astonishing picture for an America proud of her educational systems.

In 1954, however, there were 26,000 schoolchildren and facilities for 12,000: 46 percent were in school. With Emmons' Navaho Emergency Education Program under full swing by 1955 room was available for 24,000 children. And this school year, 1956–1957, 300 young Navaho men and women will graduate from high schools; in 1961 it will be about 1,200.

In the eastern half of the reservation, the percentage of children in school is very high. But in the western half which remains more primitive and with few roads the percentage is only about 56 percent. There, in nearly every family, one or more children still stay home to herd sheep, to gather pifion nuts, and to learn to live off the rugged land in the old Navaho ways. But even for these retarded children there is a special program which starts them as late as 14 years old and in 5 intensive years teaches them English, the rudiments of handling money, and a simple trade. Some talented ex-shepherds have gone from the special program into the ninth grade, finished high school, and are now in college. The last-minute sprint by a spirited dark horse to win a Derby could not be more thrilling. The Navaho Tribe itself appropriated $100,000 last year for 100 college scholarships for worthy, needy Navaho youngsters. Most of them expect to come back home to give their people help and a return on their investment.

The biggest need that the tribe is clamoring to fill now, and rightfully so, is a fully equipped trade or technical high school that would turn out competent carpenters, plumbers, plasterers, mechanics, electricians, and machinists who could go directly into the different trades in the white man's world. These trained Navahos would also form a pool of skilled labor which would attract industries to locate on or near the reservation.

One enterprising Indian leader said to me, "We're in earnest about this Abraham Lincoln business."

Like two swift rivers surging together, the juncture of two different cultures is fraught with danger: some Navahos are naturally hard put to find solid ground and need our best understanding. In the past, however, the Navahos have always spurted ahead when they mingled with another culture and they will again. America's strength has been her alloy of minorities. We had better look to our laurels. Make way for the Navaho.

Swiss Independence Day

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. REUSS. Mr. Speaker, the bonfires will be burning tomorrow night on the mountain tops of Switzerland in celebration of Swiss Independence Day. To the Swiss, and to all those of Swiss origin and descent, August 1 is as significant a day as is the 4th of July to all Americans.

I believe that Americans, too—of whatever national origin—should pause briefly on this date because it marks an anniversary of profound importance to all who believe in political freedom and national independence. The determination of the people of Schyz, Uri, and Unterwalden to free themselves from Hapsburg rule in 1291 might well be called the cornerstone of the growth of democracy and the nation state. Since that early date, the Swiss have

maintained a citadel of freedom which has kept alive the spirit of liberty in some of Europe's darkest hours.

The sturdy independence of Switzerland has been reflected in its men and women who have come to America. In my own State of Wisconsin, we can point with pride to such flourishing communities as Monroe, New Glarus, Brodhead, Monticello, and others in Green County and further north in Buffalo County. Responsible citizenship has been always as much the trademark of Swiss-Americans as is the wonderful cheese they produce.

Switzerland is a country poor in many natural resources but rich in industry and skill. We do the Swiss an ill service when our laws hamper the exchange of goods between our country and theirs. Both nations benefit from a flourishing trade, just as both have benefited for many years from the spirit of independence which inspired William Tell and which still inspires the Swiss and American people today.

Utilization of Timber Waste Materials for Composition Products

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, August 1, 1957

Mr. NEUBERGER. Mr. President, during the past year the vital Oregon lumber industry has been in the doldrums because of the adverse impact of high interest rates upon new housing starts.

However, I have felt that one of the genuine hopes for revival of the lumber industry lies in the utilization of timber waste materials for composition products—as well as in the use of so-called scrub timber for the manufacture of pulp.

An illuminating article on the production of particle board and similar by-products appeared in the Wall Street Journal of August 1, 1957, by Ray J. Schrick, staff reporter in the State of Oregon for that daily publication.

I believe Mr. Schrick's thorough and comprehensive article will be of interest to my colleagues, and for that reason I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOODPILE WONDER—CHEAP PARTICLE BOARD PUSHES PLYWOOD BUT MILLS FIND PROFIT SLIM—SEARS SAVES ON RADIO, TV CABINETS; GRANTS PASS PLANT CAN'T OPERATE STEADILY—WARNING TO BARBERS, BANKERS

(By Ray J. Schrick)

OAKRIDGE, OREG.—America's lumber, plywood, and furniture industries are going wild over a recipe for hash. Here it is:

Take 2,400 pounds of wood leftovers. Pour into one $75,000-plus plant. Grate leftovers into tiny slivers or fragments the size of potato chips, as desired. Mix well with 150 pounds of glue—ordinary soya cattle feed with water, will do. Press firmly between two steel plates, trim into 4-foot by 8-foot panels, and dry.

This will produce 1,000 square feet of particle board, a product so simple and cheap to make that it's surging into popularity. It's trimming the costs of houses, hope-chests, sewing machines, radio cabinets, and heading for still wider markets. Observes one sales official: "I don't know why it couldn't be used in coffins."

Sad to say, enthusiasm has soared so high that too many cooks have crowded into the kitchen—capacity to produce is, for the moment at least, outpacing the expansion of markets. Many a new particle board mill is writing its books in red ink, or just barely in the black. Nevertheless, optimism abounds and more mills are rising.

COAST TO COAST

In North Carolina, for example, workmen are now setting up machinery in a $4 million particle board plant for Formica Corp., a subsidiary of American Cyanamid Corp.; it's to go into production in January. In New Hampshire, a 50-percent expansion to produce particle board has just been completed at National Starch Products, Inc.'s granite board plant. And here, in Oregon's timber-clad Cascade Mountains, officials of the 104-year-old lumber producer, Pope & Talbot, Inc., are getting ready to throw the starting switch on a $1.5 million particle board plant.

By the end of the year big presses in some 53 plants, new and not quite so new, will be clanking out the stuff at an annual rate of more than 250 million square feet, forecasts Timber Engineering Co., research arm of the National Lumber Manufacturers Association. This will be twice as many plants as in 1955—and an output hike of 180 percent.

AN APPEALING MISHMASH

What's the appeal of this mishmash product? A big attraction is that its principal raw material can be found around almost any lumber or plywood mill or furniture factory whether it be here in the fir-producing Northwest, the pine-growing South, or around the chair-and-chest factories of North Carolina or Grand Rapids. This is the pile of wood shavings, hitherto often burned as waste. In the case of lumber and plywood producers about half the log that comes from the forest ends up on this pile.

A particle board maker can pick up this waste for next to nothing. One producer figures the 2,400 pounds of shavings it takes to make 1,000 square feet of particle board at only $2. The 150 pounds of binder or glue (he uses a resin more expensive than soya meal) costs $30.

There are many variations to the basic recipe, of course. In fact, one of the most distinctive facets of this product is that no two chefs make it the same way.

But with all the processes costs are so low that particle board can undersell plywood in many cases and is consequently sawing away at lucrative plywood markets. Its main drawback is that it has only 50 percent to 90 percent of plywood's strength, depending largely on the size of the wood particles used.

For example, Weyerhaeuser Sales Co., subsidiary of lumber giant Weyerhaeuser Timber Co., tags 1,000 square feet of five-eighths-inch thick particle board used as underlay for linoleum and floor tile at $114. Fir plywood for the same use sells at $121 to $123 per thousand square feet.

A HIDDEN MARKET

The composition upstart is making its biggest inroads in spots hidden from the consumer's eye. It's employed as "core-stock," the layers that lie underneath the expensive hardwood veneer in furniture or beneath the coverings of kitchen cupboards, wall panels, and plastic table tops.

At Pickens, S. C., for instance, Singer sewing machine cabinets with particle board cores are being built by Poinsett Lumber and Manufacturing Co., a Singer subsidiary. Such a cabinet sells for $50 in a Portland, Oreg., store compared with $69.50 for one with an ordinary wood core from the same plant.

Lane Co., Inc., of Altavista, Va., figures the particle board cores it makes and uses in cedar chests cost less than half the ordinary lumber cores it once used. And a Sears-Roebuck subsidiary, Mississippi Products, Inc., at Jackson, is using particle board cores in television, radio, and sewing machine cabinets. The company figures it saves 12 cents a square foot with the particle board core.

LEAVES OTHER WOODS ALONE

Particle board is not yet horning in much on the markets of the two other competition woods, insulation board and hardboard. But particle-board enthusiasts say even these markets are not sacred.

These older compositions are different from particle board. They are made of wood broken up into its tiny, basic fibers, rather than particles, then pressed and held together without the aid of glue. Insulation board is fluffy, with less than half the density of ordinary wood. Hardboard, pressed more compactly, has about twice the density of lumber. Particle board falls in between, weighing about one-third more than natural wood.

Particle board, as yet, hasn't officially proven itself for structural use, and consequently isn't able to invade insulation board's prime market, sheathing in the walls and roofs. In such cases insulation board is cheaper. Hardboard, being much thinner and smoother, is able to squeeze into spots such as drawer bottoms in furniture and as underlay where a thin board is desired. Some particle-board makers, however, see their product as a contender against hardboard in the wall-paneling field. Decorative flakeboards, made with large shavings, for example, are more attractive for paneling and should sell, even though slightly more costly than hardboard, they claim. And the Long-Bell division of International Paper Co. makes a board with such small particles that it greatly resembles hardboard.

There's plenty of testimony, though, that particle-board industry does not lie entirely in a bed of soft boughs with so many new mills rushing in.

"We're not running steadily and when we do it's only for two shifts a day," says an executive of Chipboard Products, Inc., of Grants Pass, Oreg. "We might run 3 weeks and then shut down for a week."

WE'RE NOT RUNNING STEADILY

Adds another millman: "With 1 shift you lose money; on 2 shifts you break even, and with 3 you make money." One company figures that on its present single-shift operation it costs $118 to make 1,000 square feet of board that sells for $32. The cost drops to $92 per thousand on a three-shift operation.

In addition particle board lacks standardization in an industry where standards mean markets. "There are almost as many different kinds of particle boards as there are plants," says one engineer. Some particle boards look like cork, although they are much heavier. Others have a definite woody appearance. Some producers turn out particle boards of small particles while others produce flakeboards with large particles and still others make layered boards, resembling plywood, with all sizes of particles.

With so much variety, there are large variations in strength and warp-resistance. Some of the weaker boards are not even made by the pressing process, but are extruded—made by squeezing the binder-wood shaving mixture through a mold, like toothpaste out of a tube.

As a result of such differences in methods and materials, a thousand square feet of ½-inch particle board has no standard price. One type may sell for $90 while another will bring $180. Consequently, the Federal Housing Administration, which has okayed particle board for use beneath flood tile and linoleum, will not approve it for such functions as roof and wall sheathing. About one-third of all fir plywood output goes into such sheathing.

ASKING FOR STANDARDS

A newly formed Particle Board Association now is setting up standards for approval by the United States Department of Commerce, which producers say would help open the market governed by FHA rules. But there are other arguments for caution.

"Butchers, barbers, and bankers are suckers to invest their money in particle board mills," claims one pessimistic western Oregon lumberman. "It looks like a bonanza because of all the low cost waste wood for raw material. But a lot of mills are underfinanced, make no market survey, or sew up no guaranteed raw material supply. Another poor lumber month like last one (lumber orders were off 4.3 percent from a year ago and some mills were threatening to close down temporarily this winter) and a lot of lumber mills won't be producing the raw material particle board mills need."

In fact, here in Oregon, there have been at least three stymied attempts to start new mills. Two fell through when they attempted to raise money by stock sales.

"We sold about $200,000 worth of stock to about 75 persons—half of it paid," laments Floyd Bunn, real estate and insurance man in Willamina, and director of Columbia Wood Products, Inc. "We reached the escrow date without hitting our money-raising goal and 75 percent of our stockholders have now withdrawn their support." Lane Pacific Wood Products, of Junction City, also has been unable to complete fund raising.

The third company, Red Blanket Lumber Co., of White City, is being held up by lumber company owners who have apparently changed their minds about a particle-board plant at the present.

STILL NOT DISCOURAGED

Despite such warning signs, newcomers are fighting to get into the business, foreseeing a great future for particle board.

Travel down western Oregon's Willamette Valley and you'll find a determined group of men firing up particle-board plants. Oregon should have 9 in operation by year's end, 5 more than at the beginning of the year, putting it neck and neck with North Carolina as the country's top producer.

Meet Ralph Chapman, of Philomath, a gray-haired man with black Groucho Marx-sized eyebrows, dressed casually in a blue-and-white short-sleeved sport shirt. He first began trying to get into the particle-board business 17 years ago when the process was entirely new. Last year his first particle-board plant burned to the ground on the eve of production. Starting again from scratch he finally watched the first mottled brown panel slip off the line of Chapwood Oregon, Ltd., this July.

A RUBE GOLDBERG MACHINE

He explains rather proudly the operation of a Rube Goldberg sort of machine with ladders strung as on a battleship. A revolving broom whirls, a giant blue hose sucks, a conveyor conveys, and every 2 minutes a chip-filled tray enters the bottom of a clanking press. Some 60 minutes later it emerges at the top, bearing a completed particle-board panel.

Mr. Chapman has brought some innovations, new even to this infant business. For instance, to get a smooth surface on his particle board he slaps on an outer layer of wood powder produced in chopping up shavings into particles. This prevents the usual roughness of particle board from showing up through thin veneers on furniture. Other makers put a paper-smooth surface on particle board by pressing an outer layer of fines, a flourlike sawdust.

Many of the plants are community affairs and often start more or less on a shoestring. Take, for example, Brownsville Particle Board & Associated Products, Inc., of Brownsville, Oreg. This mill began as a $350,000 dream in 1955, but by the time the 60-ton daily capacity mill began its trial runs last month it had cost $750,000. Its capital stock, originally authorized at $600,000, had been hiked to $1 million, about half of which is now subscribed at $100 per share.

PAYING WITH STOCK CERTIFICATES

Workers subscribed to 50 shares, or $5,000 worth; 30 shares were paid out for the plant site, an old lumber mill; 200 shares to the engineering firm that designed the plant; 50 shares to a lawyer and 30 shares to the president. About 20 percent of the machinery bill was also paid in stock. In all there are 152 owners. A Union Oil Co. distributor, an electric repair shop owner, and three mill executives make up the board of directors.

"You might say we've reached the first plateau to get into production," says husky brown-shirted Joseph E. Clark, the president. "We're quite optimistic." Right now the plant is struggling to get from a single-shift operation up to a more profitable three-shift operation.

Actually a particle board mill is relatively cheap, as investment in the wood industry goes. One with a capacity to produce 60 tons daily of flakeboard costs between $900,000 and $1 million (figured on the basis of $21,100 investment per worker and 46 workers), estimates Columbia Engineering Co., or Corvall, Oreg. A 50-ton daily hardboard plant, another composition wood, with 33 workers costs on the order of $1.3 million to $1.4 million, while a comparable plywood mill, employing 300 persons, will run as high as $2.5 million. Particle board plants have actually been built for as little as $75,000.

Makers of particle board's biggest rival, plywood, are well into the production of the new board. In fact, plywood makers own about half of the particle board plants in the Northwest. Nationally about a quarter of the plants are owned by furniture makers, while most of the remainder are independent.

INTO MORE CUPBOARDS

"True, we're competing with ourselves somewhat but we're also getting into more cupboard doors and underlayments with our flakeboard than with plywood alone," says Fred L. Johnson, president of Columbia Hardboard Co., Inc., of Everett, Wash.

Adds L. C. Fuchek, manager of Pope & Talbot's Oakridge lumber division: "We can increase our sales dollar income one-sixth at Oakridge by adding particle board. Utilization of wood left-overs that we used to burn is our salvation."

Particle board's topsy-like growth is being felt outside the plywood industry, also.

Such makers of binders or glues as American-Marietta Co., Borden Co., Monsanto Chemical Co., Reichhold Chemicals, Inc., and the newly-formed Spurlock & Tyner Resin Co., are finding a $7.2 million a year market for various resins.

Particle board is by no means exclusively an American product. In fact, it was first developed in Germany in 1941 and many United States plants are using European processes under license agreements. The United Nations Food and Agricultural Organization counts some 200 particle board mills in some 36 different countries.

There are, of course, American processes such as those patented by Miller Hofft & Co., Inc., of Richmond, Va., and Industrial Development Corp., at Tacoma, Wash." The number and variety of processes has grown to troublesome size in the business. An estimated 2,000 patents are held throughout Europe and the United States on processes or parts of processes, and some particle board makers fear a rash of patent suits are in the making.

Hawaii Shipping Rights Row

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. METCALF. Mr. Speaker, the administration has made a great show of opposing monopolies. I have for the RECORD an article by Columnist Peter Edson which shows that the Federal Maritime Board, all of whose members were appointed by President Eisenhower, is upholding a monopoly on over 95 percent of the shipping to Hawaii.

The truth is that this administration is fond of monopoly and only attacks it on highly technical points. When it has a clear chance to do something to end a monopoly, it turns around and supports it. The article follows:

HAWAII SHIPPING RIGHTS ROW

(By Peter Edson)

A fight for Hawaiian shipping rights between two United States companies illustrates many of the problems in the current round of congressional investigations into overconcentration in American industry, freedom of competition and regulation of monopolies.

This case hangs on a recent Federal Maritime Board 2-to-1 decision denying Pacific Far East Line the right to have ships on its unsubsidized United States-Guam-Japan route call at Hawaii three times a month to pick up or discharge cargo.

Matson Navigation Co. has provided service between the United States Pacific coast and Hawaii for over 70 years. With an investment of $35 million, it has built up its business to the point that it now handles 95 percent of the traffic.

Since Hawaii is American territory, this route is considered coastwise shipping. As such it is entitled to certain protection under the American Merchant Marine Act.

Matson does not receive a subsidy for its Hawaii service, though it is subsidized on its wholly owned Oceanic Steamship Co. route to Australia. Pacific Far East Line also receives a subsidy on another route to Japan and Hong Kong.

The question raised by PFEL on the Matson Hawaii service is whether it constitutes a monopoly which should be opened to further competition?

One additional factor here is that three of Matson's directors are high officials on three of Hawaii's big five companies that have dominated the islands' agricultural industries for many years. Practically all of Hawaii's sugar and pineapples move to the United States in Matson ships.

Three years ago American President Lines and Pacific Far East applied to Federal Maritime Board for the right to carry cargo to and from Hawaii. Later APL withdrew.

After a year and a half of hearings, 7,500 pages of testimony and 1,750 exhibits, FMB examiner F. J. Horan found that PFEL's application would not result in unfair competition. But the full Board reversed the examiner's recommendation and denied PFEL's application for Hawaiian rights.

Division of the Board was Chairman Clarence G. Morse and member Thomas E. Stakem, Jr., against PFEL, Vice Chairman Ben H. Guill for it. All three are Eisenhower appointees. Mr. Stakem is a Democrat. Mr. Guill, an exCongressman, was leader of the Texas GOP faction that swung the State to Eisenhower at Chicago in 1952.

Refusing to be stopped by the Maritime Board's divided opinion against it, Pacific Far East promptly filed application for review and took the case to court in two suits.

In District of Columbia Federal court PFEL has filed suit against the three Maritime Board members individually, with Secretary of Commerce Sinclair Weeks thrown in as a fourth defendant, for supporting a near perfect monopoly. In district court of appeals, PFEL is suing to have the Board's decision reversed.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Civil-Rights Controversy

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, August 2, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a number of editorials relating to the civil-rights bill which the Senate has been considering for some time. The editorials may be described as follows:

The first is entitled "Race Disorders in Chicago Reflect Resistance to Forced Mingling," from the Charleston, S. C., News and Courier of July 31, 1957.

The second is entitled "'Civil Rights' Fight," from the State, of Columbia, S. C., of July 30, 1957.

The third is entitled "Hypocrisy Marches On," also from the State of July 31, 1957.

The fourth is entitled "CR Commission Could Work in Secret," from the Greenville, S. C., News of July 31, 1957.

The fifth is entitled "ASHMORE Cites Federal Aid Weakness," from the Greenville News of July 30, 1957.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Charleston (S. C.) News and Courier of July 31, 1957]

RACE DISORDERS IN CHICAGO REFLECT RESISTANCE TO FORCED MINGLING

One of the most horrible experiences a city can undergo is a race riot. In the insanity of its duration, innocent men, women, and children are brutally handled. The psychological scars of race riots last long after wounds of the flesh are healed and skulls mended.

Chicago has undergone the experience of race warfare on a number of occasions. Fierce race rioting broke out in 1919. In both the 1940s and 1950s, open conflict between the races was renewed. This week whites and Negroes clashed in the streets.

Why do race riots occur? More specifically, why do they occur in Chicago where integration has the sanction and approval of governmental authorities, the press, church leaders, and scores of powerful liberal groups.

We suspect that there will be much public soul-searching in Chicago. But will influential Chicagoans stop and consider whether the race conflict was brought on by their own insistence on integration in housing and other areas of life? We doubt it.

We hazard the guess that the Chicago authorities, newspapers, clergy and liberals will propose an ever stiffer dose of the drug that caused the disorder in the first place: forced race mixing, especially in housing.

We submit that disorders will continue until the pressure is taken off the white people of Chicago to live in close association with Negroes. The city of Chicago may pass new race mixing laws; the Chicago press may hammer again and again at the theme that integration in housing is democratic and the right thing; the clergy may insist that mixed neighborhoods are morally justified; but it is virtually impossible to brainwash several million people who don't want to live in close association with another race.

When the day comes that Chicagoans are not told day in and day out that it is the law and their democratic duty to live side by side with people of a different race, strife should disappear from the streets of "the windy city." Until that time, resentment will be created in the hearts of white Chicagoans. Told by their leaders that close association with whites is their right, Chicago's Negroes will likewise become resentful. The result? Eruptions of race rioting such as marked this week.

[From the Columbia (S. C.) State of July 30, 1957]

CIVIL-RIGHTS FIGHT

Whatever the result of the present civil-rights fight in Washington, it can be taken for granted that the self-appointed persecutors, who would defy constitutional law or anything else to carry their political point, will be in action again at the next sitting of Congress. What they get this year may be a greatly watered-down version of what they sought, but the foot will be inside the door, and efforts will be made to widen the opening. In fact Senator DOUGLAS has said as much in an interview.

However, we must not let this thought discourage us for the picture in Washington is much brighter than it was, and there have been definite evidences of toleration from unexpected sources. Perhaps it is dawning upon some of the onetime proponents of the legislation that it could prove to be a boomerang; that it could be also a sword that could cut in more than one way.

It would be much better for everyone concerned, including those whom the legislation purportedly is intended to help, for the Senate to shelve the pending legislation in its entirety, but if this is not to be, then certainly the bill is not as drastic as when passed by the House. Yeoman work has been done in whittling it down.

We think there is every reason to believe other sections of the country are more understanding than they were; that they are realizing the great disaster that could follow the destruction of constitutional government to satisfy the political ambitions of self-serving politicians. Members of Congress in both Houses are beginning to get reactions from the people that are surprising to them.

In the meantime let no one forget that the South has risen in stature by the dignified and impressive manner in which the ball has been carried in contrast to the tricky procedure employed by proponents of the bill as typified by the maneuver to bypass the Senate Judiciary Committee and bring the House-passed measure direct to the floor.

[From the Columbia (S. C.) State of July 31, 1957]

HYPOCRISY MARCHES ON

When a Negro boy from Chicago was killed in Mississippi, an incident which is in no way condoned, and those who admitted kidnaping him were acquitted by the trial jury the affair was made a cause célèbre. It was held up as a true and infallible sample of the entire attitude of the whole South to law and order where the Negro is involved with whites.

When 2 white boys admittedly killed a Negro boy in Chicago, home of Emmet Till, the victim in the Mississippi mishap, the jury set them free.

The Chicago acquittal took place in the same week in which 7 of 11 persons being tried for contempt of a court order on integration in Clinton, Tenn., were found guilty.

Within the last very few weeks there have been 4 race riots in Detroit, New Jersey, and Chicago, where there were 2 on successive Sundays. The latest Chicago incident occurred when a group of white men mounted a railroad embankment and gratuitously began stoning a group of Negroes having a picnic, causing most of them to flee the scene leaving their food and equipment behind. Many of the Negro picnickers were women and children, some of whom were injured.

If there has even been this kind of unprovoked attack upon Negroes by white adults in the South any time in the present century or any riots such as occur regularly in the North, we have not heard about it.

Yet, northern agitators presume to tell southerners how to get along with their Negro neighbors.

Hypocrisy above Mason and Dixon's line marches on.

[From the Greenville (S. C.) News of July 31, 1957]

CR COMMISSION COULD WORK IN SECRET

The more the southern Senators kick the proposed civil-rights bills around in debate on the floor of the United States Senate the more boobytraps they find cunningly planted throughout the various provisions.

One of these having to do with the proposed Civil Rights Commission hasn't been publicly discussed, perhaps because that particular section of the bill hasn't been fully debated. But it certainly should be most carefully scrutinized.

This particular boobytrap would authorize the Commission to conduct secret hearings and to keep the testimony and other material from the public knowledge simply by classifying it.

No testimony taken in an executive session could be released to the public, except by the Commission, and anyone releasing or using the information in public without consent would be subject to fine of up to $1,000 or imprisonment up to a year.

This penalty, of course, most likely would apply to reporters and editors first. Naturally, we are opposed to that, as well as to other forms of official secrecy (except where the national security is involved) as a matter of principle. But that is somewhat beside the point.

The frightening thing is that the secrecy provision would enable the Commission to conduct Star Chamber proceedings. The Commission would have the power to investigate any and all allegations or violations of civil rights. It would have the power to subpena witnesses and accused persons to appear anywhere in the country. To refuse to appear or to testify could lead to punishment.

Armed with this power, the 5-member Commission, and its 15 volunteer workers, could order any one to appear for what would amount to a closed-door trial, a drumhead court. His accusers would be protected from the public knowledge that they had brought

charges which might be prompted by a grudge.

The Commission would not have the power to convict or to punish, but its power to harass and intimidate would be enormous.

While it is true that congressional committees often conduct secret hearings, this is not comparable to the civil-rights scheme. The Members of Congress are elected and are answerable to their constituents in the event they mistreat any witness. The civil-rights commissioners could not be so easily checked.

There is nothing liberal about such a proposal.

[From the Greenville (S.C.) News of July 30, 1957]

ASHMORE CITES FEDERAL AID WEAKNESS

The national House of Representatives has killed, for this session at least, the bill proposing to set up a program of Federal aid to the States for school building purposes. And good riddance.

As happened once before, the bill failed after there had been tacked onto it a rider stipulating that no State should receive Federal funds for schools if it persisted in segregating the races. Some Members of Congress feel this was one of the main reasons the legislation was rejected. It was a contributing factor, but it probably wasn't the main one.

Still other Members of Congress feel that the bill failed because the White House didn't support it strongly enough. It was said that the measure was not in the form the President wanted, but that he would accept it. Here again, perhaps, was a contributing factor, but those who hold it to be a principal one most probably are looking for a campaign issue for 1958.

The real reason the school aid bill was rejected is that it isn't needed. It is based on the false premise that the States either cannot or will not build enough classrooms to educate their children. A national survey has shown that no State is incapable of meeting its own needs; rousing the responsible State official to action is a matter for local citizens.

Proponents made much of the idea of "taxing the wealth where it is to educate the children where they are," which is another way of saying that the wealthier States would get back less than they paid in and the poorer States would get more. This caused some Congressmen from larger States to oppose the bill.

But during the debate last week, Representative ASHMORE of South Carolina graphically pointed up a major weakness in the aid bill.

Mr. ASHMORE told of an "exhibit" prepared by Representative BAILEY of West Virginia and designed to illustrate the desperate need for new school buildings. The Greenvillian found in Mr. BAILEY'S collection two pictures from South Carolina.

One of them ostensibly was of the Reidville colored elementary school in Spartanburg County. On the back of it, Mr. ASHMORE said, was the penciled note "revisited in 1949," indicating the picture had been made before that. Mr. ASHMORE telephoned a school official in Spartanburg County and was told that there hadn't been a wooden school building of the type in use in years and that every white and colored school "now operates in a modern, up-to-date building."

Another picture, Mr. ASHMORE said purported to show a dilapidated, one-room Negro school building at Summerville. Upon investigating, he found that the building in question had been abandoned in 1955 and replaced with a 19-room consolidated school which has two unused classrooms to take care of future growth.

Mr. ASHMORE'S findings tend to bear out the contention, raised by Governor Timmerman some months ago, that the Federal figures on the classroom shortage are inaccurate and exaggerated. It is evident that there are those who want to put the Federal Government into the public school business regardless of whether the States want it or it can be justified on the basis of need.

Certain politicians consider the Federal-aid program a potent political issue. Mr. ASHMORE and his colleagues have stopped the bill for this year, but it probably will be back in the same or another form.

Lower Downpayments for Home Purchasers

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, August 2, 1957

Mr. SPARKMAN. Mr. President, recently Congress adopted amendments to the Housing Act, and in them it provided for lower downpayments in the purchase of homes built under the FHA home-building program. All through the debate in the Senate and in the House on the submission of the conference report, it was made quite apparent that it was the intent of Congress that lower downpayments should apply now because of the terribly depressed condition of home building in this country, when the need is as great as ever.

The administration has declined to put into effect lower downpayments. On yesterday a letter was sent to the President, signed by the following Senators: Mr. CLARK, of Pennsylvania; Mr. COOPER, of Kentucky; Mr. HUMPHREY of Minnesota; Mr. IVES, of New York; Mr. JAVITS, of New York; Mr. MORTON, of Kentucky; Mr. NEUBERGER, of Oregon; Mr. SMATHERS, of Florida; Mr. YARBOROUGH, of Texas; and myself. In that letter we urged the President to put the lower downpayment schedule into effect immediately. I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR MR. PRESIDENT: We respectfully call to your attention the importance of putting into effect without delay the lower downpayment provisions of the new housing law as a vital stimulus to a key American industry and an indispensable aid to millions of our citizens wishing to purchase homes.

The home building industry is one of the Nation's largest, both in terms of annual dollar volume and in the number of persons it employs. Its effects on other industries such as lumbering and manufacturing and on the whole economy of the country are vast. Yet this industry may now be permitted to sink deeper and deeper into a recession and perhaps a depression.

The alarm and consternation among builders seems to be fully warranted by the facts.

Last year home construction fell off more than 20 percent. This year so far it is off an additional 16 percent. The present figures indicate that home building is now preceding at an annual rate of only 970,000 units. This is the first time in over 8 years that the production level fell below the million mark, and at the very time when home building should be expanded, not cut back, to meet the need.

When the Housing Act of 1957 was pending in the Congress, all the testimony and debate led to the conclusion that the level of home building activity would continue to decline even beyond the current low level unless some measure of relief was promptly granted; and that almost any action the Government took would require a year to have any practical effect, because the supply of housing can't be turned on and off like a faucet.

An adequate supply of new housing is a vital necessity to meet the needs of our growing population. But the restrictive pressures on the home building industry, which the new housing law was intended to relieve, raises again the spectre of a housing shortage which so unsettled the Nation a decade ago. A Washington newspaper reported last week, as a straw in the wind, official Government findings that fewer apartments are vacant now than at any time since the vacancy-rate studies were started in 1950.

We want to impress upon you our sincere belief of the need to put in the lower downpayments, not just as a measure to stimulate a vital but depressed segment of our economy, but as a means of affording home ownership to many thousands of American families.

The plight of the veteran is a vital element in this matter. The VA housing program is for practical purposes nonexistent, certainly impotent, from the point of view of a veteran who wants to buy a house. The law says he can get a loan at 4½ percent interest, but it is very difficult to obtain one. His only recourse is to buy under FHA and one major intent of the new housing law was to bring the FHA schedule of down payments more in line with VA schedules to fill this need, an intent which now must be implemented by executive action to be made effective.

The lower downpayment schedule contemplated by Congress and written into the Housing Act of 1957 was also intended to make home buying easier for families in moderate circumstances who have not accumulated large amounts of cash. Under the new law, the cash downpayment on a $10,000 home would be $300 as against the $700 required now; on a $12,000 home, it would be $600 as against the $1,200 required now. Certainly, it is logical to pay proper attention to a family's earnings as a yardstick for home ownership, rather than savings alone.

To sum up, it is our belief that lowered downpayments on FHA-insured home building were contemplated by the Congress to revive the home-building industry, to help to prevent a more stringent new housing shortage, to prove of special benefit to veterans, and to make it more possible for families in moderate circumstances to enjoy the status of homeowners.

We sincerely believe that it was the expectation of Congress that the downpayment schedules of the Housing Act of 1957 would be put into effect as soon as possible, and we wish again, with all due respect, to urge that you undertake to put these provisions of the law into effect promptly.

Sincerely.

Death of Mrs. Grace Coolidge

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Friday, August 2, 1957

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in

he Appendix of the RECORD a statement n the death of Mrs. Grace Coolidge. The statement was made by Mrs. Fred- ric Groves, president general of the DAR, and was published in the DAR Press Digest for September 1957.

There being no objection, the state- ment was ordered to be printed in the RECORD, as follows:

FROM THE PRESIDENT GENERAL

Members of the National Society, Daugh- ers of the American Revolution, feel a deep ense of loss in the passing of Mrs. Grace nne Goodhue Coolidge, widow of our 30th resident, Calvin Coolidge.

She was a great and gracious lady whose uiet charm and simplicity won the heart f the Nation. Her concentration upon her usband and her sons was refreshing and holesome.

Her warm human kindness, love of people, nd love of living were benignly contagious ualities which affected everyone who knew er.

We are grateful that our own DAR mem- er, Mrs. Eisenhower, is recognized as the irst Lady most like Mrs. Coolidge.

The National Society extends its sym- athy to Mr. John Coolidge and his family. We know that he will realize that the sweet- ess of his mother's personality will linger orever in American history.

Importations of Oil

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE

N THE SENATE OF THE UNITED STATES

Friday, August 2, 1957

Mr. FREAR. Mr. President, I ask nanimous consent that an editorial en- itled "Wrong Reason, Worse Remedy," rom the Wall Street Journal of August , be printed in the Appendix of the REC- RD. It relates to the recent decision by he Government on the importation of il into the United States.

There being no objection, the editorial as ordered to be printed in the RECORD, s follows:

WRONG REASON, WORSE REMEDY

The logic of those who would put strict ontrols on the imports of oil, it seems to us, ests upon a strange syllogism.

It runs something like this: Oil is a basic aw material, necessary in peace and abso- utely essential in war. Known United tates oil reserves are insufficient for the ng future; we now see only about an 11 ear supply. Therefore we must cut down n the influx of foreign oil as a defense easure.

The conclusion is startling, even if all the sumptions are correct. If a raw material s in short supply at home, one might sup- ose that is all the more reason why we hould conserve it for future use by increas- g our imports now.

Actually, the advocates of import restric- ons concede as much. But they say the roblem is to get more exploration for new il at home; there won't be any exploration nless oil prices are encouragingly high; and il prices won't be high unless we restrict heaper foreign oil.

This might be a persuasive argument if he plan was to find new wells and then cap hem to save their oil for future emergencies. ut that, of course, is not the idea. In prac- ice, any hidden oil reserves will be better conserved by being left alone; the untapped oil is not going to go away.

So it seems to us that this kind of argu- ment for import controls founders on the fact that the way to conserve your own sup- ply is to use somebody else's. This argument for controls seems more a rationalization for another, and more familiar, argument.

It is unquestionably true that the impor- tation of foreign oil is painful to domestic producers. In most oil States production is restricted (in the name of conservation) already. Today oil can be pumped out of Kuwait, shipped across the ocean and sold in the United States cheaper than the do- mestic price. This is not encouraging to those who have oil wells or who want to search for new ones. And we are not un- sympathetic to this aspect of the case of the domestic oil producing States. Cheaper foreign imports are always painful to those who produce the commodity in question here at home.

But this does not strike us as a suf- ficient reason for the Government to re- strict oil imports.

For one thing, the intended effect of the restriction is to support the price of oil. The price rise that helps the producer hurts the consumer. In effect, the consumer is told that he cannot buy his oil cheaper from Kuwait; he has to pay whatever is deter- mined to be the proper domestic price. As in the case of tariffs or other restrictive devices on any industry, the whole economy is denied the benefits of a free market.

Equally important, it seems to us that the Government has undertaken a hopeless task. Even the domestic oil producers, as Mr. Logan reports this morning, concede we need some foreign imports. The Government has now taken upon itself the responsibility of deciding precisely how many barrels of for- eign oil is exactly the right amount.

This brings a tremendous area of the oil industry under the thumb of Govern- ment. With the authority to turn on and off the faucet of foreign imports, the Gov- ernment will have a powerful lever which can be used to the disadvantage as well as the advantage of the domestic oil industry, a thing that the industry itself might think more about. It will also have a lever that will play havoc if the officials in charge happen to push it the wrong way.

The argument that all of this is necessary in the name of conservation is hardly con- vincing. And the remedy of coercive state planning is always dangerous.

Living Costs and Postal Pay

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, August 2, 1957

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Living Costs and Postal Pay," which appeared in the Philadelphia In- quirer of July 29, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LIVING COSTS AND POSTAL PAY

The recent announcement that living costs were up for the 10th straight month lent added weight to the plea of the Nation's postal workers for an increase in pay.

Since their wages have been almost frozen for nearly 6 years, it was not surprising that only the day before the House of Representa- tives had voted overwhelmingly—379 to 38— for a 12½ percent pay increase. In the light of living cost picture, the Senate is now ex- pected to go along.

The proposed pay increase was voted by the House over determined opposition by President Eisenhower. The argument against it is that it is inflationary, and will boost Federal expenditures still further.

At the same time, increases in postal pay cannot be said to have contributed to infla- tion. There have been too few. And when automatic wage boosts are being given work- ers in other fields as the cost of living rises, the postal worker understandably asks why he should be the last in line—and then turned down.

It is this picture, indeed, which many be- lieve responsible for the miserable mail serv- ice we have been getting. Experienced work- ers in greater numbers have been quitting Post Office jobs for better pay elsewhere, and postmasters complain of their inability to obtain able workers for the money they can offer.

All these factors, we believe, lie behind the House vote. In a free country even Uncle Sam himself must compete—in wages—if he expects to get his share of the skilled and competent help.

Meeting the Problem of Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, August 2, 1957

Mr. WILEY. Mr. President, it is now 45 years since the establishment of the United States Children's Bureau. In that time, there has been wonderful progress in looking after the needs of the Nation's youngsters—our greatest re- source.

I was pleased to read not so long ago in the Milwaukee Journal an article in which the able new Chief of the Federal Children's Bureau, Katherine Brownell Oettinger, outlined the principal chal- lenges facing the Bureau today, notably, the challenge of meeting the problem of juvenile delinquency.

Naturally, I was especially gratified that my own State of Wisconsin was singled out for its constructive work in this field. But there are other needs of the Nation's youngsters, as well, and we look to the Children's Bureau for its con- tinuous excellent leadership.

I ask unanimous consent that the text of the article printed in the July 17 issue of the Milwaukee Journal be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DELINQUENCY CALLED TOP PRIORITY PROBLEM— INFANT MORTALITY RATE NO LONGER CHIEF CONCERN OF CHILDREN'S BUREAU

WASHINGTON, D. C.—After only 2 months as Chief of the Federal Children's Bureau, Katherine Brownell Oettinger has arrived at firm conclusions on teen-age delinquency, Federal grants-in-aid and the need for more advice to parents.

She made these four major points here last week:

Teen-age delinquency is as much a top priority problem now as infant mortality was in 1912, when the Children's Bureau was organized to cope with it.

All she has seen thus far supports a finding that the grants-in-aid administered by the Bureau are important to its research program. Some have argued that the Bureau should get out of the grants-in-aid business.

It does no good to take up any plan of action until there is personnel to carry it out.

More advice should be available for bringing up normal children.

DELINQUENCY RATE RISES

Mrs. Oettinger said the juvenile delinquency rate has risen for the eighth consecutive year.

"It is a trend we can't ignore," she said. "It seems to me to rank in importance with infant mortality when the Bureau started. After many years that problem was greatly reduced, and juvenile delinquency can be.

"But we need more research to know where to put the emphasis."

Mrs. Oettinger quoted Children's Bureau figures which, on the basis of reports from 1,148 courts, showed a 20 percent increase in juvenile delinquency cases between 1955 and 1956 in the 10 to 17 age group. The population increase in that age group that year was only 3 percent, she said.

The Children's Bureau Chief listed some of the problems in the delinquency field, and some of the remedies in process or contemplated.

"Some juvenile courts are ignoring parents' rights rather shockingly," she said. "The parents don't know that they and the children have right of counsel. Sometimes the parents don't know what is happening to their children.

STANDARDIZATION PLANNED

"The National Council of Juvenile Court Judges and the children's bureau are now working on a standard juvenile court act which would correct these abuses. It will be issued next spring.

"Some police still handle juvenile offenders and adult criminals the same way. However, it is most encouraging to see how many more cities are giving special training to police officers to deal with juveniles only.

"In some part of most States, children are still being put in jail with adults. But in the last 10 years more than 100 new detention homes for children have been built.

"Seriously disturbed boys and girls still are in training schools for delinquent children. But 10 States have set up diagnostic centers which weed out emotionally disturbed delinquents and assign them to proper institutions. These States are Florida, New York, California, Minnesota, Massachusetts, Pennsylvania, Washington, Wisconsin, Colorado, and Iowa.

"Many States feel they have nowhere to turn for advice on specific delinquency problems. However, 14 States have consultants in juvenile delinquency. They are Washington, California, New York, North Carolina, Florida, Illinois, Massachusetts, Tennessee, Mississippi, Maryland, Wisconsin, Pennsylvania, Idaho, and Minnesota."

Other negative trends Mrs. Oettinger listed were custody instead of clinical treatment, attempts to punish parents for the delinquency of their children instead of helping them with their problems, and harsh disciplinary measures instead of constructive training for delinquents.

HOPES TO SEE GRANTS

Mrs. Oettinger expressed hope that Congress will adopt the pending new program of grants-in-aid to the States to help finance projects to curb juvenile delinquency.

Children's Bureau grants-in-aid to the States under the Social Security Act this fiscal year total $15 million for crippled children's services, $16½ million for maternal and child-health services—$500,000 of it earmarked for services for the mentally retarded, and $10 million for child-welfare services.

"Grants-in-aid support research and research supports grants-in-aid," she said. "It is better when they are not separated but instead are parts of the same picture."

PERSONNEL NEEDED

As an example, she said the Michigan research study on children's artificial limbs had proven an impetus to the entire crippled-children's program. Twenty-one States have sent children to be fitted there. Among these children were four born without either legs or arms. Whole new areas of activity have been opened to child amputees, she said.

She cited, too, the 25 research projects set up this year to aid mentally retarded children and their parents.

"The tragedy can be so much softened if parents don't try to do the impossible," she said. "It is not merely a matter of information; they can read that themselves. It is helping them absorb the shock, aiding them from day to day."

Mrs. Oettinger said the Children's Bureau booklet in this field, The Child Who Is Mentally Retarded, is fast becoming a best seller. The first edition of 50,000 copies has been exhausted and another 75,000 copies has been ordered.

The need in this field as in many others, she emphasized, is more trained personnel. As a former dean of a school of social work, she said, she is acutely aware of the comparative shortage of scholarships in social work as compared with the physical sciences.

Love That Debt

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, August 2, 1957

Mr. SPARKMAN. Mr. President, it is amusing to hear some of the officials of this administration try to explain away the ever-increasing national debt. Several days ago Mr. Randolph Burgess gave an explanation which has been used before, namely, that we should not worry about the national debt, because even though it has become greater, the population of the country has increased, and the per capita debt has not increased, and therefore it is all right.

The Evening Star, a newspaper published here in Washington, on Wednesday, July 31, 1957, contained an editorial entitled "Love That Debt." I ask unanimous consent that it be published in the Appendix of the RECORD, and I commend to all Senators a careful and interested reading of the editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LOVE THAT DEBT

It seems a shame that Randolph Burgess is planning to leave the Treasury. For he has a way of making a man feel ashamed of himself for stewing about the national debt.

There was a time when the New Dealers, or the Fair Dealers, or some kind of dealers went about the countryside chanting a siren song. Why worry about the debt, ran their refrain. We owe it to ourselves, and the bigger it is the richer we are. Obvious (although it is not entirely obvious to us this was a fiscal snare and delusion. It was a silly notion; one to be forthright condemned by every good American who believes that a penny saved is a penny earned (or is it the other way around?), and what good American doesn't.

Under Secretary Burgess has not picked up this New Deal line. He takes a different tack. As he has just told the Senate Finance Committee, why worry? It is true that the national debt may not be going down very much, but the national income keeps going up, and the result, as we understand it, is that the debt, which is hanging somewhere around the $270 billion level, becomes less and less important in the larger scheme of things.

Mr. Burgess illustrated his point with a statistic which is more or less within the range of our comprehension. Ten years ago, he said, the national debt averaged out to $1,832 for every man, woman, and child in the United States. Today, as a result of the superior way in which a Republican administration comes to grips with such problems, this average has dropped to $1,[illegible] for every man, woman, and child.

Is this not a reassuring item of information? Is it not enough to make one thoroughly ashamed of himself for all the peevish things he has said about our crushing burden of debt? Of course it is—unless, by some unhappy chance, those siren singers were right when they were trying to make us believe that the debt was something that was owed to ourselves. If they were right and if Mr. Burgess is right, then every man, woman, and child in the United States is $251 poorer today than he was 10 years ago.

Nobody Has Better Air Than Vermont

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Friday, August 2, 1957

Mr. AIKEN. Mr. President, on July 30, there appeared in the Providence Journal an article entitled "In Perspective—Nobody Has Better Air Than Vermont." The article is a very fine one and was furnished to me by one of the ablest, most discerning administrative assistants on Capitol Hill, Mr. Edward Higgins, assistant to the senior Senator from Rhode Island [Mr. GREEN]. Mr. Higgins was evidently so impressed by the article, that he promptly forwarded it to my office. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

IN PERSPECTIVE—NOBODY HAS BETTER AIR THAN VERMONT

Now don't anybody get sore, but I just corrected one of the things that was wrong with Rhode Island. Notice the difference in the air? It isn't every day of the year that you can breathe pure Vermont air right here in Rhode Island.

It all started innocently enough, with never an intention of casting aspersions on the air here in Rhode Island. Its pretty good air, as a matter of fact. There is the salt-dipped variety along the coast for those who like

ll-seasoned air. Further inland, you can
t the apple blossom-scented variety of
eenville, if that is what you prefer. In a
w spots you can even get hill air, so called.
course, down along the Providence River
downtown Providence at low tide this time
year—but maybe we had better get on
th the story.

It begins in Vermont, my native State.
was up there on a visit with the family.
it must to all vacationers, the visit came
an end. The time arrived to bundle the
mily back into the car and head south for
ode Island, the adopted State of this Ver-
nt-reared family.

It was a sad leavetaking. For 3 days, I
d been living it up, so to speak. For 3
ys, I had been breathing in that pure, ex-
arating, intoxicating Vermont air. My
ildren were breathing it, too, and my wife.
seemed an awful shame to have to leave it.
So we decided to bring some back with us.
e took an extra strong paper bag, opened
e end and rushed across the lawn at my
other's house until the bag was filled to
erflowing with Vermont air. Then we were

I swear the latest air-conditioning equip-
nt couldn't have kept that car any cooler
the way home. A little bit of that Ver-
nt air kept seeping out of the bag now and
en. It swirled around and around the in-
e of the car and even the children no-
ed it.

"Hey, Pop. Close the window, willya?"

"They are closed."

"How come its so cold then?"

"It's the Vermont air in the bag," I said.

"Ah," they said, remembering.

Vermont air has a peculiar quality about
Car exhaust fumes disappear in it. In-
strial smokestacks choke up every time
ey even think about it. It swallows an
or from a river mud flat in one gulp. Dust
uds cough themselves apart trying to
nd up against Vermont air.

It makes me lightheaded just to think
out it.

Vermont air is cooler, clearer, drier, wet-
, purer, and just plain better than any
her air, and I'm sorry but I have to say
at. You can see further in Vermont air
an in any other air. Everything grows
tter in Vermont air, including people.
rmont air is made in Heaven itself by the
ints, washed by the angels and carried
wn over the Green Mountain State in
fy cloud bags knotted together at dawn
the littlest angels who just love to touch

Anyway, we arrived home safely on the
rface above the bay. I figured first off I'd
ke that bag of Vermont air and rush into
e house with it. I figured I'd rush from
om to room, letting out a little bit at a
me, until I had the house well saturated
th Vermont air. I figured I could forget
about that air conditioning unit we had
ked about. I figured we could just plain
rget about bothering with opening the win-
ws at night any more. After all, with a
use full of Vermont air.

And then I thought that's a pretty damn
lfish attitude for a grown man. Here I
s making a living and feeding my family
the bounty of Rhode Island and I wasn't
en big enough to share my Vermont air
th it.

That did it. I stopped right there. I
cided right on the spot that I'd leave that
g of Vermont air in the car. I didn't
ve the heart to open the bag up and let
about that air-conditioning unit we had
t, I figured, to do the job. And I'd still
ve an ample supply in the bag to take
re of the house, which isn't a very big
use anyway.

So I left the bag of Vermont air in the car.
course, I noticed the difference in the
ighborhood the first thing next morning.

The kids were peppier.

My wife was singing.

A neighbor who hadn't spoken to us in months dropped in to have a friendly cup of coffee.

The following day several of the neighbors hired painters to spruce up their homes.

Reports of extra high sailboat speeds came in from a nearby yacht club.

A haze that had always hung over the bay in front of us disappeared.

An antipollution group that had been fighting the good fight for 10 years resigned. Said their job was finished. Said the State hadn't had it so good in 10 years.

That's the way it went, so help me. I never expected to get anything out of this, of course, and still don't, but just for the record I'll have to admit that I was disappointed by one little oversight on the part of the State. Nobody from the Rhode Island Development Council even bothered to say "Thank you." Now that wouldn't have hurt them a bit. After all, how many coastal States can brag about having mountain air—Vermont air—right down alongside the shoreline?

There's one more thing, too. I don't know how long the Vermont air will last. Oh, it's long lasting and tough all right, but there is another peculiar thing about it that I failed to mention earlier. It likes to have Vermont dirt under it.

But don't worry. I'm going back up there again sometime. I'll bring some more back if you want. I might even bring back some Vermont dirt to go with it.

Social Security for Firemen in Texas

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 2, 1957

Mr. YARBOROUGH. Mr. President, the Honorable Olin Culberson is railroad commissioner of the State of Texas, and is secretary-treasurer of the State Firemen's and Fire Marshals' Association of Texas. Olin Culberson is a relative of the late Charles A. Culberson, who served his State of Texas, and the Nation, for 23 years—1899 to 1922—as a Member of this body, with fidelity and distinction. It is my privilege to serve here in Mr. Culberson's succession.

Judge Olin Culberson has served in Texas as a county judge, and in other important positions of public trust. He has filled them all with that fidelity and integrity characterized by the Culberson family, from the service of David Culberson as a Congressman from Texas—1875–1897—through the service of his son, Charles A. Culberson, as attorney general, governor, and United States Senator from Texas.

Commissioner Olin Culberson has transmitted to me the resolution of the 81st annual convention of the State Firemen's and Fire Marshals' Association of Texas favoring the inclusion of the firemen of Texas among the groups to be covered by social security. I indorse that resolution.

Mr. President I request unanimous consent that Mr. Culberson's communication and the accompanying resolution be printed in the Appendix to the RECORD.

There being no objection, the letter and resolution were ordered to be printed in the RECORD, as follows:

STATE FIREMEN'S AND FIRE MARSHALS' ASSOCIATION OF TEXAS,
Houston, Tex., July 29, 1957.

Senator RALPH W. YARBOROUGH,
Senate Office Building,
Washington, D. C.

DEAR RALPH: Attached you will find copy of Resolution 8 adopted at the 81st annual convention of the State Firemen's and Fire Marshals' Association of Texas, with reference to making the benefits of social security available to the firemen of Texas. Also, you will find a copy of a proposed resolution which was modified and came out as Resolution 8.

I would call your attention to the fact that the Congress has heretofore seen fit to amend title 42, section 418, United States Code, which deals with the Federal social-security system and has authorized certain States to allow firemen to participate in the social-security system in the States of Florida, North Carolina, Oregon, South Carolina, and South Dakota.

There are 605 fire departments in Texas, only 38 of which are fully paid, and 567 are volunteers, and many of which have paid chiefs and paid drivers, who under the present Social Security Act, unless it be amended as requested, cannot participate in social security.

Your earnest consideration of the present resolution giving Texas firemen the option of embracing the social-security benefits is urgently and sincerely requested.

Very respectfully,

OLIN CULBERSON,
Secretary-Treasurer,

RESOLUTION NO. 8

Whereas by reason of the present pending bills in the Congress of the United States with respect to authorization of firemen and policemen of Texas to be included in social-security coverage, if they should choose; and

Whereas it appears many of the firemen of Texas and members of this association, desire to take advantage of such social-security benefits: Therefore be it

Resolved by the 81st State Firemen's and Fire Marshals' Association of Texas in convention assembled at Waco, Tex., That we go on record as favoring the enactment of such laws as will make available such benefits to those firemen or departments that may so desire coverage, and that to correct any erroneous impression that may have been created as to such desire, that a copy of this resolution be forthwith given and forwarded to each member of the Texas delegation in the Congress.

Whereas certain organizations and individuals claiming to represent the views of all firemen and policemen in the United States, have in the past exerted great influence on legislation, resulting in the exclusion of firemen and policemen from the benefits of social-security coverage; and

Whereas such organizations and individuals do not represent the views of all firemen and policemen in the United States and particularly in the State of Texas; and

Whereas firemen and policemen in the State of Texas are greatly in need of social-security coverage, both as to survivors' benefits and old-age retirement: Now, therefore, be it

Resolved by the State Firemen and Fire Marshals Association of Texas, meeting in annual convention at Waco, Tex., this — day of June 1957, That said convention and members thereof exert every effort to counteract the erroneous impression created in Congress that all firemen and policemen are opposed to H. R. 5012 which, if adopted, would extend the benefits of social security to firemen and policemen; and be it further

Resolved, That this convention and the members it represents actively support H. R.

5012 extending the benefits of social security to firemen and policemen; be it further

Resolved, That the legislative committee of this association forward certified copies of this resolution to all members of the Texas delegation to Congress.

Passed and approved this — day of June A. D. 1957.

Mrs. Grace Shattuck and Mrs. Marj Cochran, Oregon Rural Mail Carriers

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, August 2, 1957

Mr. NEUBERGER. Mr. President, one of the strong arguments for an upward adjustment in the pay schedules of postal employees is the dedication, loyalty, and faithfulness of these employees themselves.

We tend to think of most postal workers as men. This is not necessarily the case. The Oregonian, of Portland, Oreg., of July 24, 1957, published an informative and interesting article by Roberta Ulrich about two women mail carriers in Oregon, under the title "Women Deliver the Goods on Rural Route."

Miss Ulrich's article tells of the routine and duties of Mrs. Grace Shattuck of Tigard, Oreg., and of Mrs. Marj Cochran of Lakeside, Oreg., who delivers mail by boat along Ten Mile Lake in Coos County.

These capable women have been featured by the Oregonian reporter because of the special qualities of their routes—especially that of Mrs. Cochran, who operates the only water mail route within the State of Oregon.

However, both Mrs. Shattuck and Mrs. Cochran are symbolic of other able rural mail route carriers of both sexes, not only in Oregon but in the Nation. I think that these people merit an increase in their salaries, and I make this statement as chairman of a subcommittee which considered this question recently for many weeks.

I ask unanimous consent that the article by Roberta Ulrich, published in the Oregonian of July 24, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOMEN DELIVER THE GOODS ON RURAL ROUTE
(By Roberta Ulrich)

That traditional friend of the rural housewife—the mail order catalog—is considered a major headache by a pair of Oregon wives.

They are Mrs. Grace Shattuck, Tigard, and Mrs. Marj Cochran, Lakeside. The 2 are mail carriers and have to deliver the 5-pound books.

Mrs. Shattuck, 35, is 1 of 2 women who drive regular rural mail routes in Oregon. Mrs. Cochran, 39, operates the only boat route in the State. (A star route on the Rogue River includes partial boat service.)

Neither snow nor rain nor heat nor gloom of night has stopped either woman from her appointed rounds as yet, but Mrs. Cochran was stopped once by a log jam. Mrs. Shattuck has been slowed down a bit by flat tires, but she has never failed to finish her route.

TIME OUT FOR BIRTH

She did take a month off once when her youngest child, now 4, was born. She delivered the mail the day before her son was born and started for work the following day, "but went to the hospital instead."

About those catalogs, Mrs. Shattuck says, "I hate to see them start to come in." Echoes Mrs. Cochran, "I know what she means."

Mrs. Shattuck, who must deliver about 250 catalogs on her route of 465 boxes, can't take them all on 1 day in her 1954 sedan. Mrs. Cochran, who delivers her route in a 14-foot outboard skiff, can take her 30 all at once, but still finds them a heavy problem.

Mrs. Shattuck became a rural mail carrier 5 years ago when the rural carrier on the route where she lived south of Tigard quit. She had decided to go back to work, had once done office work and didn't like it; so decided to give mail carrying a whirl.

"I just love it," she said. She has a regular civil service appointment but must use her own car. The Government pays her 9 cents a mile for the car.

Her workday begins about 7 a. m. when she arrives at the post office to begin sorting the mail for her route. She is generally ready to leave by 9:30 or 10 a. m. and is back from the 35-mile route by 1:30 p. m. She then sorts out the afternoon mail for the next day's delivery before she quits for the day.

DRIVER SITS IN MIDDLE

Her schedule gets her home about the time her 2 older children, 11 and 9, arrive home from school.

Half her route lies over paved roads, half over gravel. Mrs. Shattuck drives her sedan in true mail-carrier fashion, sitting in the middle of the seat so she can reach out to put mail in the boxes without leaving the car.

"It's a lot easier now that I have a car with automatic gearshift," she said. "I've also learned a lot about a car. Before I started this, I thought a car was in good shape if it started. Now I can tell just about what's wrong with it when I have any trouble."

She also has learned how to change a tire.

"Of course, the one time no man would stop to help me," she said, "was when I had a flat tire in a terrible rainstorm."

VARIED DUTIES PERFORMED

Mrs. Shattuck doesn't just deliver the mail. She also sells stamps and money orders, picks up packages, and once in a while runs an errand for a boxholder. She also offers a sympathetic ear to mail patrons anxiously awaiting letters.

The lady mail carrier takes a personal interest in the people along her route and often goes beyond the official duty of her job. She often makes an extra trip to take a special-delivery letter—especially on Christmas Eve. "It wouldn't be sent special delivery unless it was important," she reasons.

Besides the mail-order catalogs, a lot of bulky and sometimes odd things come mail order. There are tires and scoop shovels and, worst of all, encyclopedias in packages weighing up to 100 pounds.

Since Portland absorbed the Tigard post office last spring, Mrs. Shattuck has had the only rural route at Tigart. Her territory includes Progress, Boones Ferry Road, and Scholls Ferry Road. The job has the wholehearted approval of her husband, an employee of the State liquor commission.

WATER ROUTE SERVED

The best thing about carrying the mail, according to Mrs. Shattuck, is "the people." Not only do they keep her well supplied with coffee breaks during the year, but at Christmas "they give me so many cakes and cookies we couldn't possibly eat them all. They're wonderful."

Mrs. Cochran also frequently finds herself patrons waiting for her with a cup of coffee. Hers is a contract route which she first began delivering 4 years ago with her father, J. G. Gibson.

For the past 3 years she has had the route alone, driving a 14-foot skiff along the 17½ mile shoreline of the two sections of Ten Mile Lake in northern Coos County. She leaves the lakeside post office about 8:30 a. m. every Monday, Wednesday, and Friday morning and finishes about 3:30 p. m. On her route the mailboxes are placed on docks where Mrs. Cochran can reach them without leaving her boat.

She delivers mail to about 30 families along the lake. Unlike Mrs. Shattuck's rural route, Mrs. Cochran's boat route does not involve the sale of stamps and mailing of packages, but she, too, sometimes runs small errands for the families along her route.

FOOD FERRIED ALSO

On a few occasions she has brought groceries in to families who were unable to get out. There is no road into parts of the area.

Her worst experience, however, came when she was caught in a 90-mile-an-hour wind which whipped up waves 3 and 4 feet high. "I got pretty wet," she recalls, "but I didn't turn over."

Mrs. Cochran gets enough boat riding on her route and rarely takes one out "unless we have visitors who want a spin." Her husband operates a boat service on the lake. She prefers horseback riding for recreation.

She likes her job, although she admits "In the wintertime it's not too nice. But I get plenty of fresh air."

School Bill Mystery

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, August 2, 1957

Mr. SPARKMAN. Mr. President, a few days ago the House of Representatives unfortunately killed any further consideration this year of the school-construction bill. There has been considerable discussion regarding who was responsible for that. President Eisenhower rather indignantly denied that he was responsible.

However, in the Christian Science Monitor of July 31, there appeared a very readable article, written by Mr. William H. Stringer, chief of the Washington bureau of the Christian Science Monitor. The article is entitled "School Bill Mystery." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCHOOL BILL MYSTERY
(By William H. Stringer)

WASHINGTON.—In the 1956 election campaign at Lexington, Ky., President Eisenhower said of Federal aid to school construction:

"We have now lost 1 out of 5 precious years * * * I shall accordingly call upon the next session of Congress to enact legislation that will do this job—not in 5 years but in 1 year."

But on July 25, 1957, the House of Representatives killed a school bill which, at the last voting minute, had become the administration's own bill—by the narrow margin of 208 to 203. And the kind of vigorous White House pressure which had been successful against Hells Canyon and in favor of the defense budget was not in evidence. This pressure, some Congressmen believe, would have switched enough votes to pass the bill.

What had happened since the Kentucky campaign speech?

If one seeks the view of Republican Congressmen who worked to pass the school bill and some who opposed the measure, the explanation runs like this:

1. President Eisenhower never was wholly sold on the proposal to aid the schools by Federal funds. He opposed the concept in a speech when he was president of Columbia University. The urgencies of the Nation's classroom deficiency, plus the promptings of politics, put the Republicans on record as favoring Federal aid. But influential men around the White House, including Presidential Assistant Sherman Adams, were against the concept. They, plus representatives of business groups, advanced arguments which were persuasive with the President.

2. Mr. Eisenhower was particularly unimpressed by the school bill pending in Congress, which was a compromise between the Democratic proposal to distribute funds on the basis of school-age population and the President's own proposal to distribute funds on the basis of need (more money to needy States and districts). Of the $1½ billion dollars to be expended over 5 years, half would have been expended on each basis.

3. A sizable majority of House Republicans, as the ultimate vote revealed, were against Federal school aid. Representative LESLIE C. ARENDS of Illinois, the GOP whip, had conducted one of his usual polls and discovered the hostile majority. He and Representative CHARLES A. HALLECK of Indiana carried this report to the White House. They counseled against making a fight of it and risking humiliating defeat. Personally, both Messrs. HALLECK and ARENDS were against the Federal-aid concept.

The White House was in a mood to accept their advice, although Mr. Eisenhower did write a mildly affirmative letter to Representative PETER FREYLINGHUYSEN, JR., Republican, of New Jersey, which that Congressman termed "somewhat disappointing."

4. Marion B. Folsom, Secretary of Health, Education, and Welfare, a successful businessman and former director of the Chamber of Commerce of the United States, tried to rally support around the bill. At a press conference he expressed the hope that the President would "get on the phone" to drum up votes. Later Mr. Folsom conferred with Mr. Eisenhower and was reportedly advised he had gone too far in his enthusiasm.

5. When, in the final House maneuvering, Republican supporters of the bill proposed that the administration's own version be substituted for the compromise measure, Democratic liberals suddenly threw their support to this version which they previously had fought. The Democratic House leadership was behind this strategy, aware that this accrual of support would either pass the bill in the face of Republican opposition—thereby giving the Democrats credit for "rescuing the President from his own party"—or, as actually did happen, the bill would be visibly defeated by the vote of the Republicans.

6. At the last minute, when liberal Democrats announced their readiness to back the Eisenhower-approved version, a vigorous message from the White House might still have saved the day—swung the three votes needed for victory. But the White House was not waiting off-stage, no message was ready. And a quickly formed coalition of southern Democrats and hostile Republicans (including Messrs. HALLECK and ARENDS) defeated the school bill.

This is the history.

Vice President RICHARD M. NIXON, who avoids remarks that can be construed as critical of the President, takes the position that school-construction needs will get worse before they get better. Mr. Eisenhower evidently believes the States could, and should, do more than they are doing to provide public schools. Republicans favoring the school bill argue that some infusions of non-habit-forming Federal assistance are vital right now to stimulate local efforts.

Whatever the merits of these arguments, the school bill, due to the President's lukewarm attitude and a hostile House leadership, is a dead issue for another year.

Competition Between Colorado Mountain Trout and Tennessee Catfish Luncheons

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Friday, August 2, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD several items concerning an event that has aroused a great deal of anticipation, both here at the Capitol and in my home State of Tennessee. It is the much-heralded fried catfish luncheon which will feature Tennessee blue cats specially flown up from Savannah, Tenn., the catfish capital of the world. This will be the first round of a competition between this tasty delicacy and a later meal of Colorado mountain trout, to be hosted by my esteemed colleague from that State [Mr CARROLL].

Mr. President, I ask unanimous consent that there be printed a memorandum to the press, a general invitation to all Members of the Senate, a personal invitation to the Vice President, and an editorial concerning the competition from the Chattanooga Times.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the office of Senator ESTES KEFAUVER, Democrat, of Tennessee, for release Friday, August 2]

Y'ALL COME TO A FISH FRY—WITH HUSHPUPPIES, YET

Senator ESTES KEFAUVER, Democrat, of Tennessee, announced today a bilateral agreement with Senator JOHN A. CARROLL, Democrat, of Colorado, to bring their long feud to an end. The Tennessee Senator revealed that he had made arrangements to end their battle in the Senate dining room, with Members of the Senate and the press corps acting as referees to pass on the relative merits of the Tennessee blue catfish and the Colorado mountain trout.

The month-long senatorial dispute stemmed from a challenge hurled by Senator KEFAUVER at his colleague from Colorado on the occasion last month of the National Catfish Derby at Savannah, Tenn. At that time Senator KEFAUVER expressed his disdain for the bragging claims of the trout proponents. "They make their unwarranted assertions sound," he said, "like a cigarette commercial."

On his return from the Savannah festival Senator KEFAUVER reiterated his claim that Tennessee blue cats outflavor mountain trout fins down.

"The only reason President Eisenhower occasionally fishes the Colorado streams," explained the Senator, "is that he hasn't yet been introduced to the catfish. One taste—and Denver will never see him again."

Due to the doctrine of the separation of powers, the President will not partake of the feast prepared for luncheon on August 6. But all Senators and Vice President NIXON have received copies of the attached letter inviting them to the senatorial dining room on that day. Senator KEFAUVER also extended his invitation to members of the nonpartisan Senate press corps.

"The decision of the Senate and the press will establish for all time the obvious superiority of the catfish over the trout. On Tuesday we will serve the blue cats, along with homemade southern hushpuppies. On the following Friday, Senator CARROLL will offer his trout. I am so confident of the outcome of the competition that I am willing to spot Senator CARROLL the vote of Senator ALLOTT."

The piscatorial tidbits will be shipped by air to Washington from the catfish capital of th world at Savannah, Tenn., courtesy of the Hardin County Boosters Club and the directors of the annual National Catfish Derby. Miss Linda Gail Stamps, newly crowned queen of the catfish derby, will bring along her own delicious recipe for homemade hushpuppies. She will supervise the preparation and serving of the delicacies in the Senate dining room.

The decision of the judges will be final unless it is obviously so prejudiced as to favor Colorado trout.

[From the office of Senator ESTES KEFAUVER, Democrat, of Tennessee]

AUGUST 1, 1957.

DEAR SENATOR: It is my distinct pleasure to invite you to take part in a competition which will determine the relative merits of the Colorado mountain trout and the Tennessee catfish.

Though I sincerely do not expect the culinary qualities of the trout to approach that of the catfish, Senator CARROLL of Colorado and I have reached unanimous agreement between us to hold a taste contest in which the Members of the Senate will be the final judges.

The first phase of this one-sided competition will begin at lunchtime on Tuesday, August 6, in the main dining room of the Capitol. There you will be served a succulent, meaty, and toothsome treat of deep-fried Tennessee catfish, provided by the Hardin County Boosters Club and the National Catfish Derby people. Miss Linda Gail Stamps, of Cookeville, Tenn., who was recently chosen Queen of the Catfish Derby at Savannah, Tenn., will be on hand to supervise personally the service of the tastiest entree you will ever have the pleasure of eating. Miss Stamps will also provide individual servings of those celebrated delicious homemade hushpuppies, a most necessary accessory to the complete enjoyment of this fabulous meal.

It is my understanding that on August 9 Senator CARROLL will apologetically undertake the obviously impossible task of equalling the feast offered by our delightful catfish with a few game trout, imported, no doubt, from Idaho.

You will be expected to form an impartial opinion from the evidence presented of the relative tastiness of the two dishes—though Heaven only know how you can remain impartial after assaying a sweet, delectable blue cat, accompanied by the delicacy of a hushpuppy or two.

Not the least of the merits of this contest lies in the fact that in this time of inflation it provides 2 free meals for you, although I must point out that only 1 of them will be truly worthy of its distinguished judges.

We shall await your attendance at this feast with great anticipation, although, of course, your decision will be a foregone conclusion.

Sincerely yours,

ESTES KEFAUVER.

UNITED STATES SENATE,
Washington, D. C., August 1, 1957.

The Honorable RICHARD M. NIXON,
Vice President of the United States,
Senate Office Building,
Washington, D. C.

DEAR DICK: We would very much like to have you present at this occasion. Aside from the free meal we are offering, there is a very remote possibility that a tie vote may result from the competition. In that event, your ballot as Presiding Officer of the Senate would be the deciding one.

I'm sure that you would not want to miss this rare opportunity—one that occurs most infrequently in the life of a Vice President.

We are looking forward to seeing you there and hearing your personal comment on the superiority of catfish over trout.

With warm regards,

Sincerely,

ESTES.

[From the Chattanooga Times of July 31, 1957]

UNEVEN "TASTE TEST"

The Colorado Senators have climbed out on a limb. They have consented to match Colorado trout against Tennessee blue catfish in a fishfry in the Senate dining room on August 6. The challenge was issued by Senator KEFAUVER.

Miss Linda Stamps, national catfish queen, of Cookeville, Tenn., will serve the fish in this "taste test."

The Colorado Senators do not know that the people who live on the shores of Reelfoot Lake, in Tennessee, will throw back trout and bass in order to save room for catfish. The Reelfoot people certainly ought to know and they say that hot cat is the best eating fish in the world.

A hundred and fifty blue catfish will be snared in Savannah's famous "catfish hole" at Pickwick Dam and Senator CARROLL, of Colorado, will provide 150 trout from Colorado's streams.

The catfish will be served with hushpuppies. The Chattanooga Times' seal has never been awarded hushpuppies, but we go, go, go for hot cat.

Latin American Affairs

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks I wish to include the following material which was inadvertently omitted from the transcript of my speech on the floor of the House last evening. The material includes portions of a document entitled "The Shaped Charge," apparently prepared for the use of the Embassy of the Dominican Republic. The report became available to me in a manner which I explained in detail during my speech on the subject yesterday. The following material should have appeared in the RECORD at the point where it was omitted, namely, on page 12049, column 3, after paragraph 2. The material follows:

The report goes on to say:

Some public statement or open letter might be issued forth at this time, from here or the States, emphasizing the following:

1. That the new version discredits the fundamental basis of the Murphy-helped-kidnap-Galindez story. It makes a liar out of Murphy and is an insult to the intelligence of the public and the press. The only consistency remaining in the multiple accusations is that Trujillo is the target.

2. The "Great Guru" label can be fixed squarely on Romulo Betancourt. His relationship to the New York and Washington groups should be made clear. A few well-aimed shots at Mr. B. will probably sink him and his admirers will be discredited along with him.

Congratulations in your excellent efforts. From reports we are now getting I think we can smash this thing once and for all in the next few months.

I venture to say the congratulations are premature.

The Ambassador from the so-called Dominican Republic, Manuel de Moya, made a speech earlier this year before the Commonwealth Club in San Francisco. Besides insisting that Operation Murphy-Galindez was promoted and motivated by the Communists and really aimed at the United States, he answered a question from the floor as to whether his country was governed by a dictator as follows:

The Latin American countries are vastly different from the United States and different governmental techniques are needed. In our country we do not consider our leader as a dictator but as a great man who has sacrificed his life for the betterment of his people.

The Late Mark Foote

SPEECH
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. BENTLEY. Mr. Speaker, I would like to take this opportunity to comment on the passing of Mark Foote, Chief of the Washington Bureau of Booth Newspapers. I will always count having known Mr. Foote as one of the true privileges of my life. Much has been said about his long years of faithful service to his readers and his many well-earned awards. Mr. Foote will long be remembered here in Washington as one of the leaders among our Nation's journalists. However, he will also be remembered by another group and that is his many readers back in Michigan. These are the people to whose service Mr. Foote was dedicated. During his many years as a reporter he served his readers with exceptional ability. His columns were read with confidence and trust and the knowledge that the true significance of the news was being explained. Mr. Foote's readers who met him only through his columns have suffered a great loss. Those of us who were privileged to know him personally are saddened by his passing but can take comfort in the knowledge that Mr. Foote was proud and happy in his work and was able to carry on to his final day. We all share the sorrow of his family and extend our deepest sympathy to them.

Authorizing Construction of Bridges Over the Potomac River

SPEECH
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6763) to amend the act of August 30, 1954, entitled "An act to authorize and direct the construction of bridges over the Potomac River, and for other purposes."

Mr. MILLER of Nebraska. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I would like, in the few minutes I have, to try to clear up some of the misunderstandings relative to the position of the Commissioners of the District of Columbia and Arlington County as to the differences between a 6-lane bridge and a 4-lane tunnel.

The record will show that both the Commissioners of the District and the Arlington officials oppose a four-lane tunnel under the river. They do favor a six-lane bridge. The authority exists now for the six-lane bridge—money has been appropriated; it ought to go forward.

Mr. Chairman, I want to quote from testimony taken on February 21, 1957, relative to the thinking of some officials on the merits of this proposal.

General Lane, who was the engineer for the District, said on February 21, 1957:

I think it is important at this point to know that the 6-lane bridge has been approved by the Planning Commission after thorough study by that body as required by law, and that the 4-lane tunnel has not been so approved.

He further said in his testimony:

After extensive consideration, a committee of the Planning Commission recommended, and the Commission approved on April 8, 1955, the acceptance of a 6-lane tunnel or a 6-lane bridge at this location but made no favorable recommendation on the 4-lane tunnel.

We are talking about a four-lane tunnel in this bill. It has not been approved by the Planning Commission or the District. He further said:

I am surprised indeed to learn that he staff and some members of the Commission consider that approval of a 6-lane tunnel constitutes approval of a 4-lane tunnel.

He further said:

In summary, the Board of Commissioners of the District of Columbia is opposed to the construction of a four-lane tunnel as proposed in H. R. 4366 because it would be a seriously inadequate traffic facility for this

location and because it has not received the required clearance of the National Capital Planning Commission.

Mr. Chairman, I should like to go over to some of the testimony of Mr. Stoneburner. Who is Mr. Stoneburner? He is an engineer for Arlington County, Va., the chief engineer. He says:

The Arlington County Board has been on record for some time supporting a six-lane bridge structure in this location. They very strongly feel that any 4-lane facility, and particularly a 4-lane tunnel, would not be adequate. I think a 6-lane tunnel will be considered that they would not have as strong objection to that as the 4-lane tunnel.

That is my position. If you are going to build anything across this river, be it a tunnel or a bridge, it ought to be at least of six lanes. The tunnel, I think, has some disadvantages in that a 6-lane tunnel would cost some $46 million and a 6-lane bridge, comparable to other bridges now over the river, would cost probably $18 million. That is the difference in cost between those structures. There is far more upkeep to the tunnel than to the six-lane bridge.

Mr. Robertson, the Director of Highways for the District of Columbia, had this to say:

Exhaustive studies made by the District of Columbia and others have conclusively shown that the construction of a bridge at this location is more economical, will serve all traffic needs, and can be maintained at far less cost than any other type of crossing.

He further said:

Mr. Chairman, the District of Columbia favors the construction of a bridge at this location and urges you to report favorably upon the passage of this bill.

Mr. RABAUT. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Nebraska. I yield to the gentleman from Michigan.

Mr. RABAUT. Suppose this language were inserted on page 5, line 7, "to be derived from the District of Columbia highway fund"?

I understand that with the disapproval of the Commissioners of the tunnel it would not be possible to change the language to read that way. Is that correct?

Mr. MILLER of Nebraska. I am not sure.

Mr. RABAUT. So the only thing that could be built under that situation would be a bridge.

Mr. MILLER of Nebraska. I think something ought to be built to handle the traffic, but I do not think a four-lane tunnel is the answer to that problem. The tunnel would be too small before its completion.

What did Mr. Brinkley, Chief Planning Engineer of the Department of Highways of the District of Columbia, have to say?

The Highway Department prefers to build the bridge, primarily because we do not believe we should pay $2 for a $1 article. It is just as important that we construct a full-capacity facility at this location and not with a half one as has been proposed; and we will show you later in our presentation that a 4-lane tunnel has only one-half of the capacity of a 6-lane bridge.

Ohio DAV Resolution of Protest Concerning Veterans' Administration Action in Reducing Veterans' Benefits

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. POLK. Mr. Speaker, on July 26, 1957, the Ohio Department of the Disabled American Veterans, meeting in convention, unanimously adopted the following resolution.

I believe it to be of sufficient importance to be called to the attention of the House of Representatives. The problems referred to in this resolution are very serious and should be remedied by legislative action, if that is necessary.

THE ADMINISTRATOR OF VETERANS' AFFAIRS STOPS PAYMENT OF BENEFITS TO THOUSANDS OF VETERANS WHO WERE DISABLED AS A DIRECT RESULT OF WAR SERVICE

Whereas the Ohio Department of the Disabled American Veterans, charges the Administrator of Veterans' Affairs at Washington with failure to follow legislation approved by the Congress of the United States in connection with the payment of compensation to veterans disabled as a direct result of war service, the Administrator admitting he has already terminated or decreased the benefits of more than 40,000 of these veterans, claiming that the original grant was in error; and

Whereas this is the result of a continuing review of compensation claims of the wars' disabled originally granted under the provisions of Public Law 144, approved by the Congress of the United States; and

Whereas if a field office of the Veterans' Administration fails to remove or reduce the compensation of a sufficient number of wartime disabled veterans through "error," the efficiency rating of that office is considered unsatisfactory and that office is ordered to conduct a second review; and

Whereas less than 40 percent of these cases of wartime disabled veterans have been checked to date and at the current rate those removed from the rolls will exceed 100,000; and

Whereas printed instructions, explaining this policy change of the Veterans' Administration have not been issued, this new policy being disguised by the use of the term "medical principles"; and

Whereas survey teams are sent from the Washington office of the Veterans' Administration to the many field offices to impart verbal instructions; individual claims files are called to Washington and the adverse decision rendered there affects the benefits of many other wartime disabled veterans; and

Whereas the Washington office of the Veterans' Administration has called all regional office adjudication officers to Washington for a period of instruction, and have admitted that the review of claims of wartime disabled veterans is in compliance with recommendation No. 69 of the report of the Bradley Commission; and

Whereas the rating boards at the regional offices of the Veterans' Administration are now hesitant to approve the claim of any veteran on war-incurred disabilities, the new theory of "medical principles" providing a tool for arbitrary denial; and

Whereas if the Veterans' Administration was sincere in its program of correcting alleged errors, it would also review the claims of wartime disabled veterans previously denied; and

Whereas the Veterans' Administration at Washington proposes a complete revision of the rating table to evaluate disability—132 pages of material having already been issued with recommended changes; and

Whereas the drastic reductions being proposed are shocking and would materially reduce or discontinue payment of benefits to the wars' combat veterans; and

Whereas the ratings for muscle damage from gunshot wounds and other causes are to be slashed, along with most other disabilities—and to qualify for total disability the service-connected condition must be so serious that the veteran be "housebound," with similar reductions and eliminations of compensation across the board; and

Whereas the considered changes are said to be based on "medical advances"—but actually are the result of pressure from medical associations, the Bureau of the Budget, and the report of the Bradley Commission—with military pressure; and

Whereas if the present recommendations are carried to a conclusion, the number of wartime disabled veterans receiving benefits will be reduced to a mere token—and the beginning of the end of this Nation of ours meeting its obligation to the wars' wounded and disabled among the enlisted personnel; and

Whereas no effort has been launched to interference with the high rate of retirement to the disabled career officers, it appearing that the laws enacted by the Congress of the United States no longer apply to the Veterans' Administration: Now, therefore, be it

Resolved, That the Disabled American Veterans, Department of Ohio, assembled in the city of Toledo, July 26, 27, 28, 1957, at its 36th annual convenion, charge the Administrator of Veterans' Affairs with violating his oath of office in scrapping Public Law No. 144 of the Congress of the United States and replacing the law with recommendations of the Bureau of the Budget, medical groups, and military pressure in the conduct of reviewing claims of wartime disabled veterans; and be it further

Resolved, That we charge the Administrator with a violation of the moral code of decency in his proposal to destroy the present rating schedule and to replace it with evaluations that are grossly inhumane; and be it further

Resolved, That the DAV appeal to the Members of the Congress to cause an investigation to determine the Administrator's fitness for office; and be it further

Resolved, That we request the Members of Congress to enact legislation that will freeze the present or 1945 rating schedule and prohibit any change in the evaluation of disabilities of wartime disabled veterans, without the approval of the Congress.

Submitted by Kenneth M. Robey, commander, DAV, Department of Ohio.

Adopted by the convention, July 26, 1957, by a unanimous vote.

Hells Canyon Dam

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, August 2, 1957

Mr. YARBOROUGH. Mr. President, I have received a unanimous resolution

from the Young Democratic Club of Dallas County. I shall not take the time to read it in full, but it states that the Young Democratic Club of Dallas County is dedicated to the principles of the Democratic Party and its platform, a principal element of which is protection and fostering of the public good as opposed to private gain.

The resolution condemns the effort to take the Hells Canyon Dam site out of the realm of public domain and sacrifice the resource for the gain of a few.

The resolution refers to the vote in this body by which the Senate passed the Hells Canyon bill. The resolution unanimously goes on record to commend the majority leader, the senior Senator from Texas [Mr. JOHNSON] and me for our votes in favor of the Hells Canyon high dam bill, a public project.

Mr. President, I ask unanimous consent that the resolution may be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Young Democratic Club of Dallas County is dedicated to the principles of the Democratic Party and its platform; and

Whereas a principal element of this platform is protection and fostering of the public good as opposed to private gain; and

Whereas we do not condone the recent attempt to remove the Hells Canyon Dam potential from the public domain and sacrifice this resource to the gain of a few; and

Whereas the United States Senate has recently acted to this national resource for the benefit of the people, and RALPH YARBOROUGH and LYNDON B. JOHNSON, Senators from Texas, joined in this noble resolve: Therefore, be it

Resolved, That the Young Democratic Club of Dallas County unanimously goes on record to commend the Texas Senators for their efforts on the behalf of the Hells Canyon high dam bill.

PAULIA P. WEAVER,
President.
GLENDA KERSHNER,
Secretary.

New Legislation To Aid Industry in Obtaining a Larger Share of Foreign Business

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. MACHROWICZ. Mr. Speaker, I have yesterday introduced H. R. 9029, as an amendment to section 313 (b) of the Tariff Act of 1930. The purpose of this bill is to make it possible for American industry and labor to obtain a larger share of foreign business.

For many years the Tariff Act has provided that duty paid upon imported merchandise used in the manufacture of articles in the United States may be refunded when such articles are exported. This makes it possible for American manufacturers and their employees to compete in foreign markets for business which they could not obtain if they were to be penalized by domestic duty on the imported material as well as by foreign duty on the exported product.

In many cases in which the same product is sold both domestically and abroad, of which the automobile industry furnishes numerous examples, it is impractical or even impossible under today's complicated industrial procedures to segregate imported materials in such a way as to be able to identify them positively in the finished product. The Congress recognized this in 1930 and provided in section 313 (b) of the Tariff Act that year that drawback would be available with respect to products of nonferrous metals or sugar, to the extent of duty paid upon importation of such materials for the account of the manufacturer, even though the materials used in the exported product were not the identical lots imported.

The restriction to nonferrous metals and sugar was stated at the time to be for test purposes, it being contemplated that the privilege would later be extended to other merchandise if the procedure proved feasible and advantageous. In 1949 ferrous metals, flaxseed, and linseed oil were added to the list, and in 1956 certain printing papers. These additions have caused no difficulties and have greatly benefited both employers and employees in the automobile and other steel-consuming industries, and in the paint manufacturing and magazine industries.

Accordingly it appears that the background of experience in the Bureau of Customs and among exporters has now developed to the point at which the privilege of substitution may be safely extended to all merchandise, thus broadening the benefits to manufacturers and workers in the industries already affected and opening the door to numerous other industrial groups heretofore excluded.

This is accomplished by substituting the single word "merchandise" for the enumeration of materials in the present statute.

The bill provides also three other minor amendments. One of these makes it clear that the duty to be drawn back is limited to a maximum of 99 percent of the duty actually paid. Another replaces the text of "same kind and quality" which has proven burdensome to exporters and the Bureau of Customs alike, with the simple and objective text that the materials must be "interchangeable" in the exporting manufacturer's operations, thus placing upon him the entire burden of establishing eligibility. Finally, to make it clear that the drawback merchandise must be "used" as a constituent of the product, and not merely consumed in its manufacture—as a tool or fuel—it is specified that it must "become a part thereof." This, of course, does not, and is not intended to, exclude from eligibility volatile and similar materials, such as paints and paint thinners, which are applied to the product but may largely disappear in the process.

I seek the support of the Members of this House in this constructive effort to facilitate the exportation to foreign markets of the product of American labor.

Need for United States Seapower Increases

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 22, 1957

Mr. HOSMER. Mr. Speaker, the al service chairman of the Long Beac Fleet Reserve Association, John L. Woo has written me his pertinent comment on a recent editorial appearing in th Navy Times. The subject of this No tion's increasing seapower requirement is so important that I would like to shar with my colleagues both the editoria and Mr. Wood's comments upon i They follow:

AFTER WITHDRAWAL WHAT?

Impending withdrawal of troops fro abroad leaves the Navy's strategic concep looking better all the time. If you can't kee a garrison in a place, the next best way t apply power there is to send a fleet. Th fleet carries its own air so that seapower an airpower are joined and the three-dimen sional Marines add a land component to th potential.

The essence of this concept is the big ca rier, upon which the Navy has been wisel focusing its efforts for some years.

As this newspaper pointed out long ago the era of foreign occupation for troops o this country is drawing to a close. Th Girard case in Japan was symptomatic. De spite the fact that Girard's alleged offens was committed in course of duty, and tha the status-of-forces clearly contemplate American trial for such cases, the Japanes Government demanded jurisdiction. In th nature of politics, it had to. The Commu nists, the Socialists, the Jingoists, the new papers and the common garden variety o politician looking for an issue—all of them leaped upon this case.

By failing to handle the case with firm ness and speed, our officials did their par to inflame the public mind. But it wa only a question of degree. Foreign troops a a point of irritation, especially when they ar of a different race and color. Natural human sentiment, roused by those to whose interes it is to stir up the people, tend to make th position untenable.

That time has come closer in Japan. To keep the friendship of the country we must diminish if not abandon our fixed military position there.

The same routine will be gone through with in the Philippines, although we hav no better friends in the world. We must b prepared for eventual withdrawal there if w want to keep them that way.

In Europe the case looks different. Fo various reasons we remain welcome longe but even there the trend is to less troops.

Foreign garrison duty presents some con stitutional and temperamental problems t us, too. It runs counter to a lot of traditio and history. And our best lawyers have bee so far unable to keep our women from kil ing their husbands over there. Next thin you know we will not only be refusing to k foreign countries try military malefactor that they want to try but also insisting tha they must police a lot of civilian dependent that they don't want any responsibility fo

Money reasons also are speeding the tren to withdrawal. The fact is that a world wide military establishment is costing mo than we are willing to pay. Like it or no that's a fact.

But if we maintain a powerful sea arm ment, modeled after the Navy's far-sighte planning, we withdraw from nowhere an

urther than the nearest blue water shore ne. We can concentrate almost overnight n immense punitive power against almost ny enemy or a potent support for almost ny friend.

Altogether, the trend of the times favors ore flat tops and amphibians and fewer g, fixed installations abroad.

FLEET RESERVE ASSOCIATION,
Long Beach, Calif., July 29, 1957.

Mr. CRAIG HOSMER,
House Office Building,
Washington, D. C.

DEAR CRAIG: As I read and then read sev-al times over again the enclosed editorial he impact of its profoundness continued o rise up within my thoughts.

It occurred to me that the points brought ut here were in direct accord with our urrent struggle to retain our Corona Na-al Hospital, until at least more adequate acilities were provided.

Quite obviously, as our troops are with-rawn from the nations of the Pacific the eed for strong naval task forces will not iminish but rather will grow.

The importance of Long Beach Harbor, s naval base and shipyard, and its vast cilities of supply will become more im-ortant as time passes. The number of aval vessels based here will increase and us the number of dependents residing in r community will increase.

These possibilities, in view of the in-reasing demand that we bring our troops ome, become of much greater importance n the pattern of our national security.

Our national leaders can talk peace and isarmament, and we are all hopeful that ey will meet with complete success, but en so we dare not decrease our potential r a single moment, thus the importance f the United States Navy as a triple threat rganization with worldwide maneuver-bility will in time again become a most nportant necessity, especially as our Army nd Air Forces are brought home from these ations.

Sincerely,

JOHN L. WOOD,
Chairman for Service.

A Labor Leader Remembers

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. HUDDLESTON. Mr. Speaker, st night the Washington Evening Star ublished an editorial on the question f adding a jury trial amendment to the o-called civil rights bill, which is pres-ntly under consideration in the other ody. The editorial is quite interesting nd informative and presents arguments n support of the amendment which have ot heretofore been offered by its pro-onents. To my mind, the arguments re sound, and I agree with the Star hat, unless an adequate jury trial mendment is added to the bill, the ight to vote" sought to be assured by he legislation, may suffer more than it ains.

Under leave heretofore granted, I am rivileged to insert herewith a copy of he editorial from the Star.

A LABOR LEADER REMEMBERS

John L. Lewis has a longer memory than some of his younger brethren in labor leadership today. He strongly supports a jury-trial amendment in civil-rights legislation, so glibly condemned by others in his field.

Mr. Lewis recalls that the strong and harsh power of injunction has been in the past so often abused and indiscriminately used that enlargement thereof, even for worthy purposes, must carry with it reasonable protection to all citizens who may be charged with violation and, therefore, cited and tried for contempt. He looks on the O'Mahoney-Kefauver amendment, not as a weakening of the civil-rights bill, but as a wise, prudent, and proper amendment, protective to the basic rights of all citizens wheresoever located and which will strengthen the bill.

The jury-trial issue would naturally remind Mr. Lewis of the Norris-LaGuardia Act, a turning point in the history of organized labor, and the abuses it was designed to correct. The Senate debate on that issue of 25 years ago should be reread. For the Senate overwhelmingly approved, in that law, jury-trial provisions which went beyond the scope of the O'Mahoney amendment, with the Kefauver and Church additions. Senior Norris had argued that "any man charged with contempt of court, the punishment for which may be a term in jail, ought to be entitled to a jury trial." That was the way he wrote his bill and that was the bill the Senate approved.

What happened then becomes more interesting in the light of current Senate debate. In conference with the House, the Senate bill was modified. That modification was strongly urged by the then politically powerful Antisaloon League, which argued that if jury trials were permitted in contempt resulting from violation of padlock injunctions, juries would not convict. Resulting modification of the Senate bill limited its jury-trial provisions to contempt arising under the Norris-LaGuardia Act.

In return, the House made concessions, one being retention of a Senate provision nicknamed the "editors' section." Some of the editors who today so scornfully deride the jury-trial amendment in the civil-rights bill should remember it. For editors, as well as labor leaders, had been victims of punishment for contempt without jury trial. The "editors' section" never mentioned editors. But it gave them, with other citizens, the right of trial by jury if their out-of-court editorial criticism was found by a judge to be contemptuous, and provided that another judge, if requested, would sit in the case.

Senator Norris was a prohibitionist. In arguing for jury trial in all cases of contempt, he told the Senate he had felt the pressure of the Anti-Saloon League—just as Senators O'MAHONEY, KEFAUVER, and other liberals who want jury trial feel the pressure from liberals who oppose jury trials. While agreeing to the conference report restricting jury-trial provisions of the Norris-LaGuardia Act to cases arising under the act, Senator Norris warned the Anti-Saloon League in words that are apt today:

"Prohibition has lost many of its best friends. We all have to concede that. In my judgment * * * if we follow you and say we want a different law, a different rule, applied to prohibition cases from what is applied to any other case we are going to lose the support of more good people in this country, who will take the other side of the question and demand the repeal of prohibition."

They did. And if the civil-rights bill is weakened by killing the reasonable and relatively narrow application of the jury-trial principle as provided in pending amendments, needed enforcement of the right to vote may suffer more than it gains.

The AEC Authorization Bill

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 29, 1957

Mr. PRICE. Mr. Speaker, the AEC authorization bill will probably come up for consideration in the House next week. Although the amount of money authorized for facilities will be substantially less than last year, there is likely to be some debate on items for which the joint committee took responsibility. In order to provide some background for this coming discussion, I would like to insert in the RECORD the following statements by Hon. CARL DURHAM, chairman of the joint committee, Hon. CHET HOLIFIELD, chairman of the Subcommittee on Legislation, and myself:

PRESS RELEASE NO. 94 FROM THE OFFICE OF THE JOINT COMMITTEE ON ATOMIC ENERGY, JULY 30, 1957

Congressman CARL T. DURHAM, chairman of the Joint Committee on Atomic Energy, announced today that the Joint Committee had voted to report out the AEC authorization bill to the Congress. The bill authorizes funds in the amount of $259,230,000 for construction of AEC military program, and for the program to develop the peaceful uses of atomic energy.

The Joint Committee added three projects totaling $58 million in addition to those requested by the Commission in order to accelerate the reactor development program. The projects were as follows:

Project 58–b–8, $3 million for a design study of production reactors for special nuclear materials;

Project 58–e–14, $40 million for a natural uranium graphite moderated gas-cooled power reactor prototype designed for the production of approximately 40,000 electrical kilowatts; and

Project 58–e–15, $15 million for a plutonium recycle experimental reactor designed for the production of 15,000 electrical kilowatts equivalent.

The Joint Committee deleted $9 million in funds requested by the AEC for construction of a Puerto Rico power reactor, but the Committee authorized $2,500,000 for assistance to the training project in the Regional Nuclear Training Center in Puerto Rico.

The bill, as voted out by the Joint Committee, also included a new section 111 pertaining to the AEC cooperative power demonstration reactor program. The bill authorizes the sum of $129,915,000 for use in a program not to exceed $149,915,000. The differential of $20 million is to cover types of assistance other than funds for the program, such as waiver of use charges for the use of materials.

Mr. Durham's statement summarized the main provisions of the bill. Mr. Durham indicated that the Committee report to the Congress on the bill, including the minority report, would be prepared as soon as possible, and would be made public as soon as it is ready.

PRESS RELEASE NO. 95, FROM THE OFFICE OF THE JOINT COMMITTEE ON ATOMIC ENERGY, JULY 30, 1957

Congressman CARL T. DURHAM, chairman of the Joint Committee on Atomic Energy, called for an expanded program for increased production of plutonium. He stated he was

joined by Vice Chairman Anderson and certain other members of the committee.

In connection with reporting out the AEC authorization bill, Congressman DURHAM stated that it provided only a modest beginning for an expanded program in terms of authorization of design of a plutonium production reactor.

Chairman DURHAM repeated his dissatisfaction with the methods of establishing weapon materials requirements used by the executive branch, and the lack of any forward planning for plutonium requirements. Mr. DURHAM stated: "I am disturbed over the lack of a realistic small weapons program, or any consideration of the necessity for ultimately establishing a stockpile of plutonium for weapons or peacetime purposes. Any such program would require substantial increases in productive capacity."

Chairman DURHAM further stated: "Testimony received by the full Committee as well as by Senator JACKSON's Subcommittee on Military Applications from responsible military officials and leading scientists in the nuclear weapons development field during the past 2 years indicates a need for a substantial increase in present and currently planned plutonium production. In light of the evidence presented by experts, I am concerned over the fact that more effort is not being directed toward greater development of our small weapons program and the fact that the AEC 1958 fiscal year budget does not call for construction of additional plutonium-producing facilities."

The chairman of the Joint Committee on Atomic Energy was critical of the methods used by the AEC and Department of Defense in determining the amount of fissionable material needed for national defense.

He stated: "The AEC takes the position that it will not request or support construction of additional plutonium-producing facilities unless the Department of Defense formally requests more material. Our military planning at the same time apparently is geared to current AEC production capacity instead of our needs. From the point of national defense, this is a dangerous arrangement which I and other members of the Joint Committee repeatedly have criticized. It is contrary to the basic atomic-energy policy of the United States as set out in the Atomic Energy Act of 1954 which provides 'the development, use and control of atomic energy shall be directed so as to make the maximum contribution to the general welfare subject at all times to the paramount object of making the maximum contribution to the common defense and security.'"

Congressman DURHAM pointed out that there are indications the Department of Defense is reviewing its method of determining requirements but that unfortunately its study and recommendations will not be ready prior to enactment of the current AEC authorization bill.

In addition to Senator CLINTON P. ANDERSON, vice chairman of the Joint Committee on Atomic Energy, Chairman DURHAM was joined by the following members in the statement:

Senator JOHN O. PASTORE, chairman of the Subcommittee on Agreements for Cooperation.

Senator ALBERT GORE, chairman of the Subcommittee on Raw Materials.

Senator HENRY M. JACKSON, chairman of the Subcommittee on Military Applications.

Representative CHET HOLIFIELD, chairman of the Subcommittee on Legislation.

Representative MELVIN PRICE, chairman of the Subcommittee on Research and Development.

Representative PAUL J. KILDAY, chairman of the Subcommittee on Security.

Representative JOHN J. DEMPSEY, chairman of the Subcommittee on Communities.

Chairman DURHAM stated he was hopeful all members of the Joint Committee would join in support of the substance of his views.

STATEMENT ON H. R. 5889, FROM THE OFFICE OF CONGRESSMAN CHET HOLIFIELD, JULY 30, 1957

In an attempt to rescue the Atomic Energy Commission's bankrupt program of atomic electric power development, the Joint Committee on Atomic Energy has reported out an authorization bill (H. R. 5889) which if funded by the Appropriations Committee and pressed with a will by the Atomic Energy Commission, should result in a rapid acceleration of atomic electric power development in the United States in the next 3 years.

This bill provides for $40 million to construct a natural uranium gas-cooled reactor, which most of the experienced reactor experts such as Admiral Ricko.er, Dr. Walter Zinn, Dr. John Simpson of Westinghouse, and Dr. Henry D. Smythe agree should be built.

It includes $15 million to build a pilot reactor to learn how to use the bomb material plutonium as a reactor fuel.

It includes $3 million for immediate design and engineering data to construct a large plutonium-producing reactor to insure an adequate supply of plutonium for expanding our present inadequate small weapon program.

The bill when passed by Congress will also provide congressional direction to the AEC which will breathe life into the dying AEC—cooperative partnership and insure the building of five small- to medium-size power reactors of different types. This cooperative program has been stalled on dead center for some time due to failure on the part of AEC and the cooperatives to reach agreement.

The Atomic Energy Commission has tried to create a complicated arrangement of three-way contracting between the AEC, the cooperative and the machinery manufacturers, the main purpose of which has been to conceal Government subsidy and create the illusion of private entity participation in the atomic power reactor building program.

The bill clears away the complicated contractual subterfuge which has blocked for 2 years the signing of even 1 contract, recognizes the fact that progress in building these reactors depends on Federal funds, and recommends the successful formula heretofore used in the Shippingport-Duquesne and the Atomic International-Southern California Edison Co. projects.

If the prestige of the United States in atomic power development is to be regained, the AEC will accept this program and get on with the job. If they oppose it, we will continue to drop behind the British and possibly the Soviets in the field of large atomic power-reactor development.

FROM THE OFFICE OF CONGRESSMAN MELVIN PRICE, DEMOCRAT, ILLINOIS, JULY 30, 1957

Representative MELVIN PRICE, Democrat, Illinois, chairman of the Research and Development Subcommittee of the Joint Committee on Atomic Energy, stated today that he believes the construction of a prototype gas-cooled natural uranium power reactor, as provided for in the committee's authorization bill, will mark a significant advance in this country's reactor technology and will enable the United States to compete more effectively with the British for overseas markets.

Representative PRICE referred to testimony at the recent public hearings on the authorization bill indicating the need for filling the gap in the AEC's current power reactor program through development of a gas-cooled natural uranium type of reactor.

He emphasized the necessity of building prototype reactors of the gas-cooled type in order to find out how they actually operate, rather than relying exclusively on the British for information. Otherwise, he went one, we will never know whether this type will be economic or not.

He added, in this connection, that construction by the United States of a gas-cooled natural uranium reactor will place us in a better negotiating position with regard to obtaining additional information from the British regarding their own developmental work on this kind of reactor.

Representative PRICE pointed out that the gas-cooled type reactor, as contemplated in the bill, would initially operate on natural uranium but would be designed in such a way as to test out whether enriched uranium can be used to increase the reactor's efficiency.

Representative PRICE reiterated the recommendation which he and Senator JACKSON, Chariman of the Military Applications Subcommittee, made earlier this year following meetings by the Research and Development Subcommittee to review the Naval Reactor program and the Shippingport project, that Admiral Rickover and the AEC Naval Reactors Branch be given the responsibility for development and construction of the gas-cooled natural uranium reactor project.

Postal Subs Shun Full-Time Posts—They Can't Afford It

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following article which appeared in the Daily Tribune, Royal Oak, Mich., of Wednesday, July 31, 1957:

POSTAL SUBS SHUN FULL-TIME POSTS—THEY CAN'T AFFORD IT

About 60 substitute and temporary employees of the Royal Oak branch post office will take civil-service examinations this week. A passing grade will qualify them as ful-time letter carriers.

Yet many of them will flunk the test—on purpose. As permanent employees, they'll be in worse shape, financially, than they are now. And that, as they'll tell you, is bad enough.

Temporary carriers and sorters are allowed to work overtime for the post office. Regulars cannot work more than 40 hours a week except in post-office emergencies, and even those in the top-pay grades have outside jobs in their spare time.

DUCK REGULAR POSTS

"You can't blame the boys for flunking," said Ned Anderson, Royal Oak's foreman of carriers. "The only way they can make ends meet is to take on extra work." Anderson has been trying to assemble a roster of civil-service employees for several months, but can't do it because the boys play dumb.

Anderson estimates that 90 percent of the wives of regular employes work to help support families, and nearly all of the mail carriers have extra jobs.

Yet postal employees aren't doing a great deal of bellyaching about their financial problems. They are hopeful that at least 1 of 2 bills now in Congress will be passed. But the prospects are not good.

IKE OPPOSED

A Senate bill to give mail carriers a 7½ percent increase probably will be vetoed by the President, if it gets that far. The civil rights controversy may stall off all other business until Congress adjourns its current session.

A House bill to provide a $546 per year increase for all mail carriers passed July 23, 379–38. But it must go to the Senate for approval—and then to the President. Mr. Eisenhower feels that a postal raise would require a general Federal increase.

Regular mail carriers start at $3,660 a year, an hourly rate of $1.76. They receive a $125 increase each year for the first 7 years, and $100 increases at the end of 13, 15, and 25 years. The top pay grade is $4,710 a year, or $2.26 an hour.

Of their total salary, 6½ percent goes for the mail carriers' retirement fund. That is supposed to pay one-third of the pension cost, with the Government paying the other two-thirds. Yet since 1920, the Government has not paid its share. The carriers' one-third has been sufficient to carry the plan.

Other fringe benefits include vacation time, insurance (50 cents a week) and sick leave.

Although government employees get plenty of vacation time, few of them can afford to go anywhere.

Sample their opinion and learn why:

Donald Hocking, age 25, 312 Starr, has worked at the post office nearly 3 years, sorting mail. On his 2-week take home pay of $125, he supports his wife and a 6-month-old son, Jeffrey. Mornings he attends electronic school, afternoons he works at the post office.

"Our recreation amounts to going to a movie once in a while," he said. "It's all we can afford."

At the other extreme is Roy Kortright, 310 South Blair, Royal Oak. He has delivered mail for 31 years, and takes home a $72.44 paycheck for 1 week. "I've got a wife and a grown son," he said. "If it weren't for all the parttime jobs I've had in the past, we might never have made it."

Robert Widmer, 4054 Bagley, Detroit, is one of the temporary employees who will take the civil-service examination this week. "I don't want to take it," he confessed. "It will amount to a demotion." Widmer works 13 to 14 hours a day, delivering a route and driving a truck, and is paid $1.44 per hour for his labors.

His take-home pay is $234 for 2 weeks, on which he supports his expectant wife and 5-year-old daughter, Bonnie. "We've always had trouble making ends meet," said Widmer, "and if I didn't work 7 days a week we couldn't do it.

"You can see why I don't want to become a full-time employee. I'll have to find myself an extra job."

Stanley Runevitch, 2601 Bembridge, works as an apartment caretaker in his off-duty time. He makes $145 every 2 weeks, but of this total, $21 goes for taxes, nearly $10 for retirement, and $1 for insurance. His take-home pay is $113—$56.50 a week.

STEADY WORK—FOR LESS

H. F. Massey, a brawny Georgian who lives at 301 North Washington, supports a wife and 5 children on $1.71 an hour. He was making more working as a carrier, but took a pay cut when the post office moved him inside.

He was the only man around with enough muscles to handle the heavy magazine loads before they are sorted. Most of his fellow employees agree that he works hardest of all.

"I've held all kinds of jobs," said Massey. "I've been a truckdriver, a cook, worked in auto plants—everything. This is the lowest paying job I've ever had." He is one of several refugees from auto-plant layoffs.

CAN'T QUALIFY FOR FHA

William McGoon, 3805 Indian Trail, Orchard Lake, got married in February, just a few weeks before he was hurt on the job. The post office paid his medical bills, but he was in bed for 6 weeks. He used up all his sick leave and vacation time, and his wife went to work at the post office to help out.

Ned Anderson explained, "These guys can't even buy a home under the Federal Housing Administration program. Those people tell them they don't make enough. If a guy wants to buy a new car, he'll spend years paying it off."

Morale in the post office, said Anderson, is low. "The boys get very discouraged when they look around and see how their lives stack up against others.

"What kind of a life is it when you work 40 hours a week to support a wife and kids, and get your recreation by working in a gas station?"

The Fifth of a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. MICHEL. Mr. Speaker, with this, the fifth in the series of letters written by the publisher of the Pekin Daily Times, Mrs. McNaughton takes over the column for the day to give us an inside view of Russia from the distaff point of view.

The letter follows:

[From the Pekin (Ill.) Daily Times of July 26, 1957]

THE EDITOR'S WIFE SPEAKS TODAY

Today we went to GUM.

GUM is a store.

It is on the opposite side of Red Square from the Kremlin and once (in capitalistic days) opened onto Red Square which was called Red Square then. We at first thought it was called "Red Square" because of the Red revolution, and red blood spilt. But no. In Russian, red means elegant or most beautiful; so the famous square was called Red when a capitalist opened a store with doors onto the square.

But no doors from the store open onto Red Square today. I presume it is felt that this would be disrespectful to the tomb of Lenin and Stalin which is in the square on the Kremlin side.

So you go in from another side now; and as soon as you start in you feel like you are in a canoe going down the Grand Canyon.

You are in a torrent—a cascade of humans.

In 1938 we went to visit the best store in Moscow and found papers yellow with age in display windows.

Dead flies were thick.

Inside was dingy, dirty.

They had gotten in a small shipment of calico and women were lined up three abreast in a line that wound around the first floor, up a stairway, around the second floor, and finally to a counter where a saleswoman was snipping off a short bit for each customer. The customer had no choice of which piece she got; nor how much. She took it and was happy she had gotten anything.

Today, in GUM, there were tens of thousands of items for sale. Through our interpreter we got in touch with the director of the store and asked him how many people passed through the store in a day. He replied: "250,000 a day."

Then he added in a way that showed it was important to him: "160,000 make purchases."

To be truthful, it didn't look to me as though so large a proportion were buying. It looked as though many of the thousands were enjoying the feel of handling luxury items. When there was a purchase (in the luxury area) there was apt to be an audience of watchers.

But they carry an enormous stock, from food to furs; and plainly many Russians have money in their pockets for making purchases.

Retirement of Elton Layton

SPEECH

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mrs. SULLIVAN. Mr. Speaker, I very much want to join with those Members who have noted the retirement today of one of the outstanding career employees of the House of Representatives, Mr. Elton J. Layton, for 36 years the clerk of the House Committee on Interstate and Foreign Commerce.

I have known Mr. Layton for perhaps 15 years, and during all of that time, I have been deeply impressed not only by his encyclopedialike knowledge of congressional procedures and the issues which come before his committee, but also by his ready willingness to help the Members both on and off the committee to serve their constituents more effectively.

During the years my husband served on the Committee on Interstate and Foreign Commerce, he came to know Mr. Layton very well, and had the highest esteem for him as a committee clerk and, of equal importance, as a friend. Congressman Sullivan's last conversation on the Hill, a few hours before his sudden death in January 1951, shortly after the start of the 82d Congress, was with Mr. Layton out on the House parking lot as they both prepared to go home for the day after discussing some business then pending before the Committee on Interstate and Foreign Commerce.

In the year since I have been serving in the House, though not a member of the Committee on Interstate and Foreign Commerce, I have always found Mr. Layton most helpful to me in connection with legislation pending before that important committee. I know that experience is shared by every Member who has ever asked Mr. Layton for information on the legislation with which he dealt.

It is my wish, as I know it is of every Member of the House who knows him, that Mr. Layton will enjoy the well-deserved years of his retirement. He has demonstrated in his service to the Congress the kind of selfless devotion to duty which is characteristic of so many of our career House employees who, regardless of their own political outlooks, seek to serve those of both parties equally

well in the conduct of the work of the House.

I am particularly glad that the praise which has been accorded here today to Mr. Elton Layton comes at a time when he is entering what I am sure is a very pleasant retirement. Too often, I am afraid we hold back on expressing our deep-seated affection and appreciation for friends and fellow workers until they are no longer here to know just how deeply we do feel about them.

The Committee on Interstate and Foreign Commerce, from my observation, has an able staff which, I am sure, will carry on efficiently and effectively, but at the same time I am sure that there will be many, many instances when staff members and committee members alike will be heard to say "Now this is something Elton would have right at his fingertips."

Congress has been able to accomplish so much hard work—and there is a tremendous amount of had work which is accomplished during our sessions here—largely because there are people like Elton Layton keeping track of every detail and having so much background information at their fingertips, saving the Members untold hours of research and digging, and helping to bring solid achievement out of situations which so often seem to resemble nothing but legislative chaos.

Grange Versus Government

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD at this point a letter which I believe points up an excellent case for the preservation of National Grange headquarters here in Washington, D. C.

I regret that a plot map which accompanied this letter cannot be inserted in the RECORD, for it shows conclusively that seizure of the Grange headquarters is more an architectural whim than a necessity.

It is my hope that my colleagues in the Congress will rally around this fine organization and save its headquarters building, which represents the honest toil, the hopes, and enterprise of our farm families all over America.

This is no ordinary office building. This building is concrete evidence of the determination of a farm group to have a home in the Nation's Capital. It was attained by contributions from thousands of people who baked pies, held dinners, made and sold aprons, and so forth; in short, a spontaneous campaign that was truly grassroots.

Since much of the space now occupied by this building would be taken up by landscaping, it is obvious that the property is not needed for a functional office building. Beauty is a desirable thing, but pragmatism is a necessity when dealing with many uses for limited land. It may be a Philistine suggestion, but I believe that a functional office building, adequate, comfortable, and architecturally pleasant can be constructed in the three plots which the Government owns on this block. To dispossess the Grange, a host of agricultural publications and other nationally important farm organizations from their home near the White House merely to satisfy an idealistic architectural concept is not wise, and most certainly unjustified.

I believe retention of this building for the Grange is representative of the philosophy of President Eisenhower, who has long been a foe of centralized government and operation of bureaucracy contrary to the wishes of the people. I believe the issue is clear cut in this case. This is a bureaucratic decision made under provisions of a law that permits actions far beyond the intent of the Congress when it was enacted. The Government has shown no real need for the building it plans to build. It has shown no need to incorporate the Grange property into the proposed building. Therefore, I believe the farmers of the Nation have just and due right to fight for, and keep, the building they obtained through their own efforts, joined in a great nationwide fund-raising drive 16 years ago.

I would like to commend Mr. Herschel Newsom, National Grange Master, for the courageous and tenacious fight he has been waging against the Government's grab of the Grange Building. Also, as they did in the past when they set out to get a headquarters building, the Pomona and subordinate Granges of the Nation are again working to save the building they earned. Their letters and wires have brought to the attention of my colleagues in the Congress this problem and their desire for a just settlement. I am pleased to have the opportunity to join in this effort, a fight by the people to protect their interest against encroachment by a hard-hearted Government plan, which after all represents the thinking of only an architect's office in a Government bureau.

I have offered the proposed amendment in this letter as a bill for consideration by the House, and it is my hope that my colleagues will join me in support of this bill and pass it overwhelmingly. More than 50 of them have joined me in submitting this legislation to Congress.

Text of Mr. Newsom's letter is as follows:

NATIONAL GRANGE,
PATRONS OF HUSBANDRY,
Washington, D. C., August 1, 1957.

Hon. JACK WESTLAND,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN WESTLAND: The Grange needs your help to preserve its national headquarters building.

Early this year the Government instituted eminent domain proceedings and by a declaration of taking filed therein took title to our building. In addition it took all remaining privately owned propery in this block—except the Decatur House on one corner. It is proposed to tear down the buildings on the land which has been taken to erect thereon a structure known as Federal Office Building No. 7.

Actually, the Grange property is only a relatively small rectangle (50 feet by 70 feet) and is surrounded on both the west and the north by the Decatur House. Thus, the two buildings together form but a single rectangle, the larger part of which (Decatur House) will remain intact. Because of its unique juxtaposition with Decatur House, the destruction of our headquarters building is entirely unnecessary to permit the erection of a Federal office building. The attached plat shows the properties involved.

In addition to the offices of the National Grange itself, our building houses the National Council of Farmer Cooperatives, the American Institute of Cooperation, National Agricultural Research, Inc., Farm Roads Foundation, and Washington offices for more than 30 farm publications. Thus there can be no question that the building is presently serving a very important and worthwhile public purpose in the interest of agriculture and the American farmer.

The National Grange purchased this property in 1941 with funds which had been raised for the purpose through activities carried on by the more than 7,000 local subordinate granges throughout the Nation. These activities included the serving of lunches and dinners, apron sales, penny suppers, amateur plays, and many more. Thus granges and grange members across America have their nickels and dollars invested in their national headquarters building.

The location of this building is important to Grange members, and they are proud of the fact that their work and contributions have provided a symbolical national home for farm families within a block of the White House, even as are located the headquarters buildings of the AFL–CIO and the United States Chamber of Commerce. All of us will appreciate your help in preserving our building for us.

If S. 2261 just reported by the Public Works Committee were to be amended as follows, this objective would be accomplished:

Page 9, line 17: Insert a colon in lieu of the period and add the following: "*Provided, however,* That no portion of lot 816, square 167, in the District of Columbia (the headquarters of the National Grange of the Patrons of Husbandry) shall be acquired for or used for any such project, and the Administrator is directed to withdraw the declaration of taking of said lot heretofore filed by him in the United States District Court for the District of Columbia and to take such other action as may be necessary to restore title to said lot to the National Grange of the Patrons of Husbandry."

This proposed amendment is consistent with the action taken by the Congress earlier this session when in an effort to preserve the Grange Building, it approved a provision in the Independent Offices Appropriation Act prohibiting the use of funds during the fiscal year 1958 for Federal Office Building No. 7.

We shall be very grateful for your support.

Respectfully yours,

HERSCHEL D. NEWSOM.

Public Power

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 24, 1957

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to submit a very concise but

interesting editorial from the Poughkeepsie New Yorker of July 25, 1957:

ARE THEY HAPPY NOW?

New York City had a power shortage during a recent hot spell. The peak load was largely attributed to increased use of air-conditioning, fans, and refrigerator equipment.

Well, that should make the advocates of socialized power development happy. For 6 or 7 years they have succeeded in blocking the building of a $400 million powerplant on the Niagara, by five taxpaying power companies that would have had the job done long before this if politics had not prevented them.

New York is not alone in this. The "blockaders"—who want the country to have socialized Federal power or no power at all—are at work all over the country. If they are allowed to succeed we can confidently expect a growing number of power shortages, some of a very critical nature.

On Alien Fingerprints

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, entitled "On Alien Fingerprints," by Dillard Stokes, which appeared in the Council Bluffs (Iowa) Nonpareil, dated July 28, 1957:

ON ALIEN FINGERPRINTS

(By Dillard Stokes)

WASHINGTON.—This Nation has called twenty-odd million citizens into the military service, and it took the fingerprints of every one of them.

These soldiers, sailors, and airmen may or may not have liked being printed. Nobody asked them.

If they had asked why, they would have learned that fingerprints are far and away the simplest, quickest, and best way of telling one human being from another. The odds are many billions to one against two people having the same loops and whorls. The printing was quite as much for the benefit of the inductees as the Government. They might want themselves identified some time.

Besides all who wore the uniform, all Federal workers are fingerprinted. During the war hundreds of thousands of civil defense workers were printed.

Every news correspondent who gets White House credentials leaves his prints with the Secret Service.

Some millions of private citizens have gone to the FBI and other agencies and asked to have their prints put on record, for their own protection.

So it can be fairly said fingerprints are an American folkway. Many record their prints because the law says they must. Others because it goes with something they want to do. And still others out of free choice.

Among those required to give their prints are aliens who cross the American border. For this law, two good reasons can be seen at once:

1. If the visitor should be hurt or killed in an accident, there might be no other way to identify him.

2. An alien who lost himself and tried to stay on in this country, without coming as a lawful immigrant, could be trapped by his fingerprints.

The first reason is plainly a safeguard for the visitor, and nobody who behaves himself can be harmed by it.

The second is necessary in this country.

This is not a police state where people must have travel cards and ration cards and report to the police and so forth. In America, people go where they wish and there are no strings on them.

So a foreigner could get lost very easily, take a new name, and build up a false identity. Without fingerprints on file, he might get away with it.

But the Russians do not like this American folkway. Nor do some visitors from other lands.

So the Congress now is being asked to amend the law, to excuse some or all foreigners from what is required of every American called to serve his country. It is said this would win good feeling in Russia and other countries. It is said that many would come here who now stay home, if this requirement were lifted.

One wonders, why? What business could these visitors have, of such a nature that they would buy tickets as soon as they learned their prints would not be taken?

A fetching inquiry—but the Congressmen need not dig into it. For them another question may suffice:

Are they making laws to safeguard the United States? Or to please people in other countries?

From My Hospital Bed

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an article by Mr. William H. Smith, a fine objective reporter for the Evening Capital, in Annapolis, Md.

Mr. Smith at present is confined to the Veterans' Hospital in Baltimore but, nevertheless, his great spirit enables him to keep up with events of interest to his readers and to write such timely articles as the one which follows:

FROM MY HOSPITAL BED

(By William H. Smith)

(The following is one of a series of articles by William H. Smith, Evening Capital reporter, who is on leave while undergoing treatment for tuberculosis at the Veterans' Hospital, Loch Raven Boulevard, Baltimore.)

Once again, in discussing matters of concern to Maryland and Virginia, we feel we are in an advantageous position to comment because we claimed residency in Virginia before we accepted the hospitality so graciously extended by the Free State.

In this case, on observing the most recent developments in the Burke-Friendship airport controversy, we are impelled to note that supporters of the Burke cause have pointedly ignored a highly important factor in their comparison of travel time between the 2 airport sites.

Only someone who has lived and worked in the Virginia area outside Washington can be fully conversant with the traffic jams that clog the routes between Washington and the Burke site several times each day, and any attempt to arrive at an "average" travel time between the two points certainly must take them into consideration. Yet they seem to have been disregarded in studies which purport to show that Burke is more convenient to Washington than Friendship from a motorist's standpoint.

Washington is linked to nearby Virginia and the Burke site by bridges crossing the Potomac River, and the bridges become fearsome bottlenecks whenever traffic is heavy. Every week day, from about 7 a. m. to 9 a. m., and again from 4 p. m. to 6 p. m., the Potomac River crossings are snarled by a rush-hour jam so bad that it often takes as much as 30 minutes to crawl a few miles, and at less frequent intervals, the problem arises when it becomes necessary to open the draw spans on the bridges to permit passage of large boats, causing traffic to back up for miles in each direction.

As a reporter covering the Virginia area for a Washington newspaper for many years, we had occasion to tackle the rush-hour jam several times a week. And there have been many times when we found it took as much as 40 minutes to travel the 6 miles from Arlington, Va., to our office in downtown Washington. The Burke site is some 18 miles from Washington.

In view of our own experience, we cannot believe that any impartial surveyor could give the rush-hour delay full consideration and still come up with a conclusion that Burke is more accessible to Washington than Friendship on a round-the-clock basis. In fact, we strongly doubt that a test run to Burke was made during the rush hour.

It is quite true that the rush hour isn't a constant obstacle and that it's a fairly easy run from Washington to Burke when the roads aren't congested. Nevertheless, an airport serving a metropolitan city is a 24-hour operation, and in the selection of a site from the standpoint of convenience all factors should be taken into consideration.

To get a true comparison of the travel time from Burke and Friendship to Washington, we believe a test run should be made during the rush hour, not once but several times. In a one-shot performance the test driver conceivably could get one of those rare lucky breaks when everything runs smoothly, when every driver does just the right thing, and loss of time is at a minimum. It might take several trips to learn what sheer frustration can be brought by a simple thing like a flat tire on any of the thousands of vehicles heading toward the bridges on inadequate approaches or a minor accident that can delay traffic, not minutes but for hours.

Even without encountering mishaps, though, we are convinced that the time lost in bucking rush-hour traffic between Washington and Virginia can make a vast difference when it comes to calculating the average time of travel to the Virginia site.

We feel this point is emphasized in the fact that there is now considerable agitation before Congress as to authorize construction of not 1 but 3 new bridges from Washing to Virginia. Certainly there would be no demand for these added bridges unless there were a rather sorry lack of facilities to accommodate traffic between the two areas.

Everyone will agree that travel time is a factor that must be given serious consideration when deliberating the merits of an auxiliary Washington airport at Friendship or at Burke. But when we're considering it let's do it on a 24-hour-a-day basis, and not close our eyes to the several times a day when the Burke site can be put in an exceedingly disadvantageous position from the standpoint of time delay.

Benson Exploits Disunity Among Farmers: Clifford R. Hope Pleads for Cooperation

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. COOLEY. Mr. Speaker, the Wall Street Journal in a front-page article this morning says flatly that strategists of the Eisenhower administration aim to exploit disunity among farmers in Secretary Benson's maneuvers to lower price supports for farm commodities.

To this, among all of us who are interested in the well-being of the 5 million farm families of America, there can be only a feeling of revulsion. That such could happen is beyond creditability, but apparently the Wall Street Journal is reporting the truth.

Mr. Speaker, there came to my attention this morning another publication—the High Plains Journal, published in Dodge City, Kans. The principal article in this newspaper was written by Hon. Clifford R. Hope, a Member of this body for 30 years and the former Republican chairman of the House Committee on Agriculture.

Cliff Hope encourages cooperation and unity among farmers, to work out the problems of the various crops and to make the improvements that are needed in the farm programs to give our farm families a fair share of the Nation's prosperity, which now is denied them.

Mr. Speaker, with the consent of the House, I shall insert in the Appendix of the RECORD, the articles from the Wall Street Journal and from the High Plains Journal.

[From the Wall Street Journal of August 2, 1957]

Benson maneuvers to blunt opposition to his drive for lower price supports.

He'll seek power to ease planting curbs right away if props drop. Aids figure fatter harvests would offset the initial pinch of lower prices on farm income. Benson will hold out hope that controls would die eventually. He'll promise to use prop cutting power moderately, trim supports to world market levels in easy stages.

Administration strategists aim to exploit splits within commodity groups. They play California cotton growers against Dixie producers in the push for lower fiber props. Officials make the most of intercrop jealousy. Benson plans to ask authority to lower dairy support floors; spokesmen for major crops complain mandatory dairy props incur heavy losses.

Benson's foes fail to agree on an alternative. Some Democrats plug hard for direct payments to farmers. Others refuse to swallow the idea. Benson's backers take cheer from the opposition's distress.

[From the High Plains Journal of August 1, 1957]

(By Clifford R. Hope)

Not long ago the Washington representative of an important farm group stated while here in western Kansas that the most discouraging thing about the farm situation was that so little was being done about the matter. He said the Secretary of Agriculture had no affirmative program and no program at all that Congress would likely accept, and that as far as the general farm organizations were concerned they were so much at loggerheads with each other that we were not likely to see any program from these groups. There is a general consensus of opinion that little farm legislation will be passed by Congress this year. What is enacted will in the main be extensions of laws which expire this year, like Public Law 480 for the disposal of surplus commodities and appropriations to continue existing programs, including the soil bank, for another year.

While the comparison doesn't hold all the way through, in many ways the farm situation from the national viewpoint is very much like it was in the 1920's. Then, as now, the farmer was in a squeeze. It was a slow squeeze, but nevertheless the farmer was gradually slipping a little further into the ditch while the remainder of the Nation was enjoying what was considered as fabulous prosperity. Then, as now, there was apparent indifference to the situation in the Department of Agriculture. By that, I mean that assurances kept coming that the worst was over and that we could expect conditions to get better, coupled with a complete lack of interest in proposals coming from farmers and farm organizations.

Then, as now, there was interest among farmers in self-help proposals and in programs like the McNary-Haugen plan to segregate the exportable surplus of export crops so as to prevent it from fixing the price of the entire commodity.

Then, as now, there were differences of opinion among leading farm organizations which made full cooperation difficult.

Then, as now, there was much interest in Congress in the farm situation, but the wide differences of opinion not only on the part of the farmers and farm organizations but in Congress itself prevented action.

MEETING OF COMMODITY GROUPS

Partly because there has been a sort of hiatus in farm-legislation activity in Washington, the meeting of 11 commodity groups which was held during the last week in May seems to me to be a matter of considerable importance—perhaps the most important of its kind which has occurred in a long time.

This meeting was composed of 11 important commodity organizations including, among others, the National Milk Producers Federation, the National Association of Wheat Growers, the National Federation of Grain Cooperatives, the American Soy Bean Association, and the American Rice Growers Cooperative. At this meeting an overall organization was set up known as the National Association of Commodity Organizations. It adjourned to meet again in Washington on August 6 and 7, at which time it is expected that 21 commodity groups will be represented.

Here in southwest Kansas we are particularly interested in this new group organization because it includes the National Association of Wheat Growers.

In the long run, the National Association of Commodity Organizations may or may not become an important organization. It is important at this time because it marks a genuine effort on the part of a number of active commodity organizations to start the ball rolling in the way of new and effective farm programs. Most of them have aggressive leadership and may be expected to push hard for the enactment of their programs in the next session.

I do not understand that this new organization or the various commodity groups which compose it expect or want to take the place of existing general farm organizations or to attempt to push them out of the picture, nor do I know that the general farm organizations are particularly opposed to the new organization; in fact, one of them, the National Grange, has long believed that the best approach to farm legislation was commodity by commodity.

It does not mean that the general farm organizations are about to fold up. The fact is they were never as prosperous and well heeled or had as many members and as large staffs as they have right now. They are well set to carry on greater activity than ever before in their history if they can just get together in their views on farm legislation.

SEPARATE COMMODITY PROGRAMS

The success and importance of the new organization will, of course, depend upon how well it can get its constituent members together on legislative matters. After the August meeting we will have a better idea of how much progress they are capable of making in that regard.

Some of these commodity organizations have existed for a long time. Others, like the wheatgrowers, are comparatively new. However, they have all usually operated independently. There are undoubtedly some conflicts of interest between them as far as the commodities which they produced are concerned. It is quite probable they will not all be able to agree on each other's programs. However, I can see nothing but good coming from the meeting, for those who know the problems of these commodities best will have an opportunity to present those problems to other groups.

I do not understand that it is now contemplated that the national organization will attempt to sponsor specific legislation for any group. Each group will have to do that for itself, but where there is no conflict between group interests, it is expected that the various groups will help each other.

The urge for separate programs is for individual commodity programs tailored to the needs of a particular commodity. The sugar program has been in effect since 1935. It is supported by all segments of the industry, from producers to processors, importers, and distributors. It rescued the industry when it was deep in the doldrums in the 1930's, and aside from the natural disputes over allotments to geographical areas which are inevitable, and which have always been compromised, there has been little opposition to a renewal of the program from time to time.

Wool offers another illustration of a program which has been drawn to meet the needs of a single commodity, and while it has actually been in effect only 2 years, it apparently is getting off to a good start, and is in the main satisfactory to the producers affected.

Other instances of programs designed to meet commodity needs are those set up under marketing agreement legislation. A very large part of the fluid milk of this country is distributed under marketing agreements at the present time, and there are many instances where fruits and vegetables are marketed under marketing agreements in regional areas as well as on a national scale.

As already indicated, most of the commodity organizations which comprise the national group are interested in what might be called self-help programs. These vary from commodity to commodity, but in the main call for legislation which will enable producers to do their own job of segregating and marketing their surpluses. The proposal of the National Federation of Milk Producers is very much like the old McNary-Haugen plan in principle, and would permit the producers themselves to remove the very small surplus of dairy products from the normal channels of trade so as to prevent its price depressing effects.

Wheat, cotton, and rice producers are proposing plans which in effect provide methods by which all the product goes into the normal channels of trade at the going market price but setting up machinery whereby

roducers receive a larger return on that part their product which is consumed domesti-lly for food or fiber. The domestic parity an for wheat is a good example of this kind program.

SELF-HELP AND PUBLIC RELATIONS

As one who has always advocated self-help rograms as far as possible and who has elieved for a long time that the commodity pproach is the most effective way to deal ith farm problems, I am delighted to see ommodity groups getting together in an ffort to obtain a better understanding of ch other's problems and to assist each ther in dealing with those problems in a egislative way.

I do not know whether those who are onsoring this organization have it in mind not, but there is another important thing hich an organization of this kind can do d which very much needs to be done—at is to carry out a program of public rela-ns on behalf of the farmer. Where the epartment of Agriculture has fallen down d where some of the general farm organ-ations have fallen down, it has been in resenting the farmer's problems to the pub-.

There has never been a time in the history this country when the public generally d as little interest in the great industry agriculture as it has today, or where the blic relations of farmers were as poor as ey are now. Sometime I expect to have ore to say about this subject.

As of now, there is certainly a field of ac-vity in which this new group can operate, d I wish them well in their efforts.

orseshoe Bend Park Needs Development

EXTENSION OF REMARKS

OF

ON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. HUDDLESTON. Mr. Speaker, as u are no doubt aware, the people of abama are vitally interested in the ll development of the Horseshoe Bend tional Military Park on the Tallapoosa ver in Alabama at the site of the 1814 ttle in which Gen. Andrew Jackson ushed the power of Indian resistance st of the Mississippi. It is fitting that adequate memorial be established to mmemorate this great historical event.

In the Friday, July 26, 1957, issue of e Birmingham (Ala.) News there ap-ared an editorial dealing with this sub-ct. As will be noted from the editorial, abama's citizens are taking substan-l steps to make this national memorial reality. Under leave heretofore anted, I am happy to insert in the CON-RESSIONAL RECORD the editorial from the rmingham News:

HORSESHOE BEND PARK NEEDS DEVELOPMENT

An act of Congress last year created Horse-oe Bend National Military Park on the llapoosa River at the site of the 1814 bat-e in which Gen. Andrew Jackson crushed e power of Indian resistance east of the ssissippi. But the park has yet to be fully veloped as a fitting memorial and tourist traction. Especially needed now is the rchase of 1,474 acres of land to add to the 566 acres the Alabama Power Co. has already donated.

After hearing a group of interested citizens describe plans for the park's improvement, the State senate finance and taxation committee and the House ways and means committee this week recommended an appropriation of $150,000 for the land purchase. Once the land is made available by the State, the National Park Service will provide for development and maintenance.

The park is Alabama's first national memorial of this character. The State should now do its part in helping to make the area into the attraction it deserves to be.

High Tariffs?

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, entitled "High Tariffs?" written by Charles Nutter, which appeared in the New Orleans Item dated July 27, 1957:

HIGH TARIFFS?

(By Charles Nutter, managing director of International House)

Business interests of Louisiana, extending all the way from stevedoring to banking, are awakening to the coming fight in Congress over foreign trade legislation which could endanger several hundred million dollars worth of shipping along the New Orleans waterfront.

The signs are as clear, as unmistakable, and as dangerous as a distant hurricane warning. Before we know it, Congress will be asked to wind up the 25-year-old reciprocal trade-agreements program, and return the country to a high-tariff policy abetted with restrictive quotas which could destroy much of our world markets.

The battle will center over extension, for the 11th time, of the trade-agreement program, begun in 1934, which has increased our world trade many times through lowered tariffs and aggressive sales promotion. So-called protectionist forces, powerful lobbyists, and spokesmen for a minority of industrial interest, encouraged by recent successes in Congress, want to kill this program and turn back the clock on tariff policies.

The effect of this would be immediate and disastrous in Louisiana where literally tens of thousands of jobs would be lost by any such setback. Today more than 4,000 ships visit the port of New Orleans annually, and scores more call at Baton Rouge and Lake Charles, and these represent a vital part of the State's economy.

Furthermore, Louisiana's far-sighted business leaders since 1940 have invested millions in an international program. So have a dozen foreign governments which are solidly convinced that New Orleans is a great gateway to a rich, profitable market. The aims, visions, efforts, and investments of many men of purpose and of good will would be hurt by an impaired foreign-trade program.

Last year United States exports and imports amounted to more than $30 billion, and the port of New Orleans was a strong second to New York in volume of this business, which is expanding rapidly under an enlightened trade policy which encourages foreign nations to sell in the United States and earn dollars to buy American industrial and agricultural products.

American labor, agricultural, and industrial circles have estimated that 4.5 million American families directly owe their living to foreign trade and that less than a quarter million would be affected by a free trade policy which eliminated all tariff regulations. Yet the tail continues to wag the dog in Congress because those benefiting from foreign trade accept prosperity as a matter of fact while those hurt by foreign imports, often small and marginal industries, are bitter, well-organized, and noisy in the congressional lobbies.

New Orleans has a tremendous stake in the coming trade battle, and needs to study, understand, and prepare for it. It should take a leading part in the fight. Undoubtedly it will do so because it represents, by and large, a graver threat than anything that ever happened to the waterfront. In the end, however, it will be the Republican Party in Congress, the present habitat of the protectionists, which will determine the future of our trade, and this will call for the strongest leadership from the White House.

President Eisenhower is committed to extension of the trades' program, and all his executive departments are strong advocates; but for at least 2 years they have failed to rally an all-out drive in Congress necessary to carry out their desires and commitments, strongly backed by Democratic circles.

Trade is a vital factor in the game of power politics being played today. For trade is as much the handmaiden of peace as it is of war. Throughout history trade has been a prime cause of conflict as well as progress. Man's struggle for the maldistributed resources of the earth, for trade routes, for markets in the shifting populations of the world, for geographical advantages and greater opportunities for himself and neighbors are for the most part our history and our heritage.

Today Louisiana is on the threshold of its greatest economic opportunity, far greater than ever in the past, even though its past is glorious. Within a decade or two there will no longer be a port of New Orleans and a port of Baton Rouge, as we know them today. There will instead be a continuous port extending from above Baton Rouge to blue water at the end of the Alexander seaway, and along this 200-mile stretch will be centered the greatest industrial progress in the United States.

This industry will be geared to a resurgent South. Even more so it will be catering to the greatest developing market in the world, the 500 million potential inhibitants of Latin America, just beyond our door. The communications systems tying in at New Orleans, the water resources of the Mississippi River, the climate, labor and natural resources of this area insure it as the great industrial region of tomorrow.

The Lousiana story—trade, industry and the development of peerless natural resources—has just begun. But it is well understood in the powerful financial markets of the world, and it has a future beyond compare.

The lives of every Louisianian will be enriched by the great undiscovered sulfur and oil deposits lying far out at sea beyond Louisiana shores, by the unsurpassed communications we have, to reach Latin America and the world, by the explosive expansion of industry along the Mississippi River, the Intercoastal Canal and the Alexander seaway when it comes, and by the great development of world trade which will surmount next year's threat, but only after a costly, bitter battle.

Need for Expanding Trade

EXTENSION OF REMARKS
OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. KING. Mr. Speaker, the need for expanding world trade is clearly evident, as is the necessity of maintaining the strength of our labor, industry, and agriculture at home. Statesmanlike policies and decisions are required. The unfavorable situation of our domestic tuna fishery is a continuing problem requiring such study and an early decision. As background for needed consideration, the following letter to me regarding this problem sets the state for our mature consideration and demonstrates the necessity for action:

AMERICAN TUNABOAT ASSOCIATION,
San Diego, Calif., July 27, 1957.

Congressman CECIL R. KING,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN KING: I am to appear before the Committee on Ways and Means on July 31, regarding Antidumping Act amendments. A copy of the statement of the association which I will make is enclosed for your information.

In the statement you will note my reference to and comment on the October 1951, Ways and Means hearings on a proposed tariff on frozen tuna and will recall your active interest and participation in those hearings. Knowing of your long continuing interest in the welfare of tuna fishermen and boatowners, I felt it would be most informative to compare the situation then and now.

A comparison could well be built around not only the statistics presented but our statement of what we entitled the Future Problem. This, in part, is what we said:

"It is quite clear that should the present rate of importation continue, the amount of tonnage which the American vessels would be called upon to deliver would continue to decline to the point of uneconomic operation.

"This * * * would bring about at least 2 situations. First, the elimination of the operations of many units of the American fishing fleet and, second, the movement of many units of the American fleet to foreign areas.

"There is more than a reasonable case for estimating that the imports of frozen tuna by reason of the fact that the productive potential of foreign areas is not static but * * * on the increase.

"The shift of American capital and management, which is as yet not of record, further supports the estimate of continued import uptrend.

"The increased dependence of American processors on other than American producers will surely in time effect a complete transfer of operations to foreign areas."

Questions and answers may be used for purposes of comparison and evaluation, using, where possible, the information on the years 1949, 1950, and 1951 compared with 1955 and 1956 and the 1957 year to date.

1. Has the rate (volume) of imports continued upward?

At the time of the hearing annual totals were available for immediately preceding years: 1949, 20,606,000 pounds; 1950, 56,712,000 pounds.

The year 1951 imports totaled 62,085,000 pounds.

The last 2 years totals were as follows: 1955, 145,245,000 pounds; 1956, 139,840,000 pounds.

The 1956 total is adjusted for estimated round weight equivalent of imports of cooked loins and discs (relatively new and rapidly rising forms of imports) and for an assumed error in published statistics. However, no upward adjustment has been made for weight of gilled and gutted frozen tuna which would raise the 1956 total.

In 1957 the January, April Bureau of the Census figures show 48,794,000 pounds compared to 45,142,000 pounds in 1956 for frozen tuna. Cooked and frozen loins and discs total 3,778,000 pounds in this same period in 1957 compared with 2,020,854 in 1956. Converting these to a common round-weight basis shows imports running at a record high.

Since the 1951 hearings frozen tuna imports have increased over 125 percent and are headed higher.

2. Has the productive capacity of the United States tuna fleet declined?

At the end of 1951 there were 210 long-range tuna clippers (bait boats) in operation. Their capacity tonnage was 44,300 tons.

At present there are 153 such boats with a capacity of 35,000 tons.

This is a decline of 27 percent in number and 21 percent in tonnage since the hearings in 1951.

The purse seine fleet fishing tuna full or part time has shown considerable decline as has the number of small boats fishing albacore.

3. What has been and is the climate for investment in new boats?

Since 1951 construction has been started and completed on only 9 new tuna clippers. No new tuna purse seiners have been started or completed.

4. In comparison has the productive capacity of the Japanese tuna fleet declined or increased?

At the end of 1951 gross tonnage of the large boat tuna fishing fleet in Japan was 40,714 tons or about 24,400 capacity tons (60 percent of gross tonnage) represented by 272 boats.

At the end of 1956 the approximate total of such boats was 596 with a gross tonnage of 118,121 tons and an estimated capacity tonnage of 70,800 tons.

This is an increase of 116 percent in number of boats, and an increase of 190 percent in tonnage compared since 1951 with absolute declines in the United States fleet.

5. With a decline in the number of United States tuna boats has there been an increase in deliveries of fish per boat?

The average percentage of boat capacity delivered by the bait boat fleet was 315 percent in the 3-year period 1948 to 1950 which preceded the 1951 hearings.

In 1951 percentage of capacity delivered per boat was 264 percent.

In the 5 full years since 1951 this low average has prevailed even though there has been wide variation year to year. This year it has not improved and may not actually reach the 5-year average.

Thus, even with the fleet reduced in number there has been no increase but actually a decrease in the per-boat annual landings.

6. Have decreased landings per boat resulted in an increased or decreased price per ton to the boats?

The price index for yellowfin-skipjack tuna which uses the year 1948 as 100 showed that the price index in 1951 was 83.3 percent.

The present price index is 69.4 percent or a decline of about 17 percent since 1951.

Bluefin tuna declined within the past few days by about 8 percent under prices which have held for about a year. Albacore tuna declined to the lowest level for volume landings since pre-World War II levels with the past week.

7. Has there been, as predicted in 19 the elimination of the operation of ma units of the American fishing fleet?

The facts show that there are fewer boa no construction of new boats even remote approaching replacement or maintenance the fleet size level, a decline in opportun to fish, a decline in prices received all ad ing up to steady elimination of the Americ producer.

8. Has there been, as predicted in 19 movement of many units of the Americ fleet to foreign areas?

In seeking release from the problem found in the United States a number boats have operated from South Americ ports but as they are far removed from t United States market their collective po financial experience has not been sufficie to cause movements to follow.

Other boats have recently transfer operations to Puerto Rico and, except f key men, utilize alien crews in their oper tions in nearly all cases thus eliminati American fishermen from their jobs. T selling point to get boats to go to Puer Rico is that if the boats will sell their fi at $20 below the California price they w not be subjected to layups or curtailment operation and thus will be given a prefer status.

9. Has there been shift of American capit and management?

One canning company has establish operations in American Samoa by contrac ing for Japanese boats to supply fish. T low labor rates and low fish costs plus t high earnings of this activity as given the Department of Labor report in the mat of Special Industry Committee No. 1 f American Samoa make expansion certain.

Other operations have been referred to this letter. Those in South and Centr America have not grown apectacularly these areas are under the same competiti pressure from Japan as are we. The r turns are not all in for Puerto Rico but t possibility of the Japanese landing tu from the Atlantic by establishing bases Cuba or the Bahamas is strong and for the basis for a new competitive factor.

10. How can we now regard this stat ment made in 1951?

"The increased dependence of Americ processors on other than American produc will surely in time effect a complete transf of operations to foreign areas."

Operations consist of the production raw fish and the cannery processing of it.

Since 1951 there has been a greater re tive and absolute quantity of the raw pro uct produced for the United States mark outside of the United States (principally Japan). This enters the market as fro in the round, as frozen gilled and gutted, frozen cooked loins, as frozen cooked di and as the canned finished product.

All these forms affect the domestic p ducers (boatowner and fishermen) oppo tunity to operate and earn.

Gilled and gutted tuna has some eff on cannery labor.

Cooked loins have a further and stron effect on cannery labor making unnecess certain labor operations. Cooked di eliminate still further the requirement United States cannery labor.

Canned tuna requires no United Sta cannery or fishermen's labor.

Summing this up, it is clear that th has been a steady transfer (or more ac rately, loss) of the basic operations nec sary to supply the tuna market to fore areas (principally Japan).

11. Has the United States market for tu and tunalike canned fish grown sufficien

enable the domestic fleet to keep its absolute if not its relative share of the market?

The domestic fishermen's and boatowner's relative share of the market in 1949 was 5.5 percent, falling to 69.6 percent and 70.4 percent under the impact of imports in 1950 and 1951.

The downtrend continued, and by 1954 his relative share was 57.6 percent, falling to 55.5 percent in 1955 and rising to 55.5 percent in 1956. In 1957 it is heading toward the 1955 figure at present indications.

His absolute share in pounds delivered has declined. The United States Department of the Interior gives the figures for 1949 (before imports were heavy) as 335,680,000 pounds. New boats entered the fleet, and in 1950 the total was 392,373,000 pounds. In 1951 more new boats entered the fleet (some not actually fishing until late in the year or early in 1952), but the absolute total fell to 319,-348,000 pounds. The average for the next 3 years (1952–54) was just below this at 316,772,000 pounds, while the average of 1955 (270,652,000 pounds) and 1956 (328,679,000 pounds) was 299,666,000 pounds. Thus far in 1957 landings are 28,956,000 pounds below the 1956 total, indicating that the 2-year average may not even be reached.

It is absolutely clear that the domestic fleet has not even been able to keep its absolute share, much less its relative share of the market.

The other effects on the domestic fishermen and boatowners of failure to reach some solution of the import problem as set forth in 1951 follow most logically. There has been a loss of employment opportunities, decline in share earnings, profits turned to losses, and there are other measurable signs of injury—serious and continuing.

We were not wrong in our analysis of the situation which developed up to the time of the hearings in 1951 and in our estimate of the future course of events.

We have tried many things to change this course so that the tuna producer's business could grow. We have had varying degrees of success and failure, mostly the latter, but have not concluded that we should stop trying. This trying will take many forms.

We would like to be able to do this on a basis of straight-out competition with the Japanese fishermen with no appeal for action by Government on either side. In Japan the low basic operational costs, the system of alternative markets for tuna, and the great interest and activity of the Government in the development of the industry and its export trade make this just about an impossibility on a duty- or quota-free basis. An examination of the items appearing on the duty-free list where we find frozen tuna, indicates that our Government and most producers and industries share this view. The Subcommittee on Customs, Tariffs, and Reciprocal Trade Agreements (March 1957) stated that:

"The bulk of the imports which are free of duty are accounted for by goods which fall under one or another of the following groups:

"(1) Consumer goods which are not closely, if at all, competitive with products of domestic industry, such as coffee, tea, cocoa, and bananas.

"(2) Materials used by domestic industries in which there is no, or very inadequate, domestic production. Included in this category are woodpulp and newsprint; natural rubber; raw silk; tin (concentrates and refined metal); nickel ores and matte and several other varieties of metal ores; uncut gems and industrial diamonds; asbestos; coarse wools for the manufacture of carpets; manila hemp or abaca, henequen, jute, and similar fibers; nonbovine hides and skins; and most varieties of undressed furs.

"(3) Goods which are important in farm operations, including fertilizers and fertilizer materials, barbed wire, binder and baler twine, and agricultural machinery.

"(4) Goods of which domestic production has long been greatly in excess of domestic requirements and have, therefore, been exported from this country in large amounts. Among such duty—free imports are short and medium staple cotton refined and crude sulfur, typewriters, and linotype machines."

Frozen tuna falls into none of the foregoing categories.

This leaves us two alternatives which do require Government action:

One, to obtain a government-to-government quota on tuna imports in all forms such as has been done in the case of the textile import problem, or

Two, to obtain our own Government's aid in formulating and implementing a support program such as the National Wool Act which also developed as a result of an equally serious import problem.

The tuna case is deserving of similar recognition and action—a matter in which we have had and look forward to your continued interest and action.

Very truly yours,

HAROLD F. CARY,
General Manager.

STATEMENT OF THE AMERICAN TUNABOAT ASSOCIATION BEFORE THE COMMITTEE ON WAYS AND MEANS OF THE HOUSE OF REPRESENTATIVES IN A HEARING ON AMENDMENTS TO THE ANTIDUMPING ACT, WASHINGTON, D. C., JULY 29–31, 1957, PRESENTED BY HAROLD F. CARY, GENERAL MANAGER

The American Tunaboat Association represents the major part of the domestic bait boat fleet. This is the fleet which produces the largest amount of the domestically produced tuna for canning and sale in the United States market.

We have appeared previously before the Committee on Ways and Means in regard to trade policy and trade agreement legislation which vitally affects our operations. Examples of this are our appearance at the January 1955, hearings on extension of the Trade Agreements Act, and at the September 1956, hearings on United States customs tariff and trade agreement laws and their administration.

In October 1951, we appeared on a matter of direct, particular interest which resulted in the recommendation by the Committee on Ways and Means (H. R. 5693) that a temporary tariff be imposed on frozen tuna—an action in which the House of Representatives overwhelmingly concurred and in which the United States Senate, by a narrow margin, did not. The trends in the producers' business have since followed, with few occasional departures, an inexorable downward line.

The information and evaluation given this committee at those and at other times have been carefully and accurately drawn, as we based our testimony on our actual experience.

We now appear on the subject of the Antidumping Act. We have not previously appeared at any hearings on this subject as we have had no extensive experience in this field which we could bring to this committee as useful to it or to us in designing or amending law on the subject.

We appear now because we have had experience with the law and its administration which permits us to see it from other than a theoretical view.

Our letters of May 27, 1957, and of July 15, 1957, to the chairman of the Committee on Ways and Means outline this experience in the fullest detail. We will not restate this detail in the interest of conserving time but do ask that these letters with their appendices be included as a part of this statement.

In summary form this is the substance of the matter:

1. In early October 1956, Japanese exporters held approximately 14,000 tons of frozen albacore in storage. This was purchased by them from fishing boats in June and July of the same year.

2. This particular summer albacore had been purchased at a bare ex-vessel cost approximating $300 a ton. Because of handling, freezing, storage, commission, interest and other costs it represented a then present cost before shipment of close to $400 a ton in Japan.

3. Starting in October this particular summer albacore was sold at a price of $270 a ton f. o. b. Japan a price below the average ex-vessel price paid at time of purchase and still further below the accumulated cost to the exporters who held it in storage.

4. We regarded transactions such as this as dumping and so advised the Secretary of Treasury on October 17, 1956.

5. The Department of the Treasury regarded this as a matter of substance and accordingly instructed its field officers to withhold appraisement of the merchandise in question.

6. In a letter dated March 14, 1957 (5 months after the matter was referred to the Secretary) the Department of the Treasury decided "that the purchase price of the imported frozen albacore was not less than the cost of the production thereof."

In making this decision the Department of the Treasury determined, as an example, that the cost of production of the particular merchandise was the ex-vessel price of a small amount of albacore sold by fishing boats in Japan 4 or 5 days prior to 1 week before shipment of this summer albacore and not its original cost to the exporter. The ex-vessel price in November was determined to be $207.65 per ton—sale of it at $270 f. o. b. Japan after freezing and storage was not considered dumping or sale at less than fair value (in this case, cost of production was considered to be fair value.)

Our position was and is, that this summer albacore was particular, separable, identifiable merchandise, that it cost the exporters at least $300 a ton when originally bought from the boats, that this cost was appreciably increased by handling, freezing, storage, commission, interest and other costs to a total much higher than $300 per ton, and that to determine that its cost of production should be based on the ex-vessel price of a few tons of albacore landed in the offseason was without logic and did not carry out the intent of the Antidumping Act.

The test of whether this November ex-vessel price was the cost of production of the particular summer albacore in question is found in the quantity of albacore landed in the November offseason. We were concerned specifically with about 14,000 tons of summer albacore. The cost of production example used by the Department of the Treasury ($207.65) was based on a sampling of ex-vessel albacore prices in November when only 877 tons totally were landed in Japan. Samples taken from such negligible total landings could not be determinative of the cost of production of the 14,000 tons of summer albacore landed 4 to 5 months earlier.

In any event, the decision of the Department of the Treasury could not be appealed so all this could be considered academic. That it was not and is not academic is borne out by the fact that our experience with dumping did not end there. The action of what we considered dumping and the after shocks of even so small an amount of trade in all tuna have not quieted to this day. Our letter to the chairman of this committee dated July 15, 1957, and made a part of this statement recites most of these events and effects as we have determined them to this date.

While not experts in antidumping law, we know that it is intended to prevent sales of commodities in this country at less than fair value or cost of production. Our experience has shown in our case that this can and did happen inasmuch as a particular, identifiable tonnage of albacore was sold in the United States at far below its original cost of production in Japan and that it did cause and is causing injury.

As a result of this experience we can bring to the attention of the committee the need for a study of the language of the Antidumping Act dealing with foreign market value (section 205) and with cost of production (section 206) to the end it be made clear that when the original cost of an item in commerce such as frozen tuna can be obtained, this should be used as its cost of production (adding thereto the costs incidental to preparing it for shipment) and making it equally clear that subsequent costs based on a few sales in negligible quantities cannot be determinative of cost of production. In the summer albacore dumping case, the original cost was available but in the apparent absence of a clear-cut requirement that this be used, reliance was placed on a position that albacore was fungible and that no distinction as to original cost could or should be made. Our position is that a distinction could have been made, and that it should have been made and that the law should so require.

As we have had continuing experience with the Antidumping Act for nearly 10 months we have had opportunity to think of aspects of it other than the foregoing and to develop views on remedial changes considered as improving the Antidumping Act. These are:

First, that public hearings open to all interested parties be held to develop information on whether foreign merchandise is being, or is likely to be, sold in the United States at less than its fair value.

Second, that a published report be made of the findings within a reasonable time not to exceed 90 days, and

Third, that a right of appeal be granted to an interested party in disagreement with the findings of the Secretary of the Treasury whether there was a finding of dumping or a finding of no dumping.

These are reasonable requirements and entirely consistent with our system of government.

Secretary Benson's Policies Are Hurting the American Farmer

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. McGOVERN. Mr. Speaker, late this spring the Secretary of Agriculture Mr. Ezra Taft Benson, said in his annual report that the big news in farming during 1956 was that "Agriculture seems to have turned the corner." Presumably, this meant that the economic picture, which has grown darker with each passing year under Mr. Benson, would become brighter.

In light of this statement, I think it is well that we pause at this juncture in the year 1957, to note that the parity ratio on farm prices received in the month ending July 15, was still 1 percent under that of a year ago on the same date.

Mr. Speaker, the farmers of America have lost more than $4 billion in net farm income since 1952 as the result of Secretary Benson's policies. The rural areas have been deprived of less and less purchasing power and the Federal Treasury has received less and less tax revenue from our agriculturists.

In 1952 prices received by farmers averaged 100 percent of parity. And farm people on that year's income paid $1,365 million in personal income taxes to the Federal Government.

Farm prices in the year 1956 averaged 82 percent of parity and farm people will pay only $1,100 million in income tax. In other words, the economic hardship that has been forced on the people who till our land for their living, has brought about a reduction of $265 million in tax revenues that the Government receives from farmers, figuring it on an annual basis over that 4-year period. This is more than twice the Federal cost of the price support program in 1952.

Mr. Meader Sustained

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. MEADER. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the Adrian (Mich.) Daily Telegram of July 24, 1957:

MR. MEADER SUSTAINED

Representative GEORGE MEADER wrote an article about the International Cooperation Administration which Reader's Digest published in April. In the article Mr. MEADER was critical in some respects of the foreign-aid agency, charging that it did not always tell Congress the whole truth about its money needs and the effectiveness of the spending it directs.

Among other things, Mr. MEADER wrote: "This bureaucracy has become so powerful, so cocksure, that it has defied Congress and done whatever it wanted." Things the agency has since done have supported Mr. Meader's charges.

Not long after the article appeared, the director of ICA appeared before a Senate committee and called the article unfair. Included in the committee record was a memorandum from the ICA declaring that Mr. MEADER has presented a "distorted picture of the whole program."

Thereupon the editors of Reader's Digest set out to check on Mr. MEADER's facts. They report they found them accurate in every detail and that they were in large measure taken from ICA's own records.

Mr. MEADER even before he entered Congress was a skilled and competent investigator. Since going to Congress he has made foreign aid an especial field of study. The fact that the foreign-aid agency has tried to discredit him seems to prove exactly what he said about it, that bureaucracy is out of hand and will go to any lengths to stop inquiring Congressmen.

The ICA should have corrected the errors Mr. MEADER pointed to. When it attacked him for bringing them to light it only showed that he was right.

"Good Deal," Says Farmer as He Pocket[s] $204,000 Soil-Bank Payment

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. UDALL. Mr. Speaker, earlier this week I called attention to the Arizona cotton farmer who received a soil-bank payment of $209,701. This farmer took one farm out of production, and then planted three times as much land in penalty cotton at another location.

Facts concerning another Arizona farmer who has received a $204,000 soil-bank payment were related this week by Reporter Fletcher Knebel in an article written for the Cowles newspapers. Mr. Knebel's article follows:

SOIL BANK PAYS HIM $204,000

(By Fletcher Knebel)

WASHINGTON.—The great Southwest's growing industry of not growing cotton is a mighty fine business—take it from 56-year-old John Nutt, Eloy, Ariz.

Nutt confirmed Saturday he has received a Government check for $204,000 for placing his entire cotton farm in Agriculture Secretary Ezra T. Benson's 1957 soil bank.

This is the second huge soil-bank payment in Arizona to come to light.

Early this month Representative STEWART L. UDALL, Democrat, of Arizona, revealed that Jack A. Harris, operator of 25,000 Arizona acres, had received a $209,701 Government check for not growing cotton on 1,666 acres of it.

Unlike Harris, who said he thought the soil bank was "silly" and that he applied for the big check just to show how ridiculous it was, Nutt told the Minneapolis Tribune by telephone he thought the soil bank was a "good deal."

"I put all my 1,433 acres in the soil bank," he said, "and I've got my check. I think it's a pretty good deal when the Government takes 3,500 bales of cotton out of production.

"I signed up in February to put in 30 per cent of my farm, but then they said we could put the whole thing in the soil bank if they had the money. I guess they got the money, because that's what I did and they paid.

"All this publicity Arizona is getting over these big soil-bank payments is a good thing for the State. It shows how much cotton we can grow. I get about 2¼ bales to the acre."

Harris had said he disliked the whole Government subsidy idea, and would prefer to sell cotton on a completely free market. Nutt wasn't so sure. He said he was just a cotton farmer and had no idea what prices would be like on a free market.

Nutt has gone out of the cotton-growing business temporarily in Arizona, but keeps his hand in via 75 acres of cotton he is growing in California. On another 1,000 acres he is growing maize.

Nutt differs from Harris in that, while his soil-bank payment is large, his sudden retirement from growing cotton does tend to hold down the national output.

In Harris' case, he moved his equipment 125 miles to another county, leased 4,500 acres and planted it to cotton, thereby tripling his last year's production on this phase of his farm operation.

The theory of the soil bank originally, in addition to supplying money to hard-pressed small farmers, was that less production

would tend to ease the Government's huge surplus holdings.

This year's big payments probably will not be repeated, as Congress has proposed a maximum of $3,000 in individual payments.

However the theory works out, the business of not growing cotton has become quite the thing for big Arizona operators. Thus far, UDALL has spotted individual payments to cotton farmers of his State of $209,000, $204,000, $96,000, $82,000, $78,000, $71,000, $69,000, $64,000, $60,000, $59,000, and $56,000.

Declaration in Berlin

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. FULTON. Mr. Speaker, because of important events that are happening in Europe concerning our good friends and partners in NATO, I am submitting for the CONGRESSIONAL RECORD the editorial from the Pittsburgh Post-Gazette of July 31, 1957, entitled "Declaration in Berlin."

This editorial highlights the Berlin declaration as a well-timed Western endorsement of Dr. Adenauer and his policies of alliance with the West and his work for a reunited and free German Republic:

DECLARATION IN BERLIN

High representatives of this country, Britain, France, and West Germany convened in West Berlin this week to sign a declaration on German unity. In the main, they reaffirmed that Germany should be reunited by free and fair elections, that a reunited Germany should be unfettered in choosing its alliances (as with NATO), that the West will not enter into any disarmament deal with the Soviet Union that might prejudice German unity, that the West is prepared to give the Soviets and others full assurances of safety should a reunited Germany choose NATO.

These and other points were made in a document known as the Berlin declaration. Its signing this week was attended by the ringing of the Freedom Bell, gift from the West to honor the courage of West Berliners during the Soviet blockade of 1948–49.

The declaration, which emphasizes what has by and large been the western position all along, and the attendant ceremony come when disarmament talks in London between the West and the Soviet Union enter a showdown phase. More significantly, they come when the West German election campaign enters the final stretch and shortly before the Moscow "happiness boys" Khrushchev and Bulganin, are due to visit Soviet-ruled East Germany.

That visit and the campaign in West Germany are of course related. Khrushchev & Co. would give plenty to defeat Chancellor Konrad Adenauer and his policies of alinement with the West, including rearmament, and of pressing for political and economic federation of free Europe. These policies are the surest check to Soviet ambition in Europe and elsewhere, as the Kremlin knows acutely.

Khrushchev can be expected alternately to promise the moon and threaten doom to Germans when he visits East Germany next month, all with an eye to embarrassing Dr. Adenauer's election campaign and advancing the cause of his opposition, much of which is somewhat neutralist-minded.

The Berlin declaration, then, is a well-timed western endorsement of Dr. Adenauer and his policies—the policies in which lie Germany's and Europe's best hope for freedom and union.

Ike Appoints a Fox To Guard the Chickens

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. ULLMAN. Mr. Speaker, the present administration will hardly be remembered for the appropriateness of some of its appointments to various posts both on the agency and ambassadorial level. But even with some knowledge of the caliber of past appointments to various jobs, the Pacific Northwest was not adequately prepared for the President's appointment of Douglas McKay as Chairman of the United States section of the International Joint Commission.

Mr. Speaker, I think the Oregon Labor Press summed up the Pacific Northwest's reaction pretty well when it headed a recent editorial "Ike Appoints a Fox To Guard the Chickens."

Under unanimous consent, I insert this editorial in the Appendix of the RECORD.

IKE APPOINTS A FOX TO GUARD THE CHICKENS

President Eisenhower has appointed Douglas McKay to a $20,000-a-year job as Chairman of the United States section of the International Joint Commission (IJC).

The IJC has 3 members from the United States and 3 from Canada. Its job is to settle disputes over the development of power and flood control resources on rivers which cross the United States-Canadian border.

This is a job of crucial importance to the Pacific Northwest, for the Columbia and many of its major tributaries rise in the Canadian Rockies, and many of the best dam sites lie near the international border.

McKay's appointment to this important post has been hailed with delight by the Oregon Journal ("We believe McKay will represent United States interests well") and with less enthusiasm by the Oregonian ("One assumes that President Eisenhower * * * considered Doug McKay's qualifications for the job more important than the political repercussions").

This tone of restrained politeness is used by the Oregonian when it is convinced that a Republican has committed an awful blunder—like an Englishman describing a funeral as "jolly good fun." Freely translated into plain English, the Oregonian's cool editorial probably means: "Now that Ike has made this terrible appointment, let's hope McKay doesn't mess up the job too badly."

The Oregon Labor Press can be more candid in expressing its opinion of the McKay appointment.

We believe the appointment is a tragic blunder and a deliberate slap at the Pacific Northwest.

We believe the appointment of Douglas McKay to any post involving hydroelectric power development is like appointing a fox to guard a chicken yard.

As Governor of Oregon and as Secretary of the Interior, McKay always followed the private utility companies' policy of opposing any expansion of the Federal power program. McKay believes in developing public resources for private profit whenever it is possible to do so.

So does President Eisenhower. Why else would Eisenhower oppose Hells Canyon Dam? Why else would he endorse the "partnership" scheme? Why else would he appoint Douglas McKay as Chairman of the IJC?

With their votes last November, the people of the Pacific Northwest shouted their opinion of McKay's views on power development. McKay himself was repudiated by 60,000 votes. Private-power Republicans were also defeated for Senate seats in Washington and Idaho, for the governorships of Oregon and Washington, and for a number of "safely Republican" congressional seats in the Northwest States.

But apparently Mr. Eisenhower doesn't care about public opinion or political success in this region. He prefers to please the power trust.

It is significant that McKay's appointment to the IJC does not require Senate confirmation. For it is certain that it would be opposed by 7 of the 8 Senators from the States of Oregon, Washington, Idaho, and Montana.

In the face of such opposition from the region directly affected by the work of the IJC, the McKay appointment would never receive Senate approval.

McKay's predecessor as United States Chairman of the IJC was another Republican ex-governor, Len Jordan, of Idaho, longtime friend of the Idaho Power Co. Jordan made such a mess of his relationships with Canadian members of the IJC that Canada has actually suggested diverting water from the upper Columbia into the Fraser River. And plans for Libby Dam in Montana are stalled in a dispute over water storage across the border in Canada.

Will McKay do a better job than Jordan? All we can do is to cross our fingers and hope so. Eighteen million acre-feet of flood-control storage are available in Canada on the upper reaches of the Columbia. With this storage it would be possible to increase Columbia River power production in Washington and Oregon by 1.3 million kilowatts—the equivalent of 3 or 4 more Bonneville Dams.

Beryllium Co. Opens New Plant at Hazleton, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hazleton (Pa.) Plain Speaker of July 30, 1957, commenting on the establishment of a new Beryllium Co. plant at Hazleton:

WELCOME TO BERYLLIUM

This is an important day for Hazleton.

Dedication of the new Beryllium plant at Ashmore marks a great milestone in Hazleton's industrial advancement.

In welcoming to our community an industry which is a part of the atomic age we embrace an organization with a great potential.

Advancements in the field of nuclear science during the past few years emphasize the fact that the world is on the threshold of an era of progress beyond the dreams of those who lived in the past century.

The coming of Beryllium to Hazleton puts our community "on the ground floor" of the atomic field and the possibilities are limitless.

"Industry begets industry" is a well known maxim. The establishment of a plant here by the rapidly progressing Beryllium Co. could well be the means of attracting other firms.

It is significant that Hazleton, which had a vital role in the development of the anthracite coal industry, now takes its place in sphere of nuclear power.

The establishment of the Beryllium plant here sounds another encouraging note. This company came here of its own accord—not because any inducements were offered.

With its own funds it has transformed the abandoned Ashmore roundhouse into a mighty industrial plant. The amount Beryllium has spent indicates that the firm really means business.

That an up-and-coming industry would find this area attractive is not only complimentary. It offers new encouragement to the men of our community who have been working so hard to establish industry to replace the jobs lost by the changes in anthracite mining.

We, naturally, feel that Hazleton is an ideal site for industry. That a firm such as Beryllium shares our enthusiasm is a tremendous boost.

Hazleton welcomes Beryllium as the newest member of our growing industrial family. We are confident that the association will be of mutual benefit.

Economic Problems of Northern Wisconsin

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. REUSS. Mr. Speaker, northern Wisconsin is one of those areas of our country where the economy has skidded a bit. Recently I had the pleasure of speaking in northern Wisconsin, and put forward a number of suggestions for stimulating the economy of the entire region.

The people of Wisconsin's north country are anxious to revitalize their area—to attract new business and industry, build up farming, broaden markets for forest products, and make fuller use of the region's great natural beauties and resources.

In these endeavors, county, State, and Federal Governments must work together to help the people help themselves. Local initiative is the first essential for economic revival. The problems must be recognized by the people, and if they want governmental advice and assistance, it should be available.

In this connection, I submit a helpful, forward-looking editorial from the Vilas County News-Review, of Eagle River, Wis., which evidences a real interest in finding solutions to the problems of northern Wisconsin:

MAYBE FARMING CAN BE BUILT UP

Northern Wisconsin counties have an economic problem that should be solved—and possibly can be solved under certain conditions.

There are many subpar areas in the headwaters country—the nonresort areas which are more common in Oconto, Iron, Forest, and Oneida Counties than they are in Vilas County—but which do exist to a lesser extent in this region also.

These are the areas of second-growth timber which still does not have a lot of market development, and small, rundown farms.

Congressman HENRY REUSS, of Milwaukee, visiting at Wabeno, recently, said: "The problems of northern Wisconsin are illustrated by a declining population, a large decrease in the number of operating farms and an average annual family income $800 below the nationwide average."

Farms can be built up again—more land can be cleared—but there are not as many people with the gumption or the money to tackle the jobs.

Whether we can pool our regional resources or whether the Federal Government can help—or the State set up a program, we don't know.

But during those transitional years, some sort of assistance and guidance must be present.

Farming declined primarily during the depression years in this region. And, of course, the cold winters discouraged a lot of farmers.

But now with new developments in cold weather clothing, better snow removal, farm equipment and even improved cold-resistant crops, farming could be a profitable enterprise in this region.

Farmland prices have climbed so high in the well-established farming regions that it now would be less costly for a person to buy timberland and clear it, and then fertilize it, going into farming here, than to shoulder an enormous debt for farmland downstate.

The other main obstacle to a rebirth in farming in the north country is the lack of local markets for the products raised—places to market the milk, the fruit crops, and other farm products.

But farm co-ops that are considering expanding, and new ones, could help overcome that problem. But in this field, we also need more help and guidance from experts.

Recently several editors and REUSS have suggested that some of these northern counties ought to set up a joint organization to explore the problems of building up the economy of the region.

It seems like a good idea.

Springfield, Ill., Postal Employees Pray That Ike Will Sign Pay Bill

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks I want to include the following article which appeared in the recent issue of the Illinois State Journal:

Local postal employees, about 200 of them, will participate in a moment of prayer at 3 p. m. today in the post office court for the purpose of asking divine guidance directed toward the signature of President Eisenhower on a bill proposing a salary hike for postal workers.

Rev. John S. Brockmeier, pastor of Sacred Heart Church, and chaplain for the Illinois Federation of Labor, of which postal workers are members, will lead the prayer.

Post office officials said there will be no disruption of mail service during the pause.

The postal bill has passed the House and is now before the Senate, where officials of the Letter Carriers Association said "it is assured of passage."

The bill calls for an $8 a week take-home pay hike for the average postal worker.

Status of Forces

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. BOW. Mr. Speaker, in a hearing before the House Armed Services Committee recently, the legal adviser of the State Department appeared in opposition to a bill under consideration that sought to pin point the responsibility of the administration for any future decision made to surrender one of our servicemen to a foreign nation for prosecution for an alleged offense while on duty. Legal Adviser Becker said "even if you tell us that we will get a bill, we propose to go down fighting."

Such determination would be very laudable if it was directed toward seeking a modification of existing agreements with foreign nations that would restore to the United States criminal jurisdiction over our servicemen on duty abroad. It would have been even more laudable if the State Department had shown similar determination when the first status of forces agreements were being negotiated and had determined to adhere to the principle of international law which our Government had followed for 150 years and had expressed in other negotiations with foreign governments. When our Armed Forces entered another country and were stationed there with the consent of such country, we claimed complete jurisdiction over them for all purposes.

Characteristically, however, the State Department will not admit error, and the determination only goes to defending its actions rather than correcting them.

Mr. Becker's testimony, generally, follows the line of other witnesses appearing for the executive departments, which is the scare argument being employed by defenders of the status agreements. One would think that the only reason we are allowed to have troops in other countries is that those nations want to try our erring servicemen in their courts.

Do anything to deprive our friends of the right to prosecute our boys they say, and all our foreign alliances will disintegrate. This is absurd, of course, but the defenders of the agreements do not care how contradictory their arguments may be. They will continue to repeat misrepresentations and half truths. They mean to go down fighting. Fighting against a restoration of the rights of the United States. Fighting against restoring the rights of our servicemen and the protection of our Constitution.

S. S. Kresge, Businessman and Philanthropist, Honored on 90th Birthday

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story from the Wilkes-Barre Record of August 1, 1957, as well as an editorial from the Wilkes-Barre Times-Leader of July 31, 1957, calling attention to and commenting on the outstanding career of S. S. Kresge, founder of the large chain of stores bearing his name and who established the Kresge Foundation, on the occasion of his 90th birthday:

[From the Wilkes-Barre Record of August 1, 1957]

S. S. KRESGE IS HONORED—MERCHANT OBSERVES 90TH ANNIVERSARY

S. S. Kresge, founder of the stores bearing his name, celebrated his 90th birthday yesterday at Mountainhome. A large delegation of officers and directors of the S. S. Kresge Co. traveled from Detroit to his home to attend a birthday luncheon in observance of the occasion.

One of his sons, Stanley S. Kresge, was a leader of the group.

The founder of the huge variety chain was born on a farm in 1867 at Bald Mount, Pa. His father had bought the farm at inflated Civil War prices, but when prices fell in the years that followed, the crops did not bring in enough to meet mortgage payments and the sheriff sold them out.

About a year later, when Sebastian was 10, his father bought a rundown, farmed-out farm of 113 acres for $1,500. Sebastian had to help pay for that with money earned teaching school beginning when he was 19.

"I taught country school, walked 2 miles every morning and evening, and got the magnificent sum of $22 a month," he recalled, "and the money went to my parents until I was 21 years of age."

However, young Sebastian decided against teaching as a career. So he went to Scranton in the fall of 1887 and got a job at Pat Ward's grocery store waiting on customers and delivering groceries with Ward's team. That was his last season of working on the farm.

Fortunately, between the ages of 14 and 20 Sebastian had a money-making bee culture enterprize of his own and after his first year as a bee keeper, he always had a cash reserve. In the fall of 1888 he took some of his bee money and entered Eastman's Business College at Poughkeepsie, N. Y., for a 4-month commercial course.

Then he held a succession of jobs that ranged from house-to-house canvassing and selling industrial life insurance to retail bookkeeping.

For 2 years he kept books in Howley Brothers hardware store in Scranton. Then a salesman suggested that the ambitious young Sebastian could very likely get a selling job with W. B. Bertels Son and Co. of Wilkes-Barre and make much better money.

Sebastian went to Wilkes-Barre to investigate. He took a job offered on straight commission with no guaranty of advance, paying his own expenses.

For 5 years he traveled the northeastern quarter of the United States selling tinware, living frugally and saving his money. In 1897 he was 30 years old, still unmarried and had been on his own for 9 years. He had saved $8,000 for his future business.

Mr. Kresge knew personally many other 5-and-10-cent-store pioneers, including F. W. Woolworth, G. C. Murphy, S. H. Kress, J. J. Newberry, and W. T. Grant. He sold merchandise to them. He approached John G. McCrory who had several stores in Pennsylvania and New York about a possible partnership and got an encouraging response.

In March, 1897 he opened a 5-and-10 cent store in Memphis, Tenn., with John McCrory as an equal partner. About two months later they opened a second store on Woodward Avenue in Detroit, which Mr. Kresge managed in 1899.

Later in 1899 Mr. Kresge traded his half interest in the Memphis store for full ownership of the Detroit store.

Sebastian Kresge's brother-in-law, Charles J. Wilson, stopped off at Detroit for a visit in 1900 and Mr. Kresge urged him to find a good location for a store not too far from Detroit that they could open together.

Charles Wilson found a good site at Port Huron, Mich. The two men each took a half interest in the location and it became store No. 2 in the chain.

The partnership lasted until the end of 1907. Then Wilson sold out his interest to Mr. Kresge, who branched out even farther by opening new stores and by buying out two companies that owned as many units as he already had.

Today there are 603 Kresge stores in the United States and 83 in Canada. The company's total volume of sales for 1956 amounted to $366,355,381.

With all this prosperity he remained then as thrifty as his Pennsylvania Dutch forefathers—and still is. A man of simple tastes and scale of living, at the age of 55 Mr. Kresge felt that he had acquired far more money than he had expected or even aimed for.

He recommended that he had become wealthy through a combination of favorable circumstances. With these things constantly in his mind and as a religious man, he felt a compelling obligation to utilize his wealth for the benefit of others.

After consulting friends whose judgment he trusted and respected, his ideas on the subject culminated in the establishment of the Kresge Foundation.

[From the Wilkes-Barre Times Leader of July 31, 1957]

S. S. KRESGE AT 90

As Sebastian Kresge, merchant and philanthropist, today looks back over an eventful life, spanning 90 exciting years, he has ample cause for gratitude. Providence has been kind to him in many ways. But the rewards have only been commensurate with his own investment of time, talent, and good will.

Actually, Mr. Kresge has had two careers—one in business and the other in the realm of philanthropy. He has been eminently successful in both fields.

Wilkes-Barre, of course, has a warm spot in its affections for him because it was here that he launched his career. For 5 years, 1892 to 1897, he was a tinware salesman for Bertels Co. of the city. He managed to accumulate a nestegg of $8,000, a sizable sum in those days, and with this capital he went into the chainstore business with results that constitute one of the most fascinating chapters in the history of American business.

But Mr. Kresge was not content to stop there. He has been just as much interested in putting his resources to good use. Camp Kresge of the Wilkes-Barre YMCA is one of many examples of his philanthropy.

On this milestone, Wilkes-Barre extends congratulations and best wishes.

The Gerry Murphy Case

SPEECH
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

(Mr. LONG asked and was given permission to address the House for 5 minutes and to revise and extend his remarks.)

Mr. LONG. Mr. Speaker, I had intended to ask the gentleman from Oregon some questions. I have been interested in his speech and in this case, and have given it a great deal of study. I do not wish to say anything against the gentleman's defense of his constituents. I think he has that perfect right. But there are some questions in my mind regarding the Gerry Murphy case that I believe in the next argument the gentleman presents to the House he can perhaps clear up.

I would like to know if Gerry Murphy was a licensed pilot in the United States and flying on a legal mission at the time Professor Galindez disappeared and believed to be a passenger in Murphy's plane. The facts are clear that 3 persons were engaged in the flight, 1 of them the drugged Professor Galindez and, of course, Murphy, the pilot. Now is it logical or even within the remotest bounds of reason to believe that Murphy would go to the trouble of renting a plane which I am sure the gentleman from Oregon knows he was not legally licensed to operate because of faulty eye sight, and take that plane to a point in New York, pick up 2 passengers, 1 of them obviously drugged, and make a flight apparently out of the United States with a last fueling stop in Miami without the details of who his passengers were and their purpose in making this type flight. In addition to the flight itself being unlawful, logic makes clear that the pilot was engaged in a kidnaping and further that Professor Galindez was known to have had a million dollars, one-half of which has been accounted for, the remaining $500,000 has never been accounted for and lends considerable credence to the kidnapping theory.

Mr. PORTER. Mr. Speaker, will the gentleman yield?

Mr. LONG. I yield.

Mr. PORTER. I would like to tell my distinguished colleague from Louisiana that I do not know whether he had a license or not to fly the plane. I do not think his failure to have a license warrants his being disposed of by the Dominican Government. As for the question whether he was a kidnaper or not, it is my opinion from the evidence I have heard from a great many sources, he did not know the identity of his passenger or exactly what he was doing. As I understand, the passenger was drugged and he had no way of knowing whether he was sick or whether he was there of his own free will or was actually being taken home. He did find out later, the

evidence shows, and he did boast in the bar in ——— Hotel to his girl—boast if you like or mentioned that he flew Galindez. That was after he read the papers. So if you want to take the worst possible theory and say, "Well, he was a kidnapper," I still say he should not have been killed at the order of Trujillo.

Mr. SPRINGER. Mr. Speaker, will the gentleman yield?

Mr. LONG. I yield.

Mr. SPRINGER. May I say I think the gentleman from Louisiana and I are in accord. We both stand against despotism as I am sure do the other 433 Members of the House of Representatives.

Mr. LONG. Of course, that is right.

Through the years, 27 of them, the people of the Dominican Republic have chosen their President in free elections. It is regrettable but nevertheless true that the Latin American Republics have been torn by strife and revolution throughout their histories. The Dominican Republic is no different and at this time there is an active government in exile seizing every chance and promoting every opportunity to attempt to strengthen their stand and at the same time weaken the position of the lawful government.

We have spent billions upon billions of the taxpayers dollars and worked long and arduously in the task of cementing friendly relations with other nations and especially our sister republics in the Western Hemisphere. To me it is preposterous to consider that any sort of a bona fide case can be presented against a legitimate and properly constituted government by a set of vague, farfetched, and unsubstantiated circumstances surrounding a notorious character who admittedly engaged in unlawful practices and could have well been a kidnaper and murderer. The entire thing is completely out of proportion.

Mr. SPRINGER. Also, may I say I have admiration for the gentleman from Oregon for the stand that he is taking for his constituent, if he believes he is right. As his Congressman, he ought to give him that kind of representation. I think the division of sentiment in the House of Representatives which I think is overwhelmingly against the gentleman from Oregon is that he is trying to alter foreign policy which over a long period of time has proven successful for this country and has proved to be in the best interest of the countries of the Western Hemisphere—in other words, for us to be in a state of nonintervention in the domestic and foreign affairs of other countries—sister republics with which we are united in this hemisphere. I think that is a fair statement more or less of where we stand; is that not right, may I ask my colleague, the gentleman from Louisiana?

Mr. LONG. If all that has been said regarding the Gerry Murphy case is true, then it is a clouded confession and really in my humble opinion has no place on the floor of the Congress. We are no doubt here dealing with a kidnaper and a murderer who himself met with the same fate that he probably caused others to meet. People who play with fire will undoubtedly someday themselves get burnt. According to his own confessions, the man Gerry Murphy had been engaged in many unlawful and cloudy cases. The fact that he had money does not mean that he had any connection with the Dominican Republic—it merely shows that he probably obtained money in other ways and not in an honorable manner.

Could the missing half million dollars of Professor Galindez be the cause of his death, and I might ask the question could it be possible that Gerry Murphy and his friend quarreled over this money? The man in his confession states that he did kill Gerry Murphy and then committed suicide. Is this not logical to any reasonable man? From where would the $50,000 sent to the Gerry Murphy family come, if not from this money? Under the law or any of the laws that I know anything about, you have to come into court with clean hands. You cannot come in with hands showing that a man took a drugged man and was interested in having him kidnapped and flown out of this country—a man who had been turned down for a license to fly an airplane because of his eyesight, you cannot then say that you come here with clean hands. That is the point I am making. I do not know anything about the guilt or innocence of Gerry Murphy. I am not interested in that at all. I think that our courts and the State Department are competent to handle these cases and I am willing to await their decision. The thing I am interested in is that I do not want to see a friendly government charged with having committed a crime, based on a set of circumstances involving a man who is in violation of the law himself, if he did fly the man down there. And if he did not fly the man down there, then you have no connection.

My colleague from Ohio says that what happened to Gerry Murphy is not pertinent to this case. I say that what happened to Gerry Murphy and his friend is the heart of this case and I say further that in all that I have read regarding this case I have never seen where the Dominican Republic is attempting in any way to cover up. There exists a note that this was murder and suicide yet some are not willing to believe it in the Gerry Murphy case. The note does explain how Murphy was killed but the Dominican Government in exile is endeavoring to overthrow the legally constituted government of the Dominican Republic and of course they want to twist the facts around in such a way to be most favorable to their case. I for one refuse to be hoodwinked by such a fantastic approach to this matter and shall continue in the future as I have in the past in doing all that I can to promote friendly relations with the Dominican Republic and all of the republics of Central and South America. These friendships, which are mutually shared are vitally important to the freedom of all of us. I repeat it is farfetched for us here in the Congress of the United States to condemn a friendly country and its officials on such vague and unsubstantiated evidence involving a kidnaper, a law violator and very possibly a murderer. Actually the Dominican Government in exile is fighting a desperate battle to gain recognition and discredit the lawful Dominican Government and in so doing have engaged in rank propaganda and the utilization of lobbyists here in the United States.

Mr. Speaker, in my opinion it behooves us here in the House of Representatives to be counted and let the world know as we did a few days ago that we do not believe one word of the charges made against the President of the Dominican Republic. I repeat, the thing that I am primarily interested in, and I am sure each Member of Congress is likewise interested, is the defeat of this attempt to discredit a friendly government who is our neighbor.

Mr. PORTER. Mr. Speaker, will the gentleman yield?

Mr. LONG. I yield.

Mr. PORTER. Of course, it is not what happened to Gerry Murphy or what the circumstances of his going there that I think are pertinent or the heart of this case. The heart of the case is that the Dominican Government gave to our Government an intentionally false explanation trying to cover up, many of us believe, their duplicity in the Galindez case. We are satisfied—we have a note down there that says it was a suicide and we are satisfied that the note is a forgery. The note was supposed to explain how Gerry Murphy was killed. It is a forgery. An official explanation of the Dominican Government has been rejected—rejected on the whole and part by part. They said Gerry Murphy had no money. Our people say he had plenty. They say he had no powerful friends. We say, and our evidence says, that the FBI and the State Department say that he had a good deal of money.

The SPEAKER pro tempore. The time of the gentleman from Louisiana has expired.

The Mail From Home

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. GWINN. Mr. Speaker, the New York World-Telegram's editorial on March 7, 1957, truly depicts "The Mail From Home." Many Members of Congress could add samples of taxpayers' indignant comments on the high budget. Here's a few from my own mail. Americans are "appalled," "had their hair curled," "more worried than about communism," "think it's a disgrace in the face of election promises," "fed up with outrageous budget," demand we "eliminate the pork in the budget," "protest rise in Government employees," "fire Mr. Folsom and his advocates of Federal aid to school construction," "protest advancing the welfare state," and demand that "the Hoover recommendations be adopted."

The New York World-Telegram said as follows:

THE MAIL FROM HOME

If there is to be any material reduction in Government spending, it will come because the people back home have got up their dander and told Congress what to do.

One of our Washington reporters went through a big stack of letters received by a Republican Member of Congress. All were indignant about high Government spending. We give you some quotes, culled out of the batch:

"I am a Republican, but I cannot take this budget. What has gone wrong?"

"Federal spending is fantastic. If we promote another depression the Republican Party is done forever instead of 20 years. Since I have to pay my obligations and live within my income I can't see why the Government shouldn't be expected to do likewise."

"I have talked to a great many people in the last couple of months, and in all my 68 years I have never heard as many people complain about anything as are now objecting to the way things are going in Washington."

"I have never voted for a Democratic President, but right now I would be between the devil and the dark blue sea if I had to vote."

"The Government budget is outrageous."

"I have been a dyed-in-the-wool Republican all my life and for the first time in my life I am ashamed of it."

"This tax thing is beginning to scare the hell out of me."

"You can be of great service to me and my family. I do not seek a loan, a job, or any special favor, or a gift. But I do ask that you use your influence to help reduce the President's suggested unreasonable budget."

"My God, I thought that we had opposed the Democrats in 1952 because their theory of Government was to tax and spend and now it seems the new republicanism is to show the Democrats how to do it."

Just some samples of what the people are saying. Are you listening, Congress?

But which special-interest group will be first to be put out or volunteer to get out of the public feed trough? None has volunteered lately.

The answer is to constitutionally limit the power of Congress to tax and spend as is proposed by the Dirksen-Gwinn—formerly Reed-Dirksen—amendment.

An American Legion Post Speaks on Immigration

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. DEROUNIAN. Mr. Speaker, at a meeting of the Williston Post, No. 144, American Legion, in Williston Park, N. Y., on July 18, 1957, the following resolution was passed:

Resolved, That the members of the American Legion Post, Williston No. 144, Nassau County, Department of New York, do hereby request that the McCarran-Walter Immigration and Nationality Act be preserved intact and does hereby oppose any and all further attempts now being made, or which may be made, to weaken, destroy or repeal said act either by direct weakening amendments to the act or by any other legislative procedures.

No Compromise on Freedom of the Press

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of July 31, 1957, commenting on the restrictions imposed by Secretary of State Dulles on American newspapermen who are desirous of covering Red China:

NO COMPROMISE ON FREEDOM OF PRESS

Addressing Wilkes-Barre Rotary Club yesterday afternoon, Joseph Collis, president of the American Newspaper Guild and assistant managing editor of the Wilkes-Barre Record, took exception to the restrictions placed by Secretary of State Dulles on American newspapermen, desirous of covering Red China. As a result of vigorous protests from the press, Mr. Dulles has modified his original ban to permit a limited number to visit China, but this did not meet with Mr. Collis' approval because it constituted discrimination.

Mr. Collis' view is shared by colleagues in the Fourth Estate who believe that the public has a right to know what is going on in the world, especially as it affects the American people. Under the first amendment to the Constitution, freedom of the press and of free speech is guaranteed. Mr. Dulles is violating the law of the land when he attempts to place obstacles in the way of newspapermen to keep the public informed.

Newspapermen have no exclusive claim to this right. It belongs to all the people and newspapermen share it as citizens, not just as members of the Fourth Estate.

Freedom of the press is fundamental to the preservation of the American way of life. Without this guaranty, all other freedoms soon would disappear. It is impossible to nullify one without jeopardizing the others.

There is more involved in this issue than freedom of the press, as such, and the people's right to know, important as that is. What must concern every American is the threat to all protection he enjoys under the Constitution if freedom of the press is suppressed, at first partially and eventually in its entirety.

We have seen how this has worked in dictatorships. Once the free press, as the guardian of the people's right to know, has been throttled, the way has been paved for other excesses until a nation is enslaved. That must not happen in America. It will not happen while there is left one newspaperman with the courage of his convictions and an awareness of the trust that is reposed in him.

Mr. Dulles' position is untenable, as Mr. Collis indicated. Face-saving devices will not satisfy the Fourth Estate. Freedom of the press involves too much to permit the existence of any curbs, obstacles or misunderstanding. It is written not only in black and white in the Constitution, but in the blood of generation after generation of Americans who have defended it and other principles on land, at sea, and in the air.

If Mr. Dulles does not know the meaning of these sacrifices, he will learn the hard way, for on the issue of freedom of the press there can be and will be no backward step, no compromise, no equivocation.

Answers to the Critics of H. R. 8002

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 25, 1957

Mr. REUSS. Mr. Speaker, claims have been made by the opponents of H. R. 8002 that its enactment would not result in sounder budgeting and more effective fiscal control. The Citizens Committee for the Hoover Report has prepared a memorandum which replies to these allegations and shows again how this legislation could result in more judicious spending and firmer control by Congress of the purse strings. Under permission to extend my remarks, I submit this memorandum, as follows:

ALLEGATIONS OF THE OPPOSITION

Critics of annual accrued expenditure budgeting have attempted to discredit the plan on two fronts:

First, by attacking the mechanics of the plan itself. A report compiled by a temporary subcommittee of the House Appropriations Committee is highly critical.

Second, by questioning the validity of unofficial savings estimates traced to supporters of Hoover Commission recommendations.

The first point concerns itself with anticipated difficulties in contract authorization. The Senate and House Committee reports accompanying S. 434 and H. R. 8002 rebut this argument. The House Government Operations Committee Report which accompanied H. R. 8002 stated:

"The bill permits appropriation bills to grant contract authority for an amount in addition to the amount of the appropriation in terms of annual accrued expenditures, but where the law authorizing such appropriations specifies a maximum amount this bill prohibits the total of any appropriation combined with such contract authority and accrued expenditures under any other appropriation from exceeding the total amount previously authorized for such purpose."

Similarly, the same careful and studied report of the House Committee on Government Operations on H. R. 8002 states, in part:

"When we are fully aware that contract authority will create commitments to receive goods in the future and that this has a similarity to outstanding orders under appropriations made on an obligation basis. The committee feels that the distinction is sufficient, particularly with the annual review, to warrant the adoption of the system."

Senator KENNEDY has stated in this regard:

"So far as concerns long-range appropriations needed for defense, they will be handled through contract authorization, but they will be subject to review each year. So I think this bill will give Congress far greater control."

In a statement to the chairman of the Senate subcommittee on April 10, 1957, Secretary of the Treasury George M. Humphrey had this to say:

"I believe contract authorizations for long-range projects are preferable over the present basis of appropriating, because they would

provide a means for a thorough review and examination of progress made and commitments outstanding at the end of each year when the current budget is being considered."

As to the second question relating to savings estimates, it seems reasonably safe to assume that if Congress can attain more effective control and review of these appropriations, a reduction in unexpended funds will accrue. Studies of the annual accrued expenditure proposal by Congress and the top administration financial officers elicited these opinions:

Senate Committee on Government Operations: "Full implementation of this legislation would tend to halt the continuing buildup of carryover balances of appropriations now available for expenditure at the discretion of the executive agencies, with little or no continuing control by the Congress."

House Committee on Government Operations: "It is quite possible, and the committee is hopeful, that the billions of dollars in carryover funds will be reduced to manageable proportions."

Treasury Secretary Humphrey: "It should reduce the vast carryover of appropriation balances * * *. Any means by which we can bring this carryover of appropriations under better scrutiny and review is a step in the right direction."

Comptroller General Campbell: "* * * The present appropriation basis tempts an agency to order things it may not really need because if it does not obligate all of its appropriation during the period the appropriation is available the unused portion is lost. The proposed method minimizes this temptation because the appropriated funds could be used only to pay for goods and services received during the year."

Assistant to the Comptroller General of the United States, Karney A. Brasfield: "It would establish a direct correlation between annual appropriations and expenditures. It would also vest in the Congress a much greater opportunity to control the level of operations during a particular budget year. This would mean the elimination of the vast carryover balances now available for expenditure at the direction of the executive agencies. And that perhaps is the most significant change on the one basis of appropriation as opposed to the other."

Former President Herbert Hoover, on February 5, 1957, said that there were savings estimated at over $3 billion to be had through enactment of annual accrued expenditure legislation. It should be noted that even a 1 percent reduction in the present carryover balance of $70 billion would result in a saving of $700 million.

A report of the Temporary Subcommittee of the House Committee on Appropriations describes the plan as "fraught with defects and disadvantages such as to render it impracticable." Further, the subcommittee reached this conclusion:

"Stating appropriations on the accrued expenditure basis would require supplementation in the form of contract authority for many programs. Changing over to the new basis would in no wise alter the operating realities or needs of the vast and complex programs of the Government. If operating necessities require advance commitment or obligating authority to premit of orderly program management and execution under present budgetary procedures, they will require similar authority under the accrued-expenditure method."

Contending that so-called carryover balances could be reduced under the present system if Congress so desired, the subcommittee declared:

"This situation arises from the generally prevailing practice of providing funds at the outset for the total estimated cost of a given item so that the Congress can clearly see, and have complete knowledge of, the full dimensions and cost when it is first presented for appropriation. An alternative (i. e., accrued expenditure plan) would be to appropriate in the first year only the amount estimated to be obligated in that year, leaving to later years installment appropriations to complete the necessary funding.

"But this sort of partial funding tends to be less than fully informative and in effect somewhat misleading. An instance arose on one of the appropriations bills last year wherein an amendment in the order of $1 million was adopted with ease to begin a project the ultimate cost of which will be in excess of $1 billion. Had the initial appropriation been a billion dollars instead of a million dollars, the outcome may well have been different."

The negative implications underscoring this statement apparently escaped its authors. For the statement clearly expresses a procedural shortcoming affecting a primary responsibility of the Appropriations Committee, notwithstanding the method used to state appropriations. If minor fund requests can be employed to conceal large spending projects, then the fault clearly lies in our own congressional mechanism. The committee's function as watchdog of the public purse demands complete study and full comprehension of all expenditures, large or small, partial or total. Once again the question arises as to whether Congress is really serious about controlling expenditures, and willing to take the attendant responsibilities.

WEIGHT OF THE EVIDENCE

In order to evaluate both sides of the issue, and to reply authoritatively to frequent contentions by opponents of the proposed budgetary reform, the following passages take up these contentions one by one and present the answers expressed in recent congressional hearings or by the investigating committees themselves.

Claim: "This would absolutely tie the hands of Congress so far as their having any control over the many wasteful projects that they are asked to consider."

Reply: Report of House Committee on Government Operations: "The Committee was impressed primarily by the improved management tool that the bill (H. R. 8002) provides and with the fact that the Congress can retain a more practical and effective control over appropriated funds by the year-to-year review which will be required."

Report of Senate Committee on Government Operations: "By establishing a direct correlation between appropriations and expenditures through the enactment of S. 434 (Senate bill corresponding to H. R. 8002), the Congress provides not only itself, but the President as well, with greater opportunity to control the level of governmental operations during a fiscal year."

Claim: "It would not result in reduction of carryover balances."

Reply: Budget Director Percival F. Brundage: "As of the end of each fiscal year, the balance of the accounts payable in each appropriation made on an annual accrued expenditure basis would be transferred to, and merged with, the next year's appropriation. The remaining balance would lapse unless otherwise provided in an appropriation act or other law."

Comptroller General Joseph Campbell: "It (accrued expenditure budgeting) vests in each Congress a much greater opportunity to control the level of operations during a particular budget year and would mean the elimination of the vast carryover balances now available for expenditures at the discretion of the executive agencies."

Claim: "The Departments tend to get better prices on things they buy when they have the appropriations in hand."

Reply: Max Medley, Comptroller, General Services Administration, in response to a question as to whether contractors would be more likely to drive a hard bargain under the annual accrued expenditure system: "Contract authority would be just as good to me as if the full appropriation had been enacted on an obligation basis. I can't visualize any contractors with whom we deal, which is a good many, who would take any objection to that."

Claim: "A dangerous bill, perhaps the most dangerous bill that has been brought before the House at this session."

Reply: Secretary of the Treasury George M. Humphrey: "Agencies will be required to determine their needs on the basis of costs and maintain their accounts on an accrual basis. When this is done, only then is it possible to begin to correlate what is produced and performed with actual cost for the same period of time. This change in accounting should provide an excellent basis for improvement in control over actual costs of operations and programs."

Franklin G. Floete, General Services Administrator: "We believe this is essential, and that congressional confidence and understanding can be fostered by limiting appropriations on the annual accrued expenditure basis initially to items covering long lead-time operations such as stockpile procurement, construction, and other capital items."

Senator FRANK A. BARRETT, Republican, of Wyoming: "This important step will, I believe, insure that this Government will operate on a wise and sound financial basis and will be getting maximum use of the taxpayer dollar."

Senator WALLACE *M.* BENNETT, Republican, of Utah: "By requiring appropriations to be stated in terms of annual expenditures rather than in terms of obligated authority, I feel the Congress would be able to exert much greater control over the purse strings of Government spending."

Senator JOHN F. KENNEDY, Democrat, of Massachusetts: "* * * This bill would permit a close examination of the program for the budget year on the basis of the actual cost of carrying on the program that year. Therefore, the budget would reflect even more accurately what the Government is doing each year."

Senator HUBERT H. HUMPHREY, Democrat, of Minnesota: "I feel certain that the proposal before us will aid the Congress in really coming to grips with the tremendous budgetary problem we have. * * * I think it is essential * * * that the Congress better equip itself so that it may evaluate every dollar that is being appropriated and every dollar that is being expended."

Claim: "It would not save the taxpayer a single dollar."

Reply: House Committee on Government Operations: "The committee * * * does believe that there will be savings in an amount now undetermined."

As has already been stated, former President Hoover believes that a saving of $3 billion can be effected if this legislation is enacted into law. And it should be pointed out again that a mere 1 percent reduction in the existing unexpended balances of $70 billion would produce a substantial saving of $700 million.

Here are examples of situations which H. R. 8002 would have prevented:

1. For fiscal 1953 Congress appropriated $12.5 billion for guns, tanks, and other military hardware in Korea. The war ended within a month of the new budget year. Years later, in May 1957, the Army was still spending the remainder of the $12.5 billion without any further congressional review. Information of this kind may be available under present practices and the Appropriations Committee may discuss it. But the significant point is that no positive congressional action is required by law.

2. In 1951, the Navy contracted to buy 528 fighter planes. By 1955, only 52 planes had been delivered, the design was declared unsatisfactory, and the contract was canceled. By then, however, $173 million had been spent—to little effect. Much of this money could have been saved by yearly review.

Two final points propounded by critics of this legislation should be noted.

The first is that H. R. 8002 reintroduces a system that has been used before and found to be unsatisfactory.

This is an allusion to a World War II practice of contract authorization and is not the same as the method proposed by H. R. 8002. In the past, authority had been exercised by Congress in the form of contract authorizations, but it is significant that these and later appropriations were stated in terms of obligational authority. The annual accrued expenditure basis of appropriations would state initial authorization in terms of broad authority to make commitments, while annual appropriations would be stated much more definitely in terms of accrued expenditures as each plan is developed.

When asked whether he thought that annual accrued expenditure legislation would be an improvement over the previous use of contract authority in other years, Comptroller General Campbell replied that it would:

"Because we will have an annual funding of the programs and a review at the end of each year of the contract authority to be sure that the programs and the objectives have not changed; and * * * perhaps another course should be taken in the contract work, probably under the same contract."

It must also be remembered that during World War II there was no system of cost-accounting such as that provided last year by Public Law 863. A great deal of progress has been made in the field of accounting in the last decade and present methods are wholly compatible with the annual accrued expenditure system.

The final point to be raised is that while the President may already have the authority to utilize the accrued expenditure basis for presenting budget estimates, it is a practical matter that Congressional appropriations be expressed in such terms. Even though executive agencies may present their budget estimates for a fiscal year on the basis of expenditures to be made that year only, Congress still could grant appropriations authority for expenditures to be made in future fiscal years.

In this instance, as in all others regarding control of the purse strings, the final determination is up to the Congress.

The Honorable Joseph R. McCarthy

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 19, 1957

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution by the Texas Republican State executive committee, in which I wholeheartedly join:

Resolved, That the Republican State Executive Committee of Texas extends to Mrs. Joseph R. McCarthy its sincere sympathy upon the death of her husband, the Honorable Joseph R. McCarthy, late a Senator from the State of Wisconsin.

Unanimously adopted by the Republican State Executive Committee of Texas, meeting in Dallas, Tex., the 9th day of May 1957.

THAD HUTCHESON,
Chairman.

Effect of Girard Case on Morale of Troops in Japan

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. BOW. Mr. Speaker, the inevitable effect of the Girard case on the morale of our troops in Japan is well demonstrated in the following excerpt of a letter from a soldier there to his father:

I am going on guard duty, starting the 21st, but ye gods, Dad, it seems to us over here that we are up against the old Indian game of heads, they win; tails, we lose, because if we act while on guard duty, we are apt to offend the Japs and be grabbed off and tried by them. If we don't act, we are certain to face a court-martial by our own outfit. We can't win.

The father's comment, in an open letter received by many Members, was this:

Those of you who are proud of putting our boys into that frame of mind, those of you who would enjoy going on guard duty on foreign soil with that conviction upon your mind, go ahead and kill such legislation as FRANK BOW's H. R. 8658. Let the rest of you who have a drop of red blood in your veins speak up, and not only speak, but act, for us parents and friends of those boys are waiting, watching, and listening. We may "simmer down," as Representative JOHN VORYS tells you but he forgot to tell you that we will not forget when the payoff comes.

I am confident he expresses the feelings of thousands of Americans, and if anyone objects to the emotional stress that has caused him to use rather heated language, let me remind you that the principal excuse for the sacrifice of Girard has been the emotional reactions of the Japanese. Under leave to extend, I include the text of a letter by the same individual:

JULY 23, 1957.

DEAR ———: Every letter I have received from you pertaining to my son, now serving with the Air Force in Japan, and to the William Girard mess has stressed the opinion that Girard would receive very fair treatment in a Jap court. Letters I have received from * * *, and many others all stress the same opinion.

I wonder * * * if there is one of you over there in either House, or any administrative office, who actually believes that us parents of those boys can be swayed in the least by any such incompetent, irrelevant and immaterial, soothing sirup-hogwash propaganda, or if you as individuals do not yourselves realize that such talk is exactly that, is nothing more than soothing sirup put out by the administration in a crude and, I would say, treacherous effort to take some of the sting out of and to divert attention from the real issue; namely, the fact that one of our boys who is offering the ultimate that anyone can offer to preserve our American way of life, was sold out, sacrificed, made an appeasement pawn of to a greater and more shameful degree than anything Neville Chamberlain would ever have dreamed of.

I can assure each and every one of you that my son would never be willing to trade, barter, and sell his pride and self-respect, his faith in the United States of America for a little lighter punishment. He would far rather receive a dishonorable discharge and any other penalty that could be given him via his own country standing firmly behind him than he would a complete aquittal from a Jap court after being made a shameful sacrifice and appeasement pawn by his own country, for when he sells or trades his pride and self respect, there is little left.

Is there one of you who actually believes that other bottle of soothing sirup, put out by the same people, to the effect that if Girard had not been doublecrossed and sold out to the Japs, so as to enable them to maintain their national pride, it would be necessary to recall our Armed Forces from all foreign countries? I have no alternative to assuming that John Foster Dulles, the world's all time champion, spineless appeaser, must fully believe that any and all American national pride can be washed down the drain, and should be, at any time it might interfere with that of any other nation. It is going to be both interesting and educational to a lot of us to ascertain just how many of you share that belief before we ever let loose of this Girard thing.

Any one of you who falls for the opinions of Representative JOHN VORYS, of Ohio, to the effect that you should sit on this thing long enough to let public sentiment simmer down will be making the most serious blunder of your political lives, for regardless of how much public sentiment simmers down, we of that public will not forget or forgive this thing and no one will be lulled to sleep but yourselves, and you will be awakened by us at the election polls.

Each of you has everything to win and nothing to lose by carrying this thing to the end of the road in efforts to enact some sort of legislation to make such a disgraceful sacrifice of an American serviceman impossible in the future, for the simple reason that your efforts can win you much support and lose you none. It is rather stupid, it seems to me, to fail to bet on a sure thing.

What are you going to do about it?

Many copies of this letter will be mailed out and I would appreciate hearing from any of you who receive one. I would ask only that you not insult my intelligence and that of my son by passing along any more of that soothing sirup while you fall into line and blissfully refrain from mentioning the real issue.

Cordially yours,

———.

The Late Senator Joseph McCarthy

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. GWINN. Mr. Speaker, the principal city in my district is Yonkers, N. Y., with a population of about 165,000 people.

I am honored to be asked to insert a copy of the resolution by the common council of the city of Yonkers into the CONGRESSIONAL RECORD, memorializing that courageous patriot, the late Senator Joseph McCarthy, of Wisconsin.

The resolution follows:

RESOLUTION 539, 1957

Whereas Almighty God, in his infinite wisdom, has called to his eternal reward the Honorable Joseph R. McCarthy, United States Senator from Wisconsin; and

Whereas Senator McCarthy was a stalwart and a bulwark of opposition to the international forces of communism which was rampant in these United States at a very critical time, namely, during and immediately following World War II; and

Whereas he was an outspoken and forthright citizen, who undertook on a most unpleasant task at great risk to his personal prestige; and

Whereas he will long be remembered as a fighting and courageous patriot, with a firm conviction, the temerity, sagacity, and fortitude to defend that conviction against what appeared to be overwhelmingly insurmountable pressures and odds; and

Whereas he was a champion of democracy, and even in death is admired by both friend and foe: Now, therefore, be it

Resolved by the Common Council of the City of Yonkers in meeting assembled, That this common council does and it hereby expresses its heartfelt sympathy and sincere condolences to the bereaved members of his family in this their great hour of sorrow; and be it further

Resolved, That this resolution be inscribed on the record of this common council and the city clerk be directed to forward a copy thereof to his bereaved wife, Jean McCarthy, and when this council adjourns, it do so in respect to the memory of the late Joseph R. McCarthy, United States Senator from Wisconsin.

Plea for National Grange Headquarters

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. SCUDDER. Mr. Speaker, today I introduced a bill, H. R. 9092, which will prevent the General Services Administration from acquiring by condemnation the property which presently houses the National Grange headquarters here in Jackson Square.

The National Grange purchased this property in 1941 with funds which had been raised for this purpose through activities carried on by the more than 7,000 local subordinate granges throughout the Nation. Back in 1941 the cost of acquiring this building was high, but it could in no way compare to what it would cost today.

The Grange site that GSA is contemplating taking over will be used only for a lawn and flower garden alongside the proposed new Federal building. The Government expects to pay $500,000 for this property.

At this time when we hear so much about economy, it seems to me that the taxpayers would certainly resent having the Federal Government spend approximately $150 to $200 a square foot for the purpose of grass and flowers.

Drinking and Christian Living

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. ROGERS of Texas. Mr. Speaker, like every Member of this body, I receive frequent communications from the valued constituency in my congressional district. These communications purport to a variety of subjects and issues and form an excellent guide on legislative matters as well as presenting a vivid picture of the strohg moral character of the people whom I have the honor to represent.

I am in receipt of a request from Mr. Howard M. Payne of Dumas, Tex., in which he enclosed a copy of the first-place prize winner in an essay writing contest sponsored by the Methodist Youth Fellowship Conference Board of Temperance. Mr. Payne asked me to arrange the insertion of this winning essay in the CONGRESSIONAL RECORD for which I request unanimous consent. The treatise was written by Miss Mary Helen Troutman of Dumas, Tex. Miss Troutman is a member of the First Methodist Church in Dumas, a graduate of Dumas High School, and is most active in her local MYF. She plans to enroll in college in the fall and will major in education.

DRINKING AND CHRISTIAN LIVING

Will you come with me and visit my city—Any Town, U. S. A. It's a beautiful city; the buildings are modern; and rambling ranch-style homes, the well-kept yards, the running roses in full bloom—truly a beautiful sight. I'm proud of my town. I'm proud of the friendly atmosphere and of the neighbors I associate with.

Coming into my town by the modern highways, I am amazed by the signboards on either side of the road. There's a large sign on the left. Look at the colors; see how they catch your eye? That beautiful lady in the picture is speaking to me. "Stepping out tonight? Let White Horse carry you smoothly." Look at that one on the right—"May you always have an eagle in your pocket, a turkey on your table, and Old Crow in your glass." Or that one over there advertising the Christmas season. "The toast of the holidays * * * wonderfully smooth, rich, warm-hearted Ancient Age, a superb gift in its brilliant holiday decanted."

Here and there are signs advertising business firms of my town. I strain my eyes; and finally, there's the sign I've been looking for. It's a small sign and it isn't decorated as lavishly as the others; but it's my advertisement to the passing motorist because it says, "Welcome to the Methodist Church."

As I step into the den of my home, those cute little bears on TV are singing, "From the land of sky blue waters comes the beer refreshing." Disgustedly I turn to the other channel. "You have exactly 15 seconds to reach for a bottle of Lone Star, we'll wait." I turn it off.

Sitting down, I begin to think about the liquor question. Is it wrong to drink? The TV and radio say it isn't. In fact, they make it look very attractive. The newspapers and magazines say it's all right. Some of my friends drink and seem to have such a good time. Am I missing out on the fun? Am I an old fogy? What about the crowd? Should I go along with them? A lot of the kids I know are going along and they seem to be as well off as I am.

What was it the preacher said the other day about what the Bible says about drinking? I pick up my Bible and begin to turn through the pages. In Romans I find: "It is good neither to eat flesh, nor to drink wine, nor anything whereby thy brother stumbleth, or is offended, or is made weak." In Ephesians it says, "And be not drunk with wine, wherein is excess; but be filled with the Spirit, speaking to yourselves in psalms and hymn, and spiritual songs, singing and making melody in your heart to the Lord; giving thanks always for all things unto God and the Father in the name of our Lord Jesus Christ."

I begin to search through the Old Testament. In Proverbs I find an interesting verse: "Wine is a mocker, strong drink is raging and whosoever is deceived thereby is not wise."

Is this the answer? Have my friends read these passages? Have they really searched the scriptures for God's answer or have they fallen into the hands of the clever advertisers of the liquor industry? Sure the songs and ditties are cute, why shouldn't they be, with all the millions that are spent each year in telling us that drinking is the right way?

I'll not be misled by their catchy tunes, by their signboards, and by the full page newspaper and magazine advertisements.

I close my eyes and I see Jesus hanging on the cross. He died that day that we might live. Is this the life that he intended us to have? And I cry out, "O Lord, forgive them for they know not what they do." O, Lord, what can I do? How can I show my friends that they are traveling the broad road that leads to an everlasting hell? How can I show them the true fun and happiness they're missing?

The answer comes back: "You must continue to pray for your friends; you must set the example by living a true Christian life every day, so that they can see Christ in your every word and deed and won't have to question what's right or wrong.

Yes; I love my town. I love my country, and the freedom that I enjoy; but so many freedoms have ended with the first drink. How many freedoms will we have if we continue to let strong drink guide our lives?

I will not be destroyed by this demon. I will not degrade my character, destroy my mind, make a fool of myself before my friends by not knowing what I'm doing or saying. I will not bring unhappiness upon myself with false fun, but I will be guided by the Holy Spirit. I will set the example and with God's power and help, I will bring my friends into the knowledge of the Lord Jesus Christ and His way of life.

I will work diligently and I will urge my friends to not give up the fight until the highways leading into my town shall be free from the filthy liquor and beer advertisements that mar its beauty.

I will keep my faith and trust in God, knowing that He will hear and answer my prayer, until we have won the fight against this great evil. The greatest reward I could ever wish for is to hear Him say as I stand before the judgment bar of God, "Well done, thou good and faithful servant; thou hast been faithful over a few things, I will make thee ruler over many things: Enter thou into the joy of thy Lord."

A Farmer Tells the Facts on Waterpower

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. ANDERSON of Montana. Mr. Speaker, waterpower is a mighty important matter in the Nation and particularly in the Mountain West where I represent the eastern district of Montana. It means great things for my people, and particularly the rural folks. It means employment, a prosperous economy, a true exemplification of how the American way of life can be assured. We are trying here in Congress to obtain a multimillion dollar value dam site for a mere $5 million. This site, owned by the Crow Indians, whose land was granted them by a solemn United States treaty, is on the Big Horn River of southeastern Montana, near Billings. Construction of a long-projected and promised multipurpose dam there will bring power for REASs, irrigation water, recreation, and above all prosperity while such a dam is in the building and for the generations to come who can utilize the electrical energy and water. The picture in the Billings area now is dismal with unemployment. In this city of around 50,000 there were as of the first day of July, 1,579 persons seeking work, an increase of 275 percent over the same date in 1956. That is a major reason for early action on Yellowtail dam site, an action whose other ramifications are best illustrated by a letter I received today from a farmer constituent, also in eastern Montana. It gives an earnest, illuminating view by one of thousands of rural residents on just what this entire issue of water and its uses really means.

The letter is as follows:

BARKER FARM,
Savage, Mont.

Hon. LEROY ANDERSON,
Representative from Montana,
Washington, D. C.

DEAR MR. ANDERSON: Isn't there anything you can do legally to keep that Hells Canyon Dam project open for further discussion in Congress?

It seems the administration is for the power companies. They should not be if they knew the facts.

You can tell the world I am a Republican, as my father and grandfathers were before me. They voted for Lincoln, the first Republican President and before that they were Whigs, clear back to the one who was killed at Bunker Hill.

I own and live on a farm my father left for me in the lower Yellowstone Valley, and I am all out in favor of Uncle Sam running the big water power projects. Why? Water belongs—a priority to the land where the rain falls—to us, collectively who own the ground. My farm is irrigated from the intake dam, about 35 miles up the Yellowstone. Any water which escapes down the creek goes back to the Yellowstone, thence to the Missouri and piles up at Garrison Dam to irrigate some North Dakota farmer's land and furnish power to cook his dinner and run the pump at his cattle corral.

No government has the moral right to dispose of that water to a private company to make money out of it. We, the people, own that water collectively. Mr. Eisenhower cannot be advised as to how little the northwestern power companies have done for this community.

Ever since this valley was settled the main powerline of Montana-Dakota Power ran within 200 feet of the northwest corner of our farm and my father wanted electricity. The Montana-Dakota Co. wanted $1,900 and the cost of a transformer to run wire the few rods to our gate. This was not an isolated district. On that first half mile of road there were 2 farm homes, a 2-room country schoolhouse with full concrete basement, and the school teacherage. If the power company ever did anything to build up eastern Montana, except in direct reference to their own bank balance it does not appear on the record. None of them do in the Northwest.

REA came along from Fort Peck Dam. My stock cost $100 and they bring power to my yard pole. We pay for our debt, pay interest, pay taxes, and are about $180 ahead of schedule on paying our debt to the United States.

Respectfully,

PEARL BARKER.

Two Great Senators

EXTENSION OF REMARKS
OF
HON. LeROY H. ANDERSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. ANDERSON of Montana. Mr. Speaker, occasionally there appears a newspaper article which evokes a warm glow of appreciation for our fellow men. Such an article appeared in the Great Falls (Mont.) Tribune, July 29. I was pleased and happy that two great Senators for whom I hold great admiration, should be accorded such recognition for their outstanding personal qualities.

The newspaper article follows:

STATE'S SENATORS STAND OUT IN BUSY CONGRESSIONAL WHIRL

WASHINGTON.—Anyone from Montana who happened to visit the United States Senate in Washington recently, would have been pleased. Both Senators from Montana were there in fine form. To them, it was just another routine day and they could have been away playing golf, or sitting in their offices, or in their homes, like so many other Members of the Senate. They would not have had to be on the job as they were. Nothing involving Montana was at stake.

But they were there and they stood out. They stood out for different reasons: Senator MURRAY, mainly, for his quiet, dignified presence in his seat; Senator MANSFIELD for being everywhere at once, quietly, efficiently, Johnny-on-the-spot as the Democratic Party whip. MURRAY, elegant and senatorial; MANSFIELD, scrawny and tireless.

Many Montanans who have written to Senator MANSFIELD about something or the other have received in reply a letter from him ending, "Must go now." The homely closing takes on new meaning after anyone has seen him in action. He is always on the go. Everyone knows a Senator's job is a big one: Tall piles of material to read on every bill introduced; grueling committee work hammering bills into the shape of good law; heaps of mail from the home State to read and answer; people from the home State to see and their problems to consider; ever-present publicity men and women to keep in mind; ever-present social climbers, and always, the matter of playing party politics to remember. But not everyone realizes how much every Senator must know about matters that have nothing to do directly with his own State.

For instance, one of the matters before the Senate on the afternoon of June 27 was an irrigation and flood control project for Colorado called the Fryingpan-Arkansas project. Senator MURRAY as chairman of the Senate committee responsible for such matters, read the opening statement in its support.

To observers in the Senate it is shocking at first to see how no one listens to the Senator who is talking or reading to them. Talking aloud, whispering, visiting, traveling in and out of the chamber to the cloakrooms and back goes on continuously. What is said or read is printed in the RECORD for reading next day. But there was less disturbance than usual while Senator MURRAY was reading. He has been in the Senate many years. By his very age and seniority he gets attention and has prestige that very few others have.

After MURRAY's opening statement, MANSFIELD went into action: A conference here, a conference there, a signal to this one, a signal to that one; a member to be brought in from the hall, or cloakroom; an order of business to bring up here, a point to make there. He was all eyes and ears.

He had eyes and ears for everything, and eyes and ears were turned toward him. At any moment he could bring a Member from across the Chamber by beckoning one finger; a wave of an arm could start the debate going one way or the other.

It is, of course, MANSFIELD's job to keep things moving. Fellow Members of the Democratic Party have chosen him to do that. He is the whip. But he would not have been chosen if he had not had the conscientious industry in the first place.

"Mr. President, I ask unanimous consent for the present consideration of Calendar No. 543, House bill 4748."

"Mr. President, I ask unanimous consent that the Chair lay before the Senate the unfinished business."

"Mr. President, I move that the Senate stand in adjournment until 11 a. m."

And so on. Always MANSFIELD from Montana riding herd—eyes on the clock, eyes on the calendar, eyes and ears on everyone else, ready on his feet.

There is more of a businesslike hustle in Senator MANSFIELD's office than the comfortable cordiality there is in Senator MURRAY's office where deep-voiced Lois Elliott of Cut Bank and Polson greets the visitor from Montana. Lois has been with Senator MURRAY for 21 years and she has a way of making the visitor feel that she—and the Senator—are there for the sake of the visitor. And next door there is Vic Reinemer from the University of Montana who also lets the visitor from Montana know ways in which the Congressional offices can help. But visitors from Montana in the Capital also know that MIKE MANSFIELD is there—on the job for them. Montanans can be proud.

The Bar Tells Congress What To Do

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 27, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I present an editorial entitled

"The Bar Tells Congress What To Do" which appeared in the Wednesday, July 31, 1957, issue of the Shreveport Times, Shreveport, La. I feel all the Members will be interested in reading this thought-provoking editorial. It is as follows:

THE BAR TELLS CONGRESS WHAT TO DO

It took the American Bar Association quite a while to get around to the question of what to do about the rash of radical and revolutionary United States Supreme Court decisions in recent years, but once having made the journey the organization of bar and bench moved with considerable emphasis.

First, the bar association's house of delegates, meeting in London, England, overwhelmingly rejected a resolution calling on all members to support decisions of the Supreme Court, right or wrong, and, in effect, either to commend such decisions or say nothing.

If such a policy were followed by everyone in relation to activities of all branches of the Government, the Nation soon would be in dictatorship or disintegration. Yet this resolution had the earnest support of some outstanding attorneys and of a number of Federal judges at the district and circuit court levels.

But the most important action at the London convention was the acceptance by the House of Delegates of a report from its Special committee on Communist activities, which dealt deeply with Supreme Court decisions which help Communists in defying investigation, trial, or conviction, and in carrying on their conspiracy to destroy the United States Government by force.

This committee was headed by Herbert R. O'Conor, former Governor of Maryland and past United States Senator from that State. The report was an emphatic one in pointing to dangers to the Nation from recent Supreme Court decisions, but it was equally emphatic in voicing no attack on the Supreme Court itself or on the Supreme Court system as part of the American form of government.

The report took the position that the Supreme Court has handed down certain decisions which are final as to Court procedure, but that the Nation must recognize the dangers embodied in present laws and Constitution provisions which brought these decisions. In other words, the decisions were not held to be wrong judicially but were held to point to wrongs that must be remedied either statutory or constitutionally.

The basic theme of the report lies in its warning that the maintenance of theoretical individual rights as paramount to the rights of all people of a nation may bring destruction of the nation unless statutory or other changes are made to prevent such a result.

The report brought this out very clearly in the following paragraph:

"If the courts lean too far backward in the maintenance of theoretical individual rights, it may be that we have tied the hands of our country and have rendered it incapable of carrying out the first law of mankind—the right of self-preservation."

That is an effective answer to the trite and illogical contention of leftists and so-called liberals—raised especially in the McCarthy days—that it is better to let a thousand guilty persons go free than one innocent person should suffer.

That philosophy had its good points as an idealistic proposal dealing with the ordinary run of not too important wrong doing. But when the issue is self-preservation—of 160 million people of the United States as well as tens of millions elsewhere in the world—certainly it is better that one innocent person or a considerable number of innocent persons should suffer than that all others should be endangered.

That, in effect, is what the American Bar Association report says—that protection of the individual cannot be carried to the point where it makes a people incapable of carrying out "the first law of mankind—the right of self-preservation."

And some of the recent Supreme Court decisions on communism definitely are in the direction of tying the hands of the Nation in seeking its own self-preservation.

The bar association report dealt especially with the Supreme Court decision that anti-Communist legislation is a field preempted by the Federal Government and that States cannot make laws in that field. The report calls on Congress to give the States, by statute, the right to protect themselves with anti-Communist legislation.

It also calls for congressional statutory action to correct the evil effects of the Supreme Court decision on opening secret files of the FBI to defendants. Unless this is done, the effect of the Supreme Court decision would be that any crook or traitor or enemy who has been investigated by Federal agents can rummage through any and all Federal files at will if any of them are to be used against him in court.

Again the bar association report emphasizes over and over the importance of congressional committee investigations and that these committees should have—using the committee's words—"the same freedom to investigate, communism or anything else, that these committees have always had to investigate businessmen and labor leaders." Again, the report calls on Congress for legislative action to protect its own investigations and its right to make them.

The report also points to the dangers in the Supreme Court decision that a person cannot be deprived, by a State, of a license to practice law because of past Communist affiliations. The report upholds the right of bar associations and similar bodies to exclude persons who refuse to testify fully and frankly about past activities in furtherance of Communist plans.

Further, the committee report calls on Congress to remedy another Supreme Court decision by correcting the notion that the Smith Act was not intended to prohibit advocacy and teaching of forceable overthrow as an abstract principle.

Everybody in Congress who voted on the Smith Act knows that it was intended to bar any teaching of overthrow of the Federal Government by violence, whether that teaching urged action or simply was abstract argument. But the Supreme Court held that Congress meant otherwise, thereby opening a loophole for Communist enemies of the Government.

The American Bar Association house of delegates not only has told Congress that remedy for what the Supreme Court has been doing rests with Congress itself, but it has pinpointed exactly what should be done. It has emphasized to Congress that on its shoulders rests self-preservation of the Nation.

George Humphrey Retires as Secretary of the Treasury With Flying Colors

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. FULTON. Mr. Speaker, when a person has performed a real service for our good country in one of the highest and most responsible positions a citizen can hold, we in Congress should certainly pause to express our appreciation and gratitude in behalf of the American people. In that capacity I wish to pat on the back and thank our good friend, Secretary of the Treasury George Humphrey, who has turned in a topnotch performance in the Eisenhower Cabinet.

As a friend of George Humphrey and his good wife, Mrs. Humphrey, it is a pleasure to tell them how much their genial and friendly personalities have added to the Washington scene during the years that they have spent with us as members of the Eisenhower official family. We in Pittsburgh welcome George Humphrey back to the steel business in our area and know that he will carry on his fine tradition of service to our economy and to the American people as one of the leaders and statesmen of the basic steel industry which so vitally affects our United States economy and our very United States security and defense upon which we all depend.

As I believe that Secretary of the Treasury George Humphrey is leaving with all flags flying, we salute this influential official and President Eisenhower's Cabinet and official family, and wish George Humphrey and Mrs. Humphrey every success and happiness in the future.

I close my remarks with the following article:

GEORGE HUMPHREY RETIRES AS SECRETARY OF THE TREASURY WITH FLYING COLORS

(By Marquis Childs)

WASHINGTON, July 30.—With high prosperity and virtually full employment throughout the Nation, George M. Humphrey is retiring as Secretary of the Treasury to return to the steel business.

There are critics who question the validity of this prosperity and others who take a jaundiced view of tight money and the rising spiral of prices. They believe that Humphrey's successor, Robert B. Anderson, is inheriting a task calculated to frighten the most stouthearted champion of the Humphrey policies.

But the Secretary is leaving with all flags flying. For 4½ years he has been the most influential figure in President Eisenhower's inner circle. While he picked his own successor, he intends to stay away from even the remotest suggestion of the influence on Anderson.

Humphrey felt he owed it to the National Steel Corp. to take over its direction, having overstayed his time in government, as he had originally fixed it, by 2½ years. What is more, he has long been telling the President that the old men in his Cabinet should make way for younger men. Otherwise, as Humphrey has said again and again, the administration will end up looking worn out and tired, facing the past rather than the future.

As the retiring Secretary sees it, he has a big job to do and he will concentrate on it. His only public appearances in the coming year will be 2 or 3 speeches at Republican fund-raising dinners and they will be straight party line stuff.

Many attempts have been made to pin him down in the political target area. For a variety of reasons these have largely failed. One reason is his warm, expansive personality. Another is the kindliness of the press toward this business administration. Humphrey has been more or less immune even as the fiscal policies of the administration have come under increasing fire. Economic

analysts out of the Roosevelt-Truman era, such as Leon Keyserling and Robert Nathan, are saying that the overall figures on prosperity conceal what is really a selective prosperity and a selective deflation with the rate of growth of production falling far short of the growth in the working force. They point to price rises in capital goods—20 percent for iron and steel before the latest $6-a-ton increase—far in excess of wage increases. And their charts show that capacity to produce is more and more outrunning the ability of the consumer to buy.

The most direct attack came in an investigation by the Senate Finance Committee with Senator ROBERT S. KERR in his most flamboyant Oklahoman style firing away at the Secretary. Humphrey was not happy under that fire. In the middle of it came a report by a subcommittee, headed by Representative WILBUR MILLS, of Arkansas, of the Senate-House Economic Committee recognizing the tight-money policy as a weapon against inflation. Much of the steam went out of the investigation, which had in any event lacked resources to pry behind the obvious.

The balance in the general fund of the Treasury on January 20, 1953, when Humphrey came in was $4.6 billions. His predecessor, John Snyder, with whom he worked closely in the transition period, had left the administration plenty of turnaround room. Five months later, however, a deficit of $9 billions for the fiscal year ending June 30 pushed the national debt close to the ceiling fixed by Congress.

Humphrey steps out with $5.4 billion in the general fund and 2 balanced budgets behind him. He takes satisfaction that Anderson will have no major financing to do until December. These are impressive facts as the command changes. If Humphrey has been hurt by the charges that his own wealth increased in the general prosperity and that members of his family profited from his position he gives no sign of it. For a long time to come his strong influence in cutting back military, foreign aid, and domestic spending will be weighed in the balance of America's position in the world.

Why Annual Accrued Expenditure Budgeting Is Needed

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 25, 1957

Mr. REUSS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include a memorandum prepared by the Citizens Committee for the Hoover Report setting forth the arguments in favor of H. R. 8002 to establish a system of annual accrued expenditure budgeting. I commend it to my colleagues' careful attention:

MEMORANDUM REGARDING H. R. 8002, THE ANNUAL ACCRUED EXPENDITURES BILL INTRODUCED BY REPRESENTATIVE PAUL G. ROGERS, OF FLORIDA

Recommendation No. 7 of the Hoover Commission's Report on Budget and Accounting is as follows: "That the executive budget and congressional appropriations be in terms of estimated annual accrued expenditures, namely, charges for the cost of goods and services estimated to be received."

Under this proposal, appropriations would be granted only for the oncoming fiscal year instead of in a lump sum for an entire program as is the present practice.

Under the present system, appropriations are granted to cover the entire cost of, let us say, procurement of certain military equipment. The money is available over a period of years. If the program is modified or canceled, money may be disobligated and spent for other purposes. Under the Hoover Commission's proposal, the executive agencies would be authorized to enter into long-range contracts, but money would be made available only for 1 year. All long-range programs would be reviewed annually by Congress. If the program should be canceled or modified, the funds could not be made available for other purposes without the approval of Congress.

The present amount of such carryover appropriations is estimated at $70 billion, or roughly equivalent to the budget for the fiscal year 1958.

STRONG BIPARTISAN SUPPORT

Annual accrued expenditure budgeting has drawn the vigorous support of outstanding leaders, both in Government and in private life. In a public statement on August 1, 1956, when he signed Public Law 863, President Eisenhower urged the supplementing of this legislation with enactment of similar legislation on annual accrued expenditures. President Eisenhower in his budget message to the Congress on January 16, 1957, declared:

"It is also recommended that the Congress give further consideration to legislation which would place Government appropriations on an accrued expenditure basis."

On April 18, 1957, in a message to the Speaker of the House, President Eisenhower again urged passage of legislation on annual accrued expenditures as part of a 7-point program. Later, in letters to Vice President NIXON and House Speaker RAYBURN on June 17, the President gave high priority to this measure in urging "earnest consideration" of five pending bills based on Hoover Commission proposals.

The Government's top financial officers—Secretary of the Treasury Humphrey, Budget Director Brundage, and Comptroller General Campbell—have similarly endorsed the plan. Statements such as the following have been forthcoming from these officials:

Treasury Secretary Humphrey: "This change in accounting should provide an excellent basis for improvement in control over actual costs of operations and programs."

Budget Director Brundage: "I would like to emphasize that a major advantage of this proposal is the improved program control that is made available to the Congress and the executive branch."

Comptroller General Campbell: "This method, I believe, will provide greater congressional control of the purse strings than the present method of appropriating funds in amounts to cover an entire program, which may not be expended for several years."

In the Senate, 47 Members joined Senators KENNEDY, Democrat, of Massachusetts, PAYNE, Republican, of Maine, and BYRD, Democrat, of Virginia, in sponsoring the necessary legislation.[1] On June 5, 1957, the Senate approved this bill, S. 434, in an unanimous voice vote. In connection with this action Senator KENNEDY said:

"The bill does bring governmental accounting more nearly into line with standard business practices, by providing that expenditures shall be placed on an annual accrued basis. As I have previously stated, it will prevent a great carryover of funds, both with respect to foreign aid and defense, which makes it almost impossible for us to know exactly what we are doing, and the effect our actions will have on the amount of money available to the executive branch * * * this bill, in combination with the cost-basis bill which was passed last year, will give us far greater control over the amount of money the Government will spend in each year. * * * I think this is the most important budgetary reform in the past 15 years."

In the House of Representative, 12 Members have sponsored similar legislation. They include Representatives LIPSCOMB, Republican, of California, ROGERS, Democrat, of Florida, BENNETT, Democrat, of Florida, FASCELL, Democrat, of Florida, CHURCH, Republican, of Illinois, REUSS, Democrat, of Wisconsin, WRIGHT, Democrat, of Texas, BOLAND, Democrat, of Massachusetts, BOYLE, Democrat, of Illinois, BYRNE, Republican, of Illinois, BASS, Republican, of New Hampshire, and WESTLAND, Republican, of Washington.

The Rogers proposal, H. R. 6002, would install accrued expenditures bringing budgeting for a 4-year trial period. The Senate bill establishes no time limit.

The ranks of private citizens supporting this recommendation include former President Herbert Hoover, Chairman of the Hoover Commission; Solomon C. Hollister, Joseph P. Kennedy, Sidney A. Mitchell, and Robert G. Storey, distinguished Americans who served on the second Hoover Commission; Mr. J. Harold Stewart and the members of his task force; the American Institute of Accountants, the leading national organization of certified public accountants; and the Controllers Institute, a respected professional organization.

This is not to mention the countless thousands of thoughtful citizens in all parts of the Nation who have written to their Senators and Representatives urging enactment of this legislation; or the alert editors and editorial writers who have contributed tremendous support to the individual efforts of their citizen readers.

Here are just a few samples from a tidal wave of current editorial comment:

Washington (D. C.) Evening Star: "We hope the House will follow the Senate's example and thus assure budgetary and accounting improvements of the sort already firmly established in private industry."

Hartford (Conn.) Courant: "It has been estimated that $70 billion, almost equal to the entire new budget, is available in carryover funds. If Congress had authority to take a new look at the need for these expenditures, it might well make substantial savings * * * the case for closer congressional control of spending appears overwhelming. If the Government waste is to be controlled, this measure is imperative."

Chicago Sun-Times: "In a Congress that has been so concerned about saving taxpayers' dollars, it is unthinkable that any sensible effort to economize merely by the introduction of better controls and cost-accounting procedures could fail."

Richmond (Va.) Times-Dispatch: "Real progress in Congress toward final passage of at least one key measure recommended by the Hoover Commission is being made, with President Eisenhower's support. * * * The key measure referred to is the plan to limit appropriations to 1 year. * * * The people should demand that these and other plans for simplification and economy be put into effect in our vast and costly Federal structure."

[1] The Senate cosponsors were: Bridges, McClellan, Jackson, Symington, Humphrey, Thurmond, McCarthy (deceased), Mundt, Smith (Maine), Cotton, Martin (Iowa), Allott, Anderson, Barrett, Beall, Bennett, Bible, Bush, Butler, Carroll, Capehart, Carlson, Case (New Jersey), Case (South Dakota), Chavez, Curtis, Dirksen, Flanders, Green, Holland, Hruska, Ives, Lausche, Magnuson, Martin (Pennsylvania), Monroney, Morton, Potter, Purtell, Robertson, Saltonstall, Smith (New Jersey), Sparkman, Talmadge, Thye, Watkins, Williams.

New York Times: "If Congress is really serious about controlling expenditures and is willing to take the responsibility that goes with this power it will pass this bill, which has the endorsement of the President, many leading Members of Congress, and thoughtful private citizens."

THE ISSUE

Adoption of annual accrued expenditure budgeting was one of the most significant and far-reaching recommendations of the bipartisan Hoover Commission. The proposal is based on the painstaking investigations and findings of the Commission's Task Force on Budget and Accounting.

The principal issue at stake is legislative control of the public purse, a fundamental requirement in a constitutional democracy.

The Hoover Commission found that the present method of stating budget appropriations in terms of obligations, rather than actual costs, results in a serious weakening of congressional control over Federal spending within a given year, since the obligations incurred in that year may have little relation to actual costs incurred in the same period.

It is presently estimated carryover funds amount to $70 billion. Comptroller General Joseph Campbell and United States Senator HARRY F. BYRD, Democrat, Virginia, agree on a figure of $70 billion in carryover funds.

In regard to the present measure of control over appropriations, Mr. Campbell has said:

"The budget surplus or deficit is determined annually based on the difference between annual receipts and expenditures. But the appropriations, on the present basis, are in terms of obligations against current and future years. Establishing a direct correlation between annual appropriations and expenditures vests in the Congress and the President a greater opportunity to control the level of operations during a particular budget year on the basis of conditions existing in that year. As matters now stand, Congress has little control over spending once the funds are voted, and the President has limited control over spending after apportionment of authority to incur obligations is made by the Budget Director to the agencies."

The folly of permitting Federal agencies and departments to accumulate such vast sums was graphically stated by United States Representative GLENARD P. LIPSCOMB, Republican, California, in testimony before the Reorganization Subcommittee of the House Committee on Government Operations, March 26, 1957. Mr. LIPSCOMB declared:

"With such large unexpended balances in the hands of the departments and agencies, Congress is not in a position to control the actual expenditures of the Government or the annual budget surplus or deficit in any given year, because the appropriations that it makes specifically for that fiscal year alone do not determine what the executive department can spend in that year. Actually in any year a very large proportion of the expenditures will be out of funds previously appropriated."

The testimony of Budget Director Percival Brundage before the Senate Commitee on Government Operations is also enlightening on this particular matter. Mr. Brundage stated:

"This systematic annual presentation of the agency financial plan of operation, showing past performances and forward planning is one of the benefits to be gained by use of the proposed appropriation procedures. Information of this kind may be available under present practices, but the significant point is that such data are not required by law to be brought automatically to the attention of the Congress each year nor is further action required with respect to carryover balances of continuing appropriations."

Annual accrued expenditure budgeting would strengthen the control of the Congress over governmental expenditures by: (1) Gradually eliminating carryover funds; (2) ending a system which encourages the spending agencies to obligate funds in order to prevent term appropriations from lapsing; (3) requiring the spending agencies to supply annual data for congressional review of progress, costs, and estimates in relation to specific programs, thereby relating past performances to current projects and future planning.

Since appropriations would be limited to a single year, Congress must grant authority to the spending agencies to make contracts for programs that extend over a period of years. However, by restricting actual spending authority to cover these costs to be incurred in a given year, Congress in effect establishes two control points—first, in the contract authorization, and second, in the annual appropriation.

Under the present method of authorizing long lead-time programs, whereby Congress appropriates sufficient funds to cover the entire cost at the outset, there is quite obviously only one control point.

On the other hand, by requiring annual documented justification for additional appropriations, Congress can maintain close, effective control of extended projects and thus be in a position to curtail or terminate any program which fails to measure up to initial expectations.

The Federal Government's Accounting System

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 29, 1957

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, may I have printed in the Appendix of the RECORD several more newspaper editorials favoring legislation that would place the Federal Government's accounting system on an annual accrued basis, as recommended by the Hoover Commission. The editorials follow: Christian Science Monitor, of August 1, 1957; Wall Street Journal, of July 22, 1957; Cincinnati Enquirer, of July 22, 1957; Cincinnati Post, of July 22, 1957; and the Washington Daily News, of July 27, 1957.

The editorials follow:

[From the Christian Science Monitor of August 1, 1957]

TIGHTER PURSE STRINGS

One would expect that the House of Representatives would be more jealous than the Senate of the power of the purse. For under the Constitution the lower House has the right to initiate all money bills. Yet Washington reports indicate that the plan for giving Congress closer control of Federal expenditures—already adopted by the Senate—faces a stiff battle in the House.

This is the bill providing for annual accrued expenditures budgeting recommended by the second Hoover Commission. Indeed, it is the recommendation of that body from which early and large benefits appear most nearly in reach. It would give Congress a closer check on unexpended balances, requiring annual approval for all expenditures. Federal agencies would have to render an accounting of carryover funds, now estimated by Comptroller Campbell to total $70 billion—approximately as much as this year's budget.

There are sincere opponents of this measure, and it is possible that some difficulties would be encountered under it. Adjustments would have to be made to permit the assurance of funds for long-range projects. But we see no reason why this cannot be done. The Hoover Commission believed the plan would save hundreds of millions each year. Certainly if the power of the purse is to retain its key meaning in representative government, such a provision for tightening the strings is well worth a try.

The measure has now been cleared by the House Rules Committee and should come to the floor within a few days. Advocates of economy have a major opportunity to put a brake on Federal spending by expressing support for it.

[From the Wall Street Journal of July 30, 1957]

TOOL FOR THRIFT

Both Chairman CANNON of the House Appropriations Committee and Representative TABER have often spoken in favor of Government economy. Oddly enough, however, they are adamantly opposing a bill which could result in considerable savings.

This bill to change the Government's bookkeeping practices was originally recommended by the Hoover Commission; it has passed the Senate and been cleared by the House Rules Committee. The chances are it would be approved by the House if it were brought up for a vote. The strategy of Mr. CANNON and Mr. TABER is to persuade the House leadership not to bring it up.

The reason for these two lawmakers' opposition is simple: They believe the bill would not make things better and might make them worse. But first, what is it supposed to do?

Under the bill, Congress would vote on actual spending instead of, as now, voting appropriations a large part of which are not spent in the fiscal year in question. An administration could no longer go into a new fiscal year with a huge carryover—some $70 billion this year—of appropriated but unspent funds. When Congress, under the bill, would cut the budget, it would be cutting actual spending, and thus would be restored to Congress its constitutional power of the purse.

The opponents argue that the reform would be illusory. No matter what accounting system is used, they say, the fact would still remain that advance spending commitments would have to be made for big items like aircraft carriers that are paid for over a period of years. In fact, the bill provides for contract authority for future spending, and its foes contend this would be a looser control than Congress now has.

Now we would certainly agree that no purely mechanical device like this proposed change is going to guarantee savings. If Congress is determined to be extravagant it will find ways of evading any such restraint.

CANNON-TABER argument.

If the bill were adopted, for example, Congress would have to review each year the forward contracting commitments made in a previous year. This is a check which does not exist now, and it seems to us undeniable that it would be helpful to have such a review instead of just letting appropriations, as often happens now, get buried in the labyrinths of bureaucracy. If the proposed contracting control is indeed too loose, then the thing to do is tighten the bill, not throw out the baby with the bath water.

The most important point in favor of the bill is that the present budgetary procedures are a wasteful mess. The measure may

ot be ideal—what is in this world?—but is a useful step. It would at least give ongress an implement it should have and hich it might at times use in the interests thrift.

Whatever Mr. CANNON and Mr. TABER hink, the House should debate this bill. It potentially far too important a proposal kill unborn.

From the Cincinnati Enquirer of Monday, July 22, 1957]

GOVERNMENT SAVINGS

Money appropriated by the Ohio General ssembly, unless spent or encumbered, lapses the end of a biennium. This gives the gislature the opportunity to review the oject and determine whether the money ould be reappropriated. This has worked ell in Ohio. We believe it has saved oney.

The Hoover Commission, recommending mewhat the same practice for the Federal overnment, views such a check as the sin- recommendation of the Commission hich would save the most money. Sav- gs estimates, challenged as false claims by epresentative GEORGE H. MAHON, Democrat, Texas, range from $4 billion to $5 billion year.

The proposal has the support of a formid- ble list of Government officials, starting ith President Eisenhower. Herbert Hoover, ill giving of his time and energy to his untry despite the weight of his years, ade a strong plea in its behalf at the re- nt convention of the American Society of ewspaper Editors in San Francisco.

The practice in Washington now is for ongress to vote an appropriation of say 00 million for airplanes. It may take ars to produce these planes, a good reason ay arise for canceling the order, the proj- t may fall behind schedule, or materials ay be defective. But Congress has let go the money and the taxpayer never gets back.

Under the proposed change appropriations ould be voted year by year. Congress would view progress each year. If the program re canceled the money would bo back to e Treasury instead of being expended for mething else.

The Senate approved this recommenda- n last year, but the measure failed to clear e House. In June the Senate passed it in, without dissent. The proposal is ex- cted to be up for House action within a w days. It is difficult to see how any ember can justify a refusal to support this nscientious effort to reduce the huge cost government.

From the Cincinnati Post of Monday, July 22, 1957]

SPENDING BLIND

That feverish feeling for economy which rvaded Congress earlier this year has been bing, rather rapidly. One reason for this that congressional appropriations and overnment spending do not run parallel.

Congress not only has lost control of the rse; it has no way to keep count of how ch the purse contains.

So Congress appropriates money blindly. passes on appropriations piecemeal, with- t ever knowing the totals, or how much ally will be spent and how much hoarded for later extravagance.

Two years ago the Hoover Commission rec- mmended a cure. The cure was incorpo- ted in a bill which would require the overnment to use an "annual accrued ex- nditure" system of bookkeeping—an awe- me term, but a key idea if there is to be y hope of cutting Government spending.

By this system, Congress would know from year to year how much money was being spent. No one really knows now. But a good estimate is that Government agencies have hoarded up more than $70 billion which they can spend pretty much at will. This backlog is money over which Congress has lost control.

That's the purpose of the "annual accrued expenditure" bill—to restore to Congress control over this huge gob of tax money.

The bill didn't get by the last Congress but the Senate this year passed it unanimously. It now is ready for action in the House. But two important House Members are against it—JOHN TABER of New York and CLARENCE CANNON of Missouri.

They run the Appropriations Committee and they are powerful enough to jeopardize the bill. They killed it in 1956. Neither ever has explained a good reason for opposing the bill, although both profess to be great money savers.

Well, you taxpayers who would like to have the Government take a little less of your money can do something about it—just tell your Congressman you want him to vote for the Payne-Kennedy bill. He'll know what you mean.

[From the Washington Daily News of July 27, 1957]

THE CANNON-TABER CAMPAIGN

In the United States House of Representatives, the chairman of the Appropriations Committee is a powerful man. He is in a strategic position to wield power, because he can do a lot of favors for other Members of the House.

The present and often chairman of the committee is CLARENCE CANNON of Missouri, now in his 18th session of Congress. The sometimes chairman (when the Republicans are in control) is JOHN TABER of New York, also in his 18th session.

These two generally work together. Both are strong advocates of economy in Government. But each now is busting a gusset to defeat a bill unanimously passed by the Senate, urgently endorsed by President Eisenhower, the Hoover Commission, the Budget Bureau and others who believe the Government could manage its spending far more efficiently and economically.

This bill would return to Congress its control over budgets, which Congress lost back in the 1930's. It would require Government agencies to account for their spending on a yearly basis. It would fix it so Congress could know what's being spent, year by year, and for what. Congress now doesn't accurately know this.

Mr. TABER, backed by Mr. CANNON, has circulated a plea among House Members to defeat the bill on the ground that it would destroy the power of the Appropriations Committee to keep things in line. He claims it practically would end congressional control over Government spending.

But Mr. TABER recently had reprinted in the CONGRESSIONAL RECORD another letter, from the National Association of Manufacturers, which says in the first sentence that Congress "does not really have control of the purse-string any more."

(Congressmen normally do not insert in the CONGRESSIONAL RECORD letters with which they disagree.)

In any case, the testimony and evidence is overwhelmingly against the TABER-CANNON argument. This bill wouldn't take from Congress a control it no longer enjoys—it would restore it.

The only answer we can see is that Messrs. CANNON and TABER are fearful of losing some of their own power. Although we can't see how.

Intergovernmental Relations Study

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mrs. DWYER. Mr. Speaker, this week the Intergovernmental Relations Subcommittee of the House Government Operations Committee opened an important new phase of its extensive studies in the field of relations between the Federal Government and State and local governments.

This study—aimed at exploring the broad and complex area of intergovernmental relations, including the Federal grants-in-aid programs under which States and localities match or participate in Federal funds for a wide variety of projects—will take the subcommittee into 10 different regions of the United States this fall.

This week, the subcommittee under the chairmanship of the distinguished gentleman from North Carolina [Mr. FOUNTAIN], prepared the groundwork for these nationwide hearings through the hearing of testimony by a series of nationally recognized authorities in this field.

These witnesses included Mr. Meyer Kestnbaum, who gave outstanding and valuable service as chairman of the Commission on Intergovernmental Relations; Mr. Philip M. Talbott, president of the Chamber of Commerce of the United States; Dr. Harley Lutz, Government finance consultant to the National Association of Manufacturers; Mr. Andrew Biemiller, director of the department of legislation, American Federation of Labor and Congress of Industrial Organizations; Mr. Patrick Healy, Jr., executive director of the American Municipal Association; Mr. Orin F. Nolting of the International City Managers' Association; Mr. Bernard Hillenbrand of the National Association of County Officials; the Honorable Frank P. Zeidler, mayor of the city of Milwaukee, and two distinguished Members of the House of Representatives who served on the Kestnbaum Commission, the Honorable Brooks Hays, of Arkansas, and Harold C. Ostertag, of New York.

I am sure all of us in this body realize the important significance of such a study. In recent years, there has been increasing emphasis on the constant growth of Federal grants-in-aid programs, and a rising sentiment for curbing this trend toward greater and greater centralization of Government in Washington.

Just recently, as you know, President Eisenhower focused national attention on this problem in an address before the governor's conference at Wiliamsburg when he urged the States to take the initiative toward assuming a greater responsibility for these programs.

To have a broader understanding of the scope of this problem, it is necessary to view the growth of Federal grants-in-aid programs.

The system of Federal grants-in-aid to State and local governments began in the early days of the Republic with the institution of land grants to States to promote education. But, with the ratification of the 16th—income tax—amendment in 1913 providing a new Federal revenue potential, the cash-grants system really began to expand.

By 1920, total Federal grants-in-aid had risen to $77 million annually from $5½ million in 1915. By 1925, the total was $114 million, and by 1937 some 20 grants-in-aid programs were costing the taxpayers over $290 million each year.

Each year since 1937, with the exception of 1946, the annual outlay for grants-in-aid have increased. By 1952, the cost of 48 different Federal programs had mushroomed to nearly $2½ billion, or 8 times the 1937 total. In 1956, grants-in-aid had risen to nearly $3.7 billion; in 1957, to $4.3 billion. And the estimate for fiscal 1958 is $5.3 billion. The 1957 and 1958 figures, of course, include Federal Aid Highway Trust Fund expenditures.

Thus we see that Federal involvement in grants-in-aid programs has been increasing steadily.

The big questions, of course, are just how this trend toward centralization of authority and responsibility can be reversed effectively, and how the States and municipalities can take up the slack if the Federal Government steps out of many of these programs which various segments of our population now consider essential.

It is my hope that the Intergovernmental Relations Subcommittee, as a result of the study it now is engaged in, will be able to help chart an effective approach to this problem at all levels of government.

In closing, I would like to note that I feel the Members of Congress would find it most enlightening—if they already have not done so—to study an itemized breakdown of Federal funds going into their respective States for various programs.

In preparation for the subcommittee hearings, I made such an analysis for my home State of New Jersey. The results showed a far greater participation in Federal programs than I had anticipated. For the information of Members of Congress, I am entering that analysis into the RECORD, to show what just one of the 48 States is receiving from Washington.

The New Jersey aid figures are as follows:

Direct Federal grants-in-aid to New Jersey, fiscal year 1956

Agricultural experimental stations	$338,916
Cooperative agricultural extension work	317,510
School lunch program	1,467,597
Cooperative projects—marketing	24,338
State and private forestry cooperative	118,391
Commodity Credit Corporation	1,615,207
Special school milk program	1,009,440

Direct Federal grants-in-aid to New Jersey, fiscal year 1956—Continued

Removal of surplus agricultural commodities	$2,550,650
Civil aero-Federal airport program	355,050
Bureau public roads—highway construction	10,183,697
Agricultural, mechanical, college grants	118,233
Cooperative vocational education	643,742
School construction and survey, emergency	508,546
Maintenance, operating schools, emergency	1,419,670
Veneral disease control	43,892
Tuberculosis control	125,037
General health assistance	231,712
Polio emergency grants	106,600
Mental health activities	85,551
Cancer control	65,090
Heart disease control	24,889

Total payments (20 programs)	29,031,1
Total grants-in-aid to New Jersey (63 programs) in both categories	86,410,8

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of document not already provided for by la but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications to bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72 Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of a Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Recent Decisions of the Supreme Court—Address by George Bell Timmerman, Sr.

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, August 5, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an enlightening address with reference to recent Supreme Court decisions. It was delivered by Federal District Judge George Bell Timmerman, Sr., of Batesburg, S. C., before the Rotary Club of Thompson, Ga., on July 25, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF GEORGE BELL TIMMERMAN, SR., BATESBURG, S. C., BEFORE ROTARY CLUB, THOMSON, GA., JULY 25, 1957

I shall talk briefly about our form of government, its background, its origin, and the efforts that have been made and are being made to change it. What I shall say will be the expression of my own personal views and is not to be considered an official statement.

Our America was settled by hardy, courageous, and venturesome Europeans, whose aspirations were to escape European despotisms and to gain a refuge for religious liberty.

The tyrannies from which they fled pursued them, and against them they rebelled. The result was the Revolutionary War. On one side was the loosely organized Colonies and on the other mighty England.

The war ended with the surrender of Cornwallis at Yorktown in 1781, a direct result of British defeats at Cowpens and Kings Mountain. When the war was over, the people of the former Colonies, then citizens of sovereign States, sought means of uniting the States for common defense and other mutual advantages. They did not intend to create another tyrannical government that would rob them and their posterity of the right of local self-government.

Following much thought and extended debate, a compact among the sovereign States emerged. Upon its ratification, it became the Constitution of the United States.

However, before final ratification, there was more debate respecting its merits and the implications of its various provisions. Many foresaw abuse of the powers granted the Supreme Court. Others took a more optimistic view. They thought that no Supreme Court would exceed its intended functions. Recently we have learned that such optimism was unjustified, regrettably so.

The established Government is a Republic, sometimes called a constitutional democracy. It is unique because of the dual sovereignty involved, but without which the Union would not have been formed at the time it was formed.

Almost from the beginning efforts were made to destroy the people's right of local self-government, otherwise sometimes spoken of as States' rights, and to centralize total power in the Federal Government. That effort continues even to this day, and it is now better organized and better financed than ever before; and, whether or not they are willing to face up to it, the liberties of the people are now at stake.

The Supreme Court has been construing the Constitution so as to make of it a protective shield for the criminally disposed and disloyal elements in our population, and it has been reading meanings into the Constitution and out of it that discriminate against white citizens, especially those of the so-called Deep South. If continued, this discrimination will eventually adversely affect the white populations of all the States of the Union, North, East, South, and West.

As illustrative of what is going on, I direct attention to some fairly recent Court opinions.

On December 30, 1947, the Fourth Circuit Court of Appeals held, and the Supreme Court sanctioned the holding, that acts of the Democratic Party in South Carolina constituted State action. Here is the Court's own language. "The question presented for our decision is whether, by permitting a party to take over a part of its election machinry, a State can avoid the provisions of the Constitution forbidding racial discrimination in elections and can deny to a part of the electorate, because of race and color, any effective voice in the government of the State. It seems perfectly clear that this question must be answered in the negative."

To one familiar with the facts of that case, it is clearly apparent that the Court sat up a straw man and then knocked it down. The assertion that the State permitted "a party to take over a part of its election machinery" was completely disproved by the evidence in the case. It is common knowledge that a State's election machinery is established by law and in no other way. It can be stated without fear of successful contradiction that there was nothing in the constitution of South Carolina, or in any of its statutory laws, that in any way controlled primary elections or any other party action, or that delegated authority over any part of its election machinery to any political party. It is true the State did not by law prohibit the organization of political parties or the functioning of them, just as it did not affirmatively prohibit the exercise of the senses of sight and feeling, or the use of the tongue or the feet.

It would be ridiculous to say, because of such failure, that the seeing or walking, or feeling or talking of an individual is State action. So, too, it was ridiculous for the Court to say that the voluntary action of private citizens in organizing a party to give legitimate expression and effect to their private political views was State action. The Court attained its objective of discriminating against white citizens of South Carolina by the simple expedient of substituting fiction for fact.

The Supreme Court on April 19, 1948, signified its approval of what the court of appeals had done by refusing to consider the case on appeal. The effect of that action was to deny to white citizens the right to organize and control their own political party, free of the domination of a politically minded Court—a discrimination which, if practiced by a State would be plainly unconstitutional.

In an opinion filed May 3, 1948, in *Shelly* v. *Kraemer*, the Supreme Court, among other things, said: That "* * * the principle has become finally imbedded in our constitutional law that the action inhibited by the first section of the 14th amendment is only such action as may fairly be said to be that of States. That amendment erects no shield against merely private conduct, however discriminatory or wrongful." The Court then went on to hold: First, that private agreements to exclude persons of a designated race or color from the use or occupancy of real estate for residential purposes do not violate the 14th amendment, and that such agreements are within the legal competency of individuals to make; and, second, that a State court would violate the equal protection clause of the 14th amendment by undertaking to consider ligigation arising out of such a valid agreement.

The parties who asked and got the Supreme Court aid in outlawing the long-established jurisdiction of State courts were Negroes. However, they were not parties to the agreement being attacked in the litigation, nor were they the owners of the real estate about which the agreement was made, when it was made. On the other hand, the parties who entered into the agreement were white, and they owned the land with which the agreement was concerned. By the Court's edict there was engrafted on the jurisprudence of this country a new and strangely un-American doctrine. For the first time in the history of the United States, the Supreme Court usurped the authority to deny to State courts one of their time-honored jurisdictions.

The Supreme Court having held that the agreement in question did not violate any contitutional provision, and that it was a legal agreement, one the parties had a legal right to make, there was no constitutional basis for its attempt to outlaw a State court's legitimate jurisdiction. That case illustrates the extent to which the Supreme Court has gone and is going to discriminate against white citizens, for no apparent reason other than that they are white.

Attention is next directed to the Supreme Court's opinion in *Brown* v. *Board of Education* (in the so-called school cases), filed May 17, 1954. The Court correctly found as a fact that the Negro and white schools involved in the cases had been equalized, or were being equalized, "with respect to buildings, curricula, qualifications, and salaries of teachers, and other 'tangible factors.'" The dictionary defines "factors" as "elements that contribute to produce a result"; and "tangible" as "capable of being realized by the mind; substantial; objective." So, according to the Court's holding Negroes were being afforded equal educational advantages, such as could be realized by the mind, and which were substantial and objective. Had the Court's opinion stopped there, it would have been supported both by fact and reason; but, it did not.

The Court went on to say that separately afforded equality constituted discrimination, in and of itself, as against a "minority group." As profoundly inaccurate as is that statement, it is not so startling as another that is implicit in the Court's opinion, viz: That in the Clarendon County School case, up from South Carolina, and then before the Court, Negroes constituted a "minority group." The truth is that when that statement was made Negroes in that school district outnumbered the whites in a ratio of more than 8 to 1. This illustrates the dis-

torted vision with which the Court has viewed and is continuing to view racial controversies.

Another thing which the Court said is this: "In approaching this problem, we cannot turn the clock back to 1868 when the amendment was adopted, or even to 1896 when *Plessy* v. *Ferguson* was written." The Plessy case is the one in which the Supreme Court of 1896 sensibly, logically, and factually interpreted the 14th amendment, holding that usable, tangible, and objective equality of treatment, although separate, was the reasonable and practical course required by the 14th amendment.

If the statement, "we cannot turn the clock back" means anything, it means that the Court was unwilling to consider the truths of American history, American tradition, and American judicial precedents; that the Supreme Court—our United States of America Supreme Court—preferred recourse to the sociological and socialistic writings of one Myrdal, a Swedish Socialist, and to like writings by Myrdal's fellow travelers in America, none of which was a part of the record in the case before the Court. It mattered little to the Court that it had ruled in divers other cases, that it was highly improper to go outside the record in a case to find support for a desired result.

The crowning folly and the great danger in the opinion arises out of its inconsistent and illogical conclusions. While the Court held that the 14th amendment requires equality of treatment as between the races, as manifestly it does, it also held that equality of treatment as between the races, even if desirably separate, constitutes inequality in and of itself, and is therefore discriminatory. Thus, the Supreme Court changed the dictionary by holding in effect that equality equals inequality. According to it, a State may violate the 14th amendment both by failing to accord equality of treatment and by according it.

Here again is an illustration of the Supreme Court's bias against southern white people and of its disposition to discriminate against white citizens for no apparent reason other than that they are white.

On April 2, 1956, the Supreme Court filed an opinion by Chief Justice Warren in *Pennsylvania* v. *Nelson*, holding that the Federal statute (54 Stat. 670) prohibiting "the knowing advocacy of the overthrow of the Government of the United States by force and violence, supersedes the enforceability of the Pennsylvania Sedition Act which proscribes the same conduct." The Court held that a State's sedition law is superseded by the Federal statute and is rendered ineffective by it, even if the State statute is intended to and does no more than supplement the Federal law against sedition. I find nothing in the Constitution that in terms denies to a sovereign State the right to use all reasonable means to protect its own sovereignty, and that of the United States; nor do I find in the Constitution any provision which, when legitimately interpreted, means that the Congress of the United States is granted the sole power to define, prohibit and punish sedition.

In an opinion filed April 29, 1957, the Supreme Court denied to a testator the right to dispose of this property in accordance with his own wishes. A Mr. Girard, by will probated in 1831, left a trust fund for the erection, maintenance and operation of a college, and naming the city of Philadelphia male orphans, between the ages of 6 and 10 years, as the said income shall be adequate to maintain" should be admitted to the college, and naming the city of Philadelphia trustee to administer the trust. The Supreme Court held that because the city of Philadelphia was the name trustee of the trust fund the testator's wishes could not be carried out. That the trustee fund would have to be used for the benefit of Negroes as well as for the benefit of whites. This is another example of the Supreme Court's attitude of discrimination against white citizens for no apparent reason other than that they are white.

As late as June 24, 1957, the Supreme Court set aside the verdict of a jury finding a Negro guilty of the crime of rape. His victim was a decent white woman. The assigned reason for the Court's action was that the arresting officers took too much time investigating the crime before carrying the defendant before a United States Commissioner. The crime was committed late one afternoon while the victim was alone and unprotected. The defendant was not arrested until the next afternoon. When first questioned he denied his guilt. Later he agreed to submit to a "lie detector." The operator of the machine was not readily located. Hence a delay of 2 hours, during which time the defendant was given food and water. Later the defendant confessed his guilt. The officers then attempted to reach a United States Commissioner for the arraignment of the defendant the day of his arrest. Failing to locate one, the defendant consented to an examination by the deputy coroner. That official on examining the defendant saw no evidence that the defendant had been subjected to physical or physchological coercion. The defendant then repeated a prior confession; and the next morning he was carried before a Commissioner. The Supreme Court adjudged the investigating officers guilty of procrastination, citing rule 5 (a) of the Federal Rules of Criminal Procedure, which requires only that the arrested person be carried before the nearest available Commissioner without unnecessary delay. The Supreme Court thought the officers didn't get the defendant before the Commissioner fast enough. Therefore, the confessions were ruled incompetent and the defendant's conviction was annulled. Thus the victim was remitted to another public airing of her sorrow, if indeed the Court left enough uninhibited evidence in the case to warrant a retrial of it. Here again is discrimination, and it is against the white victim of a ravisher.

Other cases could be cited to show an apparently fixed determination on the part of the members of the Supreme Court to recast our Government in a mold of their own design, but into which our constitutionally established form of Government will not fit.

To my way of thinking, the great issue now before the American people is this: Shall we surrender our fortunes, our liberties and our futures, and those of our children, into the hands of a hierarchy of despotic judges that is bent on destroying the finest system of Government ever designed by man and under which we as citizens have enjoyed the highest degree of political freedom and the finest standard of living ever enjoyed by any people, at any time, in any place, upon the face of the earth?

I do not know what decisions others may make, but, as for me, I hold that our form of Government and our way of life are worth fighting for.

Water Flow Measuring Device

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 5, 1957

Mr. JOHNSON of Texas. Mr. President, Texans are working these days on every aspect of their most important problem: the conservation and proper use of water. Now comes the information that a Texan has perfected a device to measure the amount of water flowing into an irrigation ditch. This will greatly increase the efficiency of field watering on the Texas plains.

The new invention is described in an editorial appearing in the Austin American. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEXAN SOLVES WATER WASTE IN IRRIGATION

An invention to measure the amount of water flowing in a ditch has been perfected at Plainview. At first glance the device might be typed as a Rube Goldberg contraption. There is need for some method to measure water flow in irrigation ditches on the Texas plains where farmers water their crops from wells as much as 10,000 feet deep.

If water flows too fast, it will erode the land and wash away crops it's supposed to freshen. If it flows too slowly, too much is wasted in evaporation from the sun that sends temperatures over 100°.

The ditch-flow measuring device has been perfected by Texas Tech and the Government's Soil Conservation Service. It is a 20- by 2½-inch section of sheet metal designed with orifices and windows and costs less than $10.

Jerry King, an engineering with the Hale County Soil Conservation District, made the final laboratory tests on the device. He said the operator can determine erosive velocities, control methods, cutback rate, and even the time required to wet an area.

The device measures volume of water in gallons per minute. Engineers say that the efficiency of field watering on the Texas plains runs below 50 percent usually. With the new device efficiency may be stepped up to nearly 80 percent.

GTA Daily Radio Roundups

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 5, 1957

Mr. LANGER. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD two GTA daily roundups, for July 22, and July 29, 1957, respectively, dealing with agricultural questions.

There being no objection, the roundups were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, JULY 22, 1957

Falling farm prices have hurt our economy, and the figures prove it in black and white. The figures coming from a study put out by the Federal Reserve Bank of Minneapolis. It serves the ninth Federal district which includes North and South Dakota, Minnesota, Montana, and parts of Wisconsin and Michigan. The bank, naturally, keeps a finger on the economic pulse of its district. And, as part of that job economists recently waded through stacks and stacks of reports on bank deposits for each of the many counties in the district.

The status of bank deposits in a county, of course, goes a long way toward telling

about the economic health of that county. What the researchers for the bank did was to compare county bank deposits for the year 1949 with the year 1956. They checked what—in bankers' talk—are called I. P. C. deposits. These are deposits owned by individuals, partnerships, and corporations—and are the bulk of deposits at a typical bank.

Then economists put together a map. If a county's bank deposits were lower in 1956 than in 1949, it was colored black. If its deposits increased less than the average for the whole ninth district, it was put in gray. And, if the county's bank deposits increased more than the district average for that period of time, it was colored white. Black—bad; gray—not so good; white—conditions on the up and up. When the map was finished, two States, in particular, showed up gray and black—North and South Dakota. They had lagged behind or were even worse off than in 1949.

Consider North Dakota. In 1956, 70 percent of its counties had smaller bank deposits than in 1949. And, in South Dakota, 35 percent of the counties had smaller bank deposits than in 1949. Hardest hit county was Hettinger, in North Dakota, with a 35-percent drop in deposits. Only two counties in the whole State of North Dakota had greater than average deposit growth. They were Burke and Williams—in the northwestern part of the State. And, the reason for the brighter record there is oil. The bank's economists summed up the situation by saying, "The fact that the Dakotas derive a larger part of their income from agriculture than other district States, plus the fact that agricultural products fell in price after 1949, doubtless help explain the failure of bank deposits there to keep pace with other areas."

Minnesota fared better. Only 3½ percent of its counties lost deposits. But, on the other hand, a look at the map shows that the western half of the State and a sprinkling of counties elsewhere gained less than the district average. Montana had 11⅑ percent of its counties losing ground and a good number gaining less than the average for the district. A number of things affect bank deposits—including population changes, spending, and incomes. But, one thing is clear from a look at the map produced by the economists. That is that a big and important section of the Ninth Federal Reserve District—heavily dependent on agriculture—has suffered a situation in which bank deposits have slipped behind or failed to keep pace these last 7 years. And, this is a drag on the whole economy of the district.

The figures point to one conclusion, namely, that it is in the interest of business people to see that farmers in this region get back on their feet financially and get a fair share of prosperity. This report comes to you from GTA—the co-op way.

GTA DAILY RADIO ROUNDUP, JULY 29, 1957

This is the time of the year when farmers' hopes rise high. Nothing gives a person a greater sense of inner satisfaction than to look over a countryside where the fields are ripening and the swathing and harvest has started, as it has in the Dakotas and western Minnesota. Yesterday, we were at a picnic in a boxelder grove near Bismarck, N. Dak., for the Burleigh County Farmers Union. Around 500 people were there. There were games and races and free ice cream for the children. The tables were loaded with the country home cooking and cakes and desserts furnished by a hundred good cooks and busy housewives. Men and women sat in the cool of the shade, visiting and talking and just resting.

The crop outlook is good—need for a little more rain. Barley looks light—40 pounds and under. Flax is hit by yellow-flower, a virus spread by leaf hoppers that is ruining many fields. But, wheat looks good, and so do other small grains. Nature is generous. It is what man does that bothers farmers. The farmers produce abundantly, efficiently, but what will happen to them for growing so much? There is no one answer. On the one hand, more and more research money is mobilized to get farmers to produce more. But, at the same time, political and economic steps are taken to cut production.

It is ironic—as the farmers see it—for everyone to be in favor of bigger appropriations for farm research—most of which is used to find new ways to increase output—while at the same time the USDA backs a soil-bank program to cut production, and the Secretary of Agriculture blames firm price supports, passed by Congress, for farm surpluses.

This bothers many people besides farmers—folks on Main Street, and students of our agricultural economy, like Lauren Soth, of Des Moines, who wrote a Pulitzer prize-winning book, "Farm Trouble." Soth had this to say: "What agriculture needs is more research in economics, and the other social sciences to provide answers to the complex human adjustments required. But, we continue to steer the bulk of our research and educational personnel and facilities in stepping up the output of commercial agriculture. Of course it is true that advances in science are beneficial to society as a whole, and one should not take a short-run view of these matters. But since research funds are limited, why not allocate more of them to projects which will help reduce surpluses rather than increase them?"

A sound question, intelligently put. And how can farmers grow 4 blades of grass or stalks of wheat or corn where only 1 used to grow before, without cutting farm income to a danger level, simply because they are too efficient? These were the questions farmers asked at the picnic out in that boxelder grove near Bismarck yesterday—the same kind of questions they are asking at many other picnics and gatherings. They expect, and are entitled to, some sensible answers from Washington, from their agricultural schools and experiment stations, from their co-ops and their farm organizations. But they are not getting them. We'll have more to say about these things from time to time.

The Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 5, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Bill Worth Saving," published in the Minneapolis Morning Tribune of August 3, 1957. The editorial relates to the amendments which were added to the civil-rights bill.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BILL WORTH SAVING

By a series of amendments the Senate has greatly dulled the keen cutting edge of the civil-rights bill as it emerged from the House. But even as amended, the bill can still cut. It is not a savage instrument or even a broadly effective one. But it is better than no bill at all, beyond any doubt.

The amendment approved by the Senate Thursday provides for jury trials in criminal contempt cases. This means, in essence, that a judge cannot punish a defendant for defying a court order without according him a jury trial. But in civil contempt cases, where the judge is merely seeking to compel compliance with a court order, he may send the defendant to jail without a jury trial. And he may keep the defendant there until he agrees to comply with the injunction.

The civil-rights bill has now been narrowed down to a single area—the right to vote. But in this area, surely, the amended bill arms the Federal Government with welcome authority to proceed against the violators of that right.

The South maintains that in criminal-contempt cases its juries can be depended on to render unprejudiced decisions. That remains to be seen. But one feature of the jury-trial amendment is reassuring. This is the provision that permits Negroes to serve on Federal juries regardless of their qualifications under State laws. This should mean fewer all-white juries, with their traditional reluctance to convict in civil-rights cases.

Whatever bill the Senate passes, its deviations from the House bill must be ironed out in conference. Chairman CELLER, of the House Judiciary Committee, has suggested that the House may prefer no bill at all to the amended Senate measure. Yet surely some progress in the safeguarding of voting rights is better than no progress. Let this Congress make at least a start on civil-rights legislation and if sterner measures to protect voting rights are dictated later on the law can then be strengthened.

The vote on the civil-rights amendment found the Republicans opposing it, 33 to 12, and the Democrats favoring it, 39 to 9. The South was for it to the last man, but there was a curious division of northern liberal Democrats, with HUMPHREY, DOUGLAS, MORSE, and NEUBERGER voting against it and CHURCH, O'MAHONEY, MANSFIELD, and MAGNUSON supporting it. The result may be a weakening of the bill but it is not a fatal weakening. The amended measure is still very much worth saving.

Civil Rights

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, August 5, 1957

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Solid Gains for Civil Rights," from the Christian Science Monitor of August 3, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOLID GAINS FOR CIVIL RIGHTS

Civil-rights legislation has reached its high-water mark so far in this century. In our opinion, Senate adoption of the jury-trial amendment has enhanced rather than curtailed hopes for genuine advances in Federal protection of Negro suffrage. Advocates who are describing the action as a death blow to the Eisenhower program are as mistaken as opponents who have been picturing that program as resurrecting Reconstruction.

Here are a few reasons for our judgment: Under the bill as amended the Federal Government will possess new power to intervene through the injunctive process, without jury trials, where contempt proceedings are intended only to prevent rather than to punish infringement of voting rights.

Any such action will be spotlighted with publicity. Where civil contempt does not succeed in halting abuses and judges resort to criminal contempt (with jury trial), juries themselves will be on trial before the Nation to prove that Negroes will be treated fairly.

By an amendment added to the jury-trial provision Negroes will be eligible to serve on Federal juries even where barred in State courts.

Two other sections of the bill (providing for a commission to investigate civil-rights problems and for a special civil-rights division in the Department of Justice) supplement the section amended by the Senate.

States' righters will doubtless fight these provisions—and the section to which they attached the jury-trial amendment—but so many concessions have now been made to them that they are unlikely to find much support outside the Deep South. Even a filibuster wouldn't serve now.

The House of Representatives may reasonably be expected to accept the Senate's half loaf rather than insist on no civil-rights bread. That is its choice for this year—and probably for several years. The fact that the House defeated a stiffer jury-trial amendment by only eight votes reinforces expectations that it will not balk at the Senate compromise.

For these reasons we believe effective civil-rights legislation is close to realization. The bill as it stands is unsatisfactory to many on both sides of the argument. But in our opinion it is more reasonable, more practicable, and more likely to obtain solid results than any of the plans discarded by the Senate.

Those who oppose any Federal intervention will not accept the bill. Neither will southerners who see it as a step toward social changes. But there is no such emotional resistance to voting rights as to integration. Moderate legislation will not only stand a better chance of adoption; it will stand a better chance of winning a vital measure of cooperation from southerners whose conscience and commonsense alike tell them that denying legally qualified Negroes the right to vote is poor ground for fighting.

Conservation: Our Shore Fronts

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, August 5, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article from the New York Times of August 4, 1957, by Mr. John B. Oakes, brilliant conservation editor of that great newspaper.

In addition to citing some of the remaining scenic coastline along the Atlantic seaboard for national-park purposes, Mr. Oakes has voiced a strong endorsement of my bill (S. 2489) to eliminate barbarism and cruelty on American traplines.

Let me call particular attention to one paragraph in the column by Mr. Oakes:

Senator NEUBERGER, a well-known outdoorsman and conservationist, observed that he had seen trapped animals "exhausted from trying to tear themselves to pieces, in pain and terror. * * * It is not an unusual story for such an animal to try to chew off its fettered limb, so as to escape. * * * The brutality inherent in such traps is beyond debate; the only question is what value we are to place on a matter as intangible in material terms as the suffering of an animal. Is such a matter worth the attention of the Congress of the United States?" There are many Americans who would say with Senator NEUBERGER that it is.

Mr. President, the great and illustrious Dr. Albert Schweitzer has told us that one of the true marks of a civilized person is how he or she treats animals and other wild creatures. If we are to be worthy of his high standards of humanitarianism, I believe my bill should be passed by the Senate.

I ask unanimous consent that the entire column by Mr. John B. Oakes, from the New York Times, appear in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSERVATION: OUR SHORE FRONTS—TWO UNSPOILED BEACHES WOULD MAKE GOOD NATIONAL PARKS

(By John B. Oakes)

Almost exactly a year ago there was published in this space an account of a booklet just issued by the National Park Service entitled "Our Vanishing Shoreline." It dealt with the rapid disappearance of unspoiled coastal strips from Maine to Texas suitable for conservation and public recreational purposes. The report noted that 21 years previously a survey had pinpointed 12 separate tracts along the Atlantic Ocean and Gulf of Mexico containing 437 miles of beach of superlative quality. Of these areas, only one (Cape Hatteras) has been publicly acquired during the intervening period; and only one remained available. All the rest had gone into private commercial development.

The one still available is the Great Beach area of Cape Cod. Other shorefronts, though perhaps not quite of the quality of the original 12, have been designated by the National Park Service as entirely appropriate for public acquisition. They include some 640 miles of beach, of which one-third is on the Texas gulf coast, and constitute the major remaining opportunities for conservation of seashore resources. Two of the shore fronts are of potential national park caliber: the Great Beach in Massachusetts and Cumberland Island off the Georgia coast. These two and the others should surely be acquired by public agencies before they are buldozed, built up, and developed beyond recognition.

PROBLEM STILL EXISTS

The year-old report of the Park Service is worth recalling at this time because the problem it presents is still very much alive—and will be until the last mile of vanishing shoreline disappears before the eyes of the American people. During the past year, virtually nothing has been done to save any of the beach areas in question. There had been hope of securing a sizable congressional appropriation to get started on a solution, but, most unfortunately, the results have been zero. Even on the very doorstep of New York City—at Fire Island—there is a magnificent beach that a little public foresight and a certain amount of public cash would preserve forever. Will we have to wait until it goes, for us to realize what we have lost?

CRUELTY

The appalling cruelty habitually practiced in American slaughterhouses would be curtailed by legislation introduced in the present Congress. If the public realized the brutality normally employed in hoisting hogs, lambs, and calves up by their legs prior to slaughter, and in knocking steers and bulls on the head before they are killed, there might be a nationwide demand for an immediate end to such barbarism. The Humane Society of the United States in Washington, D. C., has been attempting—so far without success—to awaken public consciousness to the practices in all but the handful of American packinghouses that consider reduction of cruelty more important than reductions of costs. Humane methods of killing domestic animals are widely used in Europe.

Legislation has also been introduced recently in Congress by Senator NEUBERGER and others to try to put an end to the equally barbaric use of steel traps in this country. In presenting his bill to require traps that instantly kill and daily inspection of traplines, Senator NEUBERGER said: "The primitive, cruel trapping practices of the last century are an anachronism today. With modern technology, such civilized requirements as humane slaughter or humane trapping do not stand between us and the food we need, or the furs; they become, at most, matters of cost."

Senator NEUBERGER, a well-known outdoorsman and conservationist, observed that he had seen trapped animals "exhausted from trying to tear themselves to pieces, in pain and terror. * * * It is not an unusual story for such an animal to try to chew off its fettered limb, so as to escape. * * * The brutality inherent in such traps is beyond debate; the only question is what value we are to place on a matter as intangible in material terms as the suffering of an animal. Is such a matter worth the attention of the Congress of the United States?" There are many Americans who would say with Senator NEUBERGER that it is.

PARK ALONG THE POTOMAC

A bill now in Congress to establish the Chesapeake & Ohio National Historical Park along the Potomac River has been formally endorsed by the Interior Department. The park would embrace the century-old, 185-mile canal right-of-way between Cumberland and Great Falls, Maryland, which is already owned by the Federal Government.

At the same time, a proposal to erect a dam across the Potomac that would back up a 36-mile lake and undoubtedly flood out much of the C. & O. park property has been meeting strong opposition from conservationists in the Washington area. The Park Service itself points out that the Potomac Valley "is so rich in scenic, historic, educational and other recreation values that only the most critical needs could justify its obliteration by a reservoir."

FUND-RAISING PLANS

In fighting the projected dam, a Washington organization called the Coordinating Committee on the Potomac makes some interesting suggestions to meet the increasing pressure of city dwellers seeking rural recreation. The committee recommends increasing the gasoline tax by a cent, the result to be earmarked by law for expenditure on recreation and conservation. Observing that the new Federal highway program will surely bring additional throngs of people to the country for recreational purposes, the committee urges a requirement that for each mile of road built under the President's program, 1,000 acres shall be set aside for conservation and recreation lands. * * * In the Potomac, this would add 500,000 acres to the park and forest system.

Regulations for the Sale of Firearms and Ammunition

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, August 5, 1957

Mr. JOHNSON of Texas. Mr. President, I have received from Mr. Howard Weddington of Dallas, Tex., secretary-treasurer of the Texas Wholesale Hardware Association, a copy of a resolution passed recently by that organization. This resolution expresses the association's view regarding proposed revised regulations for the sale of firearms and of pistol and revolver ammunition.

I ask unanimous consent that the text of the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the Treasury Department of the United States has published proposed revised regulations for the sale of firearms and of pistol and revolver ammunition and has invited comments or objections to such proposed regulations; and

Whereas among such proposed regulations are the following:

"That a separate set of records listing complete details on each firearm handled must be maintained permanently by every dealer and manufacturer. This record must include the name of the manufacturer, serial number, caliber or gage, model type, the date acquired and source, and the date disposed of and recipient.

"That a detailed record be kept by each dealer and manufacturer describing all pistol or revolver ammunition handled, the source and the disposition"; and

Whereas said proposed regulations have been considered and discussed by the members of the Texas Wholesale Hardware Association in meeting assembled at San Antonio, Tex., on June 15, 1957, and it being the unanimous opinion of said members that the keeping of the proposed detailed records of receipt and disposal of firearms and of the production, receipt, and disposition at wholesale or retail of all pistol or revolver ammunition by all of the manufacturers and dealers in such merchandise in the United States, permanently, would constitute an excessive and very oppressive burden upon such manufacturers and dealers; that in a short period of time such records would accumulate and accumulate until they would become wholly unmanageable and yet the legal requirement that they continue to accumulate and be preserved would remain in force throughout the Nation until hundreds and even thousands of acres in floor space in the aggregate would be overflowing with millions of records of no practical value to anyone, and still the proposed regulation, if actually promulgated by the Treasury Department of the United States, would continue to require that all such records be retained permanently on the premises until the discontinuance of the business: Now, therefore, it is hereby

Resolved by the Texas Wholesale Hardware Association, That we do hereby record most emphatically our opposition to such proposed regulations; and it is further

Resolved, That the secretary of this association be, and he is hereby, instructed to send a copy of this resolution to the Director, Alcohol and Tobacco Tax Division, Internal Revenue Service, Washington 25, D. C., to Senators LYNDON B. JOHNSON and RALPH W. YARBOROUGH and to each Member of the House of Representatives representing the State of Texas in the Congress of the United States, with the urgent request that said Senators and Representatives actively oppose and endeavor to prevent the adoption of either of said proposals as an official regulation of the Treasury Department of the United States.

The Battle Against Obscenity

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. HUDDLESTON. Mr. Speaker, one of the great problems which is now facing our Nation is that of juvenile delinquency. There can be little doubt that pornography, particularly in the form of off-color magazines for sale at corner newsstands, contributes to delinquency. Last year it was my privilege to introduce a bill to prohibit the transportation of obscene and lewd literature in interstate commerce. This measure was enacted into law and has served to materially reduce newsstand obscenity.

Since there is some conflict over what is obscene, there remain many publications for sale on our neighborhood newsstands which are borderline cases, but violations just the same. This problem is brought out poignantly in an editorial entitled "The Battle Against Obscenity," which appeared in the July 23, 1957, issue of the Methodist Christian Advocate, official organ of the Alabama-West Florida and North Alabama Conferences of the Methodist Church. Under leave heretofore granted, I am pleased to insert this definitive editorial:

THE BATTLE AGAINST OBSCENITY

Every adult of normal intelligence knows that the typical newsstand is literally loaded with magazines unfit for the eyes of youth. The problem of getting at this pornographic filth has been complicated by the fact that (1) any form of censorship brings up screams by those more interested in money than morals that constitutional rights are being violated; or (2) they sanctimoniously ask, But who knows what is obscene?

The struggle against obscenity found a strong new ally in the United States Supreme Court this month when a decision was handed down supporting legislative acts in California and New York against obscene literature, and also backing certain laws of the Federal Government in the same general area.

Justice Brennan did not hesitate to give what he regards as a working definition of obscenity in the Court decision referred to. He described as obscene any "material which deals with sex in a manner appealing to prurient (that is, lewd or lustful) interest." To further clarify his meaning he said the test of obscene matter is "whether to the average person, applying contemporary community standards, the dominant theme of the material taken as a whole appeals to prurient interest."

Thus the judgment of what is obscene is really placed in the hands of the local citizenship—and the criterion is the conscience of the community. It is assumed that this means the majority sentiment of the community as to what is decent and what is not. Surely here is a new guiding light in an area which the purveyors of filth have long attempted to keep completely foggy.

Those who may shriek to heaven about their constitutional right of free speech (citing the first amendment) will get little comfort from these words in the Court's recent decision: "All ideas having even the slightest social importance * * * have the full protection of the guaranties (of the Constitution) * * * but implicit in the history of the first amendment is the rejection of obscenity as utterly without social importance."

Triumph of the Jury Trial Amendment

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. LANHAM. Mr. Speaker, it is truly encouraging to know that so many newspapers and other publications are expressing their pleasure at the inclusion in the so-called civil-rights bill of the right to trial by jury for one charged with a violation of a judge-made law by injunction.

The Washington Evening Star for Friday, August 2, included an editorial on the subject entitled "Triumph of Principle," which I am including with my remarks today.

Then again on Sunday, August 4, the Sunday Star published an editorial entitled "Compromise and Principle," which I am also including.

The Wall Street Journal for Tuesday, July 30, also contained a most interesting article on the right of trial by a jury. I agree with all of these editorials and especially with the concluding statement in the editorial in the Wall Street Journal and I think it well to quote it again even though the editorial is included with my remarks. Here is the quotation:

On this question history has already passed a verdict. It is not that every jury can be depended upon to do justice. We have jury trials because the experience of men is that, for all their imperfections, they remain still the best means of insuring justice.

The debate in Washington is on civil rights. But as we press on to insure more of them, we ought at least to be wary lest we trample underfoot those we have already.

The editorials follow:

[From the Washington Evening Star of August 2, 1957]

TRIUMPH OF PRINCIPLE

The Senate strengthened the civil-rights bill early today by its approval of the O'Mahoney-Kefauver-Church amendment, providing jury trials in criminal contempt and establishing new safeguards against exclusion of Negroes from jury service in Federal courts.

A few other changes may be made in the bill, with particular reference to the makeup and procedures of the Federal Civil Rights Commission established under the legislation. But to all intents and purposes, adoption of the amendment has cleared the way for Senate passage of a genuine civil-rights bill—the first one that has got so far since Reconstruction days.

We hope the disposition of the House, and of the administration which sent the bill to

Congress, will be to speed its final enactment as perfected in the Senate. That will be done if its supporters want to see the great power and influence of the Federal Government directed to the effective removal of discrimination in the exercise of voting rights. It will not be done if they wish to retain civil rights as a political football to kick around in election campaigns. If the same order of statesmanship displayed by the Senate prevails in the House, a good civil-rights bill will become law.

Many things have been said on and off the Senate floor in recent weeks to ridicule and otherwise to discredit the principle of jury trial and its advocates. The most misleading has been the repeated contention that preservation of that principle in civil-rights legislation would weaken the legislation and the inherent power of the courts to enforce their orders. The bill as it passed the House derived no strength from bypassing jury trials. That was a fundamental source of weakness. This bill derives its real strength from new powers conferred on the Attorney General to initiate, independently or with others, civil actions for the relief of those injured by deprivation of their voting rights. That is a tremendously potent extension of Federal power, both executive and judicial, in a complex field. And as a practical matter it remains undiminished by the relatively minor safeguard interposed by the right of jury trial in the narrow field of punishment for criminal contempt.

A minor safeguard it is. But it represents a cardinal principle, the importance of which has fortunately not been undermined by the astonishing resistance to it displayed by men in high places. It is they, not those who voted for the amendment, who sought to weaken not only this bill but one of the great traditions of a free society.

[From the Washington Sunday Star of August 4, 1957]

COMPROMISE AND PRINCIPLE

At one point in the civil-rights debate Senator DOUGLAS, not without sarcasm, chided Senator O'MAHONEY for having produced the third edition of the jury-trial amnedment. He wondered how many more there might be. For the jury trial amendment grew by stages. Its final form on August 2, when approved, bore only slight resemblance to the original version suggested by its author on July 8.

Ridicule of the evolutionary processes of legislation, whether or not he sponsors it, would not disturb Senator O'MAHONEY. He reminded the Senate, on the day the debate began, that "legislation proceeds by compromise. * * * Those who propose legislation must be willing to compromise if they want to get results." The Senator got results, and a willingness to compromise helped to produce them. The amendments in his name, and those af Senators KEFAUVER and CHURCH, for jury trial and nondiscriminatory jury service, were gleaned from long hours of debate. On the principle itself, however, there was no compromise.

The circumstance recalled, to Senator CASE of South Dakota, a certain repetition of history. Twenty years ago O'MAHONEY was one of the leaders in the successful fight against an attempt to pack the Supreme Court. Senator CASE was a freshman Member of the House. He opposed the Court bill, and Senator O'MAHONEY's conduct in that battle won his admiration. It was O'MAHONEY who made the motion in the Judiciary Committee that, instead of pigeonholing the bill and thus killing it, the committee should bring in an adverse report. That adverse report was made, concluding with a passage credited to Senator O'MAHONEY: "It is a measure which should be so emphatically rejected that its parallel will never again be presented to the free representatives of the free people of America."

Senator O'MAHONEY told the Senate on Thursday night that preservation of jury trial in the civil-rights bill was as important as preservation of the independence of the Supreme Court from executive domination 20 years ago. In both cases he was on the right side.

[From the Wall Street Journal of July 30, 1957]

TRIAL BY JURY

Some days ago a jury of 12 citizens acquitted Jimmy Hoffa, the teamster union official, of a bribery charge. We think it a fair judgment that the public reaction to the verdict was not one of approval.

A few days ago a jury of 12 citizens convicted John Kasper and 6 codefendants of criminal contempt of court in the Clinton, Tenn., segregation case. In this instance we think it fair to assess the public reaction as one of approval.

We think the outcome of these two cases is worth reflecting upon as the Senate debates whether to include a trial-by-jury section in the civil-rights bill. For a great deal of that debate has hinged on whether juries can be trusted to do right.

Yet it seems to us that this sort of argument misses the heart of the matter. For the basic question would remain if both the Hoffa and Kasper juries had each rendered opposite verdicts.

Certainly the Kasper verdict shows quite clearly that jurors can, and often will, distinguish between a case at hand and their general view of political issues; it does challenge the northern notion about southern juries in racial cases. The Hoffa verdict does show that juries will not always act in accord with the way the public thinks they ought to act. Neither proves that future juries will convict every man accused of racial violence and acquit every union official accused of bribery.

The truth is, we suppose, that jury trials are imperfect instruments of justice. They will often seem very imperfect to the people who were not in the court room. But when we talk about abridging further the rights to a jury trial, the question is what to substitute.

Perhaps you think Mr. Hoffa should not have been acquitted. But at least his case was heard by 12 citizens chosen jointly by prosecution and defense. Would you find justice more dependable if the decision had been left to one man, even a learned judge, given absolute authority to throw the defendant in jail?

Or perhaps you think the Kasper verdict right. What promise have you that one official sitting alone in judgment would have equally served your own judgment? And even if one judge alone had made the same verdict, would you be as satisfied that John Kasper, standing convicted, had himself been as protected by justice?

On this question history has already passed a verdict. It is not that every jury can be depended upon to do justice. We have jury trials because the experience of men is that, for all their imperfections, they remain still the best means of insuring justice.

The debate in Washington is on civil rights. But as we press on to insure more of them, we ought at least to be wary lest we trample under foot those we have already.

Southern Railway's Advertisements Serve the South

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. HUDDLESTON. Mr. Speaker, during the last 15 years and particularly since the end of World War II, the South has experienced enormous industrial growth. With few exceptions the new plants and factories, which the South has attracted, have been located adjacent to railroad lines. This industrial expansion, which has been heavily dependent upon the railroads, has of course benefited the railroads as it has the State's economy as a whole.

To call attention to the tremendous opportunities which the South offers, the Southern Railway System has keyed its advertisements for years on the theme "Lood Ahead—Look South." Although other rail lines, as well as all modes of transportation, contributed to the expansion of industries in Alabama and the South, it is indeed fortunate that the Southern has devoted so much of its advertising budget to telling the South's story.

Under leave heretofore granted, I am happy to insert an editorial entitled "Southern Railway's Ads Serve South," which appeared July 28, 1957, in the Birmingham (Ala.) News, one of my district's fine daily newspapers.

SOUTHERN RAILWAY'S ADS SERVE SOUTH

"Look Ahead—Look South" is a slogan now familiar to millions of readers of the Nation's leading financial, business, and news publications. For since 1942, these compelling words have been used by the Southern Railway System in an intensive program of national advertising calling attention to the growth potential of the South and the great opportunities that exist in this region for industries and businesses of every kind.

In an informative and attractive fashion, the advertisements have effectively told the story of the South's economic progress and prospects. They have emphasized the region's resources, climate, manpower, markets, transportation facilities, and other advantages making it an area of economic opportunity.

In the foreword to a recently published booklet containing examples of the ads, Southern President Harry A. DeButts writes that this "Look Ahead—Look South" advertising "is as justified today as ever despite the phenomenal increase in industry and business that already has occurred. In 1957—15 years and many thousands of new industries later—we are still able to accent opportunity, to point to the youthfulness of our economic territory and the vigorous, still-growing-up years there are ahead in the South."

The Southern also recognizes the importance of letting people who live in the South know about what the railroad is doing. So in newspaper advertisements published in cities and towns along its lines it records its own activities and progress, tells of the railroad's role as part of the southern scene, and directs attention to ways in which

railroad and community face and share common problems.

The Southern is to be commended on this promotional advertising, both national and local, which serves to help further the industrial growth and prosperity of the South. Other railroads and utilities also do a solid job in this respect and are due thanks.

Fares Charged by Commercial Airlines

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 5, 1957

Mr. THYE. Mr. President, the Civil Aeronautics Board is currently studying the fares charged by the commercial airlines. Without objection, I ask unanimous consent that an editorial on this subject from the Minneapolis Star dated July 23, 1957, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FARES UP IN THE AIR

Arguing that airline fares have stayed at their 1938 level while everything else—especially including operating costs—has gone up and up, the Nation's air carriers recently asked for a rate increase averaging around 10 percent. In addition to their increased operating expenses, they point to the cost of making the pending switch from conventional planes to jet and turbojet aircraft.

So the Federal Civil Aeronautics Board (CAB) has undertaken a general fare investigation. But that is a long, involved process; CAB's report isn't due until next spring. And in the meantime, the airlines suggest, they'd like to have some fare relief for the rest of this year.

Seven airlines, therefore, have petitioned CAB for an interim increase of 6 percent. Regulations require that CAB rule on that request by mid-September.

The most striking thing to the outsider looking into the matter is the almost fantastic difference between the airlines' profit expectations as estimated by the carriers and by the CAB's staff.

The 7 petitioning carriers estimate net operating incomes—after taxes—ranging from a loss of $1.2 million to a top take of $12.9 million. The CAB staff, on the other hand, forecasts that the carrier which expects to lose more than a million will make $18 million instead, and sees the other lines making up to $27 million (after taxes).

As we understand it, this mile-wide gap between the CAB staff's figures and those of the airlines is mainly due to two differences in calculation.

The airlines base their calculations on present CAB rules covering depreciation rates, whereas CAB's staff ignores the present rule and bases its forecast on quite a different rate, which it assumes the CAB can be persuaded to adopt.

Secondly, the CAB staff estimates the airlines are going to fly more passengers than the carriers are counting on, and, moreover, that the carriers will do this with unprecedented efficiency.

Meanwhile, one must admit that Americans are getting more than ever before for their air-travel dollar—in terms of 1938 dollars almost twice as much (counting inflation and all). Service is faster and more luxurious; in some cases one can get almost the equivalent of 1938's first-class service on today's tourist flights. Other things, like reduced family rates, have made this Nation the most flying-conscious in the world.

No one likes to see prices on any commodity or service go up. But on the basis of the facts thus far disclosed in the CAB-airlines debate, it's hard to see how the Areonautics Board can fairly deny some increase in fares.

Tobacco Price Support Program Shows Really Large Income

EXTENSION OF REMARKS
OF
HON. ROSS BASS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 1, 1957

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following article from the Nashville Tennessean of August 4. Mr. Herd, in my opinion, has presented some interesting and pertinent figures relating to the tobacco price-support program.

Mr. Herd's article follows:

TOBACCO PRICE SUPPORT PROGRAM SHOWS REALLY LARGE INCOME—IN FIELD AND HOME: LOSSES CITED FAIL TO SHOW EARNINGS—PROFIT ACCRUES THROUGH INTEREST ON CCC FUND LOANED COOPERATIVES

(By Hal Herd)

For the past 5 years there has been a heavy barrage of publicity from Washington on the huge losses from Government price-support program on farm commodities.

And only recently there was a move to have tobacco removed from the list of six basic commodities to which these supports apply.

But it's often difficult to find out exactly how much the price-support program is costing the public.

I dug through a pile of documents, checked all the USDA releases, and finally wrote to Washington before I came up with the true figures on the tobacco price-support costs.

According to the latest release from the Commodity Credit Corporation (Government agency that makes loans for price-support programs), there have been gains and losses from year to year.

However, from the beginning of the program in 1933 through May 31, 1957, CCC records show a total loss under the price support program of $10,924. This includes all types of tobacco, some of which have been more difficult to market than others.

FIGURE INCOMPLETE

This figure, however, is incomplete. It does not include the net earnings in interest above the cost of banking service charges and other similar charges. These earnings, which represent income to CCC, have exceeded $10 million during this same period.

In addition, CCC supplied tobacco to foreign countries during World War II which resulted in a realized gain of $4.8 million.

This gives a total net income of $14.8 million for the tobacco program since its beginning more than 20 years ago. When the $10,924 in losses are subtracted from the net gains, there still is a profit of more than $14.7 million. That was a surprise to me, too.

Of course, the tobacco program hasn't always been in such a favorable position. From October 1933 through June 30, 1941, CCC records showed a loss of more than $2 million. However, this figure did not include interest on loans.

During the period 1941 to 1946 there was a gain of more than $7 million. For the past fiscal year the realized gain was $191,000.

SOME LOSSES, SOME GAINS

At the same time last year, corn showed a loss of $201 million; cotton, $427 million; and wheat, $89 million under the Government price support program.

However, a few commodities made gains. They include: Irish potatoes, $16,000; whey, $3,000; and honey, $867.

Many may wonder how a Government price support program can show a profit on a certain commodity. Let's take tobacco for example.

In each State where this crop is grown extensively there are one or more cooperative associations to which CCC is authorized to lend money.

During the marketing season that tobacco which fails to bring the floor prices (they vary according to grade) is purchased by the cooperative and stored in a warehouse. Here it is held until manufacturers will buy it at a price which will take care of interest and other charges.

So the main income from the price support system is through interest on CCC money loaned to cooperatives to carry out the program. And this figure sometimes gets left out of releases concerning the cost of certain price support program of farm products.

NO. 2 CASH CROP

Tobacco is the second ranking cash crop in Tennessee and is the main source of income for more than 800,000 farm families in the United States. For the past 10 years, the farm value of tobacco has averaged more than $1 billion annually.

Aside from the farmer, thousands of people make their living from the sale of leaf tobacco or its products. These include buyers, dealers, warehousemen, factory employees truckers, wholesalers, and retailers.

Tobacco is very important as a revenue producer. In the fiscal year 1955–56, latest date for which complete figures are available, direct Federal and State taxes combined were more than $2 billion, providing more direct revenue to the Government than all other crops combined.

Elton Layton

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks, I should like to pause and pay tribute to Mr. Elton Layton upon his resignation as clerk of the House Committee on Interstate and Foreign Commerce.

Congressman CARRIGG, of Pennsylvania, claims Mr. Layton as his No. 1 constituent. He comes from Matamoras, Pa., in Pike County; however, Mr. and Mrs. Layton now reside at 4730 Arlington Boulevard, Arlington, Va., and have lived in Arlington County for over 17 years. They have been my constituents since I was first elected to Congress from the newly created 10th Virginia District in the 83d Congress.

Mr. Layton has continuously been clerk of the House Interstate and Foreign Commerce Committee for over 36 years and is a member of the bar en-

titled to practice in the highest courts in Virginia, Maryland, and the District of Columbia and the United States Supreme Court.

I have had many occasions to consult with Mr. Layton and to observe his fine work. I am sure that he will be very much missed here on Capitol Hill.

The Veterans' Administration Program

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 5, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three excellent articles dealing with the Veterans' Administration program.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the St. Paul Dispatch-Pioneer Press of August 1, 1957]

DISCHARGES RISE AT VA HOSPITAL

ST. CLOUD.—Discharges from the Veterans' Administration mental hospital here have more than doubled in the past 2 years.

The number has increased from less than 300 to about 600 a year since the start of a program aimed at preparing recovering patients for the life they will lead outside the hospital.

This was revealed today by Dr. Jesse F. Casey, VA Director of Psychiatry and Neurology, who explained the new program enables psychiatric patients to learn to get along with others again and to acquire the habit of making their own decisions before they are discharged from the hospital.

Nub of the program is a "motivation unit" directed by Dr. W. R. Coutant, staff psychiatrist at the hospital. It consists of a ward with 80 patients selected from the entire hospital and a foster home program under which 55 patients live outside the hospital on a trial basis.

Patients living in the ward are encouraged to become friends, work at jobs in the hospital, attend movies and other recreational activities together, and in general to live much as they would outside the hospital.

Once a week they gather in groups of 10 to talk frankly about their feelings and fears of returning to the community. Efforts are made by the staff of the unit to allay the fears and build up the patients' trust and confidence, Dr. Casey explained.

When ward patients are ready, they go into the foster home program and are placed with families in the St. Cloud area.

Since the motivation unit was established 2 years ago only about 10 percent of those in foster homes have returned for further hospitalization.

The staff of the unit includes a social worker, a psychiatric nurse, a clinical psychologist and the hospital's vocational counselor in addition to Dr. Coutant.

The VA hospital here is the only one in this area in which this program is in operation.

Dr. Casey said VA's aim is to make life in its mental hospitals as much like normal life as possible for patients past the acute stage of their illness. Psychiatrists call this approach "development of the hospital as a therapeutic community," he said.

He stressed, however, that the therapeutic community does not replace other treatment.

[From the Minneapolis Star of August 1, 1957]

PRACTICE LIVING CURES "HOSPITALITIS"—VA PATIENTS REJOIN OUR WORLD

(By Gwenyth Jones)

ST. CLOUD, MINN.—Men who haven't had a real job in 20 or 30 years are working in factories, on farms, and in filling stations.

Men who haven't been inside a real church go to services and shake the pastor's hand just as any other parishioner would.

They go to movies, and play bingo and take part in all sorts of other community activities.

In fact, "if you meet them on the street you don't realize they're any different."

But these men are patients at the Veterans' Administration mental hospital here. They're preparing for discharge from the hospital in a pilot program described by hospital officials as a definite success.

Some 60 patients already have been discharged through this program after spending 2 to 35 years in the hospital. The average is 10.

The program, headed by Dr. W. R. Coutant, staff psychiatrist, has been in operation 2 years. It is aimed at helping patients who have developed "hospitalitis" to get ready for discharge.

Coutant describes 'hospitalitis" to get state where the patient has found a home in the hospital and is unwilling to leave, perhaps afraid of the idea.

The new approach prepares them for life "outside" by letting them practice.

First step in the program is a ward of 80 patients selected for the program. All are World War I veterans in their middle or late sixties.

They are encouraged to develop friendships, work at jobs in the hospital, attend movies and other recreational activities together—in short, to live much as they would outside.

Once a week they gather in small groups to talk about their problems.

"The possibility of leaving is constantly on their minds." Coutant says, "And some of them fear they will be thrown out. They need reassurance."

After spending a few weeks to 8 or 9 months in the ward, patients go to live in foster homes in the nearby area. The farthest of these is 35 miles from the hospital.

Before going, the patient visits several such homes and is encouraged to indicate which one he wants to go to. Patients also are encouraged to express any desire to go with other patients.

Their room and board is paid, and they receive spending money.

Residents of the area have an excellent attitude toward the program, Coutant said, understanding what VA officials are trying to do and making every effort to cooperate. In general, he said, residents treat patients living in foster homes "just as they would any other newcomers."

Patients can be discharged at any time hospital authorities think they're ready, and some stay only a short time in foster homes. Others stay much longer. The average stay is a year. Some homes have only 1 patient living there; 1 has 16.

Coutant emphasized the program's flexibility.

Many of these patients have been in the hospital so long that "the home they came from has disappeared," Coutant said.

"This program helps them get ready to live their own lives. Most of them are receiving pensions, so they're taken care of financially."

Hospital fieldworkers visit patients in foster homes regularly, although these visits, like the entire program, are flexible, but there are no restraints. Only about 10 percent of those sent to foster homes have had to return to the hospital for further treatment.

The project, originated by Dr. Thomas R. Dredge, chief of the St. Cloud Hospital's professional service, was called a pilot program by Dr. Jesse F. Casey, VA's Director of Psychiatry and Neurology, in an announcement today in Washington.

[From the Duluth Herald of August 1, 1957]

VA ANNOUNCES PLAN TO CURE MENTALLY ILL

WASHINGTON.—The Veterans' Administration said today that a new approach developed at its hospital in St. Cloud, Minn., has doubled the number of mental patients that can be discharged.

Dr. Jesse F. Casey, VA's Director of Psychiatry and Neurology, said that under a 2-year-old pilot program at St. Cloud, which includes use of foster homes in the community, the number of discharges has risen from fewer than 300 a year to about 600.

The new approach involves permitting greater freedom and a more normal life for selected psychiatric patients past the acute stage so as to speed recovery and discharge.

It enables the patients to learn to get along with others again and to acquire the habit of making their own decisions.

"In other words," Casey said, "we are trying to develop the mental hospital into a therapeutic community that will prepare recovering patients for the life they will lead outside the hospital."

The hub of the St. Cloud program is a motivation unit, directed by Dr. W. R. Coutant.

This unit consists of a ward with 80 patients selected from the entire hospital, and the foster home program under which 55 patients live outside the hospital on a trial basis.

United States Participation in International Trade Fairs

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 5, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Good Foot Forward," relating to our participation in international trade fairs, published in the Minneapolis Star of July 30, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOOD FOOT FORWARD

After getting off to a slow start, United States participation in international trade fairs has picked up steam in recent years. It has become one of this country's most effective means of introducing itself, and the American way of life, to hundreds of thousands of people around the world.

Latest demonstration of the impact this activity can have was in Poland. At the Poznan trade far last month, the American exhibit, centered around a fully equipped one-family bungalow, stole the show.

Many Poles found it difficult to believe the display really represented something just a little better than the average American worker has. And one must admit that the organizers' inclusion of a deepfreeze, boat, automobile with automatic windows, etc., did make the exhibit a bit on the posh side.

Yet, even discounting the typicalness of the exhibition home, Poles were tremendously impressed, and convinced that the lot of the American worker cannot be as bad as Communist propagandists insist.

The Poznan show was our first on the other side of the Iron Curtain. Now we have a chance to stage one in the political center of Communistland—in Moscow. As of the moment, the Russians are prepared to admit the show—scheduled for Gorki Park next summer—and the remaining step is a congressional appropriation of the necessary funds.

It would not be unprecedented if the Russians changed their mind and banned the trade show, especially after having seen its popularity in Poland. But if something does upset present plans for the exhibition in Moscow, let it come from the other side. Let us be prepared to stage our best show to date in Gorki Park. Let's get the appropriation through Congress as soon as possible.

Scarcity of Doctors Is Matter of Deep Concern to Small Localities

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. HUDDLESTON. Mr. Speaker, not so long ago, life in the rural areas of the United States was commonly a rugged existence. Within our lifetimes, this scene has completely changed. Nowadays, nearly every convenience of modern-day life is available to country folks. In fact, life in the country was never more pleasant, more appealing than now.

In only one respect is rural life suffering because of the big city. This, Mr. Speaker, is a serious lack of doctors, with little relief in sight. At present, 42 towns in Alabama are seeking physicians and proposing all types of inducement. Several localities are offering free clinic facilities, free homes, or rent-free apartments. The scarcity of doctors in rural areas arises from their growing tendency to specialize, rather than take up a general practice. To live in an area where a doctor is not available, even in the case of an emergency, is a serious risk.

Fortunately, the problem is not yet acute, but it is cause for deep concern. This situation is pointed up in an editorial entitled "Small Towns in the State Need Doctors," which appeared in the July 25, 1957, issue of the Birmingham (Ala.) News.

SMALL TOWNS IN THE STATE NEEDS DOCTORS

There was a time not so many years ago when Alabama was reported to have had only 1 doctor for every 3,000 inhabitants. With some 2,200 physicians now practicing in the State, conditions today are better. Jefferson, Mobile, and Montgomery Counties are estimated to have 1 physician for every 990 persons, while the rest of the State has an average of 1 for about 1,900 persons.

In many small towns and rural areas, however, the shortage of doctors remains an acute community problem. Cherokee County, for instance, still has only 3 physicians to serve its 17,634 people and Greene County has but 3 for its population of 16,482. The Medical Association of the State of Alabama, which operates a physician placement service through its Montgomery office, reports that 12 Alabama towns currently are trying to find doctors.

Some of these towns are offering special inducements to physicians to settle and establish practices in the communities. One would build a clinic on city-owned property, offer it to a doctor rent-free for 3 years, and provide him with a furnished apartment rent-free for 12 months. Another offers to incorporate and build a clinic, equip it if necessary, and build the doctor a home.

A major factor contributing to the shortage of doctors in many smaller communities, of course, is the financial problem of setting up practice and securing adequate income. Another element is said to be the tendency of more doctors to become specialists rather than general practitioners of the type needed in rural areas.

More young physicians should give consideration to the rewards and satisfactions of general practice in small towns. And such communities certainly must exert every effort to make conditions of service as attractive as possible.

Passenger Fares on Transatlantic Airlines

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. MICHEL. Mr. Speaker, several months ago the CAB, exercising its regulatory authority in the public interest, vetoed a proposal by the international airlines to raise transatlantic fares 5 percent in time for the current tourist season.

I think we all share the opinion that this action is commendable insofar as it permits more of our citizens to spend a vacation abroad at the least possible cost. On the other hand, I am equally sure that we would all recognize that the financial position of the airlines which carry these travelers should remain fundamentally sound.

Upon inquiring about the effect of the CAB's action in disapproving such a substantial fare increase, I find that several European airlines, as well as the governments which own them, have stirred up considerable protest. Their argument is that their costs have risen sharply. However, traffic figures show such a substantial increase this year over 1956 that it is impossible to believe that unit costs, that is, the cost of carrying each passenger, could have moved in any but a downward direction.

According to North Atlantic traffic reports filed with the CAB by the International Air Transport Association, which originally asked for the fare boost, transatlantic passenger traffic was up nearly 28 percent by the first of July this year. Of 12 transatlantic airlines all but 3 showed increases in the average number of passengers on each flight. For example, Lufthansa, the German airline, showed an increased load factor of 46 percent; for the Belgian airline, Sabena, it was 39 percent; for BOAC, over 21 percent; for Pan American, over 5 percent; for TWA, 12 percent, and so on.

I am certain that the interests of our constituents, who in increasing numbers hope to find an overseas vacation within reach, heartily applaud the efforts of our Government to withstand the pressure of foreign government-owned airlines for higher fares. That this view is shared by at least a courageous minority abroad is shown in an article which appeared in Aviation Studies—International—Ltd., last July 9. I am informed that our Embassy in London regards this British private-enterprise publication as both sophisticated and reliable in aviation economic matters.

Mr. Speaker, under leave to extend my remarks, I include an excerpt from this article at this point in the RECORD:

CONTROL FOR CONTROL'S SAKE

What is wholly lost sight of by all interested parties (including the American trade press which is always ready to have a dig at CAB on behalf of its patrons the United States carriers) is that CAB is the sole body in the whole international set up of governmental rate monitoring, which can convincingly claim to be able to judge those issues objectively, especially with respect to the traveling public's interests. All other governments are themselves airlines, and are therefore judges in their own cause. When the British Government seeks to control the fare of the London-Calcutta section of a New York-Calcutta journey passing through London, it is simply BOAC, in a different hat, endeavoring to arrange the fare structure to suit its own convenience, irrespective of the passenger's best interests. But when CAB tries to prevent an Atlantic fare increase of 5 percent, it is functioning primarily on behalf of public interest, and secondarily in what it believes to be the long-term interest of the industry (not any individual airline in which it has a proprietary interest) upon whose economic health it is intended to deliberate and predicate without any proprietorial bias.

The CAB principle that proposals for changes to fares and rates up or down should always originate with airlines, and that the validity of these proposals should be judged by strictly impartial economic assessment of the evidence of those making the claims, cannot be faulted. To interpret this as control for control's sake, when the judgment happens to be contrary to the airlines' proposals is to completely misread the basic object of the machinery of governmental fare structure approval. Until other governments divest themselves of their personal interest in individual airlines, they cannot hope to have their allegedly altruistic motives believed. Government air agencies should stand strictly in the position of the judicature, wholly independent of the administration. This is even more important in countries where the administration also has acquired industrial management functions outside its normal role of government, than in those countries where industry is still under private ownership.

Industry should be subject to the minimum of external control in economic matters. Its own commercial judgment of what is best for its customers on whom its existence depends, and therefore what is best for its own practitioners, should serve adequately as check and balance on development and sales policy. Most industries continue to work out their own salavation successfully by this natural process. The need for airline rate control arose during the subsidy era. But as industry develops and is able to stand on its own feet, it should be the aim to reduce rather than to increase the need for governmental controls. The demonstrated immaturity of airline economic policy suggests the continued need for financial monitorship; but never for its own sake, and to satisfy the vested interests of bureaucracy.

Europe Refuses To Defend Itself—Easy Money From the United States Responsible

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an article by Dr. John B. Crane which recently appeared in the Kenosha Evening News. Dr. Crane raises the question as to whether or not American aid to Europe has been too large over too many years with the result that the will of European countries to defend themselves has been paralyzed. The point, Mr. Speaker, is well made by Dr. Crane.

HAVE WE OVERPROTECTED EUROPE?

(By Dr. John B. Crane)

WASHINGTON, D. C.—France has long been noted as a land of paradoxes. Almost every writer on France takes delight in pointing these out.

Among the most striking is the political paradox that the French Government falls, on the average, every 6 months yet the French claim, with some justification, that their political system results in more stable and durable policies than those of the other western democracies. They consider their system definitely superior to that of America.

Equally perplexing to Americans is the longstanding French paradox in the economic-financial field. France has been enjoying an economic boom for years and is producing more today than ever before in its history. Yet it appears to be constantly on the verge of financial bankruptcy with the franc selling at a discount in the free market, and constant talk of a dangerous dollar deficit.

How is it possible for France to be always on the verge of financial collapse when it possesses the largest natural resources in continental Europe, outside of Russia, and is steadily growing economically richer and richer each year? This is the unsolved paradox.

Just how prosperous France really is shows up clearly in official statistics of production. During the last quarter of 1956, France's industrial production was 38 percent ahead of the year 1948 and 94 percent higher than the last prewar year of 1938.

No other country in Western Europe shows such striking economic progress compared with the immediate prewar period.

Not only is French industrial production at an alltime high but much of the production has gone into consumers' goods resulting in a substantial rise in the standard of living. The French people are living better today than at any time in their entire history.

Yet America feels it necessary to continue to extend substantial amounts of foreign aid to France, particularly in the military field.

THE BRITISH PARADOX

The paradox of postwar Britain in some respects parallels that of France. Economic progress has been rapid in the United Kingdom since the war but not so great as in France. Industrial production during the last 4 months of 1956 was 16 percent above the level of 1953 and 63 percent above prewar 1938.

The objective of the Marshall plan was to pour billions of dollars into Western Europe until its level of industrial production exceeded prewar by 38 percent. After pouring $15 billion into Europe the objective was more than attained.

Today most of the countries of Western Europe are producing at levels far higher than 38 percent above 1938. The New York Herald-Tribune's index of industrial production shows that during the last quarter of 1956 the average level of industrial production for 14 Western European nations was more than 60 percent above 1938.

How can one explain why thousands of Britishers are flocking in a stream to emigration offices in London to settle in other countries overseas at a time when Britain has never been so prosperous and when the average Britisher enjoys a higher standard of living and works shorter hours than ever before in history? This, too is something of a paradox.

Not only is the British average man better off than ever before, but he is better off than most of his European neighbors, for in spite of high taxes the British standard of living and output is one of the very highest in Europe. I know of no country which has higher average weekly or hourly wages.

Yet Britishers vie with one another in emigrating from the country, while the government of one of the wealthiest nations in Europe is cutting its modest military forces by drastic amounts and acting as if it were a have-not nation on the verge of collapse.

Could the paradoxical behavior of the French and British be related in any way to the practice of America since the war of spending whatever billions are necessary in Europe to protect this area from the Communists?

Has American aid to Europe been too large over too many years so that the will of European countries to defend themselves and to appropriate sufficient funds for their own defense has been paralyzed? Have we overprotected Western Europe to the point of weakening instead of strengthening it?

Unionist Pleads for Tax on Zinc Imports

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. BAKER. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an article from the Knoxville News Sentinel, Knoxville, Tenn., Friday, August 2, 1957, headed "Mascot Called Ghost Town."

UNIONIST PLEADS FOR TAX ON ZINC IMPORTS

WASHINGTON, August 2.—Mascot, Tenn., was practically a ghost town for 18 months before the Korean war when the price of zinc plummeted, says William F. Hawkins, a hard-rock zinc miner at American Zinc Co. there.

Hawkins, president of the Tennessee Valley Zinc Workers Union, is here to tell the House Ways and Means Committee it may be so again if adequate relief for domestic industry through taxing of imports is not provided.

He's testifying on an administration bill that would impose a sliding scale tax of from 1 to 3 cents a pound on lead imports when the American price drops below the peril point of 17 cents, and a levy of ½ to 2 cents a pound for zinc imports when the United States market dips below 14½ cents a pound.

Industry spokesmen say this tax scale falls short of providing the protection for the domestic industry actually intended by the administration bill. They want the sliding scale levy to be from 3 to 5 cents a pound for both metals.

American Zinc Co., Tennessee Coal & Iron Co., and New Jersey Zinc Co. are the operating companies in east Tennessee, employing some 1,500 persons.

These firms, says Hawkins, are having to cut back work weeks and reduce employment in face of large zinc imports that have sent the price of zinc down to 10 cents a pound.

"If the price of metal is allowed to deteriorate so that our mines are shut down as they were before the Korean war," said Hawkins, "we have our doubts whether the industry could ever recover in our area. . . .

"Our union contract provides that if the price of zinc goes below 13 cents and stays there for 90 days a wage reopener can be asked for to reduce wages. You know what this could do to us with the cost of living where it is."

Death of O. J. Larson, of Duluth

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, August 5, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "O. J. Larson, Noted City Lawyer, Dies," published in the Duluth Herald of August 2, 1957. I knew Mr. Larson in years past, and am sorry to hear of his death.

There being no objection, the article was ordered to be printed in the RECORD as follows:

O. J. LARSON, NOTED CITY LAWYER, DIES

O. J. Larson, 86, former Eighth District Congressman, an intimate friend of two United States Presidents and the recipient of high honors from Finland and Italy, died yesterday in a Duluth nursing home.

The retired attorney who came to Duluth to practice law in 1908, formerly lived at 2[illegible] North 28th Avenue East.

Widely known throughout the United States and Canada, he was one of the pioneer supporters of the St. Lawrence Waterway, held the appointment of honorary consul for Finland in Duluth until 1942 and was the principal speaker for historical celebrations many times in various parts of the country.

Born in Oulu, Finland, he was brought to the United States when he was 5 by his parents, who settled at Calumet, Mich. He was graduated in 1891 from northern Indiana Normal School, now Valparaiso University, and in 1894 from the University of Michigan Law School.

Mr. Larson entered the practice of law at Calumet, where he served as prosecuting attorney for Houghton County from 1898 to 1904.

He later was retained by the State of Michigan for a case that involved extensive travel in Italy, where he developed an avid interest in Italian history. Because of that interest he was called upon frequently to speak on the Italian contributions to civilization.

In 1931 he gave the principal address at ceremonies dedicating a life-size bronze statute of Christopher Columbus on the State capitol grounds in St. Paul. On the same day King Victor Emanuel of Italy conferred upon him the Royal Crown of Italy with the

rank of commodore, highest decoration awarded by that nation to a non-Italian, in appreciation for his interest in promoting American-Italian relations.

Twice decorated by Finland, he was made a knight of the first rank in the Order of the White Rose, in 1920, and was promoted to commandership in the same order in 1933, highest award granted by his native country to a civilian outside of Finland.

Mr. Larson served in the House of Representatives for the Eighth District from 1921 to 1925 and was appointed to the House Judiciary Committee during his second term. Herbert Hoover came to Duluth to support his candidacy in 1921.

A friend of four President's he was intimately acquainted with Hoover and Theodore Roosevelt.

In 1938, Mr. Larson was appointer national chairman of a committee in charge of the tercentenary of the landing of the Finns and Swedes on the Delaware and he gave the main address dedicating a monument presented to the United States by Finland memorializing the historic event.

Mr. Larson married Emma Dorothy Roberts, of Grand Rapids, Mich., on November 25, 1901.

A member of the bar of the United States Supreme Courts of Minnesota and Michigan, he also held membership in the American and Minnesota Bar Associations, the Masonic Order, Aad Temple, Shriners, Elks, Odd Fellows, Knights of Kavela, and Alpha Tau Omega Fraternity.

Surviving are a son, Roberts B. Larson, Washington, D. C.; 2 daughters, Mrs. W. W. Kuyper, Schenectady, N. Y., and Mrs. V. M. Tengquist, Duluth; a grandson, Robert F. Eaton, Duluth; 2 granddaughters, Miss Laura Lee, Larson, Washington, D. C., and Barbara D. Tengquist, Duluth, and a great-grandson.

Keep Your Guard Up!

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. SCRIVNER. Mr. Speaker, 40 years ago, on August 5, 1917, a day I shall never forget, 400,000 young American volunteers were mustered into the Federal service in the National Guard of the United States.

Our National Guard units, such as my division, the 35th, a Kansas-Missouri organization, helped win World War I. Again, when the call came in World War II, National Guard units performed gallantly and successfully just as they did more recently in Korea.

Although those 40 years have taken a heavy toll, dimmed the eyes, greyed the hair, and slowed the steps, those 40 years have not decreased, in any way, our justifiable pride in our National Guard service.

Mr. Speaker, the value of the National Guard as part and parcel of our national defense has been proven by its valiant service.

One motto which will continue to contribute to the safety and security of this great Republic is:

"Keep Your Guard Up."

Wheat for On-Farm Consumption

SPEECH
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 8456) to amend the Agricultural Adjustment Act of 1938, as amended, to exempt certain wheat producers from liability under the act where all the wheat crop is fed or used for seed or food on the farm, and for other purposes.

Mr. HILL. Mr. Chairman, first of all, I think we should say, No. 1, that any farm in these United States—and we have had a hard time getting it understood—can grow 15 acres of wheat on his farm and feed it all regardless of whether he got 20 bushels to the acre or 40. So, that is where we start. But it is only 15 acres. Now, if he is mixing feed and needs more wheat than that, this bill is a real relief. It doubles the amount of acres of wheat that he can grow and consume on the farm. In other words, this bill provides—and it is very simple and not difficult to understand—that he can now grow 30 acres under practically the same conditions that he could grow 15. That is all this legislation assumes to do.

There are some other things it does, but at this particular time we are not so much concerned about that.

The next thing I would like to explain is the difference between our bill and the Senate bill. The Senate bill provides that any farmer on any farm anywhere in any State can grow as many acres of wheat as he wishes as long as he feeds it on the farm. Now, the interesting thing about that is that the Farm Bureau supports that position, and I will ask when we get back in the House that I may put their statement in the RECORD. It states that they have had a resolution time and time again supporting that position presented at the Farm Bureau annual meeting. They have supported the idea that, if a farmer fed all his wheat, he should not come under this complicated agricultural legislation concerning the wheat acreage or marketing controls.

The American Farm Bureau resolution reads:

We recommend legislation to exempt farms from wheat-growing quotas if all wheat produced thereon is used only as food, feed, or seed on the farm where grown or on farms under the same operation.

I shall put their statement in the RECORD, Mr. Chairman; I include a statement by Walter C. Berger, Administrator, Commodity Stabilization Service; before the Wheat Subcommittee of the House Agriculture Committee, June 19, 1957, 10 a. m. on H. R. 6784, a bill to exempt certain wheat producers from liability under the Agricultural Adjustment Act of 1938 where all the wheat crop is fed or used for seed or food on the farm, and for other purposes.

Mr. Chairman, members of the committee, we have reviewed this proposed bill, H. R. 6784, and find that it has three major purposes.

1. To permit the growing of up to 30 acres of wheat on any farm under an exemption from the wheat marketing quota provisions provided all of the wheat produced is used on the farm for feed, seed, or human food. An exemption is provided from the 30 acre limitation on the farms operated by and as part of State institutions or religious or charitable institutions.

2. The acreage seeded to wheat for harvest in 1958 or thereafter in excess of acreage allotments shall not be considered in the establishment of future State, county, and farm acreage allotments. Also, the planting on the farm of wheat for 1958 and thereafter for which no farm allotment is established shall not make the farm eligible as an old wheat farm. If allotments are desired for such farms they must be considered as new wheat farms.

3. Any State in which for 3 successive years the wheat planted exceeds 35,000 acres shall generally become a commercial wheat producing State.

I should like to discuss each of these provisions in order.

First, with respect to the exemption from the marketing quota penalty or storage requirements for the farm marketing excess, on farms growing up to 30 acres of wheat, all of which is fed, or used for seed or food on the farm where produced, this provision is to a certain extent in line with the Department's recommendations. Bills on this general subject have been recommended by the Department of Agriculture but have in the past failed of enactment.

In the President's message to the Congress of January 9, 1956, he stated as follows:

"Legislation already has passed the Senate and is pending in the House of Representatives which would exempt from marketing quotas those producers who use for feed, food, or seed on their own farms all the wheat they raise. Because of the failure to pass this legislation last year, the Department of Agriculture has been compelled by law to hail before the courts farmers whose only offense was to raise and feed wheat outside their quotas. Again the administration urges prompt enactment of this legislation. Correction of this problam should be delayed no longer."

We believe that the proposed bill, although a step in the right direction, does not go far enough. We recommend that the exemption of wheat producers from liability under the act where all of the wheat crop is fed or used for seed or food on the farm be applicable without limitation in the same manner as is provided in the proposed legislation for State, religious or charitable institutions. However, in the absence of obtaining the greater exemption which we request, we would favor the enactment of H. R. 6784.

The purpose of this bill is to correct a situation which has arisen in connection with marketing quota operations for certain wheat producers who desire to use their entire output for feed and seed on the farm where produced, and who do not want to participate in the wheat price support program.

Under the Agricultural Adjustment Act of 1938, as amended, wheat producers subject to marketing quotas who harvest wheat in excess of their acreage allotment are subject to a marketing penalty on their farm marketing excess (unless they avoid or postpone the penalty by storage or delivery to the Secretary), whether they sell their wheat on the market or whether they feed it on their farms. The law is clear on this point and its

constitutionality was upheld in *Wickard* v. *Filburn* (317 U. S. 111). Thus, farmers subject to quotas who produce wheat only for feed and seed and do not want price support on their crop are forced to curtail their operations or pay the penalty if they fail to do so.

Production of wheat for feed is, in general, confined to small farms in the feed deficit areas.

Existing legislation exempts certain of these farms from marketing quota restrictions. For example, quotas are not applicable to any farm on which the wheat acreage does not exceed 15 acres or on which the normal production of the wheat acreage is less than 200 bushels. Also, marketing quotas are not applicable to any farm in any State which has been designated by the Secretary as outside the commercial wheat-producing area. Any State for which the wheat acreage allotment is 25,000 acres or less, may be so designated by the Secretary.

H. R. 6784 broadens these existing exemptions to include those farmers in the commercial wheat-producing area who harvest not more than 30 acres, who use all their wheat on the farm where grown for feed and seed, and who do not desire wheat price support. We believe that no maximum acreage limitation should be established for this type of wheat utilization. Insofar as this latter group of farmers is concerned, wheat marketing quota restrictions impose special hardships.

Although the consumption of wheat on farms where grown does affect interstate commerce, the exemption relating only to farms on which no wheat is removed would appear to be desirable. Such farms constitute only a small portion of all farms which produce wheat and the proposed exemption, although creating some new problems, would not unduly hamper the administration of the wheat marketing quota and price-support programs with respect to farms from which wheat is removed.

Enactment of this bill would be another step toward achievement of our objective—that farmers be permitted to operate their farms with a maximum of freedom. At the same time, it would remove the dissatisfaction of some small wheat producers with the program as it must be operated under present legislation.

The bill, if enacted, would become effective with the 1958 and subsequent crops of wheat. It would in no way relieve or otherwise affect the liability for marketing penalties incurred by farmers under past wheat marketing quota programs who fed or used for seed on the farms where produced their entire wheat crops.

Section 114 of the Soil Bank Act provides that as a condition of eligibility for participation in the acreage-reserve program under that act the wheat acreage on any farm must not exceed the larger of the farm wheat acreage allotment or 15 acres. In order to clarify the matter of eligibility for participation in the acreage-reserve program of any farm for which an exemption from marketing quota penalties might be obtained under the bill, we believe it highly desirable that such bill be supplemented by a new section containing an amendment to the Soil Bank Act which would make it clear that any farm for which an exemption from marketing quota penalties was obtained under the proposed bill would not be required to comply with the larger of the farm wheat acreage allotment or 15 acres to be eligible for participation in the acreage-reserve program.

We believe that farmers who might obtain an exemption from wheat marketing quota penalties because their entire wheat production is used on the farm where produced should be entitled to participate in the acreage reserve program on exactly the same basis as those farmers who avail themselves of the 15-acre exemption. We shall be glad to submit to you the legal language to make this effective.

As indicated above it is recognized that there will be certain administrative difficulties in putting the provisions of the bill into operation, but we believe it will be possible to develop adequate safeguards.

Additional administrative expenses would be incurred in carrying out the provisions of the bill, if enacted. It is believed that such increases might be absorbed from funds appropriated for administering the wheat quota program.

Section 2 of the bill would prohibit the use of excess wheat acreage in 1958 and subsequent years for history purposes in determining future State, county, and farm acreage allotments and prohibit farms planting wheat without an allotment in 1958 and subsequent years from becoming eligible for an allotment in succeeding years as old wheat farms. Each of these proposed provisions now applies to tobacco and the first provision now applies to all basic crops except corn and wheat. Enactment of this section of the bill would do much toward minimizing undesirable shifts in State and county wheat acreage allotments which are prevalent under existing programs. By limiting allotment credits to 1958 and subsequent years to the acreage seeded to wheat within the farm allotment, State and county allotments for succeeding years will become more stable.

Although the acreage-allotment and marketing-quota programs for wheat have generally been effective in holding down the production of wheat, there are problems under the present provisions of law which are inherently contributing to the instability of State and county allotments. Foremost among them is the provision of law which exempts from marketing-quota penalties farms seeding not more than 15 acres of wheat for harvest as grain. In 1956 there were 562,643 farms in the commercial wheat-producing area, or 34 percent of all wheat farms in such area, on which the acreage seeded to wheat for harvest as grain was in excess of the farm allotment. The total allotment on these excess farms was 4,559,317 acres, but the acreage seeded to wheat on such farms for harvest as grain was 8,991,601 acres. Thus, the total wheat acreage on such farms was 97 percent above the total allotted acreage.

An analysis of the 1956 wheat performance reports submitted by all applicable State ASC offices indicate that overplanting of allotments was prevalent on larger farms in some of the important wheat-producing States such as Kansas, Nebraska, Colorado, Wyoming, Montana, Idaho, and Washington. If these States, together with North Dakota and South Dakota in which the number of noncomplying wheat farms were relatively small, are disregarded, a true picture of overplanting wheat allotments on small farms becomes more apparent. Outside these States within the 1956 commercial wheat-producing area, there were 498,088 farms, or 39 percent of all wheat farms, on which the acreage seeded to wheat for harvest as grain in 1956 was in excess of the farm allotment. In the States of truly small wheat farms, the total acreage seeded to wheat for harvest as grain in 1956 on excess farms was about 2½ times larger than the total allotment assigned to such farms.

The permitting of excess wheat acreage to be used for history purposes in determining allotments is causing some radical shifts in State, county, and farm allotments even though the national wheat-acreage allotment remains constant at 55 million acres. The result is that a State such as North Dakota, with only 1.2 percent of the wheat farms overplanting the farm allotment, loses allotment to Missouri and other States where overplanting is exceptionally heavy on small farms. The impact on county allotments is even greater. For example, the 1958 State allotment for Kansas is about the same as for 1957, but because of excessive planting on small farms in counties of eastern Kansas, a considerable shift of allotments from the Wheat Belt of western Kansas will be necessary to provide allotments for the increased acreage in the eastern part of the State. Nebraska, another important wheat-producing State, has still another problem resulting from the overplanting of allotments. The overplanting of wheat allotments in this State has, for the most part, been on large farms in certain counties of the high plains area. This overplanting on large wheat farms, although deliberate in the face of marketing quota penalties or under the provisions of law which permit storing the farm marketing excess, is building up excessive wheat acreage history which can only be covered in subsequent years by shifting allotment acreage from other States or from other counties in Nebraska. To illustrate, in Cheyenne County, Nebr., [illegible] farms, 68.6 percent of all wheat farms in the county, had an acreage of wheat for harvest as grain in 1956 in excess of the farm allotment. The total acreage of wheat on these noncomplying farms was 43.4 percent larger than the total allotment acreage on such farms. Other important wheat-producing counties of Nebraska in which there was considerable overplanting of allotments include Banner, with 64.3 percent of farms overplanting, Deuel with 40.6 percent, and Kimball with 68.9 percent.

The shifting of allotment acreage from one State to another and from county to county within a State as the result of overplanting of farm wheat-acreage allotments is a matter of grave concern to complying producers. Even within counties complying farms must, under existing legislation, give up allotment acreage to cover the excess acreage on noncomplying farms. Unless legislative action is taken to alter this situation, the problem will become greater as we move into the future. We strongly urge the enactment of this section of the bill.

Section 3 of the bill was, no doubt, designed to stabilize the commercial wheat-producing area by preventing certain States from moving in and out of such area from one year to the next. Only four States, Alabama, Arizona, Louisiana, and Mississippi would likely be affected in subsequent years by the provisions of this section. Based on the latest available statistics of the Department of Agriculture, the acreage seeded to wheat for harvest as grain in each of these States during the last 3 years was as follows:

Acreage for harvest as grain

State	1955	1956	1957
Alabama	59,000	80,000	120,0
Arizona	43,000	58,000	55,0
Louisiana	17,000	35,000	90,0
Mississippi	18,300	18,000	150,0

The computed 1958 State wheat-acreage allotments for these States were: Alabama, 23,240 acres; Arizona, 21,401 acres; Louisiana, 6,302 acres; and Mississippi, 16,256 acres. Since existing legislation gives the Secretary discretionary authority to designate a State as outside the commercial wheat-producing area if the allotment for such States is 25,000 acres or less, each of the 4 States were so designated for the 1958 crop. An analysis of the wheat seedings in these States indicates that the 1959 State wheat-acreage allotment for both Alabama and Arizona will likely be in excess of 25,000 acres and thereby could not, under the present provisions of law, be excluded from the commercial wheat-producing area for 1959. Under the provisions of section 3 of H. R. 6784 both of these States would definitely be in the commercial area in 1959 and would have to remain there in for a period of at least 3 years before the

could again become eligible to be excluded from such area.

We believe that the provisions of section 3 of the bill are necessary in order to stabilize the commercial wheat-producing area in future years and to implement the effective administration of the wheat-production adjustment program. It is recommended, however, that section 3 be modified before its enactment as follows: (1) Insert on line 24 of page 3 the words "for harvest as grain" immediately following the words "planted to wheat"; (2) insert on line 3 of page 4, the words "for harvest as grain" immediately following the words "acreage planted to wheat"; and (3) insert on line 8 of page 4, the words "for harvest as grain" immediately following the words "annual acreage planted to wheat."

In summary may I say that subject to the suggested changes we feel that this proposed bill is a step in the right direction.

Then John A. Baker, of the National Farmers Union, supported this legislation in a statement to our committee. I include a part of it:

In our opinion, H. R. 6784 is a bill which delicately balances these various interests in wheat marketing quota legislation. The special provisions that Mr. ANFUSO has worked out through consultation with representatives of both commercial and noncommercial wheat producers appear to us to provide:

1. Appropriate and needed adjustments required to meet the special problems of noncommercial wheat farmers;

2. But still protects the essential integrity and effectiveness of the wheat marketing quota program in its general application.

Section 1 of H. R. 6784 prevents the use of this special authority for a large-scale feeding operation by restricting the exempted acres to 30 per farm. Nor does the bill eliminate the 15-acre minimum in existing law as has been suggested by some.

This section, and section 2, also, provides that acreage exempted from operation of the quota program shall not be used to build up the historical base for future quotas. This closes an unfair loophole that would otherwise be opened up.

Fundamentally we are opposed to requirements that so-called commercial corn and wheat acres be called upon to carry the entire burden of needed market supply adjustments. While H. R. 6784 does not go as far as we would like in reducing the size of the noncommercial wheat area, section 3 of the bill is, in our opinion, a step in the right direction. It is, also, a needed precaution for commercial areas against the expansion of the loophole created by exemption of certain wheat production from operation of quotas.

Mr. Chairman, in net we believe that adoption of H. R. 6784 will strengthen rather than weaken the wheat marketing quota law. Therefore, we urge your favorable consideration.

Then, Mr. Chairman, I include a statement of the American Farm Bureau, presented to our committee by Frank K. Woolley, legislative counsel of the federation:

The American Farm Bureau Federation appreciates this opportunity to present its views with respect to nearly a score of bills introduced in the House this year to exempt wheat fed or used on the farm marketing quota penalties and restrictions.

We understand the situation to be as follows: (1) Many farmers who have customarily grown wheat for feed, seed, or home consumption on the farm where produced have been prohibited by Federal law since the passage of the Agricultural Adjustment Act of 1938 from doing so unless they pay a severe penalty; (2) the foregoing is true even though the farmer does not desire price support on any other feed grain or, for that matter, any other commodity or product produced on the farm; (3) the law denying farmers permission to grow wheat for feed on their farm has been carried to the Supreme Court of the United States and in the case of *Wickard* v. *Filburn* (317 U. S. 111 (1942)), it was held constitutional; (4) thousands of farmers have been penalized and many suits have been filed by United States attorneys to collect these penalties. Legal action is pending against many farmers and administrative action is being pressed to make other collections before suit is filed.

The American Farm Bureau Federation feels this is an intolerable situation that Congress should not permit to exist. The American Farm Bureau Federation has passed resolutions on the subject of feed wheat a number of times and at our last annual meeting in December 1956 the following resolution was adopted by the elected voting delegates of the member State farm bureaus:

"We recommend legislation to exempt farms from wheat marketing quotas if all wheat produced thereon is used only as food, feed, or seed on the farm where grown or on farms under the same operation. Producers taking advantage of this exemption should not be eligible to participate in any price-support program for wheat or other feed grains, and all wheat producers affected by marketing quotas should be eligible to vote thereon. Such legislation should be substituted for the present 15-acre and 200-bushel wheat marketing quota exemptions."

In order to carry out this resolution we would suggest that the bill finally reported by this committee read as follows:

"That section 335 of the Agricultural Adjustment Act of 1938, as amended, is further amended by adding at the end thereof the following new subsection:

"(f) The Secretary, upon application made pursuant to regulations prescribed by him, shall exempt producers from any obligation under this act to pay the penalty on, deliver to the Secretary, or store the farm marketing excess with respect to any farm for any crop of wheat harvested in 1957 or subsequent years on the following conditions:

"(1) That none of such crop of wheat is removed from such farm except to be processed for use as human food or livestock feed on such farm;

"(2) That such entire crop of wheat is used on such farm for seed, human food, or feed for livestock, including poultry, owned by any such producer, or a subsequent owner or operator of the farm; and

"(3) That the producer receiving an exemption from marketing quota penalties on the farm marketing excess of wheat under the provisions of this subsection shall agree to forgo price support on corn, oats, barley, and grain sorghums produced on the same farm, or farms under the same control, for the marketing year for which the exemption from marketing quota penalties on excess wheat is obtained.

"(4) That such producers and their successors comply with all regulations prescribed by the Secretary for the purpose of determining compliance with the foregoing conditions.

"Failure to comply with any of the foregoing conditions shall cause the exemption to become immediately null and void unless such failure is due to circumstances beyond the control of such producers as determined by the Secretary. In the event an exemption becomes null and void the provisions of this act shall become applicable to the same extent as if such exemption had not been granted. No acreage planted to wheat in excess of the farm acreage allotment for a crop covered by an exemption hereunder shall be considered in determining any subsequent wheat acreage allotment or marketing quota for such farm.

"SEC. 2. Subsection 335 (d) of the Agricultural Adjustment Act of 1938, as amended, and paragraph (7) of Public Law 74 of the 77th Congress are hereby repealed."

The Senate of the United States has passed legislation a number of times involving the fundamental principle of exempting farmers from wheat penalties who use wheat on the farms where produced for feed, seed, or food. There is undoubtedly widespread support for this legislation in the House and the administration has indicated its desire to be relieved of the responsibility of carrying out a law which obviously unfairly invades the right of a farmer to farm his land as he sees fit.

The free market has been roundly condemned by some people as being cruel. What could be more cruel than the Government forcing farmers to pay a penalty for producing a crop when those farmers are not producing or marketing a commodity in a manner which injures other farmers? This is not only cruel but is the kind of governmental tyranny that is deeply resented and may ultimately result in the farm program being discredited.

We strongly urge that the House Agriculture Committee favorably report the bill at this time.

Mr. BASS of Tennessee. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from Tennessee.

Mr. BASS of Tennessee. If a man grows more than 30 acres of wheat or his farm, he is a commercial wheat grower and a big feeder as such. Would not the gentleman agree with that? That was the thought of the committee in this legislation.

Mr. HILL. Yes. I think the committee had in mind this. If you let your mind think over the numer of acres of land in the United States on which wheat is produced, then if you permit everyone to grow 50 acres or 100 acres, you would be in difficulty. That is what we had in mind.

Mr. Chairman, also I should like to include in my remarks, and shall ask permission to do so when we go back into the House, a report from John A. Baker of the legislative service of the National Farmers Union. He and his organization, so he says, support this bill we have before us today.

I shall also ask to have included in my remarks testimony from Walter C. Berger, Administrator of the Commodity Stabilization Services before our committee in June, 1957.

Mr. Chairman, I should be glad to answer any questions I am able to answer.

Mr. HARRISON of Nebraska. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield.

Mr. HARRISON of Nebraska. It it the gentleman's understanding that if a man plants 30 acres of wheat and he has an allotment of 10 acres, that he loses his allotment of 10 acres by sowing the 30 acres?

Mr. HILL. That is exactly what this bill does. In other words, he is either in one program or the other. If he wants to grow 15 acres and his county committee permits him to grow 15 acres he could not continue to grow the 15 acres and then grow 30 acres under this bill.

Mr. HARRISON of Nebraska. He could retain a history of a 10-acre allotment?

Mr. HILL. But he could not grow 30 acres. He would have to stay out of one program.

Mr. CEDERBERG. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman.

Mr. CEDERBERG. I should like to associate myself with the gentleman from Colorado in the position he has taken on this bill. This legislation has been needed for a long time. I hope its enactment will bring about the needed relief for the small farmer who grows these acres of wheat.

Mr. GAVIN. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from Pennsylvania.

Mr. GAVIN. Could the gentleman tell us what happens to these farmers who have been penalized or fined but who have not paid their fine if this bill becomes law? Are their cases automatically dismissed?

Mr. HILL. I think the gentleman from Oklahoma discussed that. We discussed that in the committee but we did not see how we could make this retroactive. If I am wrong, I should be glad to have the gentleman from Oklahoma correct me.

Mr. ALBERT. The gentleman is correct. That was the opinion of the subcommittee and of the committee.

Mr. GAVIN. The gentleman will recall that there was a case in his district where a farmer was fined and the court threw out the case.

Mr. HILL. I do not know whether it was in my district, but it was in the wheat-growing section.

Mr. GAVIN. The court did dismiss the case?

Mr. HILL. Other judges may not throw out such cases and we would not have any uniformity in the decisions of the judges. But we do not in the Supreme Court itself, so why bring that up?

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman.

Mr. FULTON. I favor the position of the American Farm Bureau Federation. I do not believe any farmer should be restricted when he feeds the wheat on his own farm.

I strongly defend the right of the small farmer to raise on his own farm whatever feed he needs for his own livestock and poultry. It is an outrage against the free-enterprise system to have prosecution by Federal agents against farmers, who are only engaged in raising feed on their own farms for their own needs.

(Mr. FULTON asked and was given permission to revise and extend his remarks.)

Mr. McCULLOCH. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman.

Mr. McCULLOCH. It is my understanding that the other body passed a bill which in effect would make retroactive the proposal for the calendar years 1955 and 1956; is that right?

Hr. HILL. That is correct.

Mr. McCULLOCH. And the House Committee came to the conclusion that that was not proper?

Mr. HILL. I do not think we came to the conclusion that it was not proper. But we felt that we were in no position to take a position antagonistic to the law as it had been interpreted in various States of the United States. That is what we thought.

Mr. McCULLOCH. Mr. Chairman, I hope an appropriate amendment will be offered at the proper time and that it will be adopted.

Mr. DIXON. Mr. Chairman, will the gentleman yield?

Mr. HILL. I yield to the gentleman from Utah.

Mr. DIXON. This legislation is long overdue. All of our small farmers and producers are asking for it, are they not?

Mr. HILL. They are.

Mr. DIXON. It will be a big relief. I hope the bill passes.

Mr. HILL. In the committee conference we will try to iron out the differences, so that when we come back to the House we can have unanimous support.

Coal Production in West Virginia

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include the following:

KEENOTES

(By Representative ELIZABETH KEE)

It is with considerable gratification—and some reservations—that I have just completed reading the 1956 annual report of the coal-mining section recently issued by our West Virginia department of mines. It is good news, indeed, that coal production in West Virginia totaled 150,401,233 tons last year, making 1956 the best year the industry has enjoyed since 1951 when more than 163 million tons of bituminous coal were produced in the State.

West Virginia's fortunes, and more particularly the fifth district's, have always been closely allied to the ups and downs of the soft coal industry, and to a large extent, probably always will be. As America leads the world in bituminous reserves and in coal production, so West Virginia, for the past quarter century, has led the Nation, having estimated recoverable reserves of 52.5 billion tons out of the Nation's estimated 1.9 trillion tons, and producing annually approximately one-third of the country's total soft-coal output.

Similarly, nearly a third of all the bituminous coal mined in West Virginia each year is produced in 6 of the 7 counties comprising our Fifth Congressional District. This is why whatever affects the coal industry is of such profound importance to the district and, in fact, to all of West Virginia, since so much of our basic economy—investment-wise and employment-wise—depends upon the industry's healthy situation. Few of us, indeed, are ever likely to forget the year 1954 when the coal industry was so seriously ailing and West Virginia, instead of experiencing a mild business recession, as did the rest of the country, suffered a real depression.

The steady improvement in the industry, as shown in the 1956 annual report, along with expectations that production in 1957 will at least equal, if not surpass, that of 1956, is therefore most encouraging for West Virginia's immediate economic outlook. Most of the credit for this recovery belongs to the coal operators and to the United Mine Workers of America for the untiring efforts both have put forth to find and develop new markets for coal and for the splendid cooperation which has existed between the two in the solving of their mutual problems.

But credit lines are also due the railroads, the electric power and the chemical industries. In 1955, the railroads transported 71 percent of the coal produced in American mines—the world's biggest commodity handling job. Since then the railroads have appreciably increased the number of coal cars needed to move the major mineral to its markets.

The electric power industry, and especially the Appalachian Electric Power Co., in its expanding effort to meet the Nation's constantly increasing demand for electric energy has become coal's largest consumer. And in this group, too, I would include West Virginia's growing chemical industry—the chemical capital of the world—which is rapidly becoming a substantially larger user of coal.

One bit of data gleaned from the 1956 annual report should, however, be a source of concern to all of us who recognize full employment as essential to a stable and prosperous economy. In 1952, it required 100,000 people employed in and about the mines to produce the State's one-hundred-and-forty-two-odd million tons of coal in that year. In 1956, the number so employed had shrunk to slightly in excess of 68,000. In other words, with an increase of almost 6 percent in the tonnage produced in 1956 over 1952, there has been, statewide, a drop in employment in the coalfields of more than 30 percent over the same period.

Much of this decline can, I believe, be attributed to the closing down of some of our big commercial mines—the so-called marginal mines, those unprofitable to operate—during the 1954 recession. This again stems in large part from the fact that mechanization of many commercial mines has made it impossible for those depending chiefly upon manpower in their operations to compete successfully.

This points up the inescapable fact—which many of us have long recognized—that a greater diversification of industries is absolutely essential to the maintenance of full employment and a thriving business community in West Virginia. Even with a greatly increased market for coal, such as is confidently predicted in the near future, further mechanization of the mines will mean that employment in the coal fields will never again reach its previous high levels.

Moreover, it takes a vast investment of capital to mechanize a coal mine, but while other industries have had the benefit of Government subsidies and Federal assistance to develop and expand, even in wartime, the coal industry and its workers have had to go it alone. The oil and gas industries, for example, have the benefit of a 27½ percent depletion allowance for development purposes, while other industries have been permitted rapid tax writeoffs for expansion purposes. The coal industry, on the other hand, has actually had to compete against Government policies to hold its domestic markets and to retain and expand its vital export markets.

Two events of recent days demonstrate this with unmistakable clarity. Within the past several months, the Polish Government was granted a loan of $10 million by the Export

import Bank. Much of this money, it is believed, is going to modernize Poland's coal mines, for already the Polish Government is invading the Argentine coal markets—a hitherto almost exclusive and profitable export market for American-produced coal.

Again, Government policies have been responsible for the loss of vital domestic markets by failing to restrict the dumping of vast quantities of foreign residual fuel oil along our eastern seaboard. For more than 8 years now, Members of Congress from West Virginia and other coal-producing States, representatives of the coal operators and the UMW, have pleaded, coaxed, and cajoled the administration to place quotas upon these fuel-oil imports in order not to wreak further havoc to our coal industry and to employment in the coal fields. These pleadings have apparently fallen upon deaf ears for it is to be noted that, although the arguments of the Texas and other Western State oil producers have had some effect—in that the President, only this past week, called for voluntary controls over crude-oil imports—he had remained significantly silent upon the subject of foreign residual oil.

Moreover, it would appear that the administration is quite unconcerned by movements afoot in the Congress to permit the importation of Canadian natural gas and to authorize Government spending to begin the development of atomic-fueled electric powerplants.

If the measure of free enterprise is the ability of industry and individuals to stand firmly upon their own feet, the coal industry, the United Mine Workers and West Virginia have demonstrated this ability again and again and to a highly commendable degree. In this day and age, however, it might be well for the administration—and Congress—to recognize that no matter how independent we may wish to be, we are all, in one way or another, interdependent upon each other.

The time has come, I feel, for both the executive and the legislative branches of Government to take heed of the coal industry's needs and to initiative such research programs and protective measures as will promote and safegaurd the existence of an essential industry which has contributed and continues to contribute magnificently to the progress and protection of the Nation.

Moscow Versus MRA

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. McDONOUGH. Mr. Speaker, at Mackinac Island, Mich., young people from all parts of the world are gathering for the 1957 Moral Re-Armament Conference. MRA has appealed to the youth of the world as an effective rallying point for the mobilization of the anticommunist forces which seek to defeat communism, its lies and tyranny, with truth based on the absolutes of God.

The following editorial from the Los Angeles Examiner brings into focus the marked contrast between the foolish followers of communism and the enlightened youth of the world now gathering for the MRA conference at Mackinac:

MOSCOW VERSUS MRA

The departure of a group of young Americans for the world youth festival in Moscow, against the warning of the State Department that it is a Communist propaganda show, takes them on a futile and emotionally dangerous journey. It is a festival celebrating the enslavement and oppression of youth under a godless regime.

In contrast to this journey of the foolish young Americans—and we hope they are not any more than that—there comes to mind the arrival in this country of young people from various parts of the world to attend the Moral Re-Armament Conference on Mackinac Island, Mich.

Many of those who have come here made the choice between MRA and Moscow. A young Scot explained he considered MRA a cure for communism. Rajmohan Gandhi, grandson of the great Indian leader, remarked, "MRA has gripped the hearts and minds of Asian and African peoples." It is, in fact, one of the most effective of anticommunist forces in the world today, because it is based on the absolutes of God.

Whatever Moscow offers youth is based on lies and tyranny. What Mackinac offers is based on God's truth and love. We think the young visitor here made infinitely the better choice.

M. Sgt. John N. Edenfield Is Most Outstanding Airman in Air Proving Ground Command

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. HUDDLESTON. Mr. Speaker, it was my privilege and honor last week to officially greet M. Sgt. John N. Edenfield, who was in Washington as one of the Air Force's most outstanding enlisted men. A former resident of Birmingham, Ala., Sergeant Edenfield was selected outstanding airman in the 16,000-member Air Proving Ground Command.

He was 1 of 19 airmen, representing the Air Force's 950,000 enlisted men, who were special guests of the Air Force Association last week for the golden anniversary of this Nation's air arm. While in Washington for the week-long ceremonies, these airmen were rightly given "red carpet" treatment.

Sergeant Edenfield, a veteran of 18 years' service, began his military career in the Infantry and switched to Aviation Cadet training 2 years later. During World War II he completed 17 combat missions with the 41st Bombardment Group. Prior to his present assignment, Sergeant Edenfield performed duties as chief of entertainment with Headquarters Allied Air Forces Central Europe at Fontainebleau, France, and as recruiting noncommissioned officer in the Alabama Military District, Birmingham.

He served in Birmingham from 1947 until 1951, taking part in many civic activities in addition to his recruiting duties.

Now stationed at Eglin Air Force Base, Fla., Sergeant Edenfield has made an outstanding contribution to the internal information program in the Air Proving Ground Command, in addition to working on many special projects. He has been awarded the Air Medal and the Commendation Ribbon for his work.

It is entirely proper that Sergeant Edenfield, as well as the outstanding airmen from other commands, should be highly honored. By rewarding their many contributions to the service, the Air Force Association is fostering the personal incentive which has made our country great, and which undoubtedly will benefit our Air Force many times again.

Save Atoms for Peace

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. COLE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the New York Times dated August 4, 1957:

SAVE ATOMS FOR PEACE

The historic occasion in the White House rose garden last week, when President Eisenhower signed the documents ratifying United States membership in the International Atomic Energy Agency, marked a significant milestone in the development of the peaceful atom. It was, indeed, the most important step taken so far toward the fulfillment of President Eisenhower's promise to the world, in his memorable address before the United Nations Assembly on December 8, 1953, that the United States would "devote its entire heart and mind that the miraculous inventiveness of man shall not be dedicated to his death but consecrated to his life."

The official birth of the agency, which actually came into being with the President's signature, could thus well mark the opening of a new era in history in which atomic swords would be beaten into atomic plowshares. Furthermore, the proper functioning of such an agency, which calls for a system of inspection and control, also promises to demonstrate the feasibility of effective inspection and control of atomic weapons.

Unfortunately, the great promise held out by the creation of the Agency is threatened at its very birth by an amendment, suggested by Senator BRICKER, forbidding the President to sell or lease enriched atomic fuels to the Agency without specific approval in each instance by Congress. This amendment, if passed by Congress, threatens to cripple the agency before it even has the opportunity to get properly started. At present, and for the foreseeable future, the United States is the only Nation that could provide a sufficient supply of enriched atomic fuels to satisfy the expected demand by the nations of the world for industrial atomic power. It costs millions to build nuclear powerplants and it is very unlikely that any nation would risk making the enormous investments required without being assured that its supply of vital fuel might not be cut off any time with a change of the political climate in Washington.

There is no possible excuse for such an amendment. The Atomic Energy Act of 1954 places its confidence in the judgment of the President in the allocation of atomic materials for peaceful uses, and there can be no earthly reason to believe that such confidence will ever be abused. The present version of the Bricker amendment should be overwhelmingly defeated.

Washington Report, August 3, 1957

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 19, 1957

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Washington Report of August 3, 1957, my weekly newsletter to constituents:

The temper of Congress as the normal adjournment time approaches is edgy, good-natured, or argumentative by turn, certainly unpredictable—not conducive to producing good legislation. The Senate (the "other body") is so far behind the House that a House recess is possible. House Members rightfully conclude that some or much of the House legislation may stay shelved until next year should the Senate elect not to match thet House effort. And so it now stands. Some Members will even go home at a fixed date as they traditionally do. Meanwhile, there's much to be said for the country being better off if we passed less, not more, legislation.

The old dilemma facing a Congressman hit me squarely this week and through me each constituent of Dallas' Fifth District, whose tax money is involved. Should $32.2 million (or more) be spent for a questionable Texas project—"to construct the San Angelo Federal reclamation project for irrigation, for municipal and industrial water supply, for flood control, for the protection and enhancement of fish and wildlife and for recreation"? Arguments for: It is needed for flood control, drinking water, and the other stated purposes. Arguments against: It has not the degree of reclamation it claims to have, and $11 million is going into 10,000 acres (costs too much), also $14 million is not reimbursable to Uncle Sam. Besides, various other specific criticisms, I concluded it was asking too much Federal aid and not enough State and local "do it yourself"—the old raid on the Federal grab bag. Having so ruled against the bill on its merits, which is solely a Congressman's responsibility, I was confronted by the dilemma. The project sponsor, who sincerely believes it necessary and worth while for his district, is an esteemed and admired fellow Texas colleague and after all, this is a Texas project, an opportunity to get back some of the money we send to Washington. Should I please my colleague and help get this project for Texas, regardless of my better judgment? Many voted for the bill because they liked the Congressman, even though they disapproved the project. For my part, having disapproved the project on its demerits over its merits, I opposed the bill. Speaker SAM RAYBURN succeeded in carrying the day by getting 12 Members to change their votes, and the bill passed 189 to 202. As one Member put it, "It being a rather tight vote, with the opposition having an apparent majority, I noted the Speaker going down on the floor talking earnestly to some of the members of his party, and then I observed 12 Members getting up and going down into the well and changing their votes on the motion to recommit from aye to nay—a change of 24 on the roll call, with the result that again Texas is in line for a Federal handout for $30 million, only one-half of which will ever be returned." Now the Speaker and all the bill's supporters must open the grab bag for everyone else if they would be consistent. Where now is Government economy and "cut the budget"? Well, that's how it's done in Washington. What would you have done in my place?

The Niagara power developing bill was the week's crowning blow to me. For the first time in history the Niagara Falls will be developed by public power instead of the private enterprise of the past. The debate brought out many arguments why it was necessary now to authorize the New York State Power Authority to do the job—all except the real one—namely, that the New York State authorities had determined that the State would take over this power development and that was that. In the testimony before the Public Works Committee this position was made very clear.

To my questions of why private enterprise couldn't do the job, the 1971 license-expiration was cited. Conveniently overlooked was the fact that the license could be renewed, and that New York State would oppose this renewal, and then when the private power companies admitted they couldn't go ahead without the license, the New York sponsors point out that they are unable to do the job and that New York State would and could develop this power.

Failing to get the answers and observing only 99 Members of the 435 present, I objected, and so temporarily stopped proceedings. However, the bill passed. I predict we will live to regret this further socialization of our Nation's power production facilities, and I condemn the manner in which the bill was railroaded through the committee hastily and solely by political pressure.

Mathematics: Did you know we will spend more dollars in foreign aid this year than there are seconds of time in a century? Or that to measure our $275 billion national debt at $1 per second, we must go back through all time from the year 6758 B. C. to today?

Administration and Federal Reserve Authorities Think a Moderate Recession Best Thing That Could Happen Now, Journal of Commerce Says

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I include here an extremely interesting article by Sylvia Porter in which she says that in off-the-record conversations with policymakers and influential economists in Washington she has heard them say, in effect—"What we need to end the wage-price spiral in this country is a little recession, and the quicker it comes the better."

If this defeatist attitude is the best this administration has to offer the people of our great country it had better pack up quickly and depart.

I can think of nothing that is more likely to lead to a depression than depression psychology.

YOUR MONEY'S WORTH
(By Sylvia Porter)
KISS AND TELL

Unless you are the 1 in 4,400 who reads the Journal of Commerce you never saw this in print before:

"The evidence now points strongly to the conclusion that both the administration and the Federal Reserve authorities believe that a 'moderate recession now' would be a small price to pay for the avoidance of another boom-and-bust later on. * * *

"Such a policy leads compellingly to the all-important psychological (or public relations) problem of whether the administration should take the public into its confidence by trying to explain its goals and methods—or whether it is better just to follow the course it deems necessary without attempting to make it palatable to the public by official explanations. * * *

"Involved is not merely the problem of whether or not the public should be told, but * * * whether such a crusade * * * actually would increase the danger of inflation by directing attention to it. * * *

"This shows how tough a decision whether 'to tell or not to tell' really is * * *."

EDITORIAL QUOTED

As that 1 in 4,400 who subscribes to this highly respected, authoritative financial newspaper, I saw this in a recent editorial.

And I quote it here because I know the editor of the Journal of Commerce has analyzed it accurately. I know this because again and again, in off-the-record conversations with policymakers and influential economists in Washintgon, this is what, in effect, I have heard:

What we need to end the wage-price spiral in this country is a little recession, and the quicker it comes the better.

Nothing big or severe, of course—oh, no. But enough unemployment spread through the country to push the unions back in line. Enough worry about the state of the economy and public resistance to force businessmen to back down on price increases and to find other ways to cover costs.

This recession is the medicine needed to cure the inflation disease and to put us into sound condition so we can move forward into a period of steady but not feverish, inflationary growth.

Well, if top men in Washington really think this way and can argue persuasively that a little temporary suffering among a few millions of us now is far preferable to the risk of a lot of prolonged suffering among all of us later, why don't they say it out loud? Because:

First, there is the danger that if leading officials of the administration and the men who rule our Central Bank go all out on their inflation warnings, they can by no means be sure they'll gain the public's support for the restraints they insist are essential.

BOOMERANG POSSIBLE

Rather, the warnings could boomerang badly. Instead of getting individual Americans to say, "We'll sacrifice what we want today for the sake of security later," the public might be frightened into fleeing from savings and scrambling for stocks, land, and other so-called inflation hedges. Organized labor might intensify its demands for protections against cost-of-living increases. Forces could be set loose that would bring about the very price explosion so greatly feared.

Second, there is the danger that this GOP administration would be immediately accused of wanting a depression in order to break unions. Former Treasury Secretary Humphrey can tell the Senate, as he did a few weeks ago, that a decline in production is "the happiest thing that can happen to this country" because the letdown will take the sting out of inflation. But Mr. Humphrey's job isn't at stake. The man who is laid off during that decline doesn't feel he is a happy statistic.

And third, there is the danger that a little recession—like a little inflation—wont' necessarily remain little. No one yet has discovered the way to predict accurately how people will react.

So, the odds are that the powers won't dare tell what they honestly think would be the best thing that could happen to us now.

But the courageous editor of the Journal of Commerce has dared tell the score to his exclusive group of readers. And in this column, I'm daring to kiss and tell too.

Southeast Citizens Urged To Help Stop Apartment Sale to NCHA

EXTENSION OF REMARKS
OF
HON. GEORGE H. CHRISTOPHER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. CHRISTOPHER. Mr. Speaker, having lived in Southeast Washington since 1949, I find myself in wholehearted opposition to the request of the National Capital Housing Authority to purchase the Terrace Apartments located at 23d and Congress Streets SE., or any other similar block of apartments south of the Anacostia River.

Personally, I own no real estate in Washington, D. C., but many of my friends do own property in the territory referred to above and in their behalf I want to make my opposition known.

Mr. Thomas D. Laney has stated the case very clearly and extended herewith are his remarks. I would recommend that those who own property in this area should immediately make their views on this subject known to the housing authority.

SOUTHEAST CITIZENS URGED TO HELP STOP APARTMENT SALE TO NCHA

Southeast residents are urged to write the Board of Commissioners at once denouncing the dangerous precedent-making action by National Capital Housing Authority's request to purchase the Terrace Apartments located at 23d and Congress Streets SE.

That this is contrary to the best interests of our area is clear from the statements of Southeast residents who appeared at the hearing on Monday, July 29. It is significant that Mr. Ring, director of the National Capital Housing Authority, testified that since it became known that they were considering this purchase, almost a hundred pieces of property had been offered for sale to the agency. What better proof is needed that this plan would blight neighborhoods from coast to coast?

Following is the statement of Thomas D. Laney, manager and executive director of the Veterans' Cooperative Housing Association, which owns and operates Naylor Gardens:

"My name is Thomas D. Laney. I am here representing the Veterans' Cooperative Housing Association, which owns and operates Naylor Gardens. I am manager and executive director of that association.

"We would like to go on record as strongly opposing the purchase by the National Capital Housing Authority of the Terrace Apartments or any other established apartment development for conversion to low-cost public housing.

"It is our understanding that public housing has two major goals: First, the elimination of slums; and, second, the providing of additional housing units.

"This proposal does not meet either test. It provides no new housing units; it merely shuffles tenants from one location to another, which is a poor substitute.

"In the second place, instead of eliminating slums, it can only create them. The impact on the neighborhood of the transfer of an established apartment development to low-cost public housing cannot but be disastrous to that neighborhood. Other real-estate values will be drastically reduced, and the rentability of other rental units in the neighborhood will receive a blow from which they will never recover.

"The precedent that would be established by this sale is one of the most serious threats that has ever confronted Washington property owners, because this would only be the first of who knows how many such purchases that would blight neighborhood after neighborhood. This may not seem too serious to those who live in areas where zoning permits only single-family dwellings, but to those of us who are in the areas zoned for apartments, it is very real. It means to us that the National Capital Housing Authority could and probably would become a dumping ground for apartment projects with serious vacancy problems. Instead of it being necessary for the owners of property to keep that property in good rentable condition, they could solve their problem merely by offering it to appease the apparently insatiable appetite of the National Capital Housing Authority.

"And what has happened to the reported promise to build no more public housing units east of the Anacostia River? I know the answering argument to this is that this is not building, but purchasing. I would like to assure you all that our objection to additional public housing in our area is not due to our being allergic to construction equipment, mortar, or carpenters, but rather to our sincere belief that our section of the city has reached the limit of public housing that it can accommodate and still remain a growing and vital part of the District.

"Furthermore, it is our belief that it was never the intention of the Housing Act that apartments that could hold their own on the rental market at the rents of these apartments should be converted to public housing. It is our contention that many, many Washington families are occupying housing less attractive and with fewer extras than these apartments have.

"Lastly, we challenge the good sense of removing this property (and the other properties that would be involved later) from the tax rolls.

"In closing I would like to ask you again to consider the fact that your action here will serve as a precedent in Washington and all over the Nation, and that approval of this sale would probably start a chain-reaction that would blight neighborhoods from coast to coast."

Congressional Help for Orphans Needed This Session

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. PORTER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following news story from the Portland (Oreg.) Journal of August 2, 1957.

Each day brings needless heartbreak to American parents who have already adopted Korean orphans. I believe the Members of this House are aware of the need for amending legislation which will permit entry into this country of these youngsters. Therefore I urge that the Immigration Subcommittee of the Committee on the Judiciary favorably report H. R. 8123 which will correct this situation.

Congressman Walter's bill contains language which will resolve a sad situation which has existed far too long.

MRS. HOLT SAYS KOREA TOTS DYING—CONGRESS HELD SLOW IN ACTION ON ADMISSIONS

"Every Congressman supports legislation to allow Korean orphans to come to America but they are all too busy quibbling about other things to pass the bill for admitting the children," Mrs. Harry Holt, of Creswell, complained here.

She came to Portland from her eight own adopted Korean orphans to speak before the Mocks Crest Evangelical United Brethren Church in St. Johns.

"While Congress is quibbling, 16 of the 220 children crowded in 2 orphanages which were designed for 50 each have died. I have to write to the adopted parents that their children have died in Korea because Congress does not pass legislation that every Congressman favors,' 'she said in an interview.

She said the desired legislation will not cost the Government a cent since the persons who adopt the children pay for adoption costs and transportation.

Because the legislation is not controversial, it is tagged to follow controversial legislation, Mrs. Holt explained. Congress didn't get to act on the bill at all in the last session.

Meanwhile, her husband and two daughters, Molly and Barbara, are helping to take care of the orphans in Seoul in a serious heat wave.

Since the hostilities in Korea ended, the number of these children to be born has increased, Mrs. Holt said.

"Mothers bring them on their backs and sign releases," she said. "The ones who love them know they have no future in Korea and that if they come to America they would be loved and cared for."

Mrs. Holt who with her husband is associated in the Holt adoption program, said they have received requests for adoption of 7,500 orphans.

Their own eight Korean-born children are doing very well—"they're very lively," she said.

AEC Rejects Part of Authorization Bill

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. COLE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter from AEC, dated August 3, 1957:

Hon. W. STERLING COLE,
Joint Committee on Atomic Energy,
Congress of the United States.

DEAR MR. COLE: This is in response to your request for comments on the proposed authorization bill (H. R. 8996 and S. 2674). The Commission has testified at hearings before the subcommittee on legislation on a prior version of the bill. I am happy for the opportunity to state in this letter the Commission's position on the major issues presented by the bill.

1. Section 101 of the bill would authorize appropriations for three reactor projects which are entirely outside the Commission's authorization request, as follows:

Project 58–b–8. Production reactor for special nuclear materials: Development, design, and engineering only, $3 million.

Project 58–e–14. Natural uranium, graphite moderated gas-cooled, power-reactor prototype designed for the production of approximately 40,000 electrical kilowatts, $40 million.

Project 58–e–15. Plutonium recycle experimental reactor designed for the production of 15,000 electrical kilowatt equivalent, $15 million.

Section 101 would direct the Commission to proceed with the preconstruction design and development work on item 58–b–8 and to submit a design, cost estimates, and construction schedule to the Joint Committee on Atomic Energy not later than April 1, 1958. Section 110 would direct the Commission to proceed as soon as practicable with the design and construction of projects 58–e–14 and 58–e–15 at Commission installations.

These provisions would constitute a substantial start toward a program for Government-owned atomic power facilities. Further, a direction to construct reactors now may well be the first step to similar directions in later years on an expanding scale. As you know, the Commission has felt that its efforts should be concentrated primarily on research and development—including reactor experiments—looking toward the improvement of basic reactor technology. When the technology has been developed to the point where the construction of a large-scale reactor is justified, it is the Commission's view that that construction should, wherever possible, be undertaken by private industry rather than by the Government. This accords with the precept in the Atomic Energy Act of 1954, section 1 b, where the Commission is enjoined to "strengthen free competition in private enterprise." In addition, this view is based upon our sense of responsibility to avoid the unnecessary large expenditure of the taxpayers' money.

Nevertheless, the Commission has often stated that in those instances in which it ever appears that a particular reactor type is ready for large-scale construction and no private proposal for such construction is forthcoming, we will seek authorization and appropriation to proceed with the construction of the reactor. Our views on this proposition were stated fully in connection with the hearings last year on the Gore-Holifield bill and are well known.

In addition to our general objections to the concept of requiring the Government to embark upon a large-scale program of construction of Government-owned power reactors, the Commission is also seriously concerned with the wisdom of a congressional designation of particular types of reactors for construction. The Commission believes that determination of the technical feasibility and promise of specific reactor concepts calls for technical judgment of a kind which is within the special competence and responsibility of the Commission. Such determinations, of course, must rest upon careful technical evaluation, as well as engineering and cost analyses. Further, a congressional direction to proceed with a specifically defined reactor type impairs needed flexibility for modifications as a project proceeds. Accordingly, we believe that a congressional direction to the Commission to proceed with particular reactor concepts would set an unwise precedent.

Project 58–b–8 would authorize development, design, and engineering on a production reactor. Authorization for such a project is, in our view, neither necessary nor appropriate since under section 261 of the Atomic Energy Act, appropriation of funds for these purposes is already authorized. Thus, the only significance of inclusion of this project in the bill is to direct the Commisson to proceed with design, engineering, and development work and to submit a report on its design, including cost estimates and schedule of construction, no later than April 1, 1958. As you know, the Commission's present development program at Hanford, Wash., includes work directed toward improved designs of plutonium production reactors, including designs which would produce incidental power. In the absence of any requirement at this time for additional production capacity, however, the Commission does not regard the development and design of a specific production reactor as a matter of urgency. The requirement to proceed with design, construction estimates and construction schedule and to report on these matters by April 1, 1958, would have the unfortunate effect of freezing upon a specific reactor design almost immediately and denying the advantages of further developmental effort. The Commission further points out that the cost of complete development and design of a large plutonium production reactor capable of producing incidental electric power is preliminarily estimated at a minimum of $16 million; such development and design, even with an accelerated program, could not be completed by April 1, 1958. For all of these reasons the Commission believes the inclusion of project 58–b–8 is unnecessary and undesirable.

Project 58–e–14, in our judgment, illustrates the disadvantages inherent in directives of the type embodied in this bill. By specifying a natural uranium, graphite-moderated gas-cooled reactor, the bill might well preclude any significant advance over the British technology embodied in their existing reactors. Indeed, the newer versions now under consideration by the British involve slight enrichment with U–235, an approach with many well-recognized advantages, which this bill would prohibit. The Commission is presently exploring the gas-cooled reactor concept on several fronts. It believes that a project for construction of a large stationary powerplant of this type would be valuable only if it made very significant advances over present British technology. The Commission believes that the specified project could only result in a reactor little if any better than the dual-purpose Calder-Hall reactors which we feel are obsolescent. No attempt has been made to estimate the operating costs of the project. In view of the bill's direction that the reactor be constructed by AEC at an AEC installation, that the power from it be used by the AEC, and that it be dismantled when it has served AEC's purposes, non-Federal contributions to the construction or operation of the project cannot be expected. For these reasons the Commission opposes inclusion of this project in the bill.

With respect to project 58–e–15, the Commission has previously testified that it believes that the construction of a plutonium recycle reactor may be an appropriate part of the Nation's nuclear power program and that it has considered requesting funds for such a reactor at an appropriate later date, when necessary research and development has reached the required point.

2. Section 111 (a) (1) of the bill would prescribe the method of contracting between the Commission and publicly and cooperatively owned utility organizations under the Commission's power demonstration program. The Commission's negotiations with several of the publicly and cooperatively owned utilities are in an advanced stage and in at least one case, the Elk River cooperative, are close to contract execution. To require the Commission to reopen negotiations on a new basis would delay contract execution and hence delay completion of the project. In addition, the Commission believes that there are cases in which it will be advantageous to the Government to give to the utility contractual responsibility for the overall project, subject to controls necessary to protect the Government's interest, and that there are also cases in which it may be practicable to provide for limited assumption of operating costs and risks by the utility. Both of these possibilities would be foreclosed by the mandatory requirements of section 111 (a) (1). The basic contractual framework proposed by section 111 (a) (1) may in some cases provide the only feasible way of successfully concluding negotiation, and in such cases the Commission would follow that framework. But the Commission believes that it, as an executive agency, should be free to develop and adopt such contractual patterns, consistent with general legal requirements, as appear appropriate and in the best interest of the Government. Accordingly, the Commission cannot endorse enactment of section 111 (a) (1) in its present mandatory form.

The Commission further points out that its estimates of the cost of these projects were premised on the assumption that contracts would be entered into on the bases presently under negotiation. It is possible that a reopening of negotiations on a new basis would result in changes in costs, whereas we are no longer at this time in a position to request a change in the amount authorized for these projects. In addition we must point out that representatives of both Elk River and Consumers have had occasion recently to advise the Commission of their need to have definitive commitments for purposes of their own system planning. They have indicated that inability to obtain such commitments in the near future might require them to proceed at this time with conventional plants instead of the proposed nuclear facilities. While we are hopeful that they would be willing to renegotiate the arrangements on the basis which section 111 would require, we cannot give assurance as to the effect which the delays necessarily involved in such a renegotiation would have on their plans.

Section 111, in general terms, authorizes appropriations of $129,915,000 for use in cooperative programs. Section 111 (a) (2) authorizes expenditure of $1,500,000 for "additional general research and development" to advance fast reactor technology. The majority report states, however, that "The committee does not approve the requested authorization for preconstruction research and development work and waiver of fuel use charges in connection with the reactor project of the Power Reactor Development Company * * *" and the list of authorized projects appended to the report shows no funds authorized to carry out the PRDC contract. The minority report, on the other hand, states that it was the intent of the committee to authorize use of the $1,500,000 for purposes of the PRDC contract. If, as the majority report would indicate, the $1.5 million authorized by section 111 (a) (2) is not intended to be available for purposes of the URDC contract, the authorization of that sum for other purposes is not necessary in that we are requesting in fiscal year 1958 appropriations in the amount of $13.6 million for fast breeder research and development and have no present need for the additional $1.5 million apart from the PRDC contract.

If the Congress decides to refuse to authorize appropriations sufficient to cover the Commission's undertakings under a contract lawfully entered into, we believe its legislation should so state explicitly and unequivocally. In the PRDC contract the Commission, in consideration of expenditures by PRDC and its affiliates estimated at about $58 million, undertook to contribute up to $4.2 million to the cost of certain specific research and development needed for the reactor project. PRDC and its affiliates have already

spent very substantial sums in reliance on the Commission's undertaking to provide this assistance. This assistance was to go for consulting and information services, training of personnel, performance of a critical experiment to determine nuclear characteristics of the proposed reactor, performane of irradiation tests to discover and extent of possible radiation damage to reactor components, and performance of containment studies to discover how to prevent parts of the reactor system from penetrating the containment shell in the event of acciden.

The PRDC arrangement was entered into in good faith pursuant to the first round of the Commission's power demonstration reactor program, the aims, content, and procedures of which were, we had every reason to believe, fully acceptable to all concerned, including the Congress. We believe that under the circumstances PRDC in justice is entitled to assurance that the appropriations necessary for the Commission's undertakings are authorized. Apparently the reason urged for not authorizing the necessary funds is the possibility that the PRDC reactor may be determined later to be unsafe. That question is presently before the Commission in a formal regulatory hearing, and the Commission's decision concerning it, based upon the very voluminous record made and to be made at that hearing, is subject to judicial review as provided by section 189 of the Atomic Energy Act. The execution of the contract does not constitute a determination of any of the issues presented in that proceeding and is without prejudice to their determination in that proceeding. The contract will, among other things, provide a portion of the research and development needed to establish definitively, at such time as an operating permit is applied for, whether or not, and under what conditions, the reactor can be operated without undue hazard to the health and safety of the public. Thus, refusal to authorize appropriations for purposes of the contract would serve to delay or to hinder the obtaining of information relevant to the safety of the reactor. Acordingly, the Commission believes that authorization of $4,206,000 to carry out the PRDC contract is in the national interest from every point of view.

The Bureau of the Budget advises that it has no objection to the submission of this report and that it strongly opposes the authorization of the three reactor projects which were not included in the Commission's authorization request.

Sincerely yours,

LEWIS L. STRAUSS,
Chairman.

Post Office Department's Troubles

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the Record, I include therein the following editorial taken from the Gaffney (S. C.) Ledger of July 27, 1957:

POST OFFICE DEPARTMENT'S TROUBLES

A Citizens' Advisory Council, working for the Senate Post Office and Civil Service Committee, has concluded that the postal service is being operated in a wasteful and inefficient manner. Moreover, the Council believes that instead of a postal increase, the department should be put on a business-like basis.

The Post Office Department is the biggest business in the country and spends about $3,000,000,000 a year. It is, of course, a socialistic enterprise and there is no competition, so there is no real pressure for efficiency or the elimination of waste.

This is one reason why the Post Office Department has operated constantly in the red, and why the deficit is increasing year by year. At present, Postmaster General Arthur Summerfield is threatening to curtail even more services, and wants to increase rates sharply.

The Citizens' Advisory Council, however, agrees with the Hoover Commission that certain postal rates are fixed not to provide income but as a factor in the dissemination of news and information, a service to the people of the country, just as is military service, and various commercial and agriculture services performed by the Government.

While the Council and the Hoover Commission do not believe that people should get mail service free, they think that the post office is more than a business, and that it is not being operated to make a profit, or even to break even, but to render a service. They point out that the department handles a large amount of free Government mail, from the various branches of Government, which constitute a service for which no revenue can be expected.

In short, the services of the post office are worthy of subsidation, in the public interest, which will always mean that certain phases of the department's operations will wind up in the red.

We agree wholeheartedly with the Citizens' Council and with the Hoover Commission. For the reasons stated above, we are against drastic hikes in postal rates and are in favor of economies and improved efficiency in the department.

West Neglects Arab Refugee Problem Which It Created

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 30, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, there will be no peace in the Middle East until the West finds a solution to the Arab refugee problem. The West has this responsibility because it created the situation which led to the displacement of thousands of Palestinians. Frequently members of the House Committee on Foreign Affairs have expressed themselves as to the emergency of the problem but apparently it is receiving no official attention.

A recent article by Mr. Philip Geyelin is to the point and I am including it as part of my remarks.

PALESTINE REFUGEE MESS, FOR YEARS A BAR TO PEACE IN MIDDLE EAST, IS WORSENING

(By Philip Geyelin)

PARIS.—To the traveler just back from the Middle East the scene is vivid: In the dusty street of a mud-hut village a mile or so from the fabled Biblical town of Jericho, children fly gaily colored kites; a stately Arab woman glides by in flowing dress, a shawl across her face, a jerrycan perched on her head. In a crude leanto cafe, men sit quietly in the shade, glaring balefully at the visitor in western clothes.

There is nothing at first glance to distinguish the setting from many another Arab town. But the difference is vast—for this is Aqabat Jaber, largest of the half-dozen camps in Jordan set up by the United Nations to house Arab Palestine refugees. Here nearly 40,000 former inhabitants of what is now the State of Israel are sitting out their lives. In similar establishments elsewhere in Jordan, and in Lebanon, Syria, and the Gaza strip, nearly a million refugees share the same futureless fate.

Now, to complicate a bad situation, financial trouble is brewing. The U. N. Relief and Works Agency for Palestine Refugees is spending $35 million a year; over the past 8 years the United States Treasury has been footing 70 percent of the bill for feeding and housing the refugees. But funds are running out, and UNRWA Chief Henry Labouisse is presently turing U. N. member countries whose contributions are lagging. Already educational, vocational training, and other rehabilitation work has been stopped or trimmed.

A financial breakdown of UNRWA could touch off a nasty row. For the Arab refugees are the grim personification of the basic Middle East issue—the dispute between Israel, established with United States blessing in 1948, and the Arab countries that ring it. Even if the current money trouble is settled, most authorities see no hope for Middle East peace until the refugee problem is permanently solved.

BYPRODUCT OF WAR

The problem begins with the partition of Palestine 9 years ago and the establishment of a sizable chunk of it bordering on the Mediterranean as a national home for the Jews. The immediate upshot was the brief Arab-Israeli war, started by the Arabs and ending in their defeat. A byproduct was that hundreds of thousands of Arabs fled, or were forced, from their homes in the Israeli section. A few melted into the population of neighboring Arab States, but most gathered in the refugee camps to be cared for by the U. N.

Today they are still encamped, pawns in Middle East politicking and an ever-present source of violent trouble.

"We must ask you not to talk to the refugees," an UNRWA escort cautions the American visitor. "Crowds gather and you never really know what might happen; though it may not look it, this place is very tense."

Last year, demonstrations were frequent—one destroyed most of the U. N. camp installations. Their inspiration is easy to trace: Cafe radios, banned when Jordan's King Hussein declared martial law after the upheaval last April, had up to then been tuned much of the time to Egyptian President Nasser's inflammatory Voice of the Arabs radio program, rich in promises of a speedy return of the refugees to their homeland and bitter in placing the blame for their plight on the imperialist west.

CRACKING DOWN

Recently the Hussein government has cracked down on the camps, warning the tribal elders to keep their followers in hand. Pictures of Nasser have vanished and in their place are displayed the youthful features of Hussein. But nobody thinks this has changed many refugee minds.

If the camp looks listless despite its latent tension, there's a good reason—its inhabitants have little energy to waste. The monthly ration includes, in addition to one cake of soap, just enough flour, sugar, rice, lentils, and cooking oil to supply 1,500 calories a day in summer, 1,600 in winter. The camp's dietary authority figures this is just enough to keep a man going if he doesn't do anything more than sit around."

Special rations are provided for sickly children and expectant mothers and disease has been kept remarkably well in check. But if medical care became a casualty of the financial pinch, epidemics would sweep the

camp population. As it is "we have many problems," says the young doctor in the crowded infirmary as he outlines the incessant battle against typhoid, dysentery, and other ills.

Combating the flies is a big camp project, and perhaps the only diversion the inmates have. Each year a contest is held for the best effort to stamp out mosquito breeding places and eliminate attractions to flies. Prizes—a bolt of cloth for a child's dress, an extra ration of soap, and sometimes gold medals—are awarded the tidiest housekeepers.

JAMMED QUARTERS

The housing allowance is as meager as the food ration. A wry laugh greets the American's question of how many rooms a family of five is entitled to. "We figure it the other way around—how many people per room," is the reply of Yusef Tabori, the pleasant, tireless director of all the camps in the Jericho area. Families of eight or more, he reports, are usually entitled to an extra room, especially after a member of the family gets married.

Some refugees, to be sure, have found outside work in nearby towns to provide small sums of money; a number of them also work on the camp staff, or on such jobs as cleaning latrines. But unemployment is Jordan's biggest economic problem and camp jobs are few. Seated with Mr. Tabori is an aged camp "notable," dressed in white robes hooding his sun-blackened face, pleading for work on the camp staff for one of his tribe members. "I had to say no," Mrs. Tabori sighs. "I spend most of my time saying no to such requests."

Mr. Tabori is a refugee himself, a wealthy owner of apartments and business properties in Israel, he declares. His solution to the refugee plight is brief. "The only solution is for us to go back," he says in a flat voice, as if he'd said it many times.

Nobody studying the refugee problem believes the chances of going back are promising. Plans for repatriation, or resettlement in other lands, abound. The Israelis have offered to take 100,000; Iran, Canada, the United States and other countries have also offered to accept some. But the stumbling blocks are enormous—on both the Israeli and Arab sides.

HANDY POLITICAL LEVER

Refugees demand that everybody who wants to return to Israel should be allowed to, a move the Israelis won't accept because of the political impact plus the difficulty of restoring their land, homes, and property, much of which is in use. Plenty of Arab politicians, especially those of the Nasser variety, are reluctant to see the problem disappear; it would not only remove a handy political lever for them at home or in other Arab countries but go a long way toward conceding Israel's right to exist.

Even negotiating with Israel is opposed by most die-hard adherents of Arab nationalism. Moreover, some rightwing Arab business elements, opposed as they may be to Nasser and his clique, are leery of an Israeli settlement. They fear the eventual result would be a weakening of the Arab boycott on Israeli goods and they don't welcome competition with the busy Israelis. And in Jordan, landlocked except for the out-of-the-way Gulf of Aqaba, there's reluctance to recognize Israel's right to exist and thus give up forever the prospect of a Mediterranean port.

Sums up an American diplomat in Damascus, Jordan's capital: "We might as well face it, this problem is going to be with us a long time." Many officials believe it is not only lasting, but already worsening. Apart from the possibility of UNRWA's financial collapse, the refugees are prime targets for Communist exploitation, and the longer their hopes are frustrated the more embittered they will become.

What will be done about the U. N. relief work is uncertain. But even if it's temporarily bailed out, a far tougher problem will remain. Peace, and a really favorable footing for the West, will never be secure in the Middle East, in the view of authorities on the scene, until the Aqabat Jabers and the problem they embody have finally disappeared.

How Some Foreign-Aid Money Is Spent—A Mere Matter of $25 Million

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 30, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, I am including at this point an editorial which recently appeared in the Wall Street Journal. The situation referred to seems almost impossible.

A MERE MATTER OF $25 MILLION

Saudi Arabia is a pretty warm place, but nobody there is quite as hot as some Congressmen in Washington are right now about the little matter of $25 million in foreign aid to King Saud.

It seems that when the King was here early this year negotiations were begun to grant Saudi Arabia that much money from the 1957 foreign-aid funds, and talks were started about where the money could best be spent for the country's economy. Naturally, there were some strings to the spending. The United States thought most of the funds ought to go to development of Damman, a port near the United States air base at Dhahran. The Saudis were willing to spend some there, but wanted the balance spent for other purposes.

Ambassador Wadsworth made a number of trips to the King's desert palace to try to induce the King to take the money. But the King was reported preoccupied with other matters, and the June 30 deadline passed.

None of that makes the Congressmen mad. What has them hot as a Bedouin is the fact that the State Department is back asking Congress to grant the amount of money again in the hopes that King Saud can be induced to accept it.

The International Cooperation Administration was wise to put some strings on the grant, considering the account of one item of foreign aid to Saudi Arabia dug up by the Hoover Commission. In 1953 ICA's predecessor, the Foreign Operations Administration, asked Saudi Arabia what the United States could do to help, and the King suggested a vast bathhouse for pilgrims on their way to Mecca.

The bathhouse was to cost around $300,000 and to include steam sterilizers for the pilgrims' robes and prayer rugs. A site was chosen, work was begun, and then FOA technicians discovered that there wasn't enough water there to run the steam sterilizers. The project was abandoned.

It may be that some similar strange idea of Saudi Arabia's economic needs led to the lack of agreement which ended in the failure of King Saud to pick up that $25 million check.

But we can understand the King's disinterest in the aid, considering the fact that he takes in some $250 million a year in oil revenues. What we find difficult is the insistence of the State Department that Congress also should insist on giving away that $25 million by making it again available to Saudi Arabia.

And considering all the circumstances, the best thing Congress can do with that unwanted $25 million is to make it, and more, available to the taxpayers by refusing to appropriate money for foreign aid that foreigners don't want.

Intervening in Cuba

EXTENSION OF REMARKS
OF
HON. TORBERT H. MACDONALD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. MACDONALD. Mr. Speaker, I call to the attention of the Members of the House an editorial which appeared in the New York Times, Saturday, August 3, 1957. This editorial concerns the visit of Ambassador Earl E. T. Smith to Santiago de Cuba. I would like to say that I feel the action of our Ambassador is in keeping with the highest traditions of American sense of justice and fair play. While Mr. Smith may be new in Cuba, the sense of fair play which he expressed so forcefully when observing the brutal repression of a peaceful demonstration by 200 Cuban women by the Cuban police, is not new to the United States and I hope is not new to Cuba.

I commend Ambassador Smith for his action and echo the New York Times' sentiment that Americans may hope that we produce more ambassadors like Earl E. T. Smith.

INTERVENING IN CUBA

The visit of Ambassador Earl E. T. Smith to Santiago de Cuba has stirred up a great controversy in Cuba. The State Department has ordered a full report which, of course, is not an implied rebuke, since the Department has no basis for judgment until the report comes.

Perhaps the Ambassador, who is a new political appointee, did not act or speak like a trained diplomat in Santiago de Cuba Wednesday when he denounced the brutal repression by the police of a peaceful demonstration by 200 women of the city. However, he spoke up like a man and like a good American, and it would be a sad day if American foreign policy could not stand envoys who are outspoken in behalf of decency and freedom. After all, Ambassador Smith saw what happened, and the demonstration concerned him.

Yet this is where the problem gets controversial. Given the great ferment in Cuba today, and especially the fact that Santiago de Cuba is almost 100 percent militantly anti-Batista, it stood to reason that a visit by the new American envoy was bound to cause excitement. However, Santiago de Cuba is the second largest city in Cuba. It is normal for an ambassador to want to see the important cities and provinces of the country to which he is accredited. Moreover, if he did not go to Santiago de Cuba this, too, could be taken as a gesture—in that case favoring the Batista regime.

Ambassador Smith's problem proves that everything the United States and its representatives do or do not do in Latin America has an effect on internal political situations. The United States is so important to a coun-

try like Cuba that it cannot remain aloof. The previous Ambassador, Arthur Gardner, made a deep impression on Cuban affairs by showing himself to be pro-Batista.

Ambassador Smith arrived in Cuba a few weeks ago with a good idea—in theory. The policy of the United States, he said at his first press conference on July 25, is "noninterference in the internal affairs of other nations." So it is, but the best of intentions mean nothing in a case like Cuba's. Mr. Smith certainly had a lesson on that score in Santiago de Cuba.

Since he had to take a stand, at least he took the right one and this is something for which most Cubans will be grateful. The Batista government, on the other hand, is unhappy. All things considered, Americans may hope that we produce more ambassadors like Earl E. T. Smith.

The Liberal Press Loaded Against Conservatives

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. SHEEHAN. Mr. Speaker, on Sunday, July 28, Senator WILLIAM E. JENNER, a conservative Republican from the State of Indiana, was a guest on one of the nationally televised press shows. In reporting on the results of this television press conference Mr. George Todt stated that it was his opinion that no network program had ever treated a guest so shabbily and rudely as was done on this occasion.

Mr. Todt brings out the opinion that Senator JENNER was discriminated against because there was not a single friendly reporter on the panel and that this seems to be the standard treatment accorded to conservatives, especially if they are Republicans.

Mr. Todt asks the pointed and soul-searching question which every press television panel show should ask of itself when he stated: "Why not have both liberal and conservative members of the press at hand on controversial shows to ask all types of questions?"

Mr. Todt's article appeared in the San Fernando Valley Times on Wednesday, July 31, and was as follows:

"The hare-brained chatter of irresponsible frivolity."—Disraeli Speech, 1878.

When Republican Senator WILLIAM E. JENNER, of Indiana, "met the press" last Sunday on a nationally televised show, I think a new low may have been reached. It would be hard to select any network program any time, any place, any station—that ever treated a guest so shabbily and rudely as this one did on that occasion. The superliberals had their day in court.

Cute little old Mrs. Mae Craig screamed shrilly that Time magazine had labeled the Senator "a reactionary and an old fossil." Brainy Ernest Lindley scowled contemptuously with overly arched eyebrows that darted looks of hatred at Mr. JENNER. Powerful Richard Wilson cut off the Senator's remarks at every available opportunity. Lawrence Spivak distinguished himself again by asking impertinent questions which seemed designed to portray the Hoosier as the dark scoundrel the superliberals undoubtedly think him to be. How did they make out?

Sorry to disappoint anyone, but this loaded kangaroo court didn't get far with Senator JENNER. He made them all look a bit on the silly side. For the more they poured out their venom and spleen on him, the more he smiled at them and spoke with charity and kindness in return. It really burned up this little section of the so-called press. Better luck next time.

The trouble with Senator JENNER is that he knows which way is up where the Communist conspiracy is concerned. While the superliberal panel expressed their horror at the Senator's newly proposed bill which would limit the self-enlarged powers of the Supreme Court in matters affecting the internal security of the United States, he made it quite clear why we must protect ourselves in this particular area. He said that the aim of the Reds is still to dominate the world—and we are their number one target to destroy and thereby accomplish their goal.

Under such circumstances, said Hoosier BILL JENNER, it is ridiculous for the Supreme Court to bend over backwards so far in the preservation of some fancied rights for individuals that it loses sight of the man objective—the preservation of the United States. Few loyal Americans will take exception to the Senator's premise here.

Some really meant-to-be-lethal blows were pitched at the Indiana solon when the press tried to egg him into a fight with President Eisenhower—which got nowhere. Senator JENNER pointed out that he was a Republican of the nonhyphenated variety, and as such he would support Mr. Eisenhower, the leader of the Republican party. And he made an excellent point in stating his position. He said that the party was big enough to hold many persons and groups of diverging points of view—that in actual practice there were 48 GOP state organizations inside the national party and within the continental limits of the United States. As to whether he was a "good Republican"? Well, now, said Hoosier BILL, having been in the Senate some 18 years—it seemed apparent that he must be a pretty good Indiana kind of Republican or he wouldn't have gotten elected all those times. Touche.

Actually, Senator JENNER was more than a match for the outgunned opponents who tried to smear him for the edification of the superliberals in the television audience who imagined that he would receive short shrift at the hands of their brave champions of the press—but that is not the point. What is important is that he was discriminated against not a single friendly reporter among the whole lot—and if this is the loaded kind of rude reception a conservative Republican must be subjected to in order to be heard on television nowadays, it might be better to have stood in bed, period.

Judging from the inane intellectual quality of most superliberal commentators and members of the press today, it is no danger to anybody that their views be heard. It is just that they manage to make it appear that they are in overwhelmingly preponderant numbers and if you don't think as they do, you are in that fearful group called the minority. Heaven forbid.

Let the superliberals load their stacked panels in the future to the tune of 3 out of 4 or even 9 out of 10, if they want to do so. But is it too much to ask them to allow just one real member of the press like George Sokolsky, or David Lawrence, or Holmes Alexander—or any one of dozens like them in the honest-to-Pete press who are scornful of liberalissimo and know how to say so—to sit in just to keep the game honest?

Unless the pseudoliberals stop monopolizing all the spots for themselves on panel shows of this type, they will ultimately prove at least this much beyond all doubt; they must be scared of their own shadows. Why not have an honest debate once in a while? Why not have both liberal and conservative members of the press at hand on controversial shows to ask all types of questions? Or do the former require an exclusive monopoly kind of handicap to appear to come out even in the argument? Some press, isn't it?

Trading With Red China

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Camden (S. C.) News of July 25, 1957:

TRADING WITH RED CHINA

Representative BYRD of West Virginia, speaking in Congress the other day against trading with Red China, recounted a story by Tolstoi entitled "What Shall It Profit?".

In the story Tolstoi told of a young man who had land hunger and who added land to land and farm to farm, but could never get enough. The young man's father died and left his huge estate, but the young man was still not satisfied, and he would lie awake at night planning and scheming as to how he might increase his possessions. One day there appeared in his presence a stranger upon whose countenance were authority and power. The stranger promised the young man all of the land that he could cover in a day for a thousand rubles. He said that the young man could start in any direction and go as far and as fast as he would, and that if he were back by sunset he could have all of the land that he had encompassed.

So the young man took off his hat and coat and placed the money upon the ground and, without saying a word to his wife and children, he started out at sunrise to get, at last, enough land. He started leisurely enough, but after a while he hurried a little and then he went faster still. His original plan was to cover a plot of ground 6 miles square, but after he had walked the first 6 miles he paused and look to the right and to the left. He thought that it was the finest land that he had ever seen, and he decided to walk 3 more miles, and then he walked 3 more miles. Then he walked 3 more miles, until he had covered a distance of 15 miles before he turned upon the second side. He completed the second side, a total distance of 30 miles, just as the sun crossed the meridian. He came upon an old man drinking water from a spring, but in his hunger for land he brushed the old man's cup aside and pressed on.

All through the long afternoon he constantly accelerated his pace, fearful that he had undertaken too much and might lose it all in the end. When he was within a few miles of the goal, it seemed that he would be completely overcome with exhaustion, but, being a young and ambitious man, he summoned the last ounce of his strength and he put forth one final and tremendous effort to reach the starting point before the sun should set. As the afternoon shadows lengthened and the hours wore on, the path became less level and his feet were bruised upon the stones. When he was within a few yards of the goal, he no longer could stand upon his feet, but he made his way painfully, crawling inch by inch upon the ground. He no longer could see to the left or to the right. Every muscle was aching and every nerve seemed to be breaking.

Looking ahead, he saw standing at the grave of his father the stranger with a cruel, cynical smile upon his face.

The man reached the starting point just as the sun went down, but he had overtaxed his strength, and he fell dead upon the spot. The servants dug a grave for him, and the stranger said to the servants, "I promised him all of the land that he could cover. You see how it is: 6 feet long and 3 feet wide." And with that, the stranger, who was called Death, vanished, and as he did so he said, "I have kept my pledge."

Those who today are urging that we trade with Red China are thinking perhaps of material gains and political gains. The question is whether we are going to forsake moral principles for political and economic gains.

We trust this country will not, for the sake of a few dollars in trade, surrender our principles as a great nation and a great people.

Plans for the Future

EXTENSION OF REMARKS
OF
HON. RALPH J. SCOTT
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. SCOTT of North Carolina. Mr. Speaker, under leave obtained to extend my remarks in the RECORD, I wish to include a prize-winning essay entitled "My Plans for the Future," written by Robert Dayton Denham, a senior at the James A. Gray High School, Winston-Salem, N. C.:

Realizing that the continuance of educational preparation after high school is becoming more and more essential for today's youth, I desire to enter college after graduation and obtain the best possible training for future life. To receive the maximum benefits offered by this training, I believe it should include the four aspects of my life: spiritual, mental, physical, and social. Knowing also the standards to which American vocational requirements have soared and the extremely high demand for college trained graduates in both the professional and business worlds, I can readily see the necessity for a college education if I am to become a successful citizen and public servant.

I want to enter college to develop my mind further and to prepare myself adequately for future endeavors. Meeting others and learning how to live sociably with them will also be an important phase of my college training. I am confident that my college life will assist me in discovering my position as a Christian citizen in our complex world.

Although I have not yet reached a definite decision concerning my life's work, I have given deepest consideration to the following: scientific research, teaching, and the ministry. I believe that either of these vocations will offer to me the opportunity of accomplishing something purposeful and objective with my life. Whatever profession I choose will be self-satisfying in itself and also beneficial to mankind.

To become a Christian citizen who can in some way, whether great or small, contribute to the betterment of humanity is my educational goal.

Defense Department Helps Boy Scouts "Be Prepared" at Valley Forge

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. DIXON. Mr. Speaker, last month it was my pleasure to visit the campsite of the Fourth National Jamboree of the Boy Scouts of America at Valley Forge.

There were many things that impressed me during my visit to the jamboree including the trading posts where I almost was swapped out of my pocket knife for a bottle labeled, "Hot Air From the Nation's Capitol." The sight of nearly 60,000 young Americans encamped on that hallowed bit of ground in numbers exceeding several times the number of General Washington's tattered army, was an inspiration.

I was also impressed with the organization of this vast project and the smoothness with which it operated.

It is my purpose this afternoon to pay special tribute to the manner in which the Department of Defense executed Public Law 638, passed during the 84th session authorizing the Department to lend the Boy Scouts certain equipment and services. It is doubtful that this great jamboree could have succeeded without the cooperation of the Army and Navy in providing camping and medical facilities. Certainly our armed services did much to help the Boy Scouts "be prepared" in their traditionally thorough fashion.

I would like to have inserted in the RECORD at this point a fact sheet printed July 13, 1957, detailing some of the services and equipment lent by the armed services and outlining the manner in which it was lent. Also, the men mentioned in the report, speaking from my personal observation of the job they did, deserve special commendation.

UNITED STATES ARMY SUPPORT OF THE BOY SCOUTS OF AMERICA NATIONAL JAMBOREE, 1957, VALLEY FORGE PARK, PA.

The Congress of the United States, by Public Law 638, 84th Congress, June 19, 1956, authorized the Secretary of Defense to lend to the Boy Scouts of America certain items of equipment and to furnish certain services in support of the Fourth National Jamboree, July 12 through 18, 1957, at Valley Forge Park, Pa.

The United States Army was directed to coordinate and execute this support mission. The Second United States Army, under command of Lt. Gen. Charles E. Hart, Fort George G. Meade, Md., is carrying out the Army's support effort.

Col. Curtis L. Williams, Assistant Judge Advocate, Second United States Army, was appointed as the Department of Defense liason officer to the Boy Scout National Jamboree. During the jamboree at Valley Forge Park, Colonel Williams is serving as the deputy director of mobilization on the jamboree staff. He has been assisted by 1st Lt. Robert B. Nolan, also from Headquarters, Second United States Army.

Col. Frank W. Bryant, who has been closely associated with the Boy Scouts of America since 1935, voluntarily is serving the jamboree staff as director of mobilization.

Representatives of the Boy Scouts, Department of Defense, Department of the Army and Second United States Army on July 5, 1956, formulated plans to construct a permanent 60,000-seat amphitheater in the Valley Forge Park. The 160th Engineer Group, Fort Knox, Ky., began work on the bowl August 28, 1956. By October 14, 1956, the work was completed. Approximately 90,000 cubic yards of earth was moved in the process of providing a sloped seating arrangement and a stage almost as large as a football field. The stage was designed to accommodate 3,000 Boy Scouts in their jamboree pageant.

On March 15, 1957, 2 officers and 6 enlisted men from Headquarters, Second United States Army, moved into Valley Forge Park to coordinate the reception of the military equipment and supplies. Lt. Col. Paul M. Neumann, G-4 Section, Headquarters, Second United States Army, was designated United States Army officer in charge of support and 1st Lt. Robert B. Boyce, his assistant.

An estimated $2,500,000 worth of Army equipment and supplies, on a loan basis and without cost to the United States Government, began moving into the Valley Forge Park on April 1, 1957. The equipment and supplies were drawn from Army and Navy sources throughout the United States. All transportation charges for moving the equipment from military depots, and return, are borne by the Boy Scouts of America. Agreements between the Boy Scouts of America and the United States Army provide that the Boy Scouts of America will be responsible for reimbursement for all losses or damages to military property.

Major items of Army equipment provided are: 150 passenger and cargo vehicles; 4,000 tents; 3,000 canvas water bags; 3,500 cots; 30 walkie-talkies radios; 5,800 fire extinguishers; and 5,800 5-gallon water cans. The Department of the Navy provided 125 field refrigerators of 150 cubic feet capacity.

The last items of equipment were received at the jamboree site July 8, 4 days before the formal opening.

United States Army personnel and unit support are provided for the National Boy Scout officials in charge of the jamboree in all major fields necessary to operate a camp for 52,000 Scouters. One of the largest units is the 354th General Hospital, an Army Reserve organization from Washington, D. C., which is on its annual 2 weeks active duty training.

The Army Reserve hospital is supported by the 27th Surgical Hospital (mobile) composed of 1 officer and 52 medical enlisted men from Fort George G. Meade, Md.; the 888th Ambulance Platoon with 1 officer and 28 enlisted personnel, also from Fort Meade. A mobile dental van with four officers from Second United States Army is integrated with the hospital in the camps medical area for a facility which is capable of handling any hospital requirement of short duration. The facility will act also as a medical clearing station for any patient who may require hospitalization over 72 hours. For such patients 600 beds at the Valley Forge United States Army Hospital and 125 beds at the Naval Hospital, Philadelphia, are held on a standby basis.

For instruction on the .22-caliber rifle range are 3 officers and 42 enlisted paratroopers from the 101st Airborne Division, Fort Campbell, Ky.

To assist the photographic requirements of the jamboree the United States Army Pic-

orial Center, Long Island, N. Y., has supplied officers and 5 enlisted technicians from the Second Signal Platoon (photographic). This unit is capable of processing 300 prints per day.

From the United States Military Academy, West Point, will be 24 cadets, in 2 increments of 12 each, to assist in the field sports program. All of the cadets are former Boy Scouts and most became Eagle Scouts during their scouting career. First Classman H. P. Gardner, Washington, D. C., heads the first increment at Valley Forge Park from July 8 to July 15. The senior cadet for the second increment, July 13 to July 20, has yet to be announced.

American Miners Facing Real Crisis

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. EDMONDSON. Mr. Speaker, on August 1 the Committee on Ways and Means began hearings on legislation of vital importance to American miners, particularly in the lead and zinc mining industry.

There is no doubt about the fact that this basic industry, so vital to our national security, is today facing a crisis in terms of a surging flood of uncontrolled foreign imports, with steadily declining price levels which make domestic mining operations impossible at our higher cost and wage levels.

One of the most persuasive arguments in favor of action by our Government to relieve this grave situation was given before the Ways and Means Committee by our colleague from the Seventh District in Missouri, the Honorable CHARLES J. BROWN.

Congressman BROWN'S clear and penetrating statement in support of a better break for our American metals producer and miner is all the more remarkable in view of the fact that the gentleman from Missouri is serving his first term in this body, and first came to grips with this problem only a few months ago.

America's miners have an eloquent new champion in the House, and Charles Brown's argument in their behalf is sure to command attention in the committee and in this body:

STATEMENT BY REPRESENTATIVE CHARLES H. BROWN, SEVENTH DISTRICT, MISSOURI, BEFORE THE COMMITTEE ON WAYS AND MEANS, AUGUST 1, 1957.

Mr. Chairman, I want to thank you and the members of this distinguished committee for letting me join this discussion. We of southwest Missouri are a part of the Missouri-Oklahoma-Kansas tri-State mining area and are vitally interested in this problem. We've been living with it, day after day; and we submit that there's a matter of moral obligation here, in addition to the economic considerations.

Suppose during the wartime automobile shortage, you just had to have a new car. You went to a good friend who worked around and got you one. Then, when automobiles got plentiful again, you got ready for another new car. And because somebody else offered you one for $50 less, you turned your back on your old friend.

Just 15 years ago during World War II, you didn't see many lead and zinc miners in Washington. Washington was out looking for miners, begging them to pump stagnant water out of any hole in the ground that even resembled a mine, pleading with them to get ore to the kilns. The Nation was fighting for its life; and with many foreign sources untouchable for the duration, it was up to American miners to produce.

It's a matter of history that they did produce. At controlled prices without profiteering. And the Nation was lavish in its gratitude.

Now there are certain raw materials that are more or less wartime products. You gear up to produce them while the fight's going on; and the minute it's over, you lock the door and shut them till the next emergency.

But now, lead and zinc aren't in that category. These metals have an important place in peacetime industry. And even during those brief years between the end of World War II and the Korean conflict, our United States mines did not produce as much lead and zinc as the United States used. We imported substantial quantities each year.

Each year imports increased. In 1952, when we started "laying in" strategic metals for defense against communism, imports reached a 161 percent ratio to domestic mine production and have continued to be the lion's share ever since.

Now, there have been some valid reasons for importing. It's just "playing it safe" to conserve your own raw materials in the ground and stockpile some foreign supplies when you're expecting war.

And there was the other selling point that importing a percentage of cheaper foreign ores meant cheaper prices for consumer goods. It looked like a happy combination.

But the longer this thing goes on, the unhappier this combination gets, because it's out of balance. Some lead and zinc imports may be good business, but too much is not good business, because the Nation then gets in the position of turning its back on its best friends—its own lead and zinc producers.

Torrential imports have driven the price of lead down to 14 cents and zinc to 10 cents. And while you might look on those prices as a bargain in the short run, I wonder how cheap it really is for the long run. Our United States miners can't produce it for that. And remember, when the chips are down, our own miners may be the only ones we'll have.

Aren't we, as consumers, or—more to the point—are not American manufacturers driving too hard a bargain here? Can't there be a better balance between domestic output and imports? Surely it is worth something to have a dependable source of supply.

That's all the lead and zinc industry wants. They're not asking us to build a high wall and lock out all lead and zinc imports. They're not asking us to protect them with a price that would guarantee a lead-pipe cinch profit to any and all comers who want to call themselves mining companies.

All they're asking is that the government help get a better balance in this import ratio picture—protection at a peril point level—so we don't kill off too many of these mining companies that we were praising so loudly just a few years back.

Now I think that's a fair request. The Nation—we consumers—have a moral obligation to stick by our own miners who stuck by us. And actually, we'll be surprised as just how little the consumer price increases will be, if they're legitimate. The big cost in merchandise today is at the manufacturing or processing level.

And don't forget, when you talk about consumers, people who produce raw materials are consumers, too. They haven't been the purchasers they should have been in recent years, because we're living in an era that I call the "manufacturers age." Processors and fabricators sit at the head of the table and keep rooting out defenseless raw material producers and distributors. But miners buy consumer goods, too. If they can stay in business, they'll buy something from somebody else.

And one more thing, a better balance on imports of lead and zinc poses no real problem for those who look forward to the day when the nations of the world can trade together without trade barriers, or who have always supported reciprocal agreements, trade not aid, and other similar ideals.

The direct route to an objective—the shortest distance between two points—is not always the straight line. Sometimes, it is wise to veer aside a step or two to avoid an open manhole.

These are abnormal times. Maybe some people are tired of hearing about it; but there's still a worldwide Communist conspiracy afoot that hates the United States and everything it stands for.

Under those circumstances, it's just plain shortsighted to import too much lead and zinc into this country and place in jeopardy a part of our own mining industry.

One of these days, we may again need every American miner we can get and you can expand a going concern into high gear production much faster and more economically than you can start a new concern from scratch.

Mr. Chairman, I sincerely hope the Ways and Means Committee will report this legislation to the House. I know the President could do it now. I know there is ample authority on the books. But let's make sure it's done. Let's fix it so we'll be sure.

Surely, it is a reasonable request and one the Nation can honor in good conscience.

Voluntary Programs for Research and Promotion in the Sale of Meat and Meat Products

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 31, 1957

Mr. METCALF. Mr. Speaker, Tuesday we are scheduled to vote on H. R. 7244, to amend the Packers and Stockyards Act to permit livestock producers to support voluntary programs for research and promotion in the sale of meat and meat products.

I am sure you are aware of the economic plight of our cattlemen, and of their efforts to help themselves. One such effort is an attempt to set up a nationwide program to stimulate and maintain the consumption of beef. The major obstacle to this producer effort has been money.

Regulatory statutes applying to many livestock markets have been construed as prohibiting the collecting by marketing agencies of voluntary contributions to finance this program. H. R. 7244 would clear up these statutes, and give to beef producers the authority which every other segment of agriculture has at this time.

The deduction would not exceed 10 cents per head for cattle and 5 cents per head for other animals for research and market development. It would be collected only when the marketing agency was requested to do so by an organization sponsored by the producers of the species of livestock sold.

If any producer thinks this is a bad investment, he can get his money back by asking for it.

Mr. Speaker, such a voluntary program has been in successful operation in Montana for more than 2 years. The Montana Beef Council has collected 5 cents a head. Of that, 1 cent was kept in the State, 2 cents was sent to the National Beef Council, and 2 cents to the National Livestock and Meat Board. In the quarter beginning with last November and running through January, this voluntary program collected $13,374.53 in Montana.

The people concerned almost unanimously approve of this program. I know of only one Montana rancher who asked a refund of his contribution. He received it.

My file on this legislation includes the following letters and telegram from Mr. Ralph Miracle of Helena, secretary of the Montana Stockgrowers Association; Mr. Thayer Stevens, of Harlowton, a director of the Montana Beef Council, and Mr. Everett E. Shuey, secretary-treasurer of the Montana Wool Growers Association:

MONTANA STOCKGROWERS ASSOCIATION, INC.,
Helena, Mont., March 18, 1957.

The Honorable LEE METCALF,
United States House of Representatives, Washington, D. C.

Lee, you are well aware of the economic problems of the beef-cattle industry both here in Montana and nationally. One producer sponsored effort to overcome present difficulties has been directed toward a nationwide program to maintain and stimulate the consumption of beef.

An adequate method of financing has been the difficult part of this effort. Regulatory statutes applying to many livestock markets have been construed as an obstacle to the collection of contributions by marketing agencies. The expressed demand for such collections in Montana has made a successful program possible, but any effective national program needs the financial support of all beef-producing States.

Clarifying legislation in the form of S. 646 in the Senate and H. R. 5244 in the House is designed to secure permissive Federal legislation to permit collection of voluntary contributions. Such permissive legislation has become a key to a successful national beef-promotion program. Without national participation Montana's efforts cannot be properly effective.

Since practically every cattle producer in Montana is voluntarily contributing financially to support a State and national beef promotion program, there can be no question of their interest in having any obstacle removed.

Your consideration and support of S. 646 and H. R. 5244 will be appreciated. Hearings before the Senate committee are scheduled for April 1 and 2. Early enactment in time for preparation and planning of an adequate program prior to the seasonal marketing season is extremely important to Montana cattle producers as well as those in other States.

Sincerely,

RALPH MIRACLE, *Secretary.*

HARLOWTON, MONT.,
August 1, 1957.

Hon. LEE METCALF,
House of Representatives, Congress of the United States, Washington, D. C.

As a director of the Montana beef council I wish to express my appreciation of your support of H. R. 7244. The Montana Stockgrowers Association, which is the oldest and largest organization of cattlemen as well as the Montana Farm Bureau in their last two conventions have supported this legislation. You can be assured that your continued support for the early passage of this legislation will be appreciated by the cattlemen of our State.

THAYER STEVENS.

HELENA, MONT., *August 1, 1957.*

The Honorable LEE METCALF,
United States Congress, Washington, D. C.

DEAR LEE: Just a note to let you know that I read your remark relative to the checkoff for beef promotion in the recent issue of the Farm Journal, and I want you to know that we certainly appreciate your efforts in behalf of the promotion programs of the various meat-producing industries.

I just can't understand why the farm bureau continues to oppose the work of the commodity organizations in trying to market their own products.

Sincerely yours,

EVERETT E. SHUEY,
Secretary-Treasurer.

As you know, the American Farm Bureau Federation is opposed to this bill. But the Montana Farm Bureau Federation has supported the measure at its last two conventions.

This successful, voluntary program should be extended. I hope we pass this bill.

Taxation—Federal Spending—Budget Making

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following report which was the subject of discussion at a recent meeting of the congressional action committee of the Chamber of Commerce of Vero Beach, Fla.

TAXATION—FEDERAL SPENDING—BUDGET MAKING

A report made to the congressional action committee of the Chamber of Commerce of Vero Beach and Indian River County, Fla., July 24, 1957.

Taxation, Federal spending, budget making, and foreign aid are several of the most controversial issues before Congress and the public today. Seldom do we find a meeting of minds on these issues; neither is there agreement with respect to facts and figures by supposedly experts, analysts, economists, and members of our legislative bodies. Too frequently different yardsticks are used in arriving at conclusions, particularly with respect to methods of accounting, and so forth, often inadvertently employed for the purpose of political gain or favor.

Taxation is practically the only source of revenue whereby our Governments—National, State, and local—are able to operate. It is for this reason that every citizen should be keenly interested in Government, for he foots the bill. Budget making involving all its complex problems of appropriations for whatever use or purpose should be predicated on income—taxes—and kept, insofar as possible, within the limits of income. Exceptions will arise during dire circumstances and when necessary for the protection of our national safety. Government is big business and should be operated on a business basis.

Unfortunately, during the past 20 to 25 years—exceptions during war years are acknowledged—to many of us it would appear little effort or attempt has been exercised to keeping expenditures somewhere nearly within in income. This has not been entirely due for the purpose of gaining political favor or advantage, but perhaps is more so due to the ever-increasing demand for public projects, special benefits, doles, subsidies, relief, and so forth, made by the public. Our elective Representatives are ever willing to please their constituents and are obviously politically sensitive to their wishes and requests. So, to a large degree, we, the taxpayers, are a contributing factor to the present staggering national debt and high taxes required to carry the load and satisfy our ever-increasing demands.

Would it not be desirable through some educational program to fully inform and acquaint the general public of our tax structure, thereby making all of us more tax conscious of the many and varied taxes, both obvious and hidden? Surely, this would create more interest in Government and tend to make for more alert and better citizens.

Uncover hidden taxes so they may be seen and analyzed by those who pay them. To most of us, other than Federal income tax, the sales tax is recognized, yet this represents a very small percent of the taxes we are paying. You who rent property are indirectly paying a real-estate tax, as well as a hidden tax on every item purchased—result—you are paying tax on tax. It has been estimated that out of an $1,800 annual rental for living quarters, $360 is represented in real-estate taxes alone. The Federal Government and the State and local governments are taking $110 billion out of our total national income, which is about 33 percent. On this basis how long can our private enterprise system endure when 33 percent of all earnings of the people are taken for taxes, year in and year out? Taxes at present rates from current sources are taking more than 90 percent of some individual incomes and more than 60 percent of the net income of most corporations. The present tax rates are approaching confiscation. How much longer can our economy survive these rates? An old theory is that what people don't know won't hurt them—they can feel the pain but cannot tell where it originates. The people want to hear and learn—give them the facts in plain and understandable language.

Federal budget—fiscal year June 30, 1958—requested $73,300,000. The Treasury now reports for fiscal year ending June 30, 1957, a national debt of $270,634,309,270. Receipts for the year were $70,989,000,000. Spent $69,344,000,000—a debt reduction of $1,645,000,000. A move in the right direction, yet at that rate of reduction it would require some 170 years to make us debt free. The present debt creates a mortgage or debt of approximately $1,500 on each man, woman, and child. Is there any wonder a child cries when first seeing the light of day? It comes into this world in debt $1,500.

Unspent accumulated appropriations from previous years amount to some $60 billion. This, along with present budget means as of July 1, 1957, we will have $133 billion that, technically, are available for expenditure

The only thing that could prevent their expenditure would be the limitation of the debt. The money is theirs to be spent, provided the funds can be obtained with which to pay for the expenditures. Last year, for example, Congress, after long debate, cut the foreign-aid bill a billion dollars, but the Government took $1 billion out of the unexpended balances and used it for foreign aid. There must be some way to cancel or get rid of these unexpended balances. We can reduce appropriations but for what good, when they can be put back out of these unexpended balances.

There are some $7 billion of your dollars tied up in farm crop surplus and the 1957 crops have not yet come to harvest. The yields per acre of practically all crops are increasing annually. This, with improved labor-saving methods of growing and harvesting, should tend for lower production costs, yet parity and soil-bank payments remain high. Should farmers be guaranteed against loss and be paid for over-production any more than any other business that may over-produce and not find a profitable market for such over-production?

We have 2,387,015 Federal employees now, yet the present budget proposes to increase the number of these Federal employees by 40,000, and perhaps more. We have 37,817,000 citizens receiving direct checks from the Federal Government each month. Including their dependents it is possible that this is a majority of the people in the Nation. When we abandon the principle that the people must support the Government, and adopt the principle that the Government must support the people, we have destroyed this democracy that our forefathers have given us as the greatest heritage that has ever come to any people in history.

In 1933 the Federal debt was $16 billion.

In 1957 the Federal debt was $270 billion.

In 1933 Federal appropriations were $4 billion.

In 1957 Federal appropriations were $70 billion.

Prior to the Roosevelt administration we operated practically on a pay-as-you-go basis. For 150 years we had frugality and thrift. Had it not been for that, we would not be the Nation we are today. Where are we going from here?

May we offer the following suggestions for thought and consideration?

1. Adopt and put into effect all Hoover Commission recommendations.

2. Curtail and eliminate all Federal Government activities in commercial business.

3. Take Government out of present power projects and keep it out in the future. Permit private enterprise and initiative to conduct the commercial business of this country and not compel them to compete with Government tax-free competition. Should taxpayers throughout the Nation provide electric power at less than cost to consumers in certain small areas?

4. Return to a government of the people, by the people, and for all the people.

5. Hold all budget appropriations and spending within or below income and systematically reduce the current debt. When that becomes a reality we may expect tax relief.

6. Curtail Government subsidies wherever possible.

7. Let us, the people, do for ourselves that which we are asking the Government to do for us in the way of special benefits, doles, relief, etc.

8. Eliminate duplication of services and see that Government is operated on an economical and businesslike basis.

9. Take a greater interest in our Government, exercise our right to vote and elect those who will be the servants of all the people, regardless of party or political affiliations.

10. Cancel or get rid of $60 billion accumulated appropriations not used, not spent, and apparently not needed. Unless canceled, this money can be spent when means are found whereby the funds can be raised or obtained.

11. Give further relief to taxation of dividends. These have been taxed once before, paid, and are again taxed at practically the full earned income rate.

12. Subject accumulated interest on Government bonds at maturity to capital gains tax instead of at the earned income rate. This would encourage bond buying and thrift by the public. At present, bond sales are lacking and cashing of bonds exceeds sales.

13. Issue low interest rate Government bonds, exempt from estate taxes, designating maximum amount for purpose of paying Federal estate tax. Require time period of ownership in order to become exempt and graduate amount of exemption based on period of ownership. In this way Government would have additional low-cost finance and at the same time estates and closely held businesses would not be too severely jeopardized when called on to pay inheritance or estate taxes.

Respectfully submitted.

A. K. FORNEY, *Chairman.*
TRACY L. TURNER, Jr.
HERSCHEL AUXIER.

Military Manpower—Down the Drain—Why United States Is Losing Many of Its Best-Trained Men in Service

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. EDMONDSON. Mr. Speaker, the noted Scripps-Howard staff writer Jim G. Lucas has written a most significant article which today appears in the Washington Daily News. Its subject matter makes it an article of vital and urgent interest to every person concerned either with our national security or with the need for Government economy.

Mr. Lucas points out not only that the defenses of the United States are being manned largely by green or inadequately trained men due to the rapid turnover of military personnel in our defense forces, but also that this same personnel turnover is one of the most expensive items in the huge cost of defense. He cites figures to show that if the Air Force could solve its enlisted personnel problem alone, it could run another full year without cost to the American taxpayer. He reports that in the Air Force's Strategic Air Command, our first line of defense, only 8 percent of the enlisted men have been in uniform 4 years or longer.

The Armed Forces are spending billions of dollars to train recruits who are lost back to civilian life as soon as their period of duty is finished. Here we have a situation fraught with peril to our national security and replete with the waste we decry so frequently in Government. Mr. Lucas has a telling message in these days when so much attention is being paid to the cost of national defense. Pointing to our antiquated military pay system, his article outlines the way to a basically sound approach to both national security and national economy.

Mr. Speaker, I should like to insert in the RECORD at this point the article Military Manpower—Down the Drain by Mr. Lucas, and to commend it to the attention of everyone concerned with these problems.

MILITARY MANPOWER—DOWN THE DRAIN—WHY IS UNITED STATES LOSING MANY OF ITS BEST TRAINED MEN IN SERVICES?

(By Jim Lucas)

The T-33 (a two-seated jet observation plane) taxied out to take off.

Suddenly, the ejection seat fired, throwing the observer 300 feet into the air and dropping him on his head on the concrete.

He died the next day.

The story was told a congressional committee recently by Gen. Curtis LeMay, colorful Vice Chief of the Air Staff. Until last month, General LeMay was head of the Strategic Air Command, where the accident happened.

"Now technically," he said, "that couldn't have happened. The equipment simply can't be fired on the ground. So we investigated. We could not find the safety pin. Yet the crew chief's form sheet had been initialed to show that it had been inspected."

TURNOVER

General LeMay was illustrating the high cost—in men and materials—of the rapid turnover in military manpower which increasingly afflicts the military services.

The crew chief, he said, finally confessed that he had initialed the inspection form without actually checking the pin.

"You might say," General LeMay continued, "we could court-martial him for criminal negligence and it wouldn't happen again.

"But the crew chief in this case was a 19-year-old kid. He was a very high type youngster, but he hadn't been with us long enough to know that a mistake is liable to kill somebody. He was the best man we had, but he was still only 19 years old.

"What was the answer? If I had court-martialed him, I would have ruined his life. I did not think that was the answer. He is back working on airplanes, and I think some day he will make a good mechanic for the Air Force."

A solution to the manpower turnover dilemma which throws green kids into positions of awesome responsibility was sought by a commission headed by Ralph J. Cordiner, president of General Electric. Mr. Cordiner's Commission spent 6 months investigating. Its recommendations were incorporated into the Cordiner report, now gathering dust in a Pentagon file, which will be discussed in a later article.

EXPENSE

Beyond loss of life and equipment, the rapid military personnel turnover is one of the most expensive items in the huge cost of defense, which this year will take $38 billion.

The Air Force spends the equivalent of 1 year's budget out of every 7 replacing enlisted men who return to civilian life after a brief term of service—usually one 4-year hitch.

Between 1949 and 1956—the last year for which accurate figures are available—this cost $17.5 billion. The Air Force's share of the Defense budget now before Congress will be somewhere between $15 billion and $16 billion. And that includes new planes, research and development and new bases as well as the annual upkeep of such vital forces as the Strategic, Tactical, and Air Defense Commands.

Thus, if the Air Force could solve its enlisted personnel problem alone, it could run

another full year without cost to the taxpayer.

These figures were given a congressional committee by Lt. Gen. Emmett O'Donnell, Jr., Deputy Chief of Staff for Personnel. They do not include pilots who cost the Air Force approximately $100,000 per man. General O'Donnell estimates that 70 percent of the USAF's 6,000 commissioned pilots—4,200 altogether—quit after one 3-year hitch.

ALARMING

The story is the same in the other services. But it is particularly alarming in the Air Force, which is our first line of defense.

It is not to much to say that nothing—literally nothing—causes as much concern among the men responsible for our security. General LeMay recently pointed out that only 8 percent of the enlisted men in the Strategic Air Command have been in uniform 4 years (1 enlistment) or longer. He says 45 percent of its ground crew are in their first year.

"When the United States Air Force," he said, "ceases to be a training school and becomes a life's work for dedicated young men, tremendous savings will be possible."

But it is more than dollars. General O'Donnell says the Air Force's accident rate is "heavily weighted against the young man who has had only 2 years in the cockpit."

"Most of our accidents," he says, "you can put right up there in that first tour. If you lose a B–52 you lose plenty. We hate to put them in the hands of people who are not fully qualified.

"We have enough bodies. If we could get quality, we would be all right."

NOT ISOLATED

The story General LeMay told is not an isolated case. Gen. James Gavin, Deputy Army Chief of Staff, said the Army has had the same experience with young artillerymen and tankmen.

General O'Donnell says that 70 percent of the Air Force's enlisted men are on their first tours. Of 785,000 airmen in service this year, he estimates it will lose 143,000 through nonenlistment. In addition, he says, it will lose 30,000 through deaths, retirements, etc.

"This," he says, "represents a formidable loss in experience and results in an extremely expensive replacement training program."

The preponderance of untrained men, he adds, causes many veterans to quit. They are responsible for youngsters who need so much supervision that they, the oldtimers, have to work all weekend, every weekend, and their families get sick of it, he says.

Among pilots, he says, there is another 70 percent turnover. Most of these now come to the Air Force through ROTC channels. He describes them as a wonderful group of boys, qualified and motivated for flying. They give up a good tour of duty. They are the kind of fellows we would love to keep.

"But," he says sadly, "when their 3 years are up they want to go back to civilian life. Young officers are leaving the Air Force just as they become fully qualified. The training invested in them does not give a sufficient return in terms of increased combat efficiency."

COMPETITION

The principal reason, General O'Donnell says, is that "for the first time in our history we are in direct competition with business.

"Industry," he says, "has openings for practically all college graduates, particularly those with technical degrees, and is actively recruiting our technically skilled airmen. These men are offered high wages, job security, and increasingly attractive fringe benefits. The Air Force is not able to meet the competition of prosperity and the attractiveness of civilian jobs.

"But unless we get trained, skilled men, it won't make much difference what we do about planes. We are not going to have the people to fly them."

Is there an answer?

General O'Donnell believes there is. That will be discussed tomorrow.

Terror Under the Neon Lights

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. PORTER. Mr. Speaker, under leave the extend my remarks in the RECORD, I include the following first portion of an article on Cuba by Carleton Beals, which appeared in the Nation on June 29, 1957:

THE NEW CRIME OF CUBA

(By Carleton Beals)

1. TERROR UNDER THE NEON LIGHTS

Habana terror in the night, bombed, homes and cafes, murders by army and police, flames in the canefields and wrecked trains, jails full of tortured prisoners, concentration camps, secret invasions on lonely beaches, and insurgents in the hills—such is Cuba's rhumba of violence. Such is the Hungary on our doorsteps.

But the blood-drenched Cuba of Dictator Fulgencio Batista, onetime army sergeant, is not merely a Pandora's box of evil and tears, it is also a paradox of prosperity and gaiety. Never was business better, never were the night clubs and B-girl bars so crowded. Nor the flat-tire politicians so inflated with hope—barking for their bone as they express it in Cuba—with talk of possible elections next June.

Against the lurid background of death and fear, a joint congressional electoral commission has been discussing an election law acceptable to the opposition parties. Old names. Old faces. Here are representatives of Carlos Prio, whom President Batista overthrew by armed force in March 1952; of former President Grau San Martin, a wily man, once a popular leader, and still with aspirations to return to power; that old orthodox warhorse of earlier paper battles, Márquez Sterling; men of a half-dozen factions—all seated with the leaders of Batista's coalition parties, his senators and Cabinet Ministers. Under the tarnished cupola of Dictator Machado's Capitolio, built with Chase Bank fund in another era of misery and military abuse, the solons have been haggling like market women, not over the welfare of Cuba, but for puerile legalisms and petty factional advantages in elections that in this swirl of violence may never be held, or if held, likely will be decided by the bayonets now pinning Cuban freedom to earth.

All morning I listened to that turgid oratory, phrased in the language of forgotten conflicts, wornout tinsel that decorated the Christmas trees of better years long ago. These puffing, pulling men had put on blinders against the airlift to the Sierra Maestra; they had plugged their ears against the bombs down the street. Shadow boxing. The Cuban people were not here. Young Cuba was not here. Everybody in Cuba except the politicians knew it.

In the last 10 years, a new voting population, nearly half that of Cuba, has come into being without ever having had a chance to vote in an honest election. Few have turned to the old parties and leaders. What they want, what they will do, no one knows or tries to find out. That some, shut off as these years from political and intellectual expression, have turned terrorists—that is sore-thumb plain. That some have gone to the Sierra Maestra to fight—that, too, is known.

In the end, Grau pulled the rug from under the Joint Electoral Commission, refusing longer to play Batista's cat-mouse game, by withdrawing his Autenticos, the major opposition party, and the "retired politician," the "fox of Marinao," became the central figure of the nonviolent opposition. A most disturbing one.

Restore the rights and freedom of the people and there will be no problem. Simple enough. Too simple. How simple is shown by Cuba's latest police assassination last night (June 14). The head of Grau's Autentico Party in Santiago was shot in the back by two secret service agents (so described by his wife). An two respectable leaders of opposition parties were framed by the secret police as leaders of terrorist bands.

Before the commission adjourned, a few voices rang out clearly, so clearly that the Minister of Gobernacion, Santiago Rey, slapped the speaker in the face, and pistols were drawn. But then, it was bad taste for the Senator to call the Minister a plunderer of public funds.

"There must be amnesty for political prisoners * * * How can we have an election when people are in concentration camps? * * * Why have not obnoxious cabinet ministers been removed as promised? * * * How can we have a free election when soldiers are breaking into private homes? * * * When our universities are closed? * * * When there is no free assemblage? * * * What about the police attack on Radio Mambi? * * * The newspapers that are still suppressed?"

In the grimy ancient Audiencia on Theodore Roosevelt Street in a special urgency court, in tar smell of these sweltering June days, special judges in black silk capes are trying presumed terrorists, mostly boys, and meting out 10-year sentences. Or they judge labor leaders and workers who have been trying to prevent their unions from being taken over by Batista stooges, or who have gathered in private homes to discuss union affairs, or who have handed out circulars. These are crimes in Batista's Cuba.

The kangaroo-court judges are safe within blocked off streets where, behind the barricades, swarm national police, secret police, soldiers, marines, armored cars, jeeps, machine guns. From the hot courtroom, I look out the barred windows at the noble royal palms and the high gray walls across, the harbor of Cabana fortress, built long ago by the Spaniards who did no worse things to Cuba than are being done today.

"Twenty years," demands the prosecutor for seven railroad workers, accused of no other evidence than that of an army officer, of making explosives in railroad shops. They are men who opposed the destitution of their elected officers.

"Twenty years for an innocent man. That is a crime," shouts one prisoner.

"Remove him from the courtroom," orders the judge.

In the palace, where last March Batista had to hide under a bed during an armed attack by the youth brigade, the President now breathes fire and brimstone at the "criminals" on the streets and in the Sierras—and why does Cuba have so many "criminals" these days? He shouts that there will be no armistice for political prisoners. No olive branch to the enemy. He denies that there is censorship of the radio. (It is merely for

bidden to mention current Cuban events and, a few days later, the police shut down Radio Reloj for 24 hours for having mentioned a battle in the Sierra.) False, said the Government. Yet this week's Bohemia gives versions by eyewitnesses.

Only recently Batista told the world that the insurrectionists had been wiped out and Fidel Castro killed. But, if Batista's soldiers could not find him, the newspapers did. Presently other invaders came ashore near the American nickel mines on the north coast, and Castro's guerrilleros swept down and captured Uvero and its barracks, only 30 miles from Santiago, and its thatched shacks make more news than Rome or Moscow.

Generals and colonels, called back from the front, rushed in and out of the Palace and Camp Colombia. The scorched-earth policy was announced. Crack Cuban outfits, American trained and equipped with American arms given for hemisphere defense, were airlifted in American-gift planes to Santiaco.

"If the French can use arms given them by the Americans to kill Algerians, if the British can use them to kill Cretans, then Cuba certainly has a right to use them to maintain order," said one official cynically.

But before the soldiers set out bravely to catch the devils in the hills, they gunbutted and murdered Santiago citizens. One of the Army's most brutal officers, Colonel José Maria Salas Canizares, took over the local police situation. Thirty-seven women marching out of the cathedral in prayer, carrying placards calling for peace, were dragged off to jail. Even bank inspectors sent by the National Bank on their regular inspection business were arrested and sent out of the city as suspicious character. Houses were broken into and searched. Seven persons disappeared, one a lawyer who had dared defend a captured insurrecto. In the morning, the bodies of four young men, arrested by the secret police, were found, horribly mutilated, on the beach and among the weeds.

Next the soldiers herded the people down from their homes in the hills—men and women, the aged and children, pregnant women—to Santiago, Bayamo, Las Minas de Bueyecito and other peripheral centers. Six thousand, the forerunners of 24,000 to come. In some places, they outnumbered the existing inhabitants and there was no place to quarter them except in the open fields in the rain. They left their animals behind to starve, their corn and coffee crops to be lost, their mortgages unpaid. Some had already gone through the reckless indiscriminate bombing of the Sierra that had hit peaceful settlements but not the rebels. These innocent victims arrived soaked to the skin, their bloody feet smeared with mud, without food or possessions. Townspeople trying to help them with food and clothing were maltreated by the soldiery or arrested.

In Santiago I picked up a few of their stories: the woman who had borne a child en route alone in the rain. The widow with 7 children—2 months to 15 years—obliged to sleep in the rain without food. One woman with a large brood said, "All we were able to bring with us was one chicken. I've sold that for a peso: Now we have nothing." A rancher said, "I had to let my horses and cattle and pigs run wild in the forest. Maybe I'll find some of them when I get back." An ancient grandmother, barefoot, a white towel about her head, carrying her little dog in her arms, said, "I came from Los Lirios—there—far off, very far. Days I walked, my clothes are torn, my shoes gave out. For the first time in my life I have to sleep on the ground, even here. And my father fought for Cuba's independence."

"Bloody Weyler all over again!" The concentration camps and scorched-earth policy of 1898, more than anything else, aroused the American conscious in days before this Nation had become so rich and powerful.

Now the consciences of nearly all Cuba have been aroused. From Santiago came protest after protest against the maltreatment of citizens, violations of homes, the torture and murder of the 4 boys, the brutality of the march of death. "Batista, stop this inhuman spectacle of families dislodged from their homes, stop the indiscriminate bombings, in the name of God, in the name of your own family, in the name of civilization." The protests were signed by every officer of every civic organization—bravery unparalleled for years under the dictatorship—Rotarians, Lions, Catholic Action, teachers' federations, lyceums, the yacht club, sport clubs, the tennis club, fishing clubs, business clubs, ministers' associations, Knights of Columbus, the bar association, engineers, architects, the League of Newspaper Men, the League Against Cancer, the Geographical and Historical Society.

The same protests came out of Bayamo, though civic groups there were not allowed to meet. A Rotarian in Bayamo does not have to face the facetious gibes of a Mencken, he has to face a machinegun. "We want no more terrorism. We want no more mysterious assassinations. We want no more files of hungry homeless people through our streets."

In Habana similar civic groups—though some were not permitted to meet, or their gatherings were broken up by the police and arrests made— backed up the protests. Of 67 organizations, only 2 backed out, but even of these individual members stepped forward and put their names down. Nearly every name on these lists has been interviewed by the secret police.

Protests rolled in from almost every community on the island. A third force had been born, a force of civic order and decency and peace in a country thought to be too corrupt and beaten down and frightened by the dictatorship, at a time when the official terror was never worse. It was a force that even a dictator with guns could not ignore—an avalanche.

One of the sad aspects of this nationwide protest was the absence, except in a few places, of protests by labor unions, which in other days would certainly have raised their voices. But they are complete captives of the dictatorship, the last vestiges of union independence having been wiped out except for a few federations centering in Habana.

Above all, what most dazed Batista was the scandal over his concentration camps. Since when had the well-to-do and prosperous of Cuba concerned themselves with the fate of mere peasants from the hills? Though he set the police and soldiery on the protesting signers, he rushed two cabinet ministers to the scene with orders to provide the refugees with proper housing, food, clothing and medicine. Army cots were flown in.

But already the epidemics had begun, especially enteritis among smaller children. Sickness threatened every community. Not until then did the worried army officers lower the barriers to permit the good women of the towns to come into the stinking camps and help nurse and ladle out stew from the big charity kettles. There were no utensils for eating it. As sickness and death spread, the tragedy threatened to build into a scandal that would ring down through the years and brand the dictator with an infamy he could never escape.

And so, the army was ordered to send them back to their homes at once. Within 24 hours they were on the march again, young and old, the pregnant and the sick. The dictator promised he would build them all homes with concrete floors, at least sanitary privies, and the schools they have never had. Maybe, just maybe, some day they will get some compensation for their ordeals.

Brushing reporters aside—they were asking many embarrassing questions—Batista turned to greet a large delegation of smiling businessmen from Jacksonville, Fla., looking for business opportunities. Fine, well-meaning, beaming emissaries, combining business with the pleasures of the Sans Souci and Tropicana navel dancers. But for Cubans who had known the terror of a city without light, the terror of police in their homes, the terror of the death march, these good folk seemed a bit like crows over a field of carrion.

But business really is good here. Nearly a billion dollars have come in from the United States during the 5 years of Batista's rule, and he has run the public debt up to the tune of $700 million. There is much new industry to take up the slack of seasonal sugarcane unemployment: textiles, shoes, glass, drugs, chemicals, wire, rubber, electrical goods, auto assembly plants, cement, added copper and nickel mining, oil refineries, fiber, and sugarcane-waste processing. Cuba, which a few years ago had to import nearly all its textiles, now exports rayon to 12 countries.

It is a real prosperity. True, wages in the cane fields are still a disgrace to a civilized people, but they are better than they ever have been and Habana workers make around $60 a month; in public-utility enterprises, $300. Cost of living is about the same as in the United States.

Of course, the generals get the cream of everything. Favored Congressmen (they are mostly a nuisance in a dictatorship) no longer receive their $5,000 graft from the national lottery. The cut is taken entirely by the army officers, and some even have concessions to run their own private lotteries. The First Lady, it is said, receives a monthly check of $70,000, no strings attached, for charity, Eva Peron style.

The tourist hotels rise higher and more air-cooled, and the night clubs, with hostesses yesterday were street-walkers, provide a neon blaze 3 or 4 to the block in every street around the central plaza, off the Malecon sea-boulevard, in the fashionable Vedado; and the touts offering young girls, "exhibitions" and pornographic movies have multiplied like cockroaches.

There are fine gambling casinos, too, and the Las Vegas gamblers, already on the scene, have made a deal, it is said, with the dictator to bring all their paraphernalia from Las Vegas to Havana, where the tax-take will be far less. At the moment Herminio Portell-Vila, former cabinet minister and head of the Cuban-North-American Cultural Institute, faces a court for having attacked the Alcalde del Pozo y del Puerto (Mayor of the Well and the Port) in an article describing "Illegal but Tolerated" gambling. It should be noted, however, that the mayor, at the cost of 3 millions, has also built a magnificant new hospital, dedicated this June 15.

With so much business prosperity, so much money to spend on public works, with so much expansive lid-off gaiety, it would seem that even a dictatorship, had it so much as three fingers of skill between eyes and hair-line, need not have brought things to such a dreadful impasse as prevails in Cuba at this hour.

Could it be that Cubans cherish political liberties as well as full stomachs? Machado went down in a year of economic misery and despair when wages in the cane fields had dropped to 10 cents a day. This is something new, a revolution at the very peak of prosperity. But all the universities are closed, human liberty and dignity mean nothing, all intellectual life is stultified by censorship and military coercion.

The Cubans have never reconciled themselves to this government implanted by mili-

tary force. It is in this atmosphere of darkened universities, intellectual sluggishness, cultural decline, superbusiness, supervice and military graft, shameless blaring night clubs, gambling and police brutality that the youth of Cuba from 12 to 30 years of age have embarked upon a life of terrorism, of bombings, and arson. It is a sad thing for a country when its young feel they have to become terrorists instead of scientists and engineers, poets and lawyers. But will youths who have become so callous that they bomb schools and homes and businesses demonstrate any great consideration for those who differ with them should they ever gain power? Terrorism is merely the other ugly face of dictatorship, not a creative force, and it is shaking Cuban society to pieces.

"Not even during the colonial period," declares the editor of Bohemia, Cuba's leading weekly, "has Cuba passed through darker days."

Who and why are the terrorists? What are their aims? Who and why Fidel Castro? What chance of success has the insurrection? What part is the church playing? What is the role of labor? What chance is there for a peaceful solution that will bring some justice to the Cuban people? Are there healthy, intelligent forces which can take hold of the situation in the face of a brutalized army honeycombed with graft and privilege? Or, will Cuba sink into blind disorder? There are no sure answers, but to some extent the forces and possibilities now existing can be measured.

The Lewiston, Idaho, Roundup

EXTENSION OF REMARKS
OF
HON. GRACIE PFOST
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mrs. PFOST. Mr. Speaker, this morning I received a letter which extended such a warm western invitation to the Lewiston (Idaho) Roundup, that I want to share it with all of my colleagues. It was like a breath of fresh air from the bitterroots.

If you are free on September 6, 7, or 8, come to Lewiston, and I will guarantee you one of the most memorable times of your life.

Here is the invitation that was sent to me—and which I want to extend to every Member of this body. You'll be mighty welcome, pardner:

Hon. GRACIE PFOST,
United States Congresswoman,
House Building, Washington, D. C.

Howdy Pardner: This is our way of letting you know that the latchstring is out again, and that Lewiston bids you a hearty "Welcome Pardner." to be our guest at the 23d Annual Lewiston Roundup, the first of next month. There will be 3 days of rip-roarin', hell-for-leather ridin', ropin', rasslin', and fun, September 6, 7 and 8.

The Lewiston Roundup prides itself on being not only Idaho's largest rodeo, but having the reputation of being "the greatest areana show in the West." The top cowboys of the world and the saltiest broncs, steers and Brahmas of the West, test their supremacy here each fall. The Lewiston Roundup is famous as being strictly an action arena show, with the schedule so carefully timed and expertly managed that not a moment's lag occurs anywhere on the program.

We'd be mighty proud, pardner, if you can come over and visit your Lewiston neighbors and share in our oldtime hospitality. Just send the word and we'll arrange all the details.

Sincerely yours,
LEWISTON ROUNDUP ASSOCIATION,
EARL R. BULLOCK, *President.*

Constitutional Government and States Rights

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. DAVIS of Georgia. Mr. Speaker, my distinguished colleague, Hon. E. L. FORRESTER, was invited to address the Georgia Prison Wardens Association at its annual convention held on July 29 in Savannah, Ga.

Congressman FORRESTER spoke to the association on the subject of the civil-rights legislation which is now pending before Congress.

Congressman FORRESTER, a member of the House Judiciary Committee, was one of the leaders in the fight against this legislation. He explained and brought to the attention of the committee and the Congress the dangerous and pernicious provisions which had been cleverly and adroitly concealed in the drafting of the bill.

In his speech on July 29 Congressman FORRESTER ably and logically presented this vicious legislation in its true light, stripped of its camouflage.

This address deserves the thoughtful consideration of all who are interested in preserving constitutional government and States' rights, and I insert it herewith:

SPEECH OF E. L. (TIC) FORRESTER BEFORE THE GEORGIA PRISON WARDENS ASSOCIATION, JULY 29, 1957, SAVANNAH, GA.

Mr. President, Mr. Chairman, distinguished guests, my good friends, it is a high privilege to be permitted to speak to the county wardens of the various counties of Georgia.

For 13 years I was the solicitor of the city court of Leesburg, and for 14 years served as solicitor general of the southwestern judicial circuit. Over those pleasant years I had the fine privilege of knowing many of you intimately, and our associations have been pleasant indeed. I know how carefully you are selected and of your high standing in your communities. I know your patriotism, your love for law, order, and decency, and I know the fine influences you exert in every county in our great State. You, of course, know that with leadership there is an accompanying responsibility at all times, and coupled with that responsibility are the indispensable ingredients: honesty, courage, and truth. Never in my lifetime has real leadership been such a necessity. Never in that time has truth been more indispensable, and honesty and courage required. If I can possibly be of the slightest assistance to you in bringing you the truth concerning these evil days which threaten to completely engulf us, then I will deem it a rare pleasure indeed.

Your program chairman, Hon. Robert J. Carter, suggested that I discuss with you the civil-rights legislation now pending before Congress. I think his suggestion was exceedingly timely, and that I shall try to do. I know that proposed legislation. I know its background; I know its sponsors; I know its motives; I know what it will do.

I am a member of the House Committee on the Judiciary, the only member of that committee from our Georgia delegation. I have been since I entered Congress in January 1951. That is the committee that has handled this legislation. Seven years of service on that committee have afforded me opportunities for knowing this legislation, and I tell you that I do know it. Humbly, I know this legislation as well as Herbert Brownell knows it, and I know it far better than President Eisenhower knows or ever will know it. I tell you I know it, and I tell you that I realize that the responsibility is upon me to acquaint you and to acquaint every good American to the very best of my ability with the facts concerning this legislation which, if enacted by Congress, will for all intents and purposes be a complete invasion of the South, whether President Eisenhower or any future president ever avails himself of that law written during the reconstruction days providing that the President can send the Army, Navy, and militia into the States to enforce civil-rights legislation. I owe you the duty. I owe our State the duty. I owe our country and the human race the duty to talk plainly to you without any evasion or equivocation whatsoever, and to tell you the undiluted truth, letting the chips fall where they will, and that I propose to do. To the best of my ability, I propose to discharge my obligation to the good people that I represent, and to the country that I love, and to the future generations.

When I think of this proposed legislation I cannot help but think of that unfortunate era immediately preceding the War Between the States and the era referred to by Bowers as "the tragic era," which was the Reconstruction era. The War Between the States did not hastily come. Every historian knows that there were gallant men on both sides of that horrible conflict that tried their dead level best to solve the problems that threatened to engulf them into a gigantic war, and array brother against brother, and they pleaded for reason, justice and a meeting of minds; but they pleaded in vain. That prevailing situation is so analogous to the situation today that it is utterly alarming to any well-thinking individual.

To the well-disposed, to those who desire no conflict, to those who realize that never has it been so necessary that we be united this day is indeed a tragic era for America and the entire world. Additionally, it is utterly bewildering to those who love their country, and to those who realize that living in atomic age and when freedom, justice, constitutional government, Christianity, morality, and common decency have all become the common enemy of the atheistic and brutal communistic theory, good men simply cannot understand how reason, justice, and mercy can be ruthelessly cast aside with a shrug, and our good people be hopelessly divided, when just an ounce of common sense and common concern for the people of the four sections of this great country could bring peace, love, understanding and unity. Yes, any historian must let his mind go back and review that fratricidal war, that reconstruction period, the civil-rights legislation, the force bills, the 40 acres and the mule provision enforced upon the prostrate South, when our lands were taken through confiscation and given away, and when our States' governments were made shambles, and when Federal troops with Federal bayonets took charge of our schools, our election processes, and even the rights of the sovereign States.

When that historian's mind dwells upon ose tragic circumstances I have just re-ted, like the bursting of the morning sun, the brilliant rainbow in the sky, that his-rian must find comfort in the fact that just a few short years, when the graves d claimed the agitators and when hot ood had cooled and reason had had oppor-nity to assert itself, the Congress of the nited States and the United States Su-reme Court annulled the force acts, wiped t the 40 acres and the mule legislation, and luntarily either annulled or held uncon-itutional legislation which is now being ught to bring back to life, and that there re better and happier days for the people this country. To the historian, to the an and woman of good will, there must be e high and firm resolve that they must everything within their power and must oke the blessing of Almighty God, in eir determination to see that justice, con-itutional government, Christianity, moral-y, and decency must be preserved.

Surely, surely one must ponder seriously d with great interest how after peace had evailed for so many years, and how after 75 not another piece of civil-rights legis-ation was enacted by Congress or spread on the law books of this land, how this y and flame has grown to such propor-ns, when we all thought that the good ople of this country, the people who made is country, the people who have kept is country, and the people who will fight this country with love, loyalty, and de-otion, when the chips are down, were walk-g together with unity and love. That is e question that I am going to attempt to swer.

In the closing years of World War I, Rus-a fell because of internal dissension, and as taken over by a Communist regime. hat regime came into power dripping with ood, with bloodshed a way of life, arro-antly denouncing God as a myth, having patience whatever with Christianity, mor-ity, common decency, and was vertiably anti-Christ regime, possessed of a most alous desire for world domination, com-ete subjection of the human race, to de-oy everything that was good, noble, and re, to eradicate even the word "sin" and bring every human being in this world to ter subjection. From their birth, world omination was and has remained their ob-ctive. From its commencement, it has en their plan to operate upon the word olerance" and through the preaching of erance, ensnare the agitator, good people, overnment leaders, church leaders, school aders, labor leaders, and every worthwhile ganization into their spurious preach-nts, alothough they were the most intoler-nt people that God Almightly ever per-itted to live, and when they had gained eir end, with only a few exceptions, those nsuspecting dupes would face firing squads, d their children would be confined to avery, degradation, and shame that could t be visualized.

Nevertheless, representatives of that un-dly scheme came into America and im-ediately and through every possible means arted their organization. It wormed its y into our body politic, into our finest d noblest institutions, and I say that thout any fear whatsoever, although I y it with respect. I hope I shall offend one, because I speak only the truth, but I do, I do not retract one single word I ve said, because the destiny of this Nation d the destiny of this world hangs in the lance, and good men and women who have en duped must realize that while there is t time, or there is no hope for the human ce.

I pause to observe here that good men and omen do not insult easily and actually wel-come truth and when they learn the truth, they accept the truth. To those who do not want to know the truth, and who bruise easily when the searchlight of truth is thrust upon them, they may be sure that I will not hesitate to condemn them and they may be sure that I will fight them every step of the way. After all, it is high time that some of our people are waking up. The hour is late, the destiny of this country hangs in the balance.

Through the twenties, the Communists were steadily building strength in this country, and in 1928, they had a candidate for the office of President of the United States. At that time they laid down their party platform. Following their pattern designed to divide our people, it devoted much space to the alleged "oppression of the Negroes". It declared war on the Ku Klux Klan while it was steadily creating, fostering, and edging into Communist and pinko organizations, all of which were advocating theories far more vicious than the Ku Klux Klan had ever dreamed of. Here is the platform of the Communist Party in 1928, relating to racial discrimination, quoted verbatim from the Daily Worker, May 26, 1928, to-wit:

1. Abolition of the whole system of race discrimination. Full racial equality.

2. Abolition of all laws which result in segregation of Negroes. Abolition of all Jim Crow laws. The law shall forbid all discrimination against Negroes in selling or renting houses.

3. Abolition of all laws which disenfranchise the Negroes on the ground of color.

4. Abolition of laws forbidding intermarriage of persons of different races.

5. Abolition of all laws and public administration measures which prohibit, or in practice prevent, Negro children or youth from attending general public schools or universities.

6. Full and equal admittance of Negroes to all railway station waiting rooms, restaurants, hotels, and theatres.

7. The War and Navy Departments of the United States Government should abolish all Jim Crow distinctions in the Army and Navy.

8. Immediate removal of all restrictions in all trade unions against the membership of Negro workers.

9. Equal opportunity for employment, wages, hours, and working conditions for Negro and white workers.

Now, I ask the do-gooders and the uninformed, and those that were duped, what do you think of those demands, made in 1928, when you realize that each and every one of those demands has been fulfilled by decisions of the United States Supreme Court, by executive decree, administrative orders, by the trade unions, and by some churches, with the sole exception of the abolition of laws forbidding intermarriage of persons of different races. I pause to tell you that laws forbidding intermarriage of persons of different races have declared illegal by the United Nations Charter and the Universal Declaration of Human Rights, and that a case involving that principle is now before the United States Supreme Court, and I predict as a certainty that the Supreme Court will declare those laws illegal and void.

Some people in Georgia at least, well remember the case of Angelo Herndon, reported in 178 Georgia Supreme Court, pages 832–869. This case arose during the early days when communism was not to any extent known as communism now is known or should be known. Anyway, Herndon, a negro and a Communist, came into Fulton County advocating the violent overthrow of our country by force and the division of the southern Statess into a territory to be be known as the "Black Belt." In his pamphlets, the area of the black belt was fully described, and acording to those pamphlets, it was to be the property of the Negro race exclusively, and would not even be a part of the United States, unless the Negroes elected for it to be. The House Committee on Un-American Activities thoroughly documented this astounding fact and its records show that the Communists had planned and continue to plan to take over the South and to make of it a black belt. Herndon was convicted by a Fulton County jury, of the offense of an attempt to commit insurrection, and the Supreme Court of Georgia affirmed that conviction. The United States Supreme Court reversed that conviction, although admitting that the evidence showed a conspiracy to overthrow the Government, but held that the evidencec failed to show that there was a "present" danger of violent overthrow of the Government. As a matter of grave concern, I point out that not even the United States Supreme Cour was willing during that era to hold as it did a short time ago, in the case of *Nelson* v. *State of Pennsylvania*, that a State could not prosecute and convict for sedition or insurrection, and that it was the sole prerogative of the Federal Government under the preemption doctrine established by that court. Had the United States Supreme Court affirmed the conviction of Herndon, doubtless communism would have been stopped in its tracks.

Instead of communism being stopped, instead of any effort being made to stop it, it was permitted to flourish, to bloom, to blossom, and to produce its deadly fruit.

Later, and unfortunately, the great Democratic Party, in which the South had a voice which must be heard, the two-thirds rule was abrogated, and since that time the doctrine of States' rights was denounced in its platforms and the South and the southern viewpoint has been a matter of almost scorn in that party. That great party which had been the champion of States' rights and which had battled the Republican Party for years over that issue, became thoroughly centralized, as the Republican Party had been centralized throughout the history of that party. And, from that time to this date, both of those major parties have been running a footrace to see which one can outpromise the other in service to minority groups and pressure groups, and at the expense of the South and at the expense of constitutional government and the sovereignty of the various States, the very life's blood of this nation. To the discredit of both of those parties, we have now arrived at the state where if you even protest, no matter how feebly, you are labeled "un-American" and the archenemy of minority groups.

Now, in what was free America, you are not permitted to refer to a colored person as a "Negro." Last year in a speech which I was making on the floor of the House of Representatives, I was chastised by another Congressman about the way I pronounced that word, and was told that it was N-e-e-g-r-o. It happens to be a fact that I have never had any trouble with a plain Negro in my life, and neither have you, but this world has had a lot of trouble which was aroused by the N-e-e-g-r-o, inspired by groups who have cases to make, and who are not now and never will be friends of the colored race. A few years ago, it was my great pleasure to assist that great American, Hon. Chester McMillan, Clearwater, Fla., in memorializing the Swanee River and to set up Florida's Stephen Foster Memorial. McMillan was the author of that legislation, and it came before my committee, and I led the fight in that committee for a favorable report, and helped steer it to passage. Now, in a matter of 3 or 4 years, it is my understand-

ing that the radio and television networks say that they have been forced by minority pressure groups to refuse to permit any songs or any language such as "darkies" and "Old Black Joe" and that the word "Negro" is taboo.

It is my understanding that now it is considered an unpardonable sin for anyone to tell a joke in which any of the minority races are principals in that joke. According to the Amsterdam News, a Negro newspaper, 20th Century-Fox contends that they have made a picture that was really it, that Bill Marshall was starred with a pretty white girl and that it was it when it came to depicting Negro and white relations on the screen. Also, that MGM had a picture which was an adaptation from the TV play entitled "A Man Is Ten Feet Tall." You of course know the picture Island in the Sun depicting the mixing of the races, and that according to a newspaper article, this picture has been banned in the Bahamas, on the ground that "it would not be in the public's interest for the film to be shown in the Bahamas." No wonder we read in the Columbus Enquirer, July 10, 1957, issue, page 3, an article from Tuskogee, Ala., quoting a Negro educator there as saying the boycott of white merchants "means something to us—it makes us 10 feet tall." Certainly we catch the significance of the phrase "10 feet tall" when we consider the picture that I have just described. No wonder we are advised that in the desegregated public schools in the city of Washington, D. C., there is a group referred to as junior mothers consisting of junior high-school girls under 16 years of age that are unwed mothers and during the last year 129 of these girls became pregnant; 119 of those being Negro girls, and that since desegregation, unwed high-school mothers had increased 1,000 percent.

No wonder, though it is utterly disgusting and revolting to us, that we find these do-gooders not only advocating but demanding that all of our public schools be desegregated, despite the fact that they know that the schools in the District of Columbia have been literally ruined. No wonder, though it is absolutely ghastly to contemplate, that these same groups are demanding desegregation in all phases of our public life.

No wonder that New York City, which is actually the capitol city for these civil-rights boys is having its troubles. The mayor and the city counsel of New York have been following the suggestion that many more schools be built to spur integration efforts, and to outlaw segregation in most of their apartment houses in New York. Of course, many people are leaving New York City, but actually they should have read the Communist booklet The Negroes in a Soviet America, pages 38–39, and they would have known what had been promised to the Negroes there.

Naturally, from what I have previously said, you can understand the clamor and the demands for wicked, iniquitous, and highly punitive legislation regarding so-called civil rights.

One of the most unfortunate decisions ever rendered by the United States Supreme Court was the case of *Missouri* v. *Holland*. There the Court ruled that treaties overruled and overrode the Constitution of the United States. For the past 25 or 30 years, the Democratic and the Republican Parties have been battling each other for the votes of the minority groups to such an extent that both parties have virtually forgotten the old-fashioned southerner and the old-fashioned Yankee, and those who made America great, and those who are expected to maintain America. We of course remember that President Truman kowtowed to these minority groups, appointing his Committee on Civil Rights. We further know that not one southerner was a member of that Commission. In 1947, that Committee said:

"It is true that the Federal Government does not possess broad, clearly defined delegated powers to protect civil rights which it may exercise at its discretion. A detailed examination of the constitutional aspects of the civil rights problem makes clear that very real difficulties lie in the way of Federal action in certain areas."

But, let's continue reading; they gleefully say:

"In its recent decision in *Missouri* v. *Holland* in 1920, the Supreme Court ruled that Congress may enact statutes that carry out treaty obligations, even where in the absence of a treaty, it has no other power to pass such a statute. This doctrine has an obvious importance as a possible basis for civil-rights legislation."

But, read on:

"The Human Rights Commission of the United Nations is at present working on a detailed international bill of rights designed to give more specific meaning to the general principle announced in Article 55 of the Charter. If this document is accepted by the United States as a member State, an even stronger basis for congressional action under the treaty power may be established."

In 1949, Attorney General Tom Clark, now a Justice of the Supreme Court of the United States, made a statement before the House Committee on the Judiciary, advocating an omnibus bill encompassing civil rights legislation or proposals in every field the human mind could conceive of, and in that statement Mr. Clark made some amazing comments. Mr. Clark virtually admitted that were serious questions of constitutionality of his proposed legislation. But, he pointed out that upon proper congressional findings, that his proposals could be made constitutional, under the treaty powers under the United Nations Charter. In fact, he said that his proposed legislation would "bring about a greater awareness of the obligations of this Nation as a member of the United Nations." At that time, Mr. Clark said that his department had aided the office of the Assistant Solicitor General in cooperating with State Department in connection with United States participation in the preparation by the United Nations of the Universal Declaration of Human Rights and of a proposed covenant to enforce some of these rights. How Mr. Clark ever got consent to propose legislation which was unconstitutional and which would need the United Nations Charter to override our Constitution and to assist in the preparation of the Universal Declaration of Human Rights, I can never understand, and I doubt that you can. It is high time, however, that the American public reads the United Nations Charter and the Universal Declaration of Human Rights. If you will read those two instruments, then you can understand the deplorable and completely erroneous decisions that have been rendered by the United States Supreme Court. Then and only then can you understand the famous school cases decisions of 1954. Only then can you understand decisions that passports must be issued to suspected communists. Only then can you understand how the Supreme Court held that California must admit a suspected Communist to the practice of law in that State. Only then can you understand how the United Nations is now spending taxpayers' money to develop the theory that all races are equal, that there are no biological differences, and that there is no justification for prohibiting marriage between persons of different races. Then you can understand how communism is treated only as a political idea.

As a member of the House Committee on the Judiciary, fighting civil-rights legislation every step of the way, I am thoroughly familiar with the proposals of the then Attorney General Tom Clark, and I tell you unreservedly and unequivocally that he recommended civil-rights legislation covering every field that Attorney General Brownell recommended in the 84th and 85th Congresses, and which is now pending in Congress. In other words, there is nothing new whatsoever in the Brownell version, and on the other hand, it is the same old garbage dressed up in different clothing and designed for the same purposes and for the benefit of the same people.

In the 84th Congress, so-called hearings were conducted. Those hearings were absolutely one sided, and only the proponents were heard. This was done over my vigorous protest, and over my demand that the opposition be permitted to be heard. Though it is shocking to you, I am going to tell you just who those groups were, and who those persons were that were permitted to testify and upon whose testimony H. R. 627 was reported out of the 84th Congress. I submit the list in detail, to wit:

Chairman of the National Civil Rights Committee, Anti-Defamation League of B'nai B'rith, accompanied by the director, Anti-Defamation League of B'nai B'rith, Washington, D. C.; executive secretary of the NAACP, New York, accompanied by the director of the Washington bureau and counsel for the bureau; general counsel, American Jewish Congress; executive director, American Veterans Committee; secretary-treasurer, International Union of Electrical, Radio, and Machine Workers, CIO; codirector of the fair practices and antidiscrimination department, UAW–CIO, accompanied by national representative, UAW–CIO; legislative representative, Americans for Democratic Action; director, American Council on Human Rights; W. Astor Kirk, who said he was appearing as a private witness, although a professor of government at Huston-Tillatson College, Austin, Tex.; Washington representative, Japanese-American Citizens League; statement of the National Community Relations Advisory Council, the statement reciting that it represented the combined and joint views of the constituent organizations as shown on pages 360–361 of hearings; also, statement by the National Lawyers Guild, National Council of Jewish Women, Inc., Women's International League for Peace and Freedom, and the American Civil Liberties Union.

With the exception of certain Congressmen who introduced civil-rights legislation and the testimony of Attorney General Brownell, those are the groups that caused Congress to rush pellmell into passage of that legislation in the House of Representatives last year.

The FBI did not testify, no State official in any of our 48 States testified, or were invited to testify. Apparently all the testimony that was wanted was the testimony from those minority groups.

The truth is, the Brownell civil-rights proposal, which is reflected in H. R. 1151, introduced by the gentleman from New York [Mr. KEATING] was simply an effort on the part of the administration and on the part of the Republican Party to take this legislation from the Democrats and to be able to say to the minority groups, "Look what we have done for you."

The Brownell version consists of four parts. Mr. Brownell contends that this proposed legislation was his own inspiration. It so happens, however, that the National Lawyers Guild, which guild, by the way, Attorney General Brownell is trying to have listed as subversive, by letters written to the chairman of Subcommittee No. 2, House Committee on the Judiciary, and to members of the House Committee on the Judiciary, on July 27, 1955, and April 23, 1956, proudly states that they wrote or drafted the model civil rights statute. As a member of Subcommittee No. 2 and a member of the House Committee on the Judiciary, I received those letters, and I have those letters in my possession, and they are available to anyone who desires to see them. The National Lawyers

Guild, in a resolution passed at their 1956 convention, said that their proposed legislation on this subject was introduced in Congress, and identified it as H. R. 389. An examination of H. R. 389 shows that its provisions were strikingly similar to the legislation that Mr. Brownell says he wrote, and which he so proudly claims. How he receives any pride out of that proposal, I never will know, and will never understand. How any man, trained in the law to any appreciable extent, could ever suggest such legislation is beyond understanding.

Part I provided for a Commission, to be appointed by the President, to investigate allegations that certain persons are being deprived of their right to vote, or are being subjected to unwarranted economic pressures by reason of their color, race, religion, or national origin; to study and collect information concerning economic, social, and legal developments constituting a denial of equal protection of the laws under the Constitution; appraise the laws and policies of the Federal Government with respect to equal protection of the laws under the Constitution.

We went to work on that provision in part I in the House Committee on the Judiciary. Bear in mind that not a single southerner was a member of the subcommittee considering this legislation this year. These do-gooders and pressure groups screamed to high heaven against Senator Eastland of Mississippi even being a member of the Judiciary Committee in the Senate. Those same do-gooders and minority groups saw nothing wrong, in fact thought it was exceedingly proper that not one southerner served on the subcommittee in the 85th Congress considering civil-rights legislation. That of course is their idea of tolerance.

There is utterly no excuse for this commission. If Mr. Brownell had had his way, that commission would investigate allegations made by irresponsible people, not under oath, not subject to any penalty whatever for lying and that commission would have caused confusion throughout this land. What unwarranted economic pressure means, no one knows, but I did know what the proponents had in mind that that phrase meant. It simply meant that anything that was done by an old-fashioned southerner or an old-fashioned Yankee, where a member of a minority group was involved, those actions would be subjected to the scrutiny of the commission, absolutely handpicked, having the services of the FBI to such an extent that searches for Communists seeking to overthrow our Government by force and violence would be left free to do their dirty work without interruption, and would have brought so much dissenion that actually good and loyal Americans would have been afraid to do business with people of different races. It would have meant that any transaction that you had would be investigated to see if you had committed a wrong against a person of color, or a person of another religion, or a person of another national origin. I wonder if you see where this Government is drifting? Here, you see an Attorney General of the United States advocating things that are thoroughly unconstitutional, absolutely despicable to the American way of life, and you hear the President of the United States saying that this was model legislation, temperate legislation, "must" legislation, and that this particular legislation was the number one legislation in his program. I have repeatedly said, and proudly said on the floor of Congress, that the people that I have the honor and privilege of representing are freer of prejudice than any people in the 48 States. I endeavored to point out that there is absolutely no religious prejudice abounding in our great State. I have, and have had over the years, innumerable friends amongst all of the different races in our State, and amongst all of the religious groups. I have welcomed that friendship, I cherish that friendship, and I will never do anything whatever to merit the loss of that friendship, and I resent anyone else trying to do so.

The Constitution of the United States guarantees the free exercise of religion, and that guaranty carries with it the right to discriminate. Were that not so, there would be no basis for religious groups such as Catholic, Episcopal, Baptist, Methodist, Seventh-day Adventists, and so forth. That constitutional amendment was for the purpose of conferring upon each and every one of us the right to be different in our religious faith, so as to protect against the very tyrannies that churches in Europe had practiced upon our ancestors by requiring them to conform. The American Civil Liberties Union approves this proposed civil-rights legislation. But, they tipped their hand. They said: "Free censorship of books, magazines, and motion pictures is rapidly disappearing," but criticized boycotts where religious and other groups not only exercise their right to guard their membership from material believed objectionable, but also may keep other people from exercising their judgment. Also, "That the Roman Catholic Church was one of the religious groups that had moved in that direction." Your church, my church, or any other church, thank God, under the Constitution of the United States, has a right to criticize motion pictures, books, magazines, and material that they think are or should be, objectionable to their membership. Then too, thank God, under our Constitution, any member of any church has the right to disregard the admonitions of that church. Strange, isn't it, that an Attorney General and the President of the United States would be willing to make religion a matter of controversy. You wonder how that crept in? I think I can tell you how it happened. You had better read the United Nations Charter and the Declaration of Human Rights, and see what they have cooked up for you in that package.

I demanded, and the Georgia delegation demanded that we be permitted to bring up witnesses this year against this proposed legislation. I asked for and obtained the services of our Attorney General and Hon. Charles Bloch. They appeared before the subcommittee this year, and they did a magnificent job. We were able to strike out the phrase "or being subjected to unwarranted economic pressures" by reason of their color, religion, etc., and restricted to such investigations to deprivation of the right to vote by reason of color, race, etc. That was a great victory, it was obtained by fighting, but all of those provisions should have been stricken out. These pressure groups immediately started their agitation, and the word "religion" was placed again in the legislation, but only so far as deprivation of the right to vote on account of religion was concerned. Those groups simply demanded the right, some way, somehow, to interfere in the field of religion. Today, this legislation stands so that this commission is going to be appointed, and they are going to go up and down this land investigating as to whether or not anyone has been discriminated against in his right to vote because of color, race, religion, or national origin. Additionally, however, they are going to study the economic, social, and legal developments constituting a denial of equal protection of the laws. Those words "economic, social, and legal developments" come from the United Nations Charter and the Universal Declaration of Human Rights. The idea of making a study of "social" developments should be utterly abhorrent to any decent individual, and that is as plain as I can make it. The Brownell version also provided that the commission would have the right to have voluntary and uncompensated personnel, which of course, and there can be no doubt of it, would be composed of persons from the leftwing organizations and the pressure groups advocating that legislation, and only for such purposes. Stacking the jury is wrong. Thank God, the Senate struck that particular provision.

Part II provides for an additional Assistant Attorney General. The trouble is, though, it did not tell how many assistants to the Assistant Attorney General would be required. We tried to get the Department of Justice to tell us, but they never would. Will Maslow, general counsel, American Jewish Congress, testified that it ought to have at least 50 lawyers in it. I think his estimate was conservative. That alone would cost a half million dollars a year from the taxpayers' pocket, for the purpose of destroying our Constitution and our freedom. The cost of this Commission we could not ascertain, although we tried, and although we asked the Department, and although we asked the authors. I can safely tell you, however, that this civil-rights legislation will cost the taxpayers at least two to three million dollars for the 2 years it is supposed to operate, and a million dollars a year for the assistants to the Assistant Attorney General. Then, of course, with all of these additional assistants, they will be screaming for additional Federal court judges, to a degree that you cannot imagine. You might be interested in knowing that the Department of Justice has over 1,700 lawyers now under its command and direction. Indeed, it is the largest law firm in all this world, and no defendant, no matter how rich, can possibly hope to obtain such representation, even if he has the money to pay for it.

Part III would amend section 1985 (42 U. S. C.) by adding two additional paragraphs. The effect of part III would be that in every imaginable conspiracy, the United States, at the taxpayers' expense, would throw the entire Justice Department against our school officials, our registrars, the judges, and prosecutors, sheriffs, peace officers, grand and petit jurors, and all public officials, free of cost to the alleged aggrieved, while the defendants would have such representation and assistance as their own pocketbooks would permit. How an Attorney General could ask for such power, I will never know. How the President of the United States could countenance such a suggestion, I am at a loss to understand. This is the iniquitous provision that Senator RUSSELL went down to the White House and discussed with President Eisenhower. This is the provision under which Senator RUSSELL told the President he would be endowed with the power to call out the Army, Navy, and militia, and invade our States. It was after that discussion, that the President winked and blinked and said that he had understood that this legislation was a voters' bill. That he so understood, I do not deny. I do say, however, that he owed to the people of the United States the duty to know what that bill contained, since he had said that it was a moderate bill, a "must" bill, and the No. 1 legislation in his administration's program.

I say he ought to have known. He ought to have known what he was doing, because when this bill was upon the floor of the House, I tell you honestly, that we had enough votes to adopt the jury trial amendment and to water down some of these pernicious proposals and we lost those votes because the White House had Congressmen called out and told the supposed political facts of life.

There is no doubt about it, an attempt was made to sell this legislation on the theory that it only pertained to voting. That was said on the floor of the House, and in my speech against this legislation on June 10, I said: "Do you think that just applies to

voting? If you do, you believe in fairies. Parts III and IV are so broad that they cover every civil right, every last one of them. It gives them the right to go into all these school cases. Mr. Brownell admitted it. You will find it in the record. Yes, you are touching every facet of your national life. Now, listen: elections; do you think it refers only to congressional elections? It refers to all primaries; it refers to every election; State, county, municipal, township, school district; it applies to the election of a justice of the peace. Does anyone want to challenge that? I say it does. I am telling you, if you pass this bill, you will have rung the death knell of your State and your county election laws. Do not kid yourselves."

Never has anything more vicious been proposed than part III of the Brownell legislation. I am a temperate man, I am a patient man, but I cannot begin to express my deep sorrow over the fact that a national administration and the two major political parties endorsed and were willing to place that crown of thorns upon my people. I told them on the floor that I knew who that gun was aimed at, and that I resented it with every ounce of my soul. Part III was designed to make the life of my people miserable. Actually, the southern people are the only people in all this world that such legislation would have been suggested against. Thank God, the United States Senate struck section 121 from part III, which would have given the Attorney General the dictatorial power to hunt our people like partridges, and the power to utterly destroy State government in our land.

Part IV substantially provides, "Whenever any person has engaged in or is about to engage in any act depriving any person of the right of any privilege secured by subsection (a) or (b), the Attorney General, in the name of the United States, for the benefit of the real party, may institute a civil action or other proceeding for preventive relief, including permanent or temporary injunction, restraining order, or other order;" and that the district court shall exercise jurisdiction without regard to whether the party aggrieved has exhausted any administrative or other remedies provided by law.

Make no mistake, the Federal courts would be required to entertain suits arising by virtue of any kind of election—general, special, or primary—for the purpose of selecting candidates down to the lowest local level, including trustees of schools, county surveyor, and so forth. Further, under the ruling in the Cloverleaf Butter case and the Steve Nelson case, dealing with preemption of the field by the Federal Government, and in view of the ruling in *U. S.* v. *Classic*, part IV will destroy our electoral processes. It is actually unconstitutional, but of course I would not be fool enough to say that the United States Supreme Court would so hold. Actually, a person has the right to go to court, or to stay out of court, and under no constitutional provision can the great Brownell or any other Attorney General take that person into court because of a violation of some private right of that individual, not criminal in nature, without the consent of that individual. I am certain, however, that the United States Supreme Court can sidestep that salutary principle. One of the purposes for this proposed part IV, although they would not admit it, is to apply the ruling in *U. S.* v. *Classic* to the effect that the right to vote for Representatives in Congress is a right derived from the States only in the sense that the States are authorized by the Constitution to legislate on the subject, as provided by section 2 of article I, to the extent that Congress has not restricted State action by the exercise of its power to regulate elections under section 4, and its more general power under article I, section 8, clause 18, to make all laws which shall be necessary and proper for carrying into execution the foregoing powers.

Yes, it is for the purpose of applying section 4 and article I, section 8, clause 18, as construed by the United States Supreme Court in that case.

Under the powers provided in part IV, the Federal courts would have the right to grant ex parte injunctions upon the petition of an all-powerful government, with such an extensive staff that they could grind out overnight thousands of affidavits, perjurous or not, and the judge then having established manmade law, whether right or wrong, could punish the defendant for contempt and sentence him to prison, the judge being the legislator, prosecuting attorney, judge, and executioner. In other words, deliberately the Attorney General wants to deny the defendants the right of trial by jury in criminal contempt cases. When he inserted the language "in the name of the United States" into that power to institute proceedings, he deliberately, designedly, and dictatorially asked for the right to destroy the right of trial by jury. He says that southern juries might not convict. To that, thank God, I agree. After all, there are some innocent defendants. I like the jury system, and I am afraid of an experienced lawyer that doesn't like the jury system. The present law kills the right of trial by jury in criminal contempt proceedings.

It happens to be the law, and has been the law since 1932, that in labor disputes, the right of trial by jury is provided for in all classes of contempt, even where the United States is a party. For some reason Mr. Brownell has not tried to change those laws. Consequently, it is crystal clear that he wants the denial of the right of trial by jury to apply only to the South.

The Senate is presently considering an amendment providing for the right of trial by jury in criminal contempt cases. Thus, so far as they are concerned, demonstrating that perhaps they are not willing to go along with the Attorney General in his theory that southern juries cannot be trusted. Irrespective, however, of the right of trial by jury, this provision permitted the Attorney General, in the name of the United States, to interfere with the electoral processes in the various States, proving that the Republicans never learned anything from history. Let me hasten to say that a lot of the northern and eastern Democrats also refuse to let history make any impression upon them.

This same method was tried in the reconstruction era, and it did not work. Federal troops armed with guns and bayonets stood at the polls in all of the election precincts in the South, preventing loyal citizens from voting, and subjecting loyal citizens to cruel indignities and suffering. This method played into the hands of the crooked and corrupt, because the crooked and corrupt were the only ones who would do business with such people. Should the Attorney General ever possess the power to exercise the provisions in part IV hereof, then State government is no more.

So, my friends, I stand before you today, telling you that we are facing our most serious hour. I denounce any violence, for I am a law-abiding man. On the other hand, I tell you it is our duty to God and man to do everything in our power to prevent the destruction of our way of life and our Government. If we ever lose this Government, we will never have another. The chips are down and we must have what it takes, unless we are willing for future generations to brand us as the weakest generation heretofore endowed with responsibilities of a public nature. We must assert ourselves in a lawful manner, and that I intend to do. Whatever is necessary in a legal way, that we shall do. We have permitted some in the Democratic Party to believe that they can with impunity deal with us as they have never dealt with the Japanese or with the Communist. The Republicans have made it a life-long habit to grind us into the dust.

No matter what the Senate does, and I take my hat off to the great leaders of the South in that body, there must be a conference held beween conferees from the House and the Senate. I am informed that the chairman of the House Committee on the Judiciary, a Democrat, and the leading minority member of that committee, a Republican, say they do not intend to budge one inch from the bill passed by the House. Whether that is true, I do not know. If it is true, it must be premised on the belief that next year being an election year, it will be easier to make the South a whipping boy again. The truth is none of this legislation should be passed. It is your duty and mine to fight it every step of the way. So far as I am concerned, I am against anybody who is for it, no matter to what political party he belongs, what church he belongs, or to anything else to which he belongs. I have fought this iniquitous legislation for 3 long years, and I will fight it as long as life remains in my body. This is the time when we must separate the men from the boys, and the hour is late, but I promise you that the Georgia delegation will stand firm for God, for country, and our way of life, and count it a privilege to do so.

Moonlighting in the 4-Day Week

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. SIEMINSKI. Mr. Speaker, for the 6-day week, the promise was 2 chickens in every pot and 2 cars in every garage.

In the 4-day week, management and labor wonder whether it will take 2 jobs to support the 2 chickens, the children and the 2 cars.

Two jobs is called moonlighting. Today's New York Herald Tribune tells of this growing trend in the American economy.

The question management and labor face is whether moonlighting can be eliminated by giving money a value fixed in units of energy.

In the overall economy, neither management nor labor set the value of money or its rate of flow.

Money is energy. Related to an electric light bulb, the dollar has half the brilliance it had in 1939. Since then, as the juice in each dollar has run down, more and more bulbs have been placed in the chandelier.

The globe thrives in the fixed energy of the sun. Can our people thrive in the fixed energy of the dollar? Or must the value of the dollar vary as the seasons?

That seems to be the question of our time, Mr. Speaker. Perhaps the article on moonlighters will be of interest to the House. It follows:

"MOONLIGHTING" MAKES MANAGEMENT FROWN—DOUBLE-JOB GAMBIT SEEN CAUSING ABSENTISM, LOWER WORK STANDARDS

(By Vartanig G. Vartan)

As living costs for the average worker head upward, American industry finds on its hands a personnel puzzler called "moonlighting."

This colorful term means "double employment." The National Industrial Conference

Board has just issued the first study tackling this subject.

"Moonlighting," the NICB hastens to add, has nothing to do with making love or liquor."

But it is making more and more headaches for management. "Undoubtedly, there is more moonlighting today than ever before," the Conference Board reports.

WORKERS TIRE

Business firms frown at moonlighting, because it can bring two undesirable results—growing absenteeism (often to fill in at the second job) and falling work standards on the regular job.

Reliable estimates place the Nation's moonlighters at between 1,000,000 and 2,000,000. Exact figures aren't available, for the simple reason many employees keep their moonlighting a secret.

Workers are turning to the double-job gambit in order to escape the squeeze of inflation and the high cost of living. A facilitating factor is the abundance of jobs in many areas.

The conference board surveyed production line workers in 25 companies ranging from tire makers and breweries to candy firms and railroads. One out of five firms called moonlighting a fairly serious problem.

The average company figured 5 percent of its workers were moonlighters. But one manufacturer estimated that 50 percent of its highly skilled hands took to moonlighting.

To meet the nebulous standards of a moonlighter, a worker in the survey must get paid on a second job taking at least 10 hours a week.

A classical case turned up in the study. One production worker holds two jobs at 47½ hours apiece, tries to manage a few hours overtime on Saturday, and studies auto mechanics on the side.

"I don't feel spry like I used to," the worker told his interviewer. "I guess I'm getting run down a bit."

Unions line up beside management in efforts to control the practice. Basically, unions like to spread employment; they want to see 2 men—not 1—on 2 jobs. Furthermore, it creates a headache for unions when their moonlighting men get in trouble with the boss.

Some companies have fired moonlighters when they found their secrets leaking to competitors. One firm gave the gate to a moonlighter after it found him snoozing soundly on company time.

The problem of moonlighting only now is crystallizing. There are few hard and fast rules on how to deal with it. Some companies warn their men against holding two jobs; others tolerate the trend.

Meanwhile, many a worker turns into a moonlighter in order to keep up with the Joneses (who also may be moonlighting).

One thing seems sure—the puzzle will grow as the workweek shortens. A century ago, when the 6-day week called for 66 working hours, there was little time left for moonlighting.

But the current pattern of a 5-day, 40-hour week encourages the double-job practice. Machines also take more of the workload off employees for each given hour on the job.

FOUR-DAY WEEK LOOMS

Already, union leaders are thumping the drums for a 4-day week. Economists say this eventually will come. In turn, this greases the moonlighting skids.

Firemen traditionally rank among our society's moonlighters. They can rest on duty, the conference board notes, and thus save up energy for afterhours work.

In New York City 50 patrolmen—most of them rookies—resigned last February to join the fire department. Pay scales are the same, but the city's fire fighters are allowed to hold outside jobs.

A final poser in moonlighting: No one knows exactly how the term got started. It popped up in the literature a few months ago.

Recent Decisions of the Supreme Court

EXTENSION OF REMARKS
OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. DAVIS of Georgia. Mr. Speaker, on July 19 I inserted in the CONGRESSIONAL RECORD on page A5812 an article from the American Legion Firing Line regarding recent decisions of the Supreme Court.

There was not space enough in that issue of Firing Line to discuss all of these Supreme Court decisions. Part II of this discussion appears in the August 1 issue of Firing Line, and I insert herewith part II of the discussion of these decisions.

The article follows:

RECENT DECISIONS OF THE SUPREME COURT, PART II

14. *Paul M. Sweezy* v. *State of New Hampshire* (June 17, 1957). A self-confessed Marxist and coeditor of Monthly Review, Paul M. Sweezy appeared before a hearing conducted by the New Hampshire attorney general on January 8 and June 3, 1954, and "refused to answer questions dealing with the Progressive Party and his (Sweezy) lecture at the University of New Hampshire on March 22, 1954." His refusal was on the grounds "that questions concerning these matters violated his political freedom and his freedom of speech, as guaranteed" by the Constitutions of the United States and New Hampshire. According to the Report of the Attorney General to the New Hampshire General Court, dated January 5, 1955, page 91, the questioning of Sweezy "in these two areas was pertinent to an investigation into subversive activities and violated no constitutional rights."

When directed by the Merrimack County (New Hampshire) Superior Court in June 1954 to answer New Hampshire attorney general's original questions, Sweezy refused and was "found in contempt of court and ordered remanded to jail." Sweezy appealed this decision to the Supreme Court of New Hampshire, which subsequently affirmed the lower court ruling. In April 1956, he appealed directly to the Supreme Court of the United States claiming "State sedition laws have been superseded by Federal legislation" in accordance with the high court's decision in the case of the *Commonwealth of Pennsylvania* v. *Steve Nelson*. (See Firing Line, July 1, 1957, p. 1; New York Herald Tribune, April 21, 1956, p. 3; and Report of the Attorney General to the New Hampshire General Court, 1955, p. 92.)

The Supreme Court, in reversing the lower court ruling, held that Sweezy had been "denied due process of law." In criticizing the State of New Hampshire, the Court asserted "merely to summon a witness and compel him, against his will, to disclose the nature of his past expressions and associations is a meaure of governmental interference in these matters." (See Supreme Court of the United States, No. 175, October term, 1956, pp. 11, 16, and 21.)

In a dissenting opinion, two Supreme Court Justices sharply claimed "The (Supreme) Court today has denied the State of New Hampshire the right to investigate the extent of 'subversive activities' within its boundaries in the manner chosen by its legislature * * * We are bound by the State court findings. We have no right to strike down the State action unless we find not only that there has been a deprivation of Sweezy's constitutional rights, but that the interest in protecting those rights is greater than the State's interest in uncovering subversive activities within its confines. The majority has made no such findings. The short of it is that the Court blocks New Hampshire's effort to enforce its laws * * * They (Supreme Court) destroy the fact-finding power of the State in this field and I dissent from this wide sweep of their coverage." (See Supreme Court of the United States, No. 175, October term, minority decision, 1956, pp. 1, 2, and 3.)

15. *John T. Watkins* v. *United States of America* (June 17, 1957). John T. Watkins, labor organizer for the United Automobile Workers, appeared before the House Committee on Un-American Activities on April 29, 1954. While denying actual membership in the Communist Party, Watkins testified "that for a period of time from approximately 1942 to 1947 I cooperated with the Communist Party and participated in Communist activities to such a degree that some persons may honestly believe that I was a member of the party." Watkins refused to testify "on the grounds of conscience," about former associates whom he believes have long since removed themselves from the Communist movement. While pointedly not invoking the fifth amendment, Watkins defied that committee by refusing to answer other similar questions he believed to be outside the proper scope of committee's activities. (See HUAC, Investigation of Communist Activities in the Chicago Area, pt. 3, 1954, pp. 4268 and 4275.)

The House Committee on Un-American Activities cited Watkins for contempt of Congress in May 1954. In June 1955, the Federal district court found him guilty and gave Watkins a suspended 1-year prison term and a $500 fine. After the lower court's verdict was upheld by the United States cout of appeals, Watkins appealed directly to the Supreme Court. In its majority decision, the high court reversed the ruling of the court of appeals and dismissed the indictment against Watkins. Slapping down congressional investigating committees, the Supreme Court declared "we have no doubt that there is no congressional power to expose for the sake of exposure." (See the Washington Post and Times Herald, June 19, 1957, p. B-4; and Supreme Court of the United States, No. 261, October term, 1956, pp. 19 and 35.)

Supreme Court Justice Tom Clark filed the only dissenting opinion. He strongly declared: "As I see it the chief fault in the majority opinion is its mischievous curbing of the informing function of the Congress. * * * I think the committee (House Committee on Un-American Activities) here was acting entirely within its scope and that the purpose of its inquiry was set out with undisputable clarity. * * * The record in this case shows no conduct on the part of the Un-American Activities Committee that justified condemnation." On June 18, 1957, FRANCIS E. WALTER, chairman of this congressional committee, flared out at the Supreme Court and called upon Congress to assert its authority to block judicial invasions into the legislature's field. (See Supreme Court of the United States, No. 261, October term, minority decision, 1956, pp. 1, 11, and 16; and the Washington Post and Times Herald, June 19, 1957, p. B-4.)

16. *Oleta O'Connor Yates, et al.*, v. *United States of America* (June 17, 1957); 17. *William Schneiderman* v. *United States of America* (June 17, 1957); and 18. *Al Richmond and Philip Marshall Connelly* v. *United States of*

America (June 17, 1957). Representing the aforementioned cases (16, 17, and 18), the following 14 Communist leaders were convicted in California on August 5, 1952, for plotting to teach and advocate the violent overthrow of the Government of the United States: Frank Carlson, Dorothy H. Connelly, Philip M. Connelly, Ben Dobbs, Ernest O. Fox, Rose C. Kusnitz, Carl R. Lambert, Albert J. Lima, Al Richmond, William Schneiderman, Frank E. Spector, Henry Steinberg, Loretta S. Stack, and Oleta O. Yates. Each defendant was sentenced to prison for 5 years and fined $10,000. When the Ninth United States Circuit Court of Appeals upheld the conviction of these 14 west coast Communists in March 1955, they appealed to the Supreme Court. (See the Washington Post and Times Herald, June 18, 1957, p. A–21.)

In its ruling, the Supreme Court reversed the lower court by acquitting 5 of the 14 and ordered new trials for the other 9. The Court majority claimed evidence produced against the five Communists was entirely too meager to justify putting them to a new trial, and that their acquittal should be ordered. The acquitted were: (Mr.) Connelly, Kusnitz, Richmond, Spector, and Steinberg. This Court also declared the trial jury was not instructed with the fact that merely preaching abstractly the forcible overthrow of the Government is not a crime under the Smith Act of 1940. In adopting the defense argument, new trials were also granted to the other 9 Communist leaders because the indictment charging them with organizing the Communist Party was barred by the 3-year statute of limitations. (See Supreme Court of the United States, Nos. 6, 7, and 8, October term, 1956, pp. 5, 25, and 32; and the Washington Post and Times Herald, June 18, 1957, p. A–21.)

According to a separate concurring and dissenting minority opinion, two Supreme Court Justices felt the convictions against all 14 Communist leaders should be reversed and "all the defendants be acquitted." Supreme Court Justice Tom Clark filed another minority opinion and dissented without reservation. He declared: "I would affirm the convictions. * * * I agree with the court of appeals, the district court, and the jury that the evidence showed guilt beyond a reasonable doubt. It paralleled that in Dennis and Flynn (cases of convicted first- and second-string Communist national leaders) and was equally as strong." (See Supreme Court of the United States, Nos. 6, 7, and 8, October term, First Minority Decision, 1956, p. 1; and Second Minority Decision 1956, pps. 2 and 3.)

Continuing, Justice Clark said: "In any event, this Court should not acquit anyone here. In its long history, I find no case in which an acquittal has been ordered by this Court solely on the 'facts.' It is somewhat late to start in now usurping the function of the jury, especially where new trials are to be held covering the same charges." (See Supreme Court of the United States, Nos. 6, 7, and 8, October term, Second Minority Decision, 1956, p. 3.)

Has the H-Bomb "Sunk" Our Navy?

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the July 28, 1957, issue of This Week magazine:

HAS THE H-BOMB "SUNK" OUR NAVY?

IS IT NOW A SITTING DUCK FOR ENEMY NUCLEAR ATTACKS?—HERE THE NAVY'S BOSS TELLS WHY THE SURVIVAL OF OUR CITIES MAY DEPEND ON OUR SHIPS AFLOAT—"THE NAVY CAN DEFEND ITSELF AGAINST ANY ATTACK"

(By Adm. Arleigh A. Burke, United States Navy, Chief of Naval Operations, as told to Leonard Gross)

(As he prepares to begin his second term as top man in the United States Navy, Admiral Burke has written for This Week one of the most important statements of our times on the Navy's new strategy to fight modern war. His article follows:)

Sure you can sink an aircraft carrier with an H-bomb—let's admit it right away.

Let's also admit that if we ever have a massive war, many targets are going to be obliterated. Some will be cities. Some will be military bases. And some will be aircraft carriers.

But I would like to initiate my second term as Chief of Naval Operations by suggesting that you don't abandon cities or military bases simply because they may be vulnerable. Nor do you abandon aircraft carriers.

I would like to suggest further that talk about superweapons making the Navy as obsolete as tanks made the cavalry is far from the truth. I suggest, instead, that the Navy is the single most effective service ready to fight against aggression today—any kind of war, at any moment, in any place. And I'd like to prove it.

If there is public uncertainty about the role of the Navy it probably stems from the notion that the next war if it comes would be fought by 2 men, 1 button-pusher in Russia and another in the United States, and that all humanity would wait helplessly to be annihilated by the explosions they unleash.

I don't believe that anything remotely like this is going to happen.

All-out war is possible, and we've got to be prepared for it. But while it's possible, I don't think it's very probable. My reasoning is simple:

Russia cannot destroy the United States.

The United States can destroy Russia—no matter what Russia does in any initial attack.

OUR SIMPLE STRATEGY

The United States will not start a general war the only result of which could be to wipe out another nation. Such a war is horrible and abhorrent to a democracy. But neither, I believe, will the Soviets start such a war, not because they have any qualms about destroying others, but because they do not want to be destroyed themselves. The Soviets know what we've got, because we've made sure to advertise it. They know we have enough to destroy them. There are many unkind things that can be said about the Soviet leaders; they are, in my opinion, ruthless and heartless. But it can never be said that they don't look out for themselves. It would not serve their interests for Russia to be destroyed.

If this reasoning is simple, so is our strategy. The Navy believes in a defense of balance, based on the idea that the Strategic Air Command, the Tactical Air Command, Army missiles, Navy missiles and air power, and the power of our allies abroad can each perform some missions better than any one of the others.

All of these separate, balanced forces would make the Soviets dilute their defenses. They couldn't handle all these threats at once.

Certainly the U. S. S. R. can sink a carrier, but it would take a tremendous effort. With everything thus committed, it would, I believe, have little left with which to attack elsewhere.

And so the bomb that destroys the carrier spares Chicago. And the "misses" aimed at the carrier don't destroy the suburbs of Chicago. And the Soviet planes that fail don't fall on Milwaukee—they fall into the sea.

The effort the U. S. S. R. throws against a carrier task force, in other words, will not be thrown against the United States.

And what is the result? Our Strategic Air Command, Tactical Air Command and other free world forces are able to retaliate against the source of aggression, the U. S. S. R. itself.

Let's turn the plans around. Supposing the Soviets elect to make their initial attack where the radioactive fallout will not be wasted, as it would be at sea. So they attack United States land targets, and the United States counters against Soviet bases, and both are destroyed. At the end of this massive attack, who's left? We're left—the Navy.

In large-scale future wars, the balance of power may well rest on a few ships at sea.

But, again, I am convinced that the Russians know this power balance would still be tipped at our end, and that's why I believe that a general war is the least likely war of all.

What if our estimate is wrong, and the U. S. S. R. does begin a general war? What good is a Navy against airborne H-bombs, guided missiles with atomic warheads, and submarines equipped to launch other potent guided missiles, perhaps even from under water? Is the Navy helpless, and are its expensive carriers "sitting ducks"? Against all of these super weapons, how could the Navy get into position to strike back at the Soviet Union? These are good questions, and they have got to be answered.

WHY WE NEED CARRIERS

In the first place the Navy is already in position.

We are in place, right now, close to our allies, watching the avenues the U. S. S. R. must use to launch an all-out war. And we are in the right places—Europe, the Middle East and Asia, where the Soviets threaten to move in.

If there is war, we can try to make sure it will be fought far from the United States.

This fact should answer those who wonder why we center our Navy on the aircraft carrier, while the Soviets concentrate on the submarine. Our force must be prepared to fight anywhere in the world. The Soviets, if they fight, will be fighting in Europe and Asia. Furthermore, while they use the seas, they do not depend on them as their bloodstream. The free world does; it must trade to stay strong. If the Soviets could command the seas, they could isolate us from our allies. The U. S. S. R. recognizes this in their concentration on submarines, about 500 against our 110.

The American people worry a lot about those 500 subs, and I don't blame them. I worry a lot about them myself. In any future war, the danger to ships at sea is going to be great. We will lose ships, a good many ships.

But does this mean we are helpless before submarines? Do we abandon ship? We do not. And I say it in reference to guided missiles and H-bombs as well. The Navy can defend itself against all three. That fact is, in my estimation, one of the great deterrents to the all-out, atomic war we all dread.

NAVY OF THE FUTURE

What's the explanation? In brief, it's the old story of weapons versus armor. Throughout history, each new weapon has provoked an improvement in defense. The same thing is happening today and will continue to happen. In 10 years, you will hardly know your Navy. Its ships will almost all be atomic powered. It will have struck a balance be-

tween size and quality; it will be smaller nd tougher. The battleship will be gone, e have only two left now, but the smaller hips, the destroyers and frigates, will be rmed with guided missiles, the frigates en- irely so, without a gun aboard.

The fleets will be able to stay out longer ecause they'll require less support from sup- ly vessels. And they'll be able to destroy ubmarines, planes, and missiles at greater nd greater distances, because they'll be eavily equipped with automatic data com- uters—electronic brains—to help them in his job. Some of our equipment, such as hose computers and the 1,000-mile-per-hour lanes, is so marvelous that we haven't yet earned to use it to full capacity.

The H-bomb makes the massive invasions e knew in World War II impossible, but, ith our new Navy, they will no longer be ecessary. A task force will be able to send arines by helicopter over the obstacles, be- ind the lines. It could also drop weapons o our allies.

And as everything else in the Navy is hanging, so is the task force. We once hought of it as a tight defensive circle, uch like a walled city. When you think f a task force today, you must think of an cean area the size of New York State. The ost powerful H-bomb known would get nly one of our ships. We've got our dis- nces figured.

And we've got our defenses, and we think hey're good ones, even against these super- eapons you hear so much about. There re a few things to remember about these abled weapons:

They must be aimed, and proper aiming equires an exact knowledge not only of the ring location, but of the location of the arget as well. A ballistics missile has range nd speed, but it cannot anticipate a mov- ng target. A homing missile must be fired rom in close—close enough for us to pester he devil out of whoever's firing it, sub or irplane. We can bother him enough to up- et his accuracy. And even after he's fired is homing missile, we've got devices to fool : false heat, if it homes on heat; false noises f it homes on sound. And we have some ther tricks that I can't talk about.

To get a carrier, the so-called sitting uck, you must first find it. A sitting uck that can't swim. So you can see what mismomer that turns out to be. Our car- ers are not like fixed land targets whose act locations are known and unchange- ble. Ships can move swiftly and evasively.

But let's concede that a task force is found d its location accurately transmitted and hat an attack is launched against it. Keep your mind that ocean area the size of ew York State, with the carriers in the enter.

OBSTACLE COURSE

Whoever comes at it must go through our ng-range fighters. Then through our picket hips. Then through our air early warning ystem. Then through our overhead patrol f fighters from the carriers. Then through ur missile ships. Then the missiles of sup- orting ships. And finally, the close air de- nse of the carriers themselves.

If they've gotten through all of that, and heir aim is good, sure, they'll get a carrier.

But does this make the Navy obsolete? hardly think so. Admitting that a carrier an be sunk does not imply that it already . Nor does the admission detract from he three indispensable contributions a avy—and nothing else but a Navy—can ake in a big war:

1. As a decoy for the mainland.

2. As a patrolman of the avenues of ggression.

3. As a potent, self-contained offensive nit.

We have been talking of big wars, which don't believe will happen. Now, what bout the little wars? These are the wars we've known in the last decade. These are the wars we may well know in the next. These are the wars that require immediate deployment by mobile force. Americans have been asking questions of their Navy. Now the Navy would like to ask some questions of America.

When United States forces were all but pushed off the tip of South Korea in the early months of that little war, who sailed up the coast to Inchon, landed Marines and broke the back of the extended North Korean Army?

Who ended the imminent threat of a Chinese invasion of Formosa?

Who removed 300,000 refugees from North Vietnam when the Communists moved in there?

More recently, who evacuated 3,000 United States citizens from the Suez fighting zone? And, only a few months ago, who sailed for the eastern Mediterranean to help stabilize a situation which threatened the independence of Jordan?

Who else but the Navy, in every case? Who else could have done the job? A navy can move its power around. It is the only force that doesn't have to invade a country to make its point. Thus it does not get us involved. It does not depend on a foreign power allowing it to set up shop on its territory; it can do its job cruising offshore.

If we narrow our military strength to one channel, say the intercontinental ballistic missile, we simplify Russia's operation. To take an extreme case, if we were to prepare only for an all-out war, we could conceivably be forced into a position of choosing between capitulating over another Korea or Formosa or accepting a nuclear holocaust. Moreover, capitulation would increase the danger of war at a later date, when the enemy would be stronger.

A BALANCED MILITARY FORCE

There will probably be many localized flareups in our lifetime. The U. S. S. R. and Red China want to separate Japan from the free world. India's Communist Party feeds on the country's poverty. Indonesia's restless Communists look for control. We want to help Indonesia keep her independence. She is an island country; the only way the Soviets can reach her is by sea. We control the sea.

No one can be sure what is going to happen in our divided world. We must be prepared to deal with all kinds of problems, the instant they arise. And we think the Navy, as part of a balanced military force, is needed for that job, today more than ever.

Bill To Modernize Federal Budget Needs Your Support

EXTENSION OF REMARKS

OF

HON. TORBERT H. MACDONALD

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. MACDONALD. Mr. Speaker, there is at least 1 additional reform of the nearly 500 recommendations of the Hoover Commission, which should be authorized before we adjourn the 1st session of the 85th Congress.

I am referring specifically to H. R. 8002 and other identical bills, one of which I introduced, which are designed to put Federal budgeting on an accrued expenditures basis. This legislation has the unqualified endorsement of President Eisenhower, the Hoover Commission, Bureau of the Budget, the Secretary of the Treasury, and the Comptroller General of the United States. As my colleagues know this legislation has already passed the United States Senate without opposition and has been reported unanimously by the Government Operations Committee of the House after a 2-year study.

On Sunday, August 4, 1957, it was my privilege to broadcast over WEEI in Boston with the regional director of the New England Citizens Committee for the Hoover Report. We discussed the Hoover Commission recommendations in general and both agreed that the present Congress should enact legislation that will provide a means for control over expenditures and place Government fiscal practices on a more businesslike basis.

Mr. Speaker, I estimate that savings to the Federal Government amounting to $3 billion a year would materialize from the enactment of this type of legislation. In fact, I know of no legislation of more importance at this time, in view of the tremendous expenditures that our national defense requires than putting our Federal financial house in order. It is my hope that the Congress will enact this meritorious legislation into law at the earliest possible time. By doing so it will provide for the most important improvements in the Government's financial structure in a decade or more and it will result in more economic and more efficient Government.

The distinguished editor of the Reading Chronicle, of Reading, Mass., a town which I have the honor to represent, wrote a very timely and enlightening editorial on July 25, 1957, entitled "Bill to Modernize Federal Budget Needs Your Support." This editorial deals with the problem of restoring the control of Congress over the present high level of Federal spending which is the goal of H. R. 8002 and the bill I introduced. I commend this thoughtful editorial to the consideration of the entire membership of the House.

The editorial follows:

BILL TO MODERNIZE FEDERAL BUDGET NEEDS YOUR SUPPORT

Legislative control of the public purse is one of democracy's bulwarks. Restoring the control of Congress over the present high level of Federal spending is the goal of a bill, H. R. 8002, now before the House of Representatives. Similar legislation passed the Senate unanimously.

In nontechnical terms, this bill would limit budget appropriations to a single year, halting the present practice in Congress of handing out funds in a lump-sum for full payment of projects that may take years to complete. Under the present system, $70 billion—almost as much as the proposed record-high budget for fiscal 1958—has slipped beyond the effective reach of Congress. This vast sum represents "carryover" funds unspent from past budgets when long-range projects were changed or canceled. Instead of returning this money to the Treasury, Federal agencies can spend it on new projects which Congress may know nothing about.

Advantages of the proposed system are clear-cut. Former President Hoover estimates it will save $3 billion a year. Outstanding leaders in both parties endorse the plan, including President Eisenhower, Treas-

ury Secretary Humphrey, Budget Director Brundage, Comptroller General Campbell, and all 96 members of the Senate where it was championed by Senators KENNEDY, Democrat, Massachusetts; BYRD, Democrat, Virginia; PAYNE, Republican, Maine; SMITH, Republican, Maine; and 46 other senatorial cosponsors. The vast majority of the Nation's press has lined up behind the new plan, and thousands of alert Americans have written to Congress urging its enactment.

Yet H. R. 8002 faces a bitter fight in the House, where advocates of the status quo are fiercely resisting this widely endorsed improvement. Their stand sharply contradicts the American taxpayer's economy mandate so forcefully expressed in every part of the country this year.

What's needed now is a strong immediate show of citizen support from coast to coast. If you haven't told your Congressman that you favor this bill, tell him now. With the full weight of public opinion behind it, H. R. 8002 stands a good chance of adoption. Without your support, it's sure to fail. This is your chance to put a major economy measure over the top.

Berks County, Pa., Farmers Endorse H. R. 8456, Wheat for On-Farm Consumption

SPEECH
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 8456) to amend the Agricultural Adjustment Act of 1938, as amended, to exempt certain wheat producers from liability under the act where all the wheat crop is fed or used for seed or food on the farm, and for other purposes.

Mr. RHODES of Pennsylvania. Mr. Chairman, it is my pleasure to support H. R. 8456, permitting farmers to grow up to 30 acres of wheat for use on the farm for feed, seed, or human food without being subject to penalty payments under the wheat acreage allotment program.

Like many of my colleagues, I have had a number of cases involving penalty payments called to my attention by farmers in my district. It is grossly unfair to deny farmers the right to grow enough wheat on their own farms to feed their livestock. As one Berks County farmer states in a letter:

It is against democratic principles to hamper such farm operations when the products does not directly affect public markets. It may even be compared to a monopoly since a farmer can raise grains cheaper than he can purchase them on a controlled market.

A Berks County official of the State grange writes:

If you can help us get a minimum 30-acre allotment for farmers in this State, you will have done us a good service. I have an allotment of 26½ acres on 290 acres in 2 farms which does not reach to feed my chickens.

Another farmer remarks:

I have heard discussion of this problem for a number of years. The answer has always been to permit a farmer to raise what he needs for seed, feed, or human use on his own farm without penalties. I think raising the acreage to 30 acres for above uses will remove any farmer in Berks County from penalties.

A farm organization official writes:

This bill is in line with the policies of the Pennsylvania Farmers' Association and also with the Berks County Farmers' Association; anything you could do to pass this bill would be greatly appreciated by the association.

A Berks County chicken farmer states:

I feed 2,000 layers and 2,400 replacement pullets every year. Since the wheat quota went into effect, I am only allowed to grow 15 acres of wheat on this 175-acre farm, so in order to get enough wheat to feed my poultry, I must go out and rent land from neighbors to raise wheat even though I would have enough land at home to raise my wheat if the quota system was raised, or still better abolished completey. Please support this bill H. R. 8456.

Mr. Chairman, while this legislation does not go as far as far as many of us feel is justified, I am convinced that it is an important step in the right direction. The objectives of this bill are sound and in the best interests of the farmers of my district and State. H. R. 8456 corrects an injustice in existing law which has cost many farmers hard-earned dollars in discriminatory penalty payments.

It is my hope that the section of S. 959, a similar bill on this subject passed by the Senate, providing retroactive cancellation of penalties imposed since 1954 may be included in the final version of the measure enacted into law.

I congratulate the sponsor of the bill, my friend, the gentleman from New York [Mr. ANFUSO] and the members of the House Committee on Agriculture for approving the measure and sending it to the House floor.

Kenneth Roberts Had Roots Deep in This Area

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 23, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial from the Somersworth Free Press, Somersworth, N. H., on Thursday, August 1, 1957:

KENNETH ROBERTS HAD ROOTS DEEP IN THIS AREA

The death last week of novelist Kenneth Roberts struck the hearts of many people in this city and Berwick, especially of the residents who remember the days when Roberts was a young boy visiting here.

Kenneth Roberts' roots were quite deeply set in the life of this area. Indeed, his grandparents, Mr. and Mrs. Ebenezer Tibbets, were Somersworth natives. Mr. Tibbets owned and operated a hardware store near the bridge where Lemay's Garage now stands.

Back in the late part of the last century, Roberts came here to visit his aunt, Mrs. William Russell, who lived on Noble Street.

Of all the Somersworth people who knew the noted author best in his growing-up years, the Bates sisters, Leonora and Theo[illegible] date, have the most complete account of his visits.

In Berwick, the Spence family recalls some interesting family connections with Roberts and through their ardent perusal of his books tell us that many are the scenes and many are the characters in his works which draw for their source on places and families in Somersworth and Berwick.

As a writer, Kenneth Roberts will go down in the history of American literature as one of this country's greatest. His novels of early American history have enthralled millions of readers young and old. The joy behind his writing is heightened by the accuracy of detail and validity of the incidents he recounts. It was a matter of personal pride with him to put hours of careful research into everything he wrote. Some of his works were years in the planning and preparation stage, and one novel he told friends, represented 2 years' research and 5 years of writing.

Kenneth Roberts will be sorely missed in the world of literature. A consolation in his passing, however, is that behind him he has left a wealth of writing and not a few of his books will continue to provide enjoyment to readers for generations to come.

Like Ol' Man River, Inflation Jes' Keeps Rollin', Rollin' Along

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Inez Robb, which appeared in the New York World Telegram and Sun of August 2, 1957:

LIKE OL' MAN RIVER, INFLATION JES' KEEPS ROLLIN', ROLLIN' ALONG

(By Inez Robb)

Uncle Sam is printing the first batch of his paper money ever to bear the inscription "In God We Trust," although American coins have carried this legend for years.

Appropriately enough, the first bills to bear this phrase are of the dollar variety whose purchasing power has shrunk so rapidly that the Treasury apparently felt salvation depended upon a miracle or an act of faith. Frankly, the ultimate consumer of John Q. Public had already beaten the Treasury to this decision.

In the battle of inflation it is hard to know what the Government has in mind, if any. After recourse to any number of experiments, it is possible that Washington has decided there is no hope for the dollar save in an appeal to a higher power.

Has anyone else noticed that it's been a long, long time since he has heard what was at one time a favorite American cliche: "Money isn't everything?" It has been driven out of circulation by the fact that money isn't anything any more. It's hardly worth the blood, sweat, toil and tears required to latch onto it. Yet money is like dentistry. You can't get along with it or without it. (But wouldn't it be fun to try?)

It is nice of the United States Bureau of Labor Statistics to tell us taxpayers every month that the cost of living has hit another new high, but it's redundant. This is a fact of life to which the citizen is hep without any outside help from the Federa

birds and bees—or the Bureau of Labor Statistics. In this field, the cash register at the supermarket has the birds and bees licked to a standstilll as an informant.

I have long made a conscientious effort to read financial publications, always printed in an obscure argot of the unknown tongue. But recently I ran across a simple statement, probably printed by mistake, that I could understand on the first reading. It said, with stark clarity: "Money costs more today." Well, ain't it the truth! Not even the HCL has soared more rapidly than the cost of money.

There are still persons alive who can remember the famous day and year when the Five and Dime was just that. But money costs so much today that the old Five and Dime is but a memory replaced by the $.98-and-$9.98—prices revised upward while you wait, to the tune of "I Found a Trillion-Dollar Baby in the Cut-Rate Cartier's."

Like Ol' Man River, inflation jes' keeps rollin' along. Money, soft or hard, is all the same, once it sifts down to me. Whether it's 3-minute or 5-minute money, it melts like butter in a heat wave.

Money at the moment is a sometime thing—here today and gone before you can count the change. All money is in transit. It may not travel far, but no one can deny that it's jet-propelled.

The fact that Uncle Sam is inscribing "In God We Trust" on paper money may comfort a lot of people who had begun to look askance at the Treasury. But in view of the transitory nature of money, there is another step Uncle could take. He could invoke for this off-again, on-again, gone-again commodity the protection of that patron saint of travelers, St. Christopher.

Budge Gets the Answer From the People

EXTENSION OF REMARKS

OF

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, there follows an editorial from the Fremont County Chronicle News, published at St. Anthony, Idaho, under date of July 25, 1957:

BUDGE GETS THE ANSWER FROM THE PEOPLE

In a recent editorial we contended that in very many ways Congress definitely is not following the will of the people in its actions—or in its refusals to act.

About the same time, Representative HAMER BUDGE, of Idaho, was sending to a group of southern Idaho constituents selected at random from telephone books, questionnaires on some of the items of national interest. The results he got well bear out the contentions we made.

For instance, folks replied 869 to 315 in favor of increased postal rates to bring postal revenues up to meet expenses. But Congress refuses to act, preferring to let taxes pay the deficits.

Folks voted 789 to 354, well over 2 to 1, against banning nuclear tests. Yet Congress has given serious consideration to that proposal recently.

Idaho folks, far less affected than most, probably, voted 940 to 213 against any increase in annual immigration quotas, and again Congress has toyed with the idea and has suspended quotas in many instances recently.

Again, Idaho, where there is no reason to do anything but approve of civil rights legislation, voted in favor of such legislation only 542 to 540, with a lot of folks not answering. Maybe there isn't the majority interest in that matter about the country there would seem to be, judging by the emphasis it is getting and the time it is taking in congressional activity.

The cynic would be confounded too, by the vote, 933 to 210, which favored reduction in Federal expenditures even if the reductions affect projects or programs in which the voter has a direct interest. That's one to be pondered by the Congressman who is for reductions in everything but those matters affecting his district—and so for none. And Congress should note the same voters urged 880 to 287 reduction of the national debt before tax reduction. The people want to pay their debts—Congress doesn't seem to care.

Congressmen might worry less about labor lobbies and more about the rest of the folks if they could see more surveys like this one which read 1,046 to 101 in favor of more, rather than less, regulation of labor unions. Mighty surprising in an agricultural area was the vote on Federal agriculture support programs—only 220 wanted the program increased while 402 suggested it be decreased and 513 urged elimination entirely.

On the matter of foreign aid, belief was about what we figured. In the vote 701 persons wanted it decreased and 314 wanted it eliminated altogether. Only 134 thought it should be increased.

There are some surprising results in surveys like that. Yet those are the beliefs of the people and should be the basis of congressional action.

Representative BUDGE is to be congratulated for attempting to keep in touch wth the beliefs and desires of the people who elected him. His questionnaire, circulated to a small southern Idaho area at random, of course, may or may not reflect the feelings and desires of all the people of the Nation.

But we believe very sincerely that it is only when all the Members of Congress, in one way or another, seek to keep close contact with the wishes of their own people, and then seek to act on those wishes, that we will have true government of the people. Today Congress is too remote from the ballot boxes and from the electorate—remote in both distance and thinking.

New Schoolrooms for Los Angeles—Without Federal Aid

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. McDONOUGH. Mr. Speaker, Los Angeles County, Calif., is an example of a local area meeting the challenge of increased population, especially including an increase in school-age children, and providing for adequate school facilities for these children without the aid of the Federal Government.

The following news report on the emergency plan to provide needed classrooms in the Los Angeles area clearly illustrates that increased educational facilities can be provided in communities where the citizens and the school authorities go to work to solve their own problem without waiting for the Federal Government to act for them.

Los Angeles is setting an example which all communities with a school problem growing out of increased population of school-age children could do well to study and emulate.

EMERGENCY CLASSROOMS DUE FOR LOS ANGELES

Emergency classrooms for more than 6,500 Los Angeles students will be ready by late fall, Superintendent Ellis A. Jarvis yesterday told the board of education.

The extra 192 bungalow classrooms to be added to schools throughout the city are in addition to the regular bonded building program and will be financed from a $2 million appropriation in the new school budget.

The regular and "crash" programs combined are expected to reduce the number of half-day and short session pupils from 35,000 to about 10,000 by next June.

Unless they are delayed by the building strikes, 11 complete new elementary schools and 3 new junior high schools are scheduled to open in September.

The emergency program, being rushed through planning stages with top priority, includes 84 bungalow classrooms at existing elementary schools and 108 at junior and senior high schools.

Meanwhile, the school board awarded a $454,650 contract for construction within 240 days of the new Lanai Road School at Ventura Boulevard and Hayvenhurst Avenue to Packard Construction Co. The plant will relieve the overcrowded Hesby and Encino Schools.

Action on Lead-Zinc Crisis Imperative

EXTENSION OF REMARKS

OF

HON. HENRY ALDOUS DIXON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. DIXON. Mr. Speaker, last week the House Ways and Means Committee conducted hearings on the Secretary of Interior's proposal to impose an import excise tax on lead and zinc. In conjunction with those hearings I appeared before the committee and offered testimony on the subject as did other members of this House, the Senate, and leaders of the industry.

The situation is critical and unless the Congress acts during this session I fear that what is left of our domestic lead-zinc industry will not be left when we reconvene. Of 21 lead-zinc mines in the State of Utah operating in 1947 there are only three major producers still operative. This is being repeated in all of the 27 States affected directly by the lead-zinc industry. I hope that we can act on this important legislation soon.

The following is the text of my statement last Thursday before the committee:

TESTIMONY OF REPRESENTATIVE H. A. DIXON, REPUBLICAN OF UTAH, BEFORE HOUSE WAYS AND MEANS COMMITTEE ON PROPOSAL SUBMITTED TO THE CONGRESS TO IMPOSE AN IMPORT EXCISE TAX ON LEAD AND ZINC AUGUST 1, 1957

Mr. Chairman and members of the committee, I am happy to appear in support of the proposal submitted to the Congress by Secretary of Interior Fred A. Seaton, to im-

pose an import excise tax on lead and zinc, but to ask for such modification in the mechanics of the bill that will accomplish the original intent of the program; namely, to prevent the price of lead and zinc from dropping below the peril points (17 cents per pound for lead and 14½ cents per pound for zinc).

The hearings before your committee are crucial because I believe that the future of this industry, so essential to our defense, will be in a great measure determined by the action of this committee.

There are five major points I should like to make. They are as follows:

1. Action should not be delayed until the next session of Congress because lead-zinc mines are closing so rapidly that there will be few left by the time Congress reconvenes.

2. The shutdown of our domestic lead-zinc mines will threaten national security, result in a shock to America's economy, a loss of taxes, and a loss of employment to hundreds of fine mining families.

3. Domestic mines cannot compete with foreign producers unless cost differentials are recognized in some protective measures.

4. The Government has the responsibility to protect our strategic mining industry.

5. The administration program is a big step in the right direction. First, our domestic mining companies are ceasing operations due to the disastrous effect of the drop in metals prices for lead and zinc. In my own State, Utah, the records of the State tax commission indicate that in 1947 there were a total of 21 mines producing lead-zinc ore. The latest figures available indicate that there are now only 3 major producers and possibly 3 or 4 minor operations still in production. In less than 10 years there have been approximately 14 lead-zinc producing mines cease operation in Utah alone. Two-thirds of Utah's producers have felt the squeeze to such an extent that they have ceased all operations.

Unfortunately this same story is being told in every other State which has mines. The latest issue of Management Digest (July 9, 1957, published by the Utah Mining Association) listed for shutdown before August 1, 2 mines in Washington, 1 in Colorado, 2 operations in New Mexico, 1 in Nevada, and 1 in Idaho. Curtailments were also ordered at one other Nevada mine and a 2,700 ton per month (30 percent) reductiton was ordered in a Texas zinc smelter. These are all in addition to the literally dozens of domestic operations that have already closed and more are closing each month. It is encumbent upon us in Congress to take speedy action or be responsible for widespread economic disaster to the American mining industry.

These closed mines are not something that can be opened and shut down like the corral gate. In some instances it takes a considerable expenditure to close a mine. In most instances it takes many times that to reopen it. After prolonged disuse many mine workings fill with water or become unsafe in numerous obvious ways. Then too, those of you from mining States know that when you shut a mine down for a year or two the reorganization of a labor force is a major problem aggravated even more so by a mine that has been shut down previously.

My second point is that these mine closures have serious ramifications for our country in at least three major areas: defense, tax loss, and the plight of the miners and their families.

Charles E. Schwab, Chairman of the Emergency Lead-Zinc Committee estimates that the value of lead-zinc mines in the United States, including smelters and refineries, is about $1 billion and they contribute importantly to the economy of this entire Nation and more specifically, to the economy of the 27 States in which they are located. In Utah for example, our lead-zinc mines had an assessed valuation of nearly $11 million in 1949, but due to closures only $6½ in 1955. This decreased valuation meant a tax loss of $175,000 in local and State property taxes and in addition more than $350,000 in other taxes to the State and local governments. The tax loss if computed for the Federal Government, and the host of other indirect taxes would be staggering. These mines, while operating are helping pay their share in the American economy. This is not the case with foreign producers.

The defense values in having a healthy domestic industry which frees this nation of reliance upon the whimsey of foreign producers seems obvious and I shall not dwell at great lengths upon it.

It appears also that a detailed world-portrait of the heartache and misery involved in each and every mine closure for the numerous families involved is unnecessary. In my Congressional District a historic mine that had been operating continuously in a rather remote area since 1909 announced that it was suspending operations last month. Announced on the financial page in a Salt Lake City newspaper, the story did little to mention the problems faced by the 70 Utah families quite tragically affected. Many of the miners were working in the same mines their fathers before them had labored in. That area is their home and mining is their business and now for the workers of Chief-Consolidated, there is no mine and no business.

My third point is that we cannot expect to retain our domestic mining industry and have it compete against foreign producers without reasonable protection. In a speech I delivered on the House floor on June 14, I referred to the abundance of technical reports and statements from American mining engineers which show that a high grade miner in India is paid from 12 cents to 15 cents per hour for a 12-hour day. In other instances the pay ranges as little as 10 cents or 12 cents per day for inexperienced miners and women. In Korea a good day's pay is a cup of rice. In Bolivia miners are paid on a wage scale ranging from $1.00 to $1.50 per day and the average daily wage for mining in Mexico in 1956 was $1.68. Contrast this the recent report of the Tri-State Lead Producers Association which shows that the average hourly wage for an American miner, including fringe benefits is something like $2.09 per hour. One company which operates mines in both the United States and Mexico pays only 10 percent of the amount for labor costs in its Mexican operation which it must pay in the United States.

We cannot expect American mines and miners to uphold our own wage scales and standards of living and freely compete with foreign producers.

My fourth point is that the Government has a responsibility to protect our strategic domestic mining industry. I firmly contend that we cannot allow ourselves to become more dependent upon foreign sources of supply than we are now. Further, a paradoxical situation exists in the fact that during World War II and during the Korean war, when our Government desperately needed domestic lead-zinc production and when these domestic producers could have made substantial profits had the market sought its natural level, the Government imposed price ceilings on both metals. To be specific, during the Korean war, foreign producers in Mexico, Australia, Africa, and elsewhere were able to sell their products at around 23 cents per pound for lead and more than 30 cents per pound for zinc. In contrast, our Government stepped in and controlled domestic prices at 17½ cents to 19½ cents for zinc and 17 cents and 19 cents for lead. Aside from placing the American miner under strict price controls, he was not allowed even to export his tonnage to take advantage of the high world market price. By keeping America off the world market production in other countries was over stimulated and our industry now is the victim. Now the situation is reversed. These producers helped the Government and now they look to us for protection from foreign mines and miners that are putting them out of business. A continuation of the present trend will leave us at the mercy of the shifting winds of international politics. The lead-zinc industry is not asking us for a dole or a handout or a subsidy. They are asking for pure and simple protection from low-priced foreign metals.

Finally, today I would like to say that adoption of the administration program is a step in the right direction. The sliding scale it establishes will help stabilize domestic prices but this program should go further. The import taxes to be applied when prices for lead and zinc fall below the peril points of 17 cents for lead and 14½ cents for zinc should effectively serve to maintain domestic prices at about the peril point levels. I recommend the consideration by this committee of the import tax applications presented in the testimony of industry witnesses. It is my hope that this committee in view of the problem will develop a program which will take cognizance of the losses sustained by the industry in recent years and enact legislation enabling it to operate as a healthy member of our great American industrial team.

I am not a mining expert myself nor am I aware of the intricacies of tariffs or world economics, but I am aware of the damages being wrought in this industry throughout the mining States. By adding my voice to those who plead with you to evolve a fair solution, perhaps a contribution has been made.

We have confidence in your ability and your judgment. Thank you.

An Open Letter to Marshal Tito: Will You Release Djilas?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. MULTER. Mr. Speaker, the following open letter, written by Roscoe Drummond and which appeared in the New York Herald Tribune of August 5, 1957, is worthy of the close attention of our colleagues:

AN OPEN LETTER TO MARSHAL TITO: WILL YOU RELEASE DJILAS?

(By Roscoe Drummond)

WASHINGTON.

Marshal JOSIP BROZ TITO,
President of Yugoslavia,
Belgrade.

DEAR SIR: You have many friends in the United States, in the whole free world. They are your friends not because they esteem communism. They don't. They abhor communism, even a diluted nationalist communism as in Yugoslavia.

They are your friends because they respect the bravery and patriotism which you showed in wresting Yugoslavia from Soviet rule. They respect the way you risked all to stand up to Stalin rather than yield to the Kremlin. They respect the way you boldly avoided being trapped by Khrushchev.

Today your friends in the West are anguished by the fact that a brilliant, courageous, patriotic Yugoslav—a once cherished

perhaps still cherished, friend of yours—Milovan Djilas, lies languishing in a Yugoslav prison cell.

For many years he labored diligently by your side to help create a Communist state in Yugoslavia. As he saw and pondered the fruits of what he helped to create, he began to have misgivings. You shared many of those misgivings. Later Djilas' misgivings turned into formidable conclusions, finally into unshatterable conviction—the conviction that the greatest, most horrible mistake of his life, the greatest and most horrible mistake a part of mankind ever made, was to give birth to communism anywhere in the world.

Today Djilas is intent upon doing his part to help the world repair its horrendous mistake at whatever risk to himself.

You know, as the whole free world knows now, that for more than 2 years he has been writing a devastating, closely reasoned, total denunciation of the fallacies, not merely the excresences, of communism.

You know, as the whole free world knows now, that friends of Djilas have succeeded in smuggling the manuscript of this torrential book from his lonely cell and already delivered it in two parts to his New York publisher.

His word to his publisher, who will bring out the book on August 12, was: "Hurry, hurry; publish it, publish it as soon as possible, regardless of the consequences to me, regardless of what may happen to me before or after publication."

Marshal Tito, your friends in the West ask: What are going to be the "consequences" for your old associate, Milovan Djilas, because he has spoken his mind without fear of the consequences, knowing that he had nothing to lose but his life?

What, indeed, may happen to Djilas—before or after publication?

You once encouraged Djilas to write his criticisms of communism, even of Yugoslav communism. Many believe that it was with the greatest reluctance that you yielded to pressure to deprive him of party office and then send him to jail.

His heart can be stilled but his voice can never be silenced because ideas can't be snuffed out by either a prison or a firing squad.

Even now his words are on his publisher's presses. They will be heard today and tomorrow and forever—as long as they are needed. They are earnest, honest, searing, uncompromising words of a once dedicated Communist who is exposing communism as having spawned a new class of exploiters and nothing else—"a class whose power over men (for its own privilege and benefit) is the most complete known to history."

Marshal Tito, your friends in the West ask: Will you not free Djilas that he may win or lose in the arena of free speech?

If you have no doubts about communism, you have nothing to fear.

If you have doubts about communism, you may be safer if you make Djilas a free man, safer with Djilas outside of jail than in.

Respectfully,

ROSCOE DRUMMOND.

The Sixth of a Series of Editorial Letters by F. F. McNaughton

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. MICHEL. Mr. Speaker, I should like to insert in the RECORD today the sixth of a series of editorial letters by F. F. McNaughton of the Pekin Daily Times, Pekin, Ill., written during his recent visit to Russia:

[From the Pekin (Ill.) Daily Times of July 27, 1957]

THE EDITOR'S LETTER

(By McNaughton)

Have you ever visited Lexington, or Concord, or Bunker Hill, or Mount Vernon?

Today those spots are shrines to Americans. They recall the glorious days when we won our freedom.

Today was rainy in Moscow; so we went to some of the scenes and museums that tell the story of the successful effort of the Russian people to win their freedom.

First we went inside the Kremlin and spent a couple hours there. This, formerly, was forbidden.

Among many other things there, we saw the luxury in which rulers of state and church lived before the revolution.

I won't try to (and I couldn't if I did try to) describe the riches of the garments worn by royalty and by high churchmen. There were cloaks and capes and robes and trains that took countless hours to make, and were enriched by innumerable jewels—some almost solid with jewels.

All this came from the toil of a people, most of whom lived in poverty and misery—and purposely were kept in ignorance.

Then we went to museums outside the Kremlin. One painting shows a peaceful march made by the people (carrying religious symbols) to ask the Tzar for bread.

According to the painting, the reply was bullets instead of bread.

Old men in Pekin who were born in Russia have told me of the cruel behavior of the nobles in Russia; have told me how a noble in a carriage might come galloping thru a village, and woe to the small children that did not flee in time. If they were run down, and their skulls or backs broken, the noble never stopped to offer sympathy or even ask a question.

Well, these museums tell the whole story of the revolution. I can't begin to tell it all here. Let me mention two things:

1. The revolutionaries took a trick from the Bible's Gideon. Short of ammunition, they made a noise maker that sounded like a machine gun. With it, they terrified the enemy.

2. They have a statue of a boy reading a forbidden book. I could not help commenting that now even university boys of Russia are not permitted to read the free world's newspapers, magazines, and literature.

Tomorrow we are going to try to find a church.

Do they have churches?

Tobacco May Be Harmless

EXTENSION OF REMARKS
OF
HON. RALPH J. SCOTT
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. SCOTT of North Carolina. Mr. Speaker, under leave obtained to extend my remarks in the RECORD, I wish to include an article by Dr. Ian G. Macdonald, of the University of Southern California, contained in the August 2, 1957, issue of the U. S. News & World Report entitled "Smoking and Cancer—What Is Known and Unknown—Here's Another View: Tobacco May Be Harmless":

SMOKING AND CANCER—WHAT IS KNOWN AND UNKNOWN—HERE'S ANOTHER VIEW: TOBACCO MAY BE HARMLESS

(An independent authority on cancer now disputes findings made by other scientists that link cigarette smoking with lung cancer. Such findings, according to Dr. Ian G. Macdonald of the University of Southern California fail to establish any sound basis for the alleged tie between smoking and cancer. Dr. Macdonald, as clinical professor of surgery at the University of Southern California, has directed cancer work at that school for 10 years and has been engaged in treating cancer since 1935. He is an official of the American Cancer Society and chairman of a committee on cancer research of the American Medical Association. It is with that background that Dr. Macdonald analyzes recent studies on cancer. Following are excerpts from a statement by Ian G. Macdonald, M. D., before the Subcommittee on Legal and Monetary Affairs of the House Government Operations Committee, July 25, 1957.)

The constant reiteration of the claim that cigarette smoking is one of the most important causes, if not the most important cause, of lung cancer has persuaded many that a cause-and-effect relationship has actually been established.

A poll of public opinion by the American Institute of Public Opinion, reported in the newspapers for July 21, states that 50 percent of the general public believes that cigarette smoking is one of the causes of lung cancer. Those who advocate fervently the supposed causative importance of cigarettes in this disease seem to have an almost evangelical attitude, and are remarkably oblivious of the fact that virtually the entire basis on which this belief rests is statistical.

Although there is an apparent association between cigarette smoking and lung cancer, a review of the total evidence fails to establish a cause-and-effect relationship.

Cancer is a complex group of diseases of extremely disparate manifestations of abnormal growth of the tissues of the individual in whom the disease arises. A fundamental definition of cancer is an abnormality of growth of cells resulting from a disturbance in the extremely delicate system of check and balance which, under normal conditions, allows the body to replace wornout cells or to repair effectively the result of injury of various sorts. In general, the possibility of a given individual developing cancer depends upon two basic factors:

1. The capacity of the individual to respond to unfavorable influences by developing cancer, and this capacity, or the lack of the capacity, is now accepted by many as being genetically determined, or due to hereditary tendencies.

2. The exposure of the individual to environmental factors which, in the susceptible individual, may eventually result in the degree of abnormal growth which manifests itself as cancer.

Although we have limited information as to some of the genetic factors involved, and although we have considerable information concerning the predisposing environmental influences which may lead to cancer, we are ignorant still of the actual trigger mechanism which sets off the cancerous process in any given individual.

One of the principal arguments that smoking is responsible for an assorted increasing mortality from cancer of the lung is based on the gradually rising mortality statistics for lung cancer. It is more than proper to offer some inquiry as to the validity, or at least the degree, of the increase in cancer of the lung. It is a striking fact that from 1900 to 1956 there has been a reduction in crude death rates from principal respiratory diseases from 430 to 57 per 100,000.

When one considers that reasonably exact measures for diagnosis of lung cancer have

become available only recently, it is obvious that many of the death in the earlier decades of this century which actually were due to lung cancer were recorded in vital statistics as due to pneumonia, influenza, tuberculosis, etc. If one will accept that this error of past decades was as little as 5 percent, this adjustment would show that there has been no real increase in lung cancer during this century.

A number of investigators have drawn attention to the questionable validity of the figures usually quoted in support of the increase in cancer of the lung.

In summary, one may state that, while most of the reports of studies based on the diagnoses of lung cancer made during life show an increase, studies based on autopsies vary, some showing an apparent increase and others showing no increase. Accuracy of diagnoses at post mortem examination has changed very little since 1900, but the accuracy of clinical diagnosis has greatly improved.

Considering these facts, an increase in lung cancer disproportionate to that for all or selected types of cancer has not been demonstrated in most geographical regions, and perhaps even in none.

CIGARETTES PRODUCE CANCER? AN OVERSIMPLIFIED THESIS

The main evidence claiming that smoking causes lung cancer is based on statistical surveys here and abroad.

There are a number of geographic disparities related to tobacco consumption which seem to invalidate the suggestion that cigarette smoking is a causative factor. In Australia, for example, from 1949 to 1951, the tobacco consumption averaged 4.7 to 4.9 pounds per capita, compared with 5 pounds per head in the United Kingdom; in Australia, the incidence of lung cancer was 13.3 per 100,000 as against 55.5 in the United Kingdom; in the 55 to 64 age group the Australians had 30.5 cases per 100,000 as against the United Kingdom's figure of 111.6 per 100,000.

To take an example closer to home, in a recent year 2,003 tax-paid cigarettes were sold per person in Idaho compared to 2,319 tax-paid cigarettes per capita in New York, but the lung-cancer death rate in New York was four times greater than that in Idaho. The degree of difference in industrialization in New York and Idaho is well known. Further comment on the factors of urbanization and industrialization will be made later.

The causation of lung cancer is much more complicated than the oversimplified thesis that it is due to cigarette smoking. The data advanced by those who are mesmerized by statistics includes the English findings offered by Doll and Hill. Their controls—without lung cancer—actually contained more subjects in the moderate-smoking group than there were lung-cancer patients in that moderate-smoking group. Their figures thus show that moderate smoking is actually commoner in persons without lung cancer. Even these data may indicate smoking to be a harmless pastime up to 24 cigarettes per day. One could modify an old slogan: A pack a day keeps lung cancer away.

Still another interesting fact in the data collected by English investigators concerns the individual habits of inhalation of cigarette smoke. Many proponents of the cigarette-lung-cancer theory have speculated that cigarette smokers inhale more than other types of smokers, thus accounting for the excess of lung cancer in users of cigarettes. Yet Doll and Hill's figures showed that cancer of the lung was more common in cigarette smokers who did not inhale than in those who did inhale.

Another curious finding advanced by the advocates of cigarette smoking producing lung cancer, is the fact that the dilution of cigarette smoking by some use of cigars and pipes, materially decreases the probability of lung cancer. This seems to be without reference to the degree of moderation or the excessiveness with which the individual uses cigarettes along with the cigar and/or pipe.

If cigarettes are carcinogenic, they surely should be so, whether accompanied by tobacco in other forms or not. It is an insult to reason to believe that 2 men who indulge equally in cigarettes will have a different chance of lung cancer, simply because 1 periodically adds to his cigarette smoking the use of tobacco in another form.

Another fallacy in the theory that cigarettes have a casual relationship to cancer of the lung is shown by the difference in the relative incidence of lung cancer in males and females. Long before cigarettes were thought to produce the dramatic increase in lung cancer emphasized by the evangelistic statisticians, the ratio of lung cancer in males to females was in the range of 1.5 to 1 and in some areas almost 1 to 1.

In the intervening period, disparity in incidence of lung cancer has constantly increased until, for the United States at large, it is approximately 1 female to 5 males and, in some areas, such as upper New York State, it is in a ratio of 1 female to 7 males. During this period, cigarette smoking by females has constantly increased, and a recent study of patterns of smoking by the United States Public Health Service indicated that slightly over 40 percent of women smoke or have smoked cigarettes since 1930. There has been at least a 25-year period during which women have been exposed to the possible causative effect of cigarette smoking, if there be any such effects, and nevertheless the disparity of incidence of lung cancer as compared with the male continues to widen.

If cigarette smoking were a real and causative factor in lung cancer, the relative incidence in men and women should be approaching parity instead of becoming more disparate, as is the actual situation. * * *

It is timely now to inject some data concerning cigarette consumption and lung cancer in the United States as compared with England and Wales. From 1920 to 1950, the consumption of cigarettes, expressed in pounds per capita, increased in England and Wales from 1.6 pounds to 3.6 pounds, while the lung-cancer rate was increasing from 17.2 to 72.7 per 100,000. In the United States, a vastly greater increase in cigarette consumption took place in this 30-year period, or from 1.6 pounds to 6.3 pounds per capita, but the lung-cancer rate increased only from 6.2 to 31.5 per 100,000.

Differences in lung-cancer rates in urban and rural areas are consistently found. Several investigators have concluded that residence and employment in urban areas with constantly increasing industrialization constitute more significant and reasonable associations with lung cancer than smoking.

"BASIC CAUSE" OF CANCER REMAINS "AN IMPENETRABLE MYSTERY"

The adjusted mortality rate for cancer of the lung for white males in the United States for 1948–49 was 22.3 per 100,000 in urban areas and only 12.3 in rural areas. A review of comparative death rates from lung cancer in various communities in the United States also offers a striking demonstration of the apparent importance of industrialization.

For example, it needs no statistician or expert in sociology to realize that the smoking habits of residents of Charlotte, N. C., are little different from those of other comparable communities in the eastern part of the country. Yet Charlotte has a lung-cancer standardized mortality ratio of only 32 per 100,000, compared to a national average of 100, and compared to various heavily industrialized areas that run as high as 137.

It has been estimated that 6 tons of tarry material fall on each square mile of Manhattan every year, and in English towns the number of lung-cancer deaths has been observed to increase in proportion to the number of chimneys per acre in the towns studied.

EXPERIMENTS WITH MICE

From an experimental standpoint, highly concentrated extracts of tobacco tars have been applied on the skin of mice after shaving, by [Dr. Ernest L.] Wynder. Before offering some detailed comments on this doubtful activity, it is proper to emphasize that mouse skin cancer bears no relationship to human cancer, and this is admitted by those who have done the experiments. The lungs and the skin have different origins in development of the animal, and it cannot be assumed that they will react the same way to the same irritant.

Still further, mice and men are completely unalike in their response or lack of response to certain agents. For example, cancer of the breast can be produced in a high percentage of mice of certain strains by the use of estrogens—female sex hormone—but intensive use of the same hormone over a long period of years in female monkeys failed to produce a single cancer of the breast or any other organ. It is thus proper to make the following generalizations concerning this particular problem:

a. The demonstration of the production of cancer by an agent in a mouse cannot be accepted as valid evidence of a similar property in men, particularly if the experiment cannot be repeated successfully in higher mammals, which has not been done in the instance of tobacco tars.

b. No satisfactory approach to an equivalent of human lung cancer has been produced in animals after exposure to concentrated doses of tobacco smoke produced by smoking machines.

In spite of the fallacies of this particular experimental work, there are other reasons for denying any real analogy with the situation of smoking in the human. This denial is based on the following:

1. An English investigator—Wright—exposed 160 mice for 18 months to cigarette smoke, that is, for half of their live span. The smoking mice actually lived longer than the nonsmoking mice.

2. Another British investigator—Campbell—observed an increase in lung-tumor rate in mice from 8 percent to 80 percent when they were subjected to prolonged in-

1. An English investigator—Wright—excontent of tar.

3. An attempt to compare the amount of cigarette smoking by a human to equal the exposure of the skin of mice in the experiments where concentrated tobacco tar was used points up the absurdity of the comparison. Extrapolating the concentration of tar on the small area of the mouse's skin to an equivalent concentration on the large area of the lung of men, I estimate that a man would have to smoke over 100,000 cigarettes a day to equal the dose Wynder gave his mice. Indeed, Wynder has told this committee that, when his dose is cut in half, no tumors on mice result. Thus, on my extropolation, a man can smoke over 50,000 cigarettes a day and not be in danger of developing cancer from smoking.

Extrapolations such as this show the dangers of predicting results in man from results in mice, and of predicting cancer-producing doses in man from mouse experience.

In his statement before this committee, Wynder said he produced about 50 grams of tar per 1,000 cigarettes, or 50 milligrams per cigarette. This raises the question whether this tar was produced under conditions simulating human smoking, since none of the figures presented to you Wednesday indicated that much tar content to be in the smoke of a cigarette.

4. Experimental projects acrried out by Kotin and his associates at the Univerait

of Southern California in Los Angeles in exposing mice to Los Angeles atmosphere in natural and artificial forms show how potent the pollutants in air can be in the production of tumors.

Kotin and his group applied various substances that contribute to air pollution on a quantitative basis. Incidentally, he used a lesser dosage in 1 year, weight for weight, than Wynder used in 1 week. When material obtained from diesel exhaust fumes was so applied, 17 out of 20 animals bore tumors, or 85 percent, and 11 of these 17 tumors were cancerous. When a similar experiment was conducted again with a pure strain of mice, using a concentrate from gasoline internal-combustion engines, 38 out of 86 mice developed tumors; there were multiple tumors in over 60 percent of the animals and 44 percent, or 22 out of the 38 animals with tumors, had cancerous tumors.

Finally, when products simply filtered out of Los Angeles air were similarly applied, 13 out of 35 mice, or 42 percent, developed tumors, and 9 of these 13 animals showed malignant tumors on microscopic examination.

RESULTS OF EXHAUST-FUME TESTS

This makes obvious the fact that duplicating the Wynder type of experiment, not only with diesel and gasoline-engine exhaust concentrates, but also with samples of Los Angeles atmosphere, produced considerably more convincing evidence of cancer-producing ability in mice, for what it may be worth, than did the Wynder experiment.

As a further note, it should be remarked that Kotin's observations have been duplicated readily by several other competent investigators, while Wynder's results have been difficult of reproduction by other scientists.

In summary, the total evidence here reviewed fails to establish any sound basis on which a causative influence may be assigned to cigarette smoking in the production of cancer of the lung. As in a majority of human cancers, we have at hand an imposing list of predisposing factors, no one of which is of more than ephemeral status. The total problem of cancer in Homo sapiens from the standpoint of its basic cause remains as much an impenetrable mystery as in the days of Aesculapius.

H. R. 8002

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to point out that the Government Operations Committee of the House of Representatives has favorably reported H. R. 8002 without objection after a study of 2 years. The Rules Committee has given a rule on this legislation which has been endorsed by President Eisenhower on six different occasions. Enactment of the measure has been recommended by the Comptroller General of the United States, the Secretary of the Treasury, the Bureau of the Budget, and the bipartisan Hoover Commission, which made this recommendation. Similar legislation, S. 434, cosponsored by 50 Members of the United States Senate, passed that body unanimously on June 5.

For the information of the House a fact sheet follows which sets forth the pertinent points of this legislation:

FACTS ABOUT H. R. 8002

Will provide a means for congressional control over the annual rate of Government expenditures. Agencies will request appropriations each year in the amount required to pay for the goods and services estimated to be received during such year and for other authorized payments.

Will minimize carryover balances of appropriations given in one year and expended in later years. When an appropriation is made on the annual accrued expenditure basis, any unaccrued balance at the end of the budget year is automatically terminated.

Will require an annual review with positive action to be taken each year by the Congress on both existing and proposed programs. Under the present budgetary method, no further positive congressional action is required on entire programs or portions of programs for which appropriations were granted in prior years but on which work is presently being performed.

Will provide authority to enter into contracts and orders, for work to be performed in future years, as necessary for orderly procurement. Such grants of contracting authority, however, are not appropriations of funds and must be financed during the future years in which the work will be performed.

Will minimize confusion over the size of each year's budget. Now we have two budgets—the obligation budget and the expenditures estimates. Congressional appropriations are presently geared to the obligation budget. Congressional appropriation action on the 1958 budget relates to agency obligation budgets totaling $73.3 billion and not to the $71.8 billion estimated expenditures. The 1958 estimated budget surplus is based on the $71.8 billion expenditures.

Provides that the annual accrued expenditure basis for stating appropriations be on a trial basis until July 1, 1961. Any problems encountered during this period which cannot be solved through administrative procedures can be considered for legislation when extension of the authority beyond July 1, 1961, is being considered.

What the "Doria" Taught

EXTENSION OF REMARKS
OF
HON. A. D. BAUMHART, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. BAUMHART. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues an editorial which appeared in the July 31, 1957, issue of the Toledo Blade. The editorial compliments Congressman HERBERT C. BONNER for his alert and conscientious efforts, as chairman of the House Committee on Merchant Marine and Fisheries, to prevent another *Andrea Doria* disaster.

Immediately following the Italian liner's ill-fated collision and sinking in July 1956, Chairman BONNER assigned a group of maritime experts to find out where the blame lay and how future disasters could be averted. Soon thereafter the investigators issued a report exposing inconsistencies in international ship construction standards and backwardness in the use of modern safety devices.

Appalled at the apathy displayed by American and foreign diplomatic and maritime agencies in the interim, Chairman BONNER has now served notice that he and his committee will push forward with plans to dispel bureaucratic sluggishness and thereby achieve safety on the sea lanes.

As a member of the House Committee on Merchant Marine and Fisheries, I wish to commend our distinguished chairman for his leadership in this regard, and at the same time to assure him of my fullest support. I am sure, too, that the entire House of Representatives echoes these sentiments.

The text of the Toledo Blade editorial follows:

WHAT THE DORIA TAUGHT

Representative HERBERT L. BONNER, chairman of the House Marine Committee, has announced his determination to follow through on the recommendations of the experts his group put to work after the Italian liner *Andrea Doria* went to the bottom off Nantucket Island last July with a loss of 50 lives and millions of dollars. His interest is timely because nothing has been done to translate the defects that collision revealed in maritime construction, procedure, training, and equipment into regulations which might prevent the recurrence of such a tragedy.

To landsmen, at least, the findings of the committee's experts revealed an astounding lag in bringing seafaring practices abreast of modern technology. A 1948 international convention on construction standards was criticized as inadequate. Both the *Doria* and the ship with which it collided had radar, yet the officers of neither ship appeared proficient in its use. The collision raised basic questions about traffic control in crowded sea lanes, the desirability of radio-telephone communication between the bridges of ships in close proximity, the possible need for an international organization to enforce sea safety.

It may be argued that ships do not require the exacting controls that are imposed on airplanes—that their numbers, speed, and nature of operations make such controls inappropriate. Yet dozens of ships were lost last year besides the *Doria*. And even if it had been the only one, for such a ship to go down when better construction and operation might have provided a saving factor should be sufficient incentive to maritime nations for remedial action.

Blue Sky Practices Rampant in Installment Credit

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, August 2, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, in my opinion the gentleman from Texas [Mr. PATMAN] made one of the great speeches of this session on Monday, July 29, when he spoke on the subject of how the financial institutions bill of 1957 will legalize usury.

Since World War II, there has been a revolution in consumer credit. Not only

has the volume of credit increased greatly, but the practices whereby this volume of credit is extended and collected have assumed new proportions. Installment credit has become a method of sales promotion in fields where such credit was unheard of only 10 years ago. Furthermore, blue sky practices have become involved in a great part of this credit.

The August issue of Consumer Reports makes the point that what is needed is a kind of control which would help protect consumers from the fleecings and shakedowns to which they are now in many instances the victims. Whatever one's views of this particular publication may be the article does make some basic arguments which must be considered.

What is needed is legislation to check usury. We cannot count on competition among credit agencies to protect consumers from exorbitant charges; we cannot expect consumers will be drawn to those credit agencies which offer the lowest financing charges. The simple reason is that the credit agencies present their financing charges in such devious and complex ways that, as a rule, consumers never know what financing charges they are paying. When consumers do not know what financing charges are being asked, they cannot compare the charges of one agency with those of another.

I include part of the article I refer to for the information of the Members. The omitted portion deals with wartime regulation W, and with the Federal Reserve Board's recent study of consumer credit with which the Members are already familiar.

The article follows:

At the end of 1955, President Eisenhower asked the Federal Reserve Board to make a study of the status of consumer debt. During that year, installment credit had increased by $5½ billion, to a total of $28 billion. It had been the year of blitz car sales—both new and used cars advertised with "100 percent financing plus easy terms," which usually meant a small loan on top of the installment loan, and 36 to 48 months to pay off the total. During that year, also, the rug industry put steam behind its nothing-down-and-3-years-to-pay for wall-to-wall carpeting. Department stores all over the country began booming their revolving credit schemes—setups which allow for a kind of installment payment of charge accounts. Airplane companies advertised travel on the cuff. Hardware stores joined in the credit selling parade, and even Woolworth's launched a promotion of time-payment buying. In short, the promotion of credit hit a peak in 1955 and consumers went into debt at a record-breaking pace.

* * * * * * *

When regulation W was first drawn up, back in the early 1940's, installment buying was a costly financial device used by a limited number of consumers to facilitate the purchase of high-price consumer durables. Back in 1939, for example, less than 20 percent of the new cars sold were bought on the cuff, as opposed to 80 percent today. Since the postwar boom, moreover, installment credit has become something more than a financial device. It has developed into a sales tool. It has become an instrument of competitive promotion and has fallen heir to those fraudulent practices that always have been associated with blue-sky activities. That consumer credit has been a blue-sky operator's dream these past 10 years is evidenced by some of the data buried in the thousands of pages of the Federal Reserve Board's report. Consider, for example, the following:

"One of the most important factors that restricts price competition among consumer installment credit agencies is the difficulty consumers have in comparing rates of charge made by various agencies * * * In view of the variations possible as a result of a level or graduated charge per month, a discount or add-on rate, credit life insurance, delinquency penalties, investigation fees, etc., it is small wonder that most consumers, while they may be aware of the dollar finance charge, have little idea of the actual financing rate they are paying. Available evidence suggests that consumers are sometimes unaware of even the dollar amounts of their finance charges."

As a matter of fact, consumers are not only frequently unaware of the financing rate they are paying, they are generally misled when and if they try to find out. No installment seller will quote a financing charge on a true, annual-interest basis. Salesmen and credit departments are strictly forbidden to do so. And until financing charges are quoted on such a basis by all sellers, it will not be possible, of course, for consumers to make price comparisons between various installment lenders. Instead of quoting the actual cost of the loan (and an installment debt is simply a loan disguised as a sale) in meaninful and comparative terms, sellers will describe their charges simply as 1 percent a month, or 8 percent, or 10 percent on the total balance—all meaningless terms. One percent a month, for example, can mean a financing cost as high as 24 percent interest. Ten percent on the total balance can mean a very high rate if the debt is paid back within 3 or 6 months. And so on.

In short, sellers of debt today can charge a concealed price for their services. Even worse, without consulting the buyer, they can—and do—change at will the cost of the service they have contracted to perform. Here is where the practice of levying penalties for late payments can yield a rich harvest. Some installment lenders hold a payment to be late if it is as much as 30 minutes behind a stated hour. Furthermore, the amount of penalty for late payments frequently is not stipulated in the contract.

THERE IS, AS A MATTER OF FACT, A VAST AND LUCRATIVE KIND OF LEGAL NO-MAN'S-LAND GROWING UP AROUND CONSUMER DEBT

One interesting recent development illustrates the point. Since department stores launched their revolving credit schemes—on which they levy a carrying charge amounting to 20 to 25 percent at a true annual-interest rate—they have been adopting gradually the practice of charging their old-style charge account customers fees for late payment. If a charge account is not paid up in 30 days, stores have taken to adding a 1 percent to 2 percent per month penalty and, according to trade reports, most consumers simply pay it, even though there is no contractual agreement on their part to do so.

In trade discussions of this practice, retailers are quite frank to admit that they levy late-payment charges on credit customers arbitrarily. If the customer is a good one, who spends a sizable amount each month and is known to be late but faithful in payments, he may not be charged for his delay. His neighbor who buys less, however, may suffer such a charge. If consumers would simply refuse to pay this arbitrary levy, chances are it would not be pressed. Charge-account customers, say the retailers, tend to buy more, buy higher-price goods, and do less shopping around. They're the kind of profitable customers retailers like to keep.

The legal status of late-payment levies on charge accounts is open to question. It may be that, when the retailer announces the levy in billing the customer, the charge assumes some validity even though the customer has not contracted to accept it. There are other practices in connection with consumer credit contracts, however, where the law is obviously violated but where the consumer has, practically speaking, no opportunity for redress. The nature of our sales laws and the legal setup for debt collection, together with the three-way relationship between consumer, retailer, and financing agency, all too often mean that, no matter how fraudulent the sale, the consumer must pay up.

In Oakland, Calif., for example, a rug company recently folded up when its salesmen were indicted by a grand jury. The salesmen, it was charged, had defrauded the public by selling low-grade rayon rugs to consumers for the price of high-grade wool, and by claiming the rugs to be of that quality. Even after the salesmen had been tried and convicted, the victims of the fraud, the consumers, still were required to pay $600 to $800 on their contracts for carpeting that would be overpriced at $200, simply because neither the rug company nor the salesmen owned the contracts. As soon as the consumer had signed them, they were turned over to sales finance companies, who claimed that they bought the paper in good faith and hence had the right to collect.

RESISTING THE CLAIMS OF A SALES FINANCE COMPANY IS A COSTLY BUSINESS FOR AN INDIVIDUAL CONSUMER

If debt claims arising out of proven fraud could, for instance, be argued before a small claims court, where the consumer could appear on his own behalf; and if consumer debt contracts could be so drawn that both the seller and the financing agency accept responsibility for stipulating the facts surrounding the sale—then, perhaps, this kind of fraud could be minimized. But in most States the top limit of a small claims court still is $100—a sum that is quite unrealistic in light of the fact that most consumers who are in debt owe $300 or more, and the fact that the prices of goods sold on installment have risen so much in recent years. Here is where a major study is required and where practical recommendations could be made and embodied—for example, in a model law for a debt claims court, to be offered to the States.

To be sure, it is hardly astute of a consumer to be taken in by the sales spiel of a fast-buck operator. A number of sellers and financing agencies oppose any legal measures to curb such activities on the grounds that consumers ought to be able to take care of themselves. But such an argument is beside the point. The philosophy of "never give a sucker an even break" is not only destructive of good human relationships but is also inconsistent with the vast and rapidly growing body of State and Federal law designed to promote fair dealing between competitive business groups.

Other sellers who do agree that fair dealing is important to sound business as well as to good morals, however, take the position that fraudulent consumer credit practices are limited to the dishonest few always to be found in any field of endeavor; hence, that the problem is too minor a matter for legislative action. And anyway, they ask, how would you go about it?

An answer to both objections lies in the current practice of a number of banks, which in the past few years have set up their own home-improvement loans in competition with the Government-insured FHA title I loans. Under FHA title I loans, a consumer may borrow for a 3- to 5-year period, at an approximate 10 percent rate of interest, sums of money up to $3,500 to finance home remodeling; the FHA, in turn, insures the bank against a loss on the loan. Home-repair loans have boomed since the middle 1940's. And banks which have adopted the practice of making the loans without Gov-

ernment insurance have found business plentiful, even though the interest rates on such loans are generally higher, up to 16 percent in some cases.

The number of people who now borrow at 16 percent, when the same loan is available at 10 percent, may be a compliment to the sales ability of the banker. But, even more interesting than the higher interest charged in these private—as opposed to Government-sponsored—home-repair loan programs is the kind of contract usually asked by the bank from the contractor who does the job. In home-repair consumer installment loans, the contractor plays a role similar to that of the appliance dealer in the installment sale of washers, ironers, refrigerators, etc. The consumer buys the job and signs the contract calling for monthly payments. The dealer sells the paper to the bank with which he does business. Unlike typical installment contracts, however, the individual bank's private home-repair loan contracts usually require the dealer to stipulate that:

Each note he offers the bank is genuine, valid, legally enforceable and actually made by the customer who signs it—not forged, or changed after it was signed.

Each signer of the note was competent and of legal age.

Every condition surrounding the agreement of sale has been fully executed and satisfactorily performed.

Each note is free from all offsets (a term meaning promise of commissions or rebates), claims, counterclaims disputes or differences between buyer and seller.

The fact that such requirements are made of home-repair dealers when the bank takes the loan without government insurance is, of itself, evidence that most banks have been aware right along of the fast ones that were, and still are, pulled by too many installment sellers.

What the banks require of remodeling contractors should now be required of all other dealers, too. And consumers need to ask for the same sort of protection from both the lenders and the sellers with whom they do business. In short, such stipulations should be a part of all conditional sales contracts.

It is in this area that consumer credit controls are now needed. It is from this point of view, rather than the Regulation W approach, that the problem should be studied and corrective legislation designed.

The Peace of Death

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, August 2, 1957

Mr. PORTER. Mr. Speaker, I call to the attention of my colleagues the article on Haiti in the Nation for July 6 by the distinguished Latin American authority, Carleton Beals, the first portion of which is as follows:

THE PEACE OF DEATH

PORT-AU-PRINCE.—Under martial law and an 8 o'clock curfew imposed by the new Haitian military junta, the capital of Haiti, Port-au-Prince, has for the past week been peaceful, without violence. But it is expected to get back to normal very soon.

It is the peace of death. The brief effort of the Haitian people to obtain a freely elected government has been crushed in blood. Gen. Antonio Kebreau, head of the junta, rules from the main barracks with an all-military Cabinet of unknown colonels and captains; the dazzling white national palace that lords it over this city of squalor stands vacant and sealed, the streets blocked off to traffic, soldiers in the three nearby barracks on the alert day and night.

I arrived several days after Kebreau and his soldiers had burst into a Cabinet meeting, put a gun at President Daniel Fignole's head, and shipped him out in the dead of night. Kebreau's only excuse was that Fignole, trying to restore civilian control, was undermining army discipline. He also mentioned the need to protect life and property. But for months life and property have been endangered chiefly by the army and its armed claques let loose in the streets to kill and shout viva l'armée. Life and property have never been more menaced than by the actions of the military junta itself.

The new Caesar turned his soldiers loose on the slum districts—which comprise most of this city except for the tourist hotels and palaces of generals and ex-cabinet ministers on the cool hills of Petionville. Particularly they struck at the shacks along the harbor front and the boulevard to the airport, one of the filthiest, most sickening conglomerations of misery, disease and horror I have ever seen, and at the tangle of workers' homes known as Bel Aire. Unarmed people, demonstrating in favor of their fallen idol, Fignole, were mowed down by machineguns.

The hospitals are jammed with wounded, and the latest estimate of dead reaches 476. The actual number cannot be known because all but the few bodies taken to the morgue were loaded into lorries and buried in the plain. There have been no funeral processions. Relatives have been afraid to claim bodies in the morgue. The others cannot be recovered.

Many demonstrators and people dragged at random from their homes were dumped without food or shelter on La Gonave, an uninhabited island 40 miles off shore. Every day trains of people are led down the streets by the soldiery, and every day soldiers have been terrorizing, by illegal search or arrest, the followers of Fignole, of candidate ex-Senator Louis Dejoie, and officers of the Popular Social Christian Party (Catholic). The vice president of that party, Alain Laraque, who is also head of the Chamber of Commerce, was badly beaten at the police station and his nose was broken; he is now held incommunicado, as are others.

François Duvalier and Clemente Jumelle, the two other main candidates, have not been molested. Almost part of the army machine, they showed by their proclamations of June 13 a prior knowledge of Kebreau's assault on the Palace and acquiesced in it.

Jumelle, already badly discredited as Minister of Finance and Public Health in the dictatorial regime of General Paul Magloire (dumped last December 13), was in large part responsible for the worst orgy of systematic thievery in the history of Haiti. Jumelle left the country bankrupt, its industries in ruins, and with a piled-up debt. He did no blessed thing for public health. Kebreau's coup, some believe, was to shut off disclosures by a special investigating commission, due to report June 19, concerning the corruption of the Magloire-Jumelle regime and the army.

I had vivid proof of Kebreau's terrorism within less than 24 hours after my arrival. An officer and two soldiers forced the Plaza hotel manager to unlock my door. They lunged in with leveled rifles (I was in undress). Having stormed the barricades so valiantly, they proceeded to look over my room.

I went to the barracks and demanded to see Kebreau (who might at least put some of his idle soldiers to work cleaning up the sidewalk filth around the outer walls). My conversation with the officer, I presume a major, called by the officer-of-the-guard, began politely but ended rather acrimoniously, with a note of menace. I said I had not come to get an interview but to make a protest and to demand proper professional guaranties; I added that I expected the general to send me an apology.

Instead, when a small news item about the incident in my room appeared in the local Independance, the police dragged the owner of the Plaza Hotel, Rossini Pierre-Louis, to the police station, and there accused him of international conspiracy with the foreign press against the Government. I'm still waiting for the apology.

Though the irritating incident was trivial, it indicated the lawlessness of the regime and its contempt for life and property. The vice consul at the United States Embassy told me, "in behalf of Ambassador Gerald A. Drew," who did not find it convenient to see me, that no protests in behalf of maltreated Americans or violations of press rights could be made because Washington has not yet recognized the junta; furthermore, martial law gave the soldiery of this illegal gang the right to break into anybody's home or hotel room. He did not quite subscribe to Dulles' thesis that Haiti, like China, is a place where no American newsman should be allowed to go, that the State Department is the sole arbiter of what news the American press may gather and what news the American public will be allowed to read.

But even the limited doctrine set forth at the Embassy in Port-au-Prince, that the American newsman has no rights the military gang is required to respect, represented an abdication of basic rights long established under international law and in particular by the American Declaration of the Rights of Man, to which Haiti is also a signatory.

I applaud the effort of the Embassy not to meddle in Haitian affairs, especially as the United States has entered into agreements outlawing intervention with all the American States. But proper concern for human rights under recognized international precedents and law would win us friends in Haiti, in all America and around the world, and would not be intervention.

Actually, the United States constantly intervenes in Haiti. We poured more money behind the corrupt Magloire dictatorship than behind any previous government. That dictatorship had no respect for democracy or human rights, and the American taxpayers' money was stolen by politicians and the army, with few benefits for the Haitian people and little benefit for the reputation of the United States. In a sense, the present murderous conduct of the Kebrau government is a result of American policy in Haiti. Last February, to stave off acute suffering due to the previous Magloire abuses, the United States shipped in rice, beans, and other provisions—for Haitian Army speculators to handle at prices so high some of the shipment spoiled and had to be dumped into the harbor. We have trained and equipped this oversized, overgeneraled army now abusing the citizenry in a frantic effort to hang on to its unholy privileges. United States Air Force cars buzz around the streets. A recent consignment of trucks, destined for public works, I was told, has been appropriated by Kebreau's soldiers. For what? To dump the bodies of murdered Haitians into unmarked graves? And it is startling to see prisoners herded along the broken, rubbish-filled streets by soldiers wearing knapsacks labeled "U. S. Army." The Haitian people are not blind, and the grapevine now has it that Kebreau, if he will falsefront his bayonets with a civilian junta ("two honest men and one ——— to please Washington"), will be granted a premilinary American credit of $6 million. He needs this to pay his army. At the moment there's not a dime in the treasury, and starvation is again around the corner.

Prominent people, and less prominent people, continue to be dragged to the police

station or the barracks—not once but repeatedly to be questioned and threatened and in some cases physically maltreated. One of the first decrees of the junta, based on a forgotten law of 1826, makes it a crime for any business to close its doors without official consent. The junta fears another general strike such as that which tumbled Magloire's dictatorship. Before the week was out, the police took the heads of the chamber of commerce and scores of businessmen to the barracks or the police station, and charged them, without evidence, of planning such a strike. Few people doubt that resistance will soon boil up.

Among those arrested was the owner of a grocery store which I patronize near the American Embassy. The police chief (who only this May, when he was a commander in the interior, plotted to assassinate the members of one of the civilian governments) accused him of preparing to shut up his shop on Monday (this was Saturday). He demanded to face the Army colonel who, the chief said, had reported that the shop owner had told his employees not to show up on Monday. The owner was held all day. Finally the police brought in his employees. Fortunately they had the courage to say that he had never told them not to come to work on Monday, and all were released.

Another employer was not so lucky. One of his employees nursed a grudge. So he is in jail, and the police accomplished what they sought to prevent, the shutting down of his business.

The chief reasons for Haitian disorder are clear. The Haitians are probably the worst exploited people on earth and never worse than now when most of the world is moving ahead to better standards. The average income of the Haitian worker is $65 a year. Anyone who has tried to provide for a family of 5 on 18 cents a day—even if there are a few bananas and mangoes hanging from the trees—will know that a piece of calico to cover nakedness can be obtained only by doing without the daily handful of rice, that children cannot be sent to school even when there is a public school, that there is no money for doctors or medicine, let alone for any of the amenities of life.

Yet these good-humored, kindly people, with their great dignity and grace even in poverty, have great potentialities. If they were given the slightest opportunity, they would accomplish much for themselves and their country. Few people can match them in artistic taste, and out of the worst poverty have come remarkable painters, sculptors, poets, writers, and musicians. But Haiti's best talent is ruthlessly destroyed.

The more exaggerated military evils that have ruined Haiti developed under the Magloire dictatorship. He took over the country in 1946, imposed puppet President Dumarsais Estimé, then kicked him out by another coup in 1950. Magloire's 1953 budget totaled 175 million gourdes, but his hand-picked congress voted him 200 million extra to use without strings. By 1956 the total of both budget and slush fund reached 456 million gourdes, and Jumelle had piled up a 325 million-gourde debt and had borrowed 90 million gourdes from the government's national bank. (The gourde is worth 20 cents.)

These enormous sums disappeared, leaving no public works of importance or any other benefits. Almost the only tangible accomplishment was building the Artibonet Valley Dam (estimated cost $9 million, actual cost $30 million), and it is so badly constructed that presently it will fill up with silt.

Magloire ruined even the telephone system. For a time only those friendly to the regime could get their phones repaired. Now the whole system has gone to pot; only a few phones in government offices and the barracks give service. Probably no other city of its size in the world is without phone service. The pavements have not been repaired for years. Even the main business streets and sidewalks are full of deep holes and rubbish. The only fairly goods roads are those climbing the hills to the rich villas. Stinking drains from houses cross the sidewalks every few feet, and the sewers, which have to be cleaned periodically because of the run-off of gravel and silt, now bubble up at every manhole, creating a stench in this hot town that is beyond description. This shabby but gracious and beautiful city, with its wide gardens and brilliant flowers, is the worst pest hole in the Americas, perhaps in the entire world.

Besides looting of the public treasury, Magloire and the army set up an ironclad monopoly that still exists for soapmaking, tobacco, flour mills and cement. One-third of the profits went to Magloire, now in exile in Paris, one-third to his chief of police, Marc Prosper, who built a half-million dollar mansion in Petionville.

The army, not content with its one-third, was given in addition the income from banana exports, at the time about 10 million stems a year. "They took the profits, then ate the bananas," remarked Georges E. Riguad, an agronomist. The banana industry is now all but ruined. Forty-eight percent of the coffee export price is taken by the Government, mostly for the army. Half of this is supposed to be used to promote better production and to help the growers, who are mostly small peasants. Not one cent has ever been so used. The coffee harvest this year will be the smallest in Haiti's history.

Magloire, Jumelle, and the army left the country ruined, bankrupt, its trade all but paralyzed, close to the very nadir of its history. The mulattoes, who took over Haiti after the ousting of the French more than a century ago, represented the better educated, well-to-do class; they ruled with the aid of the army, and not always with much regard for the mass of the people. Now the army has devoured the mulattoes along with everybody else. Haiti is the prize example of the end that awaits a people which permits the bulk of its revenues to be used by the army, which allows its generals to become its spokesmen in public policies and international affairs.

Thus, in spite of the confusing swirl of names and the involved political intrigues, the Haitian problem is simplicity itself, though the solution promises to be incredibly difficult. It is the army versus the people of Haiti, an army above law and government, dealing out death at will, robbing freedom and property at will, shameless in its plundering. On the other hand, a people, made up of suffering peasants who get no profits from what they sell, workers who never get enough to eat and no medical care, a middle-class whose members are quickly crushed unless they kow-tow to the army system, professionals who can scarcely work, businessmen hemmed in by army monopolies, subject to unreasonable taxes, hampered by endless redtape from an earlier feudal era and restrictions both lawful and unlawful.

The issue was clear enough last December 13 when Magloire was booted out by a general strike involving everybody in society from top to bottom, joining hands across all economic, class, or color lines. The poorer peasants brought no food to market; the stevedores moved no cargo, the chauffeurs drove no cars, the commercial classes closed up their businesses drum-tight and not all the arrests or the breaking-in of soldiers could open them up again. There was little use in soldiers sitting behind the counters when not a soul would buy a penny's worth. There were similar demonstrations during the 6 months whenever the army tried to move back into control or the Magloire elements tried to regain the upper hand. For 6 months the people have striven, against constant army conspiracy and repeated betrayals by their leaders, to establish an honest government, freely elected. Now, under Kebreau, the vicious Magloire gang and the army are back in the saddle, ruling by terror.

Winston Churchill's New View of the United Nations

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. SHEEHAN. Mr. Speaker, Sir Winston Churchill spoke to the members of the American Bar Association in London last week and presented some very pertinent remarks on the present makeup of the United Nations.

Mr. Churchill's views, 12 years after he personally helped to found the United Nations, point out some unforeseen problems which will have to be faced and resolved by many countries, including our own United States. The Chicago Tribune, in their lead editorial of Saturday, August 3, offers some most timely comments on Winston Churchill's talk, and this editorial is as follows:

[From the Chicago Daily Tribune of August 3, 1957]

WISDOM AFTER THE FACT

Sir Winston Churchill, the showpiece of the vanishing British Empire, was dragged out before the American Bar Association in London to sermonize on a fact long since known to everyone. His theme was that the United Nations is a flop. The Tribune has been saying this for a long time and for doing so has been denounced as anti-British.

Now Churchill joins us in the opinion that justice is not being achieved under U. N. and that its decisions are taken on grounds of enmity, opportunism, jealousy, and petulance. And he condemned those who, "at one swoop in the hour of victory, tried to draw up an all-comprehending scheme" and tailor the world to their internationalist pattern.

Among them, of course, was Churchill himself, for he and Mr. Roosevelt joined at Teheran and Yalta in winning Stalin to this all comprehending scheme. If Churchill had misgivings then, they are not to be discerned from his utterances at the time.

And, again, it is a little late in the day for the man who was twice Prime Minister of Britain to be bemoaning that justice is impossible of accomplishment under the United Nations. The hour for justice struck, and passed ignored, a long time ago when Poland and Eastern Europe were sacrificed to communism, when dismemberment and vengeance were decreed as the proper lot for Germany, and when the Atlantic Charter was consigned to the dustbin.

Churchill, the author of that misnamed instrument, came to Argentia Bay, in Newfoundland, in August 1941, to sell President Roosevelt a bill of goods and to dope the American public with a masterfully contrived piece of propaganda. The Atlantic Charter, with its lofty aims to govern a peace that could only be made possible through American military intervention to accomplish the defeat of Germany, was unveiled at that meeting.

It cannot be said that Roosevelt was bamboozled. He was a willing and delighted ac-

complice in cynically foisting upon his countrymen and the world a spurious statement of the shape and character of the promised millennium. It fitted in beautifully with his plans to drag the United States into war.

So we were presented with the prospectus that, after the final destruction of the Nazi tyranny—an end that Britain was wholly incapable of accomplishing by her own power—mankind would be blessed with the establishment of a wider and permanent system of general security. That was the United Nations, now branded by Churchill to be a fraud.

In this dispensation, no one would seek territorial aggrandizement; no territorial changes would be made that would not accord with the freely expressed wishes of the peoples concerned; and all peoples would be free to choose the form of government under which they would live.

The deal at Yalta only a few years later made a mockery of the lot. An authoritative and contemporary account of Roosevelt's diplomacy, read and approved by the wartime President, recorded his motives when the outline of the peace was drawn at Tehran. It is obvious that he staked everything on U. N. and that every concession to Stalin was advanced to win the Soviet tyrant's assent to international organization.

Mr. Roosevelt's confidant, Forrest Davis, wrote that "Roosevelt, gambling for stakes as enormous as any statesman ever played for, has been betting that the Soviet Union needs peace and is willing to pay for it by collaboration with the West." Roosevelt's "great design," Davis recounted, was to bring Stalin into the coming United Nations, and to do so he was willing to scrap the Atlantic charter by giving Stalin ascendancy over all the countries bordering on Russia.

That this was done with the agreement of Churchill is demonstrated by the wartime prime minister's announcement and defense of these dispositions before Parliament, which, as early as 1944, prompted questions in Commons as to what had become of the Atlantic charter.

Now, 16 years after the Argentia conference, 14 years after Tehran, and 12 years after Yalta, Churchill tells us that international organization, which was to justify the immense sacrifices of war, has proved a hollow promise. An admission of the inherent futility of that scheme would have been vastly more helpful to the American people 16 years ago this month, when Churchill and Roosevelt were meeting off Newfoundland. It would have kept us out of war.

Washington's Best Baseball Pitcher

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. BYRNE of Illinois. Mr. Speaker, I would like permission to extend some remarks about my favorite baseball club, the Chicago White Sox. Sunday's Washington Star magazine section carried a fine story on Doc White, who was a big winner for the White Sox. I would like the RECORD to reflect this tribute to Doc White.

As a loyal White Sox fan and former president of the Woodland Bards and one who has followed the White Sox even into training camps, I think it is about time we stopped the nonsense and took off after those Yankees in earnest.

Perhaps the memory of Doc White and the "Hitless Wonders" of another era will provide the spark to start a drive that could emulate the Boston Braves of George Stallings' day.

I am sending a copy of this article from the Sunday Star to Charles Comiskey, president of the White Sox, and to Sharkey Colledge, clubhouse boy, asking that it be placed on the bulletin board in the clubhouse where all can read.

The article follows:

WASHINGTON'S BEST BASEBALL PITCHER

(By Francis Stann)

No $64,000 question is this one: Who was the finest baseball pitcher ever born in Washington? It's much too easy and accurate to reply that he was Guy Harris (Doc) White, a reed-slim southpaw who became one of the first collegians to go directly from the campus to the big leagues.

Doc White, born in 1879, was a 15-game winner for the Philadelphia Nationals in 1901—and he didn't graduate from Georgetown until 1902.

After winning 15 more games for the hapless Phillies in 1902 (the team only won 56), Doc jumped to the Chicago White Sox of the new American League and spent the next 11 seasons as a big winner. Beginning in 1903 he won, successively, 17, 16, 18, 18, 27, and 19 games for the "Hitless Wonders," who deserved the name.

Now 78, Doc White is retired at his Silver Spring home, tending his flower and vegetable gardens and graciously consenting to hark back to the old days when old friends visit. The one-time dentist, mound star, vaudeville entertainer, athletic coach and teacher lately has been recovering from a hip fracture.

"I don't tend my gardens as much as I used to do," says Doc, who retired several years ago after serving 28 years in the District school system, 18 at Wilson Teachers College and 10 at old Central High. "My daughter, Marian, has been doing most of the gardening." His wife died 2 years ago and Doc now lives with his daughter. A son, Martin, lives in Sharon, Mass.

A gifted and versatile man was G. Harris White, a success at everything he tried except, perhaps, dentistry. This was not due to lack of skill, acquired at Georgetown.

"I set up an office during the off-season when I was a young ball player," Doc recalls, "but business wasn't very good. Finally, I discovered why. In the same building there was a guy who was pulling teeth for 50 cents!"

On the diamond and even on the stage he did better, although like most ballplayers of his era he was woefully underpaid. "From 1904–1910 I was paid only $3,000 a season for playing ball," he says. "Ed Walsh and Nick Altrock were paid about the same. In fact, you might say that only one man connected with the ball club made any money—he was Charles Cominskey, who owned the team.

"With a family to support, I had to look for off-season employment. So, like other ball players and fighters, I turned to vaudeville.

"When I read now where pitchers are getting $35,000 * * * maybe $50,000 * * * and picking up more outside money for a 2-minute spot on televsion than I could have made on the stage in years it—well, it kind of makes my blood boil. I know the dollar today doesn't stretch as far as it did in the early 1900's, but still I think Walsh, Altrock, Cobb, and the rest of us were underpaid."

Some of Doc's feats still stand in the records, college and pro. On May 28, 1900, pitching for Georgetown against Holy Cross, he struck out the first nine hitters to face him. In short, Doc fanned the entire Crusader team as fast as the players came to the plate.

It was customary in those days for big league clubs to play college teams in preseason exhibitions. That is how the Phillies spotted him and signed the young collegian for the 1901 season.

Doc was a pitcher of many skills. His control was fabulous. Over one stretch in 1907 he pitched 65 consecutive innings before giving up a base on balls. In 46 games that year he averaged one walk per contest. In 1906, when the "Hitless Wonders" won 19 in a row during their successful pennant drive he pitched 6 of these games and allowed a total of only 8 runs.

In the World Series of 1906 the Chicago Cubs were favored to whip their city cousins. But with Big Ed Walsh, Nick Altrock, Roy Patterson, Frank Smith, and White there was rare quality to the Sox pitching.

Pitching in relief in the fifth game, Doc faced 7 batters and gave up only 1 hit. Yet he was charged with a loss. The next day White came back to pitch the entire game, which was won by the Sox, deciding the series.

According to the majority of newspaper notices, White was far better than average on the stage during his two years—1910–11. Through the courtesy of Ira Smith, noted historian of Alexandria, here is what a 1910 clipping reported:

"WAUKEGAN, ILL., November 15.—G. Harris (Doc) White, the star White Sox pitcher, made his first appearance in vaudeville here last night before a crowded house. He was a big hit on the stage as he ever was on the rubber slab, where he had made all his previous public appearances.

"His act was wholly musical, his portion of it being confined to vocal selections, with interludes by a pianist. The excellence of his voice was a complete surprise to the listeners, who came to see a great ballplayer and went away lauding a new baritone star."

One of Doc's vocal efforts which fans liked especially was titled "Little Puffs of Smoke, Goodnight!" White wrote the music and a young Chicago sportswriter of the time, Ring Lardner, supplied the lyrics.

A pitching record of White's, which still stands, is 5 shutouts in a row within 18 days in 1904. During his career he hurled 52 shutouts and his No. 1 victims, oddly, were the pennant-winning Detroit Tigers of 1907–8–9. While the Tigers terrorized other rivals with their big bats, Doc made 'em roll over and play dead. His particular patsy was the great Ty Cobb.

The Sox trainer had a grudge against Cobb. So much so that he offered to work on White's arm for an hour for every time Doc fanned Ty.

The same afternoon that he propositioned White, the slender southpaw fanned Cobb three times, whereupon the trainer pleaded to be excused from the bargain.

Doc pitched for the White Sox through 1913 and then quit baseball at the age of 34 to return to Washington, where he coached and taught at Central and Wilson until his retirement.

Those boys he coached, or taught and counseled, always counted themselves as extremely lucky.

The Ike Critics

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks I want to include the following editorial

which appeared in the Joplin Globe Wednesday, July 31, 1957, entitled "The Ike Critics":

[From the Joplin Globe of July 31, 1957]

THE IKE CRITICS

Eisenhower administration opponents, notably the ultraliberals, are severely criticizing the President for defeat of the school-aid bill in the House and for the watering down of the civil-rights bill in the Senate. They think he should have waved the big stick to put pressure on Congress.

Several facts are pertinent. One is that at no time has President Ike been a "pressure" or "big stick" President in his relations with Congress. On such a first term record the people reelected him overwhelmingly. Another fact is that both the Democratic and Republican Parties had school aid and civil rights planks in their 1956 platforms, and the President has repeatedly let it be known that he stands on the GPO platform.

A third very important fact is that both House and Senate are controlled by the Democrats. While it is true that more Republicans than Democrats voted against the school aid bill in the House showdown, 97 Democrats did vote against it. A lot of people believe that the principles involved in both the school aid and civil rights battles transcend political partisanship.

So that who should get credit or be blamed for this or that piece of legislation is a matter of differences of opinion on principles. Singling out the President for criticism on the school aid and civil rights issues could backfire, for a great many Americans believe the school bill should have been defeated, and that civil rights should be compromised.

Something To Be Scared About

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. PORTER. Mr. Speaker, more and more hydrogen bombs and other nuclear weapons are coming into existence every day. Very soon other nations will have these weapons. When one considers that man is a very fallible creature. He gets drunk, he sells out, his mind snaps, and all sorts of things happen to interfere with his reasoning powers, it does indeed make one shudder to think what may happen when these bombs are handled carelessly. It makes one wonder whether some accident will not set off a conflict which may well mean the end of the human race. The following is a review by Robert C. Ruark of Nevil Shute's latest book, "Ordeal," which appeared in the Washington Daily News on Friday, August 2, 1957. It points up the situation very effectively:

I have just finished a disturbing book by a man named Nevil Shute, a great aeronautical engineer turned mystic, and later novelist. Mr. Shute has a way of projecting you into the future while making you believe he is writing the present.

Twenty years ago, Mr. Shute wrote a book called Ordeal, which was a scientifically accurate forecast of the blitz on Britain. The scientist in him always dominates the fictioneer, but his people are so real and ordinary that the technical knowledge seems secondary.

DIRE PREDICTION

He has just scared the pants off me with a new book called On the Beach, which is a digestible prediction of the end of the world. It starts with a foulup due to too many nasty and stupid people having too many atom-hydrogen-cobalt playthings, and the irresponsibles take over. Egypt bombs us using Russian planes, and we bomb Russia mistakenly. China and Russia bomb each other, Albania does something to somebody—the bomb has become cheap enough for fifth-class powers to produce—and the upshot is that everybody's dead everywhere as the winds carry the fallout.

The big shocker in Mr. Shute's book is the quietness with which the doomed people accept what's coming. The government has already issued suicide pills, free, a do-it-yourself kit to alleviate the nastiness of the last moments. An American submarine commander who was at sea, submerged, when Europe and America copped it, buys an anniversary bracelet for his dead wife, and a Pogo stick for his dead little daughter.

FACE OF DOOM

A scientist in the atomic trade buys a Ferrari racing car, and enjoys a long-dormant yen to be a racing driver. A farmer fixes his fences, a housewife plans a garden, a girl falls in love, a mother worries over her baby's cold. All in the face of a known doom, when mankind will be completely obliterated, while leaving behind everything that mankind has manufactured and created.

Mr. Shute is so completely home-folksy that this thing gave me the creeps.

I know that people have always fought—Anglos, Saxons, Goths, Phoenicians, Greeks, Romans, Celts, Indians—and will always fight. But then they fought with limited weapons, and some segments of the population survived.

OLD DAYS BEST

I know that man, being the lowest member of the animal world, will always itch to do in his neighbor, but I wish they'd take back to the good old days and do it with clubs, spears, rocks, catapults, and bows and arrows. Even the blockbusters and the tank is allowed, but this other thing is getting too big.

Someday some jerk like Hitler in a tiny country is going to give free leash to his paranoia, and think in his insane conceit that it would be nice to knock off the world. He'll have the tools, and by the time mistakes by jerks are made all around—bye-bye world. I have never been wronged by a book, but I have been scared by one, and On the Beach is it.

Favor Budget Reform

EXTENSION OF REMARKS
OF
HON. F. JAY NIMTZ
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. NIMTZ. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include the following editorial urging favorable action on H. R. 8002, the Federal budget and accounting bill, from the South Bend, Ind., Tribune of July 31, 1957:

LET LEGISLATORS KNOW

The bill for accrued expenditures budgeting apparently faces rough going in the House of Representatives although a similar measure was passed unanimously by the Senate.

It is almost 2 weeks since the House Rules Committee released it for consideration by the full House of Representatives. In this period there has been no evidence of House majority enthusiasm for it.

This bill and the one that has gone over the Senate hurdle project a reform in Federal Government accounting that promises savings in the billions. These bills project a reform recommended by the Hoover Commission on Government Reorganization.

If one of them becomes law, the bad system of hangover appropriations will be abandoned. As was remarked in this space, some Federal agencies seeking gigantic current appropriations and intimating that the Nation will collapse if they don't get them have vast unspent balances from previous appropriations.

The Hoover Commission recommended that the total final condition of each agency, with emphasis on unspent previous appropriations, be considered by Congress in its consideration of the agencies' current annual budgets.

Congress should—and did in much of the Nation's history—control the Federal purse. As Congress is made up of the people's elected legislative representatives, this is necessary for reasonably representative Government.

We have drifted far away from it, especially in the last 20 years, because Congress hasn't been properly alert. This is a factor in Federal extravagance, in painfully high taxation and in the inflation which is sapping the buying power of the dollar.

The superpowered Federal machine needs positive brakes. The annual accrued expenditures budgeting bills would have braking power.

All taxpayers should let their legislators in the House of Representatives know that they favor this reform. If the taxpayers don't do this quickly, the much-needed budgetary reform may be postponed indefinitely because of House inaction in this session.

Another Socialist Blight on Society—Niagara Falls Power Bill

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, August 5, 1957

Mr. GWINN. Mr. Speaker, the debate on the Niagara Falls power bill was so sketchy, both parties having agreed and industry having laid down and died, that there was no use spending the time and angering the Members by debating the subject and delaying the vote. Seventy-four other Members and I simply dropped in a token vote against the project. Another Member and I were the only two from the New York delegation casting such a vote.

The people are literally unable to comprehend the issues involved in such matters. Indeed, the Congressmen themselves, if they could all understand the problem, cannot take the time to make themselves understand. Only a small minority understand the figures.

They are so deceived by Government propaganda that they have no idea that

they pay for these projects in the first place. Nor do they realize that afterward they carry the burden of these power projects' deficit operations for themselves and their children indefinitely.

In the case of TVA, for 23 years the people thought that their $2 billion investment (now $2 billion) was actually being paid back to the Treasury for their account. Instead, TVA has ceased all pretense of paying back the $2 billion. It now proposes to mortgage the people's investment in TVA to borrow more money to build more steam plants.

Even so, the immoral taking of the people's money by force for such projects puts a blight on the State receiving it. Tennessee as a State for example falls behind the other Southeastern States because she is continually short of power by comparison with other Southeastern States being served by private power.

The following letter received from Mr. Robert A. Gilbert of the Intercontinental Research & Analysis Co., 19 Rector Street, New York 6, N. Y., sets forth the latest repetition of the colossal, the fantastic TVA. He points out that:

The additional cost of this power at Niagara Falls to taxpayers as a result of operation of the Niagara public dam compared to private enterprise is going to be simply enormous. Exactly the same logic of excessive costs applies here as applied in Idaho in connection with Hells Canyon Dam which, as you know, was defeated recently. It is inconceivable that Congress would vote the Niagara Falls "TVA" without realizing the losses involved here.

The Niagara Falls hydroelectric plant would cost an estimated $600 million [according to] the figures that the Socialists give. The interest rate on the debt might be fairly low, but the taxes avoided over the 40-year life of the project would be much more than the interest cost. The compound loss of Federal and State taxes for this so-called expenditure of $600 million would be a loss to society in the 40-year period of $4,764,000,000 The privately operated electric utilities in 1955—the latest available annual figure and a representative one—paid Federal taxes equal to 3.2 percent of the value of plant, and local taxes equal to 2.1 percent of the value of plant for a total 5.3 percent per annum. The total taxes paid were about four times the interest paid in this year on long term debt and easily twice the interest cost of any project financed 100 percent by debt of low bond interest.

Thus, what seems a saving at Niagara Falls is obviously an enormous expenditure, an enormous loss to taxpayers. The taxpayer, still unsocialized, have to pay the taxes from which the socialized projects are exempted.

In addition to these operating taxes, which will not be paid by this public power project, the recipients of interest paid by Mr. Moses will be exempt from any taxes on the interest received by them. This adds easily 1 percent more to the cost of the project, or another $6 million a year.

The Socialists never seem to be able to estimate costs accurately. Their construction cost estimates are invariably low. For example, the St. Lawrence seaway will cost $35 million more on a project on which it was going to borrow $105 million. Over the years the history of public power has been one of underestimation of capital costs. Some examples are given below:

Hoover Dam, estimated $126,500,000 in 1928. Actual cost, $172,070,000 in 1952.

Columbia Basin, estimated $487,030,000 in 1935. Actual cost, $754,476,000 in 1952.

Parker Dam, estimated $21,767,000 in 1935. Actual cost, $24,202,000 in 1952.

Davis Dam, estimated $41,200,000 in 1941. Actual cost, $118,902,000 in 1952.

Palisades Dam, estimated $24,092,000 in 1941. Actual cost, $76,601,000 in 1952.

Just as with the St. Lawrence seaway not all of these differences are due to increased capacity of the projects by any means, but to inefficiency in making estimates in the first place.

All good citizens hope and pray you will have the courage to speak out on this latest attempt to raise our taxes and squander our money, because these factors are of primary importance in the continuously increasing cost of living.

Yours very truly,

ROBERT A. GILBERT.

How can efforts such as Mr. Gilbert hopes for be joined together. For example, could not the campaign for the 48 States be joined with all of those on the right, might work together to bring about a constitutional limitation on the taxing power to finance such projects?

Many of us have come definitely to the conclusion that the socializing process cannot be stopped as long as Congress has unlimited power to tax and spend. We must all join hands to restore constitutional limitation on the functions and the taxing and spending powers of Congress.

Stop-Go Policy on Monopoly

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Roscoe Drummond, which appeared in the New York Herald Tribune of August 4, 1957.

This fostering of monopoly with Government aid, if not connivance, must stop. I certainly hope that before the 85th Congress comes to an end, we will enact legislation to put an end to this phase of monopoly.

STOP-GO POLICY ON MONOPOLY

(By Roscoe Drummond)

WASHINGTON.—The Eisenhower administration is proud, bordering on the boastful, of its record of energetically enforcing the antitrust laws.

The President aims to keep it that way.

This is why the White House, if my information is correct, is pained and dismayed by the recent decision of the Federal Maritime Board protecting what the Matson Navigation Co.'s would-be competitors call its near-perfect monopoly of the shipping business between the west coast and Hawaii.

It is embarrassing to any administration when two arms of the executive branch are found fighting opposite battles—the battle of the Justice Department to combat monopoly and, in the Matson-Pacific Far East Line's case at least, the battle of the Maritime Board to protect monopoly.

Certainly the objective and the effect of Attorney General Herbert Brownell's vigorous application of the antitrust laws are to increase competition.

Certainly the effect, whatever the objective, of the Maritime Board decision in the Matson-PFEL case is to prevent competition.

It is the kind of schism in policy which frustrates any President, and which cannot fail to be especially galling to Mr. Eisenhower, who has given the green light to his Justice Department to use the law to nourish competitive enterprise at every opportunity, not to dry it up.

This schism stems from the Matson-PFEL decision, and here are the pertinent facts:

The Pacific Far East Lines, Inc., which operates a subsidized line to Japan, Korea, the Philippines and Hong Kong, and a nonsubsidized service to Guam and Japan, asked the Federal Maritime Board for permission to stop at Hawaii three times a month on its nonsubsidized run. The hearings took a year and a half, and at their end the board's examiner recommended:

"The board should find that the granting of PFEL's application will not result in unfair competition to any person, firm or corporation operating exclusively in the coastwise or intercoastal service, or be prejudicial to the objects and policy of the act. Accordingly, the application should be granted."

The public counsel of the Maritime Board concurred and ruled: "The proposed service of PFEL will be consistent with the objects and policy of the act, and will not result in unfair competition to Matson."

Whereupon the board itself voted 2-to-1 to guard the Matson Line's run to Hawaii from competition. The majority opinion held that Matson's favored position should be protected on the ground that it was a domestic, unsubsidized operator engaged in coastwise trade. But the judgment of the board's examiner on this point was that both companies were on the same footing.

I am not assuming to judge the legal merits of the Maritime Board's action. Its legality and validity now are before the Federal District Court at the instance of PFEL's attorneys.

But the consequence of the board's action, which aids monopoly, is clearly at variance with the Administration's avowed purpose of curtailing monopoly as in the DuPont-General Motors case, the Eastman Kodak case, and many others.

It is true that the Maritime Board is a quasi-independent agency whose actions the President cannot directly influence. But the White House is involved and to a degree responsible for the board's policies in light of the fact that it now is wholly made up of Mr. Eisenhower's appointees.

On the basic issue I am reminded of a paragraph which comes from the pen of Bernard Baruch in his forthcoming autobiography. It reads: "In time the government forced the break-up of the Tobacco Trust despite Duke's bitter opposition. I happened to meet Duke some years later. 'As hard as I fought dissolution of the Tobacco Trust,' he told me, 'I'd fight even harder any effort to put it back together gain. We made more money after we were broken up and had competition."

Federal School Construction Bill Loses

EXTENSION OF REMARKS

OF

HON. F. JAY NIMTZ

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 5, 1957

Mr. NIMTZ. Mr. Speaker, on leave granted to extend my remarks in the RECORD, I would like to include the following editorial from the La Porte, Ind., Herald-Argus, under date of July 30, 1957, commenting on the recent defeat

in the House of the Federal school construction bill:

FEDERAL AID TO EDUCATION LOSES

The Republican campaign platform of 1956 called for Federal aid to schools but when the vote was taken late last week in Congress on the $1.5 billion measure 111 Republicans in the House voted against the bill and 77 voted for it. There was a total of 97 Democrats (87 of whom were from the South) who voted to kill the measure and 126 Democrats voted in favor of it.

Of interest to Third District voters, those of La Porte, St. Joseph, Elkhart and Marshall Counties, was that Congressman F. JAY NIMTZ, Republican, supported the measure. He was the only Indiana GOP Congressman to vote for it, as even the assistant GOP leader in the House, CHARLES HALLECK, joined the ranks of those opposed. Democratic Congressmen DENTON and MADDEN were the other Hoosier solons to support the bill.

By a close vote of 208 to 203 Federal assistance for schools is lost for this session of Congress. Since 1953 the President has repeatedly called for some kind of Federal assistance to get needed schools built. And yet when a vote on the bill was near, his only apparent action was to let it be known that although it was not entirely satisfactory to him he would sign the measure if passed by Congress. This lukewarm sort of support was all the bill's foes needed to head it for the ash heap.

The bill would have distributed $300 million a year for 5 years to the States, alloting half on the basis of school-age population and half on the basis of financial need. While not a perfect measure, or a sure-fire panacea for the burgeoning school population problem, it would have bolstered efforts of States and local communities to keep up the increasingly difficult pace of matching schoolrooms and facilities with the soaring school population.

Despite the brave talk about "we can take care of our own school situation" from some politicos, there are many school areas which cannot keep up the pace and continue to fall further behind the needs.

In any event, Congressman NIMTZ appears to believe that education of all the teeming millions of youngsters coming on is as important as the development of some more intercontinental ballistic missiles. And he is so right.

From the Executive's Easel—Now on in Washington

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 31, 1957

Mr. REUSS. Mr. Speaker, I wish to call to the attention of the Members a most remarkable art exhibit which will open for 2 weeks in Washington at the Statler Hotel on Tuesday, August 6.

The showing, From the Executive's Easel, is a collection of 38 paintings by American business and professional men. The paintings, from the country over, were chosen by a committee of museum directors appointed by the American Federation of Arts. Included among these museum directors are Thomas C. Howe, director, California Palace of the Legion of Honor, San Francisco, Calif.; Denys P. Myers, art director, Philbrook Art Center, Tulsa, Okla.; Alonzo Lansford, director, Isaac Delgado Museum of Art, New Orleans, La.; Mrs. Adelyn D. Breeskin, director, Baltimore Museum of Art, Baltimore, Md.; Jerry Bywaters, director, Dallas Museum of Fine Arts, Dallas, Tex.; Edgar C. Schenck, director, the Brooklyn Museum, Brooklyn, N. Y.; Wallace Mitchell, head of galleries, Cranbrook Academy of Art, Bloomfield Hills, Mich. On the advisory committee were Edward Dwight, director, Milwaukee Art Institute; Edmund Lewandowski, director, Layton School of Art, and Frank Getlein, art critic, the Milwaukee Journal.

From the Executive's Easel is sponsored by Manpower, Inc., of Milwaukee, the world's largest temporary help service, which maintains 107 offices in the United States, as well as offices in London, Paris, Montreal, Toronto, Habana, and Johannesburg. In serving industries, retail establishments, and professional persons needing temporary office help, Manpower employs many thousands of men and women who are able to work only on a part-time or temporary basis. Manpower also provides assistance for conventions, surveys, and direct mail programs and such additional services as demonstrating and car unloading. In sponsoring this exhibition, Manpower hopes that the paintings included in From the Executive's Easel will demonstrate the increasingly important part that art is playing in the lives of business leaders.

Elmer L. Winter, the able president of Manpower, Inc., tells the role of the businessmen in art in his introduction to the catalog for From the Executive's Easel:

Today, as a business executive steps into his office, his activities are becoming more and more regimented. Appointments are made for him on a split second basis. Seminars, brainstorming sessions, automation discussions, middle management training programs—all consume a major part of the executive's day. Charts, graphs, projections and budgets restrict the executive's creative ability. He is deeply frustrated by work measurement programs, standardization procedures, and time phasing. He is tiring rapidly as he becomes a human Univac.

It is small wonder then that ever increasing numbers of business as well as professional men are eagerly turning to painting in an effort to escape from the rigid programs which are part of their daily business lives.

For within art there is an opportunity to express one's self without conforming to blueprints and formal patterns previously set. In painting lies the opportunity for the executive and the professional man to explore and create, whether it be through the use of oils, pastels or watercolors. Pattern, color and shadow take on new significance. The executive now at last is free, unhampered in his work as a painter. If he chooses to paint realistically, or if he prefers to delve into the abstract, there is one to check or restrain him by reference to group decision, manuals or operating memoranda.

Five years ago I found myself faced with the same daily problems of restrictive and closely routinized office programs. I desperately searched for an outlet to relieve the tensions so well known to business and professional men.

At my wife's urging I turned to painting, an art form in which I had no previous interest or experience. I quickly found in painting on outlet which gave me an opportunity to express my feelings through canvas and paint. Class work became most absorbing. Late hours were spent at home on perfecting painting techniques. Traveling throughout America and abroad, I found that the monotony of business trips could easily be broken by spending an early hour or two painting on old fishing wharf, a complex of city buildings or scenes from a quaint village. Cities no longer were measured in terms of business or market potential. A new horizon unfolded for me with the opportunity to paint the interesting and the unusual in city patterns. What a thrill to paint a late afternoon sunset or rooftop from my hotel window. As I became more deeply immersed in painting, I found that other business executives, as well as professional men, were reaching out for the many satisfactions resulting from self expression through painting. I discovered that many executives were seeking professional classroom training, or were obtaining painting instruction through correspondence courses. I found that many excellent and outstanding paintings were flowing from the executive easel.

Our organiaztion felt that American business communities, as well as the general public, would be deeply interested in viewing some of the competent paintings of these executives and professional men.

Recognizing that this desire to view these paintings should properly be fulfilled, we, at Manpower, have brought together an exhibit of some of the many fine paintings of business and professional men. We have been ably assisted by the American Federation of Arts and the museum directors listed in this catalog.

It is our fondest hope that this exhibit, from the Executive's Easel will offer an opportunity to your community to enjoy the paintings by American business and professional men. We further hope that this exhibit will encourage many others to turn to painting and discover the warm and rewarding pleasures that will follow.

The Washington showing is the second in a series which will take From the Executive's Easel through the United States in the next 2 years, and ultimately abroad. The following editorial from the Milwaukee Journal for March 31, 1957, describes the public's debt for this outstanding showing:

FROM THE EXECUTIVE'S EASEL

Milwaukeeans will have the first look at an unusual art exhibit that was conceived here and will go on to tour the country in the next 2 years, then possibly abroad. It is From the Executive Easel at the Layton School of Art from this Friday through May 3.

The debt is owned to Elmer Winter, president of Manpower, Inc., that remarkable local firm that has so rapidly grown to be an international enterprise. Himself an executive who took to painting as a hobby of escape and self-expression, he found many other businessmen doing likewise and some of them doing extremely well. Aim of the show is to spread that idea as well as the name of the sponsor.

That this is no ordinary amateur showing, art connoisseurs may be reassured by the fact that the American Federation of Arts put it together, working through art museum directors, who voted to hang only 38 paintings from all over the country.

Local experts who advised with the sponsors tell us—and we pass on their tip—that the collection on the whole is well worth seeing as art, even if the artists are all surgeons and engineers and clothing manufacturers and oil and ad men.

Mr. Speaker, those who are able to visit from the Executive's Easel at the Statler in the next 2 weeks will find it a rewarding experience.

Supreme Court Rulings Relating to Communists

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, August 5, 1957

Mr. COTTON. Mr. President, in the U. S. News & World Report for August 9, 1957, appear excerpts from an address delivered by Hon. Louis C. Wyman, attorney general of the State of New Hampshire, who is president of the National Association of Attorneys General of the United States, on the subject of the recent decisions of the Supreme Court relating to Communists. Mr. Wyman represented the National Association of Attorneys General before the Supreme Court in connection with several cases which he discusses. This address was delivered at the national convention of the association, on June 24, 1957, at Sun Valley, Idaho. I believe his comments are worthy of most careful consideration.

I ask unanimous consent that excerpts from the address be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

(By Louis C. Wyman, president of the National Association of Attorneys General)

No matter the precise phrase, there is little doubt but what the Constitution—that great instrument through which Americans have devised perhaps the most satisfactory method of community living under a Government of law and not of men—is being tortured out of all rational historical proportion by decision after decision of the United States Supreme Court.

These decisions, in their cumulative aspect, seek by fiat of five appointed Justices to substitute a philosophy of government patently contrary to that contemplated by George Washington and the great figures of our early constitutional period. Such fiat involves certain basic assumptions concerning what is best for the American way of life and, through these decisions, in effect amends the Constitution to the point of usurping what has always heretofore been considered as the proper function of the constitutional convention in our pattern of government.

Such decisions must further confound and confuse our youth who seek and deserve real understanding of the true relationship between State and individual, between Communism and capitalism.

In recent years, even months, this country has witnessed the curious phenomenon of a Supreme Court decision on one day and a bill in Congress to set it aside on the next. Were such measures and developments peculiarly local in isolated cases they would be readily understandable, but protests and outcry against these decisions have mounted from North to South and from East to West, across the length and breadth of the United States. Most recent is that group of cases decided June 17, 1957.

What was originally drawn as a compact between the States to create a Federal Government with certain express powers which were delegated in the compact—called a Constitution—threatens by decision of the High Court to become a one-way ticket to a Federal bureaucracy in which the position and authority of the individual States becomes less and less and authority of the individual States becomes less and less with every passing year.

No one questions that the powers expressly granted to the Federal Government in article 1, section 8, are powers best exercised by Federal authority for the common good. But when those powers are extended by the exercise of some sort of civil-liberities preoccupation or underdog complex into the kind of decision that resulted in *Griffin* v. *Illinois* or *Pennsylvania* v. *Nelson; Schware* v. *New Mexico; Konigsberg* v. *California; Jencks* v. *United States; Watkins* v. *United States; Sweezy* v. *New Hampshire,* and *Yates* v. *United States,* we face a common problem of the highest magnitude. This problem is the State's interest in its own survival.

The public record of Communist subversion, both in this country and in many other countries around the world, is notorious. It is equally notorious that responsible agencies within and without Federal and State governments have repeatedly confirmed that the Communist Party in this country is an arm of the Communist Party in the Soviet Union, with the objective of alteration of the form of government of the United States to a Communist state—whether or not through an intermediate step of socialism—to be attained by force and violence is necessary.

If our United States is to have any semblance of realistic national security—not essentially by guns or even bombs but through awareness of possible subversion and nonforgetfulness of the absolute enmity to the principles of freedom which has always characterized world communism—the highest court of the United States should not even hint that membership in the Communist Party is a mere matter of political association, much less hold, as it has in *Yates* v. *United States,* that a subjective test is to be applied to advocacy of force and violence to overthrow the Government of this country, and that the Smith Act permits advocacy of forcible overthrow, short of incitement of direct action to that end.

A majority of the Supreme Court of the United States has held that, at least as far as good moral character is concerned, membership in the Communist Party is apparently considered a mere matter of political association, privileged under the first amendment. No matter protestations of words in the opinion to the contrary—as the dissent points out—one cannot read the Konigsberg decision without observing that this is exactly what the High Court has done by telling a State court that, on such a record, there can be no reasonable doubt of the good moral character of an applicant for admission to the bar who refuses to answer the question of whether or not he is, at the time of his application, a member of the Communist Party in this country.

COURT HAS CAUSED "DANGEROUS INSTABILITY IN OUR LAW"

If this were not enough, the High Court denied the right of the Legislature of New Hampshire to inquire into the actual contest of a required-attendance lecture at a State university with Communists and Communist-front organizations, who had written that violence to preserve the Soviet system was justified but that violence to preserve the capitalist system was doubly damned—once for itself and once for its purposes, as well as more.

This latter decision was rested on the astonishing ground, in part, that there was no assurance that a legislature which had delegated the investigation to an attorney general wanted answers to the questions put; that this lack of assurance evidenced an abuse of authority in the face of a legislative resolution stating, "The Attorney General is authorized to act upon his own motion and upon such information as in his judgment may be reasonable or reliable."

No matter the phrasing of words nor the rationale of individual members of the majority, it is plain that the elements of partnership between State and Federal governments in the investigation of subversive activities have been sharply limited, if not destroyed. Mere questioning in legislative fact finding does not stigmatize. It is the answers to questions that count. If the questions are pertinent and relate to a vital concern of the State, they should be sanctioned, not struck down. The mere asking of relevant questions in factfinding into possible subversion cannot destroy legitimate free speech.

Without being disrespectful, I believe it is a fair comment to characterize the language of the majority in the Sweezy decision as pure sophistry. The individual citizens in America must feel frustrated and helpless in the face of such reasoning reaching a conclusion contrary to the literal right of the governed to self-preservation.

Democracy has the right of self-preservation. Freedom does not, and cannot, mean freedom to destroy freedom in this country. Preservation of academic freedom and the American way of life does not require the judiciary to constitute the campus an insulated cloister wherein the relevant question may not tread in seeking to detect the presence or absence of a virus that would potentially destroy both academic freedom and the American way of life.

We are lawyers. That we happen to be attorneys general for the moment is either our good or poor misfortune, as the case may seem to each of us. As lawyers, we must have respect for the law and confidence in the integrity, ability and enlightenment of our judiciary. The situation of the law in the field of Federal-State relations, and particularly in the field of subversive activities, has never in the history of the United States descended to as low a point in terms of lack of public confidence as it has reached today.

While, of course, I cannot speak for the Department of Justice, it must be apparent to anyone with a balance wheel in his head that the recent decisions relating to communism and the Communist Party; the tragic delay in disposal of the Subversive Activities Control Board orders relating to the Communist Party registration under the Internal Security Act of 1950; the requirement that confidential files and reports to the Federal Bureau of Investigation—which may include classified material—shall be open carte blanche to cross-examination in all criminal cases, including prosecution for subversion; the decision that the board of bar examiners in New Mexico were required against their judgment to have in their bar association a man who had a record of previous membership in the Communist Party and previous criminal activities; the decision that the California bar may not deny membership to an applicant who refuses to answer whether he is presently a member of the Communist Party; decisions relating to extensions of Federal control in the water cases; the decision requiring compulsory transcripts to the indigent in a State court in Illinois, and decisions in derogation of State labor laws not touching interstate commerce—all these have brought about a dangerous instability in our law, a lack of confidence in government and in the judicial structure of this Nation.

That this has been accompanied by such spectacles as those recently presented by the abuse of the fifth amendment by Dave Beck and his son for purposes for which most assuredly it was never intended does not help this unhappy situation.

What are people to think of the law when they read about such conduct on advice of counsel? What kind of a law do we have that can permit defiance of commonsense to the extreme that it cannot sufficiently define a point in testimony at which the fifth amendment begins to apply?

Must a lawyer always tell a client, "You can't even admit to knowing your own father

lest under the doctrine of the Rogers case you may be construed to have waived your right to claim the privilege"? This is nonsense. It is bad public relations for the law.

It is in the interest of improvement of the administration of justice as well as restoration of public confidence in Government that, at the earliest possible time, there should be a decision clearly, rationally, and firmly spelling out that the fifth amendment means what it always should have been plainly held to have meant, namely, that a truthful answer, if given, is honestly believed by the witness to possibly furnish a link in a chain of evidence which might lead to his conviction for a crime not outlawed by the statute of limitations, and nothing less. The fifth amendment is not a shield against informing nor a barbiturate for twinges of personal conscience.

Cooperation between the States and the Federal Government is a two-way street. If the Federal Government wants cooperation from the States, then the judiciary should permit extension of real cooperation to the States, for the proof of the pudding is in the eating.

If the bar association of the State of New Mexico does not want a former Communist and a former criminal as one of its members, the Supreme Court of the United States should not force it to do so.

POLITICS SHOULD BE LEFT OUT OF JUDICIAL DECISIONS

If the bar association of the State of California does not believe that an applicant for admission to the status of officer of the court—sworn to uphold the State and Federal Constitutions—who refuses to say that he is not a member of the Communist Party at the time of his application is not of good moral character, the Supreme Court of the United States should not tell the State of California that, on such a record, there is no reasonable doubt of his good moral character, simply because the witness contended that he did not advocate or believe in force and violence generally. Perhaps the bar examiners did not believe him.

If a legislative committee investigating subversion in New Hampshire questions a person who gave a required-attendance lecture at a State-supported university, seeking to find out whether directly or indirectly he advocated force and violence to adolescents of impressionable age, the Supreme Court should not tell the State legislature that it may not so inquire.

And finally, under no circumstances—in the delegated field of interpretation of the Smith Act—the Supreme Court should not permit exclusion from that act advocacy and teaching of forcible overthrow of the Government as an abstract principle short of incitement.

EFFECTS OF COURT'S RULINGS

Words may be combined like keys on a piano to play a tune according to the conception of the pianist. Although there is an old saying that "sticks and stones may break my bones but words can never hurt me," words from the highest court in the world are translated into action all over the United States and in those places under United States influence—which includes a goodly portion of the world.

Such a play on words makes infinitely more difficult judicial establishment of an intelligible dividing line between free speech and advocacy of subversion, and offers encouragement to those enemies of the American way of life who, like termites in the foundation, are never seen and seldom heard until the day the house falls in.

This Nation is composed of many languages, many races, many creeds, living together under a document which permits a good deal of give and take. The very flexibility of the Federal Constitution has insured its continued strength against stresses and strains which, in other lands, have seen as many as 17 governments fall in 2 years. This document must not continue to be interpreted in such a manner as to throw out of kilter the great divider between the powers of the States and the Federal Government—the 10th amendment.

We State attorneys general are responsible, through our national association, for asserting our best efforts that the course of history in the United States shall be turned from a direction of paternal federalism to one of enlightened cooperation between sovereign States and the Federal Government, each working in its own sphere with recognized division of authority.

I believe that, if the United States Supreme Court continues with the type of decision that has been handed down of late, that the National Association of Attorneys General should support at least four specific courses of action:

First. The preparation of language clarifying the 10th amendment, to protect States' reserved powers in more certain terms—with its immediate recommendation to all 48 State legislatures.

Second. That a method be devised whereby the States shall have a great voice in confirmation of appointments to the Supreme Court than now exists through the United States Senate.

The more one observes the path of the growth of America, the more compelling becomes the conclusion that politics should be left out of judicial decisions, and persons without prior judicial experience should not be appointed to the Supreme Court.

While 300 years ago it might have been appropriate for a scholar writing with quill pen to observe that "the law is a ass, a fool," we can no longer afford to have this considered to be the fact by the people in a kinetic, dynamic society troubled with the awful awareness of the fact that society controls technologically the means to destroy itself, without at the same time having devised the means to live together in peace and trust.

Third. Specific continued support of legislation of the general nature of S. 654 and H. R. 3, as amended, designed to insulate against judicial legislation in derogation of State sovereignty.

Fourth. The appointment at this conference of a special committee on internal security, instructed to immediately confer with the interested Federal agencies and with other national groups, including the American Bar Association, with a view to preparation of legislation for introduction at the current session of Congress, designed to undo as great a portion of these recent decisions as is possible short of constitutional amendments.

The chairman of this special committee should be further instructed to present the committee's recommendation to the permanent executive committee of this association and, with its approval and authority, to appear before the Congress of the United States in support thereof.

On any theory, a determined few on the Supreme Court of the United States have by these decisions mortgaged, if not destroyed, the reasonable attempts of hard-working, loyal Americans, including such as J. Edgar Hoover and the Federal Bureau of Investigation, FRANCIS E. WALTER and the congressional committees, and State legislative fact-finding committees—whose methods in the great majority of cases have in no sense or manner been either unfair or overreaching—to keep check on the extent of Communist penetration and subversion in America.

These decisions have set the United States back 25 years in its attempt to make certain that those loyal to a foreign power cannot create another Trojan horse here.

PROTECTING DISLOYAL PERSONS

Beyond even this incredible, compelled conclusion is the dismaying fact that the Supreme Court has sanctioned protection of the dark corners of individual association with persons disloyal to America, and made infinitely more difficult, if not impossible, the taking of sworn testimony relating to subversive activity in the United States.

By equating lawful politics with communism, it has been suggested to America and to the world that Communists and communism may not, in fact, be subversive of our way of life at all—which is certainly contrary to the public record of communism, which has proven to an overwhelming majority of Americans that communism is the mortal enemy of freedom everywhere.

WYMAN: THERE IS UNDERMINING OF NATIONAL SECURITY

There is no need to torture the memories of surviving loved ones to establish these facts.

On issues of loyalty to State and Nation, the life of every citizen by American law should, and must, be an open book.

Gentlemen, the situation is serious, even appalling. These decisions strike a mortal blow at the very foundations of the American way, at the very principles in which we believe, those same principles that, when the chips are down, find all loyal Americans ready to risk their very lives to defend and preserve. It is tragic to see such judicial undermining of national security and Federal-State relations, as well as of the very foundation of free America's right to protect itself.

Foregoing are excerpts from an address by Mr. Wyman, president of the National Association of Attorneys General, at the 51st national conference of that organization, Sun Valley, Idaho, June 24, 1957.

SENATOR JENNER'S VIEW: COURT HAS CHALLENGED AUTHORITY OF CONGRESS

Following is an excerpt from an address by Senator WILLIAM E. JENNER, Republican of Indiana, on the floor of the Senate, July 26, 1957:

There was a time when the Supreme Court conceived its function to be the interpretation of the law. For some time now the Supreme Court has been making law—substituting its judgment for the judgment of the legislative branch.

There was a time when a Justice of the Supreme Court might dissent in a case of first impression, but could be relied upon to decide the next case involving similar points in accordance with the prior decision of the Court, notwithstanding his own prior dissent. This was because Justices of the Supreme Court respected the Court and respected the principle of stare decisis. Nowadays individual members of the Supreme Court are constantly busy defending their own positions, and a Justice who files a minority opinion on a particular point can usually be expected to stick to that opinion whenever the point is raised, thus keeping the Court constantly split.

By a process of attrition and accession, the extreme liberal wing of the Court has become a majority. And we witness today the spectacle of a Court constantly changing the law, and even changing the meaning of the Constitution in an apparent determination to make the law of the land what the Court thinks it should be.

Laymen and lawyers, the legislative branch and the executive branch of Government, have come to recognize the predilection of the Supreme Court for making new law. Even the lower courts have come to expect it, with the result that it has become commonplace for decisions to be held up in lower courts waiting for the Supreme Court to make some new law that will apply to the case.

A particularly flagrant example is the case of Albert Blumberg, convicted in March 1956, of violation of the Smith Act, but not yet sentenced, and now likely to be turned loose through application of the new doctrine enunciated by the Supreme Court in the Jencks case.

A jury convicted Blumberg in March of 1956; and in May of 1956 Judge Kraft in Philadelphia heard argument on a defense motion to set aside the verdict and for an acquittal. Judge Kraft never acted on that motion, and is free now to apply the Supreme Court's decision in the Jencks case to the facts and issues of the Blumberg trial held a year ago last March.

The Jencks case, as you know, is one of a group of very recent decisions which have gone even farther and faster than the Court ever has gone before in the direction of the left.

There can be no doubt that the total effect of these decisions of the Supreme Court has been to weaken the Government's efforts against communism and subversives.

By some of these decisions, antisubversive laws and regulations have been rendered ineffective. States have been denied the right to fight subversion, and have been denied the right to bar Communists from practicing law. Violators of Federal antisubversive laws have been turned loose on flimsy technicalities. Confidential files of the FBI and of other investigative and law-enforcement agencies have been opened up to "fishing expeditions" by defendants and their counsel. The Court has challenged the authority of Congress to decide upon the scope of its own investigations and the right of a congressional committee to make up its own mind about what questions to ask its witnesses.

Many pending cases may be affected, and an undetermined number of cases already settled may be reopened, as a result of recent decisions of the Supreme Court, regardless of what Congress may find it possible to do toward curing the situation, because while Congress cannot make a new law that will affect a case already tried, the Supreme Court can and does. The Supreme Court can change overnight a rule of law a hundred years old, and can make the new rule apply to all cases underway, and provide a basis for reopening cases already tried which involved the point covered by the new rule.

There is no way for Congress to invalidate or repeal a decision of the Supreme Court of the United States, even when that decision is legislative and policy-making in nature. Congress can in some cases strike down judge-made law by enacting new law, or by correcting the Court's error respecting the intent of Congress, by a new declaration of intent. This power of the Congress should be exercised to the maximum, of course, but it will not fully meet the situation. The Court has become, for all practical purposes, a legislative arm of the Government, and many of its feats are subject to no review.

Osmena's Address

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 1, 1957

Mr. SIKES. Mr. Speaker, recently, former President of the Philippines, Sergio Osmena, delivered a speech in which he reviews Philippine-American relationship in such a way as to show how the United States has fulfilled its pledge to the Filipino people. It is a heartwarming experience to read the words of a revered statesman such as President Osmena and to be reassured that the Filipinos recall with gratitude the acts of this Congress in their behalf.

President Osmena was addressing the convention of the Nacionalista Party, which is the majority party in the Philippines. We in America have no desire to participate in any way in Philippine partisan politics. Our only interest is that the Philippine Republic may continue to be the bastion of democracy in Asia.

Speeches such as those of President Osmena reaffirm us in our faith in the determination of the Filipino people to continue in their democratic way of life and it is for this reason that I ask for unanimous consent of the House to insert the following address of President Osmena in the RECORD:

ADDRESS DELIVERED BY FORMER PRESIDENT SERGIO OSMEÑA AS SPECIAL GUEST AT THE NACIONALISTA CONVENTION YESTERDAY AT THE SANTA ANA RACE TRACK

Mr. Chairman, delegates to the convention, fellow Nacionalistas, ladies, and gentlemen, your kind invitation has deeply touched me. It is a distinct pleasure and honor to be with you once more. And I deeply appreciate the opportunity you have given me to say a few words on this historic occasion when the party is to nominate the next president of our Republic during the year in which the 50th anniversary of the founding of our party is commemorated. For the Nacionalista Party was born in a humble house located at Lacosta Street of this city 50 years ago.

Most of the men of great vision who organized the party have gone to their Maker. Our youthful and energetic leader "who brought victory to our party" in the last presidential election has likewise passed into eternity. A most untimely and tragic accident that stunned and grieved not only our own people, but also of the free world, snatched him from our midst in the prime of his life and in the fullness of his powers. We have lost him, as we have lost others before him, in deep sorrow and bowed heads, resigned to the omnipotent will and the infinite wisdom of our common Creator. "We who survive them must carry on, keeping faith with them and with our people."

I recognize among the sea of faces in this hall many that I have known and worked with. I also see many that I have not had the privilege of knowing and working with, yet equally friendly and cordial. To the Nacionalista standard have indeed rallied, generation after generation, both the young and the old. For it is the party that has grown with and served the country; it is truly the party of the Filipino people. Within its frontiers, we never divided ourselves on account of age, but in the spirit of real comradeship, old and young worked together harmoniously and helped each other in the discharge of the common task.

The Nacionalista Party was born on March 12, 1907, at a time when our campaign for independence had become completely disoriented and practically abandoned. We had given up the Katipunan revolution against Spain and had suffered defeat in the Philippine-American War. With the encouragement of Governor Taft, certain Filipino leaders who had not joined or had abandoned the Malolos Republic organized the only party then permitted to exist, and its paramount objective was the annexation of the Philippines to the United States. In this confused atmosphere we organized the Nacionalista Party to advocate the immediate independence of our people and our country.

Although, by 1907, before the first national election held that year to choose the members of the Philippine Assembly, the Federal Party had transformed itself into the Progresista Party and changed its unpopular platform from annexation to ultimate independence, our party won an overwhelming victory in the election. From that time on, our people entrusted to our party the tremendous responsibility of securing the national independence from the United States. We not only gladly accepted the responsibility but carried it out with determination and, I believe, with wisdom and statesmanship.

We conceived it the mission of our party to secure in peace the very national freedom and independence which we had failed to win in war. We returned to the calmer teaching of our patriot, Dr. Jose Rizal, who had envisioned the Philippine progress to nationhood as a process of evolution through the careful and systematic preparation of our people educationally, economically, socially, and culturally. Having resolved to win our objective in the realm of peace, we decided to cooperate with America on the basis of mutual respect and mutual friendship, without sacrifice of dignity and basic liberty.

The establishment of the Philippine Assembly, as provided in the Organic Act of 1902, became our great political opportunity. It was a concession yielded to us by the American Government with much misgiving as to our fitness for self-government by many of its leading officials, citizens, and organs of public opinion. If, by our acts in the assembly, we gave even the slightest confirmation of that misgiving, the American verdict would be against us. On the other hand, if, by our wise and statesmanlike conduct of the affairs of the assembly, we could dissipate American doubts, we would convince Washington of our capacity for self-government and thus justify further concessions of autonomy, leading to our complete freedom.

Upon the termination of the first regular session of the assembly on June 19, 1908, I delivered, as its humble speaker, a brief closing address which the assembly adopted as its official Declaration of Principles and Pronouncement on Independence. Its concluding paragraph reads as follows:

"Gentlemen of the House: Following the dictates of my conscience, as a representative of the country and under my responsibility as speaker of the assembly, allow me to declare solemnly, as I now do before God and before the world, that we believe that our people aspire for independence, that they consider themselves capable of leading an orderly life, efficient for themselves and for others in the concert of free and civilized nations, and that we believe that if the people of the United States were to decide at this very moment to set the Philippines free, the Filipinos, in assuming the consequent responsibilities, could comply with their duties to themselves and to others, without detriment to liberty, to justice, and to right."

It will be quite superfluous for me to relate in detail the chronological steps which our party and our administration took towards our goal of independence. It will suffice to mention the fact that the assembly originated the practice of adopting at the close of every regular session a resolution addressed to the American Government demanding Philippine independence, a practice which the subsequent legislature under the Jones law followed as an irrevocable tradition. At first, these resolutions were transmitted through our resident commissioners in the United States Congress. But after the effectivity of the Jones law, they

were hand-carried to Washington by the parliamentary missions which we periodically sent there to work for our independence. The first parliamentary mission carried with it, basic instructions issued by the Philippine Legislature, through the commission of independence in an official document entitled, "The Declaration of Purposes of the Philippine Legislature."

The momentum of autonomy having been started, it moved forward, sometimes with increasing acceleration, but sometimes slowed down and even entirely arrested by roadblocks. In 1906, following the establishment of the assembly, more Filipinos, some of them becoming heads of executive departments as well, were appointed to the Philippine commission, which served both as the upper house of our legislature and the cabinet of the governor general. In 1912, soon after assuming the presidency of the United States, President Woodrow Wilson announced that America held the Philippines as a trusteeship, not for the benefit of the United States but of the Filipino people themselves, their happness and their freedom. He followed this statement the following year by appointing a majority of Filipinos to the Philippine commission, thus giving us more or less complete control of our legislative department. Then in 1916, the Wilson administration enacted the Jones Law, which not only greatly expanded our autonomy but also declared in its preamble that the Philippines would be given its independence as soon as a stable government would be established therein. In 1920, President Wilson finally recommended to the Congress the grant of Philippine independence. It was not, however, until another Democratic administration returned to Washington, after 12 years of Republican rule, that this recommendation was finally brought to fruition.

It was in 1932, when the Democratic Party had once more gained control of the United States Congress, that the OSROX mission succeeded in securing the bipartisan congressional approval of the Hare-Hawes-Cutting bill. President Hoover, who was still in the White House, vetoed the bill, but the Congress, already controlled by the Democrats, quickly overrode his veto, and the bill became a law. It suffered another veto in the Philippines when the Philippine Legislature rejected it. But through further representations, the American Congress reenacted the law with slight amendments as the Tydings-McDuffie Independence Act.

Under the authority of this law, we wrote our own constitution and established the Commonwealth Government, which was to last for 10 years as our final period of preparation for independence. Unfortunately, World War II interrupted our work and forced our legitimate Government to flee to the United States while our country suffered 3 years of cruel enemy occupation. In spite of the tremendous war destruction, nevertheless, the independence law and the promise made by President Roosevelt when American and Philippine forces were still defending Bataan and Corregidor, that the enemy would be driven away, our freedom redeemed, and our independence established and protected, were carried out as scheduled. On July 4, 1946, we became a free and independent republic.

The Nacionalista Party fully kept faith with the people. Our pledge in 1907 that we would secure the independence of our country was finally and completely redeemed in 1946. But having obtained our independence, our responsibility as a party has extended and increased. It is the sacred duty of the Nacionalista Party to see to it that our freedom and sovereignty are preserved and our republic is advanced toward the goal of progress, prosperity and success. Speaking from the background of a lifelong public service and the vantage point of independent and matured reflection and contemplation of our future, I venture to state that the very factors which contributed to our success in obtaining our independence are the same factors that we indispensably need today in order to attain our new goals. These factors are solid unity within our party and sincere friendship with the United States.

The Nacionalista Party has maintained a basic unity from 1907 to the present time. It is true we have had dissensions and disagreements and even divisions within the party. But except in one single instance, we have in the end always recognized the esential harmony of our political views and objectives and patched up our differences, weathering intrigues within and without. For we have a long and durable tradition of basic harmony among ourselves. This is the reason why until now our party is the longest-lived, the strongest and the most effective party in the country. We must preserve our party's unity as an instrument of further national progress. In the great task of nation building, we cannot afford to be divided. Personal ambitions must be subordinated to that solid and massive unity which we now need and without which we cannot fulfill our new responsibility completely and successfully, as the people have learned to expect of us.

Having failed to secure our freedom in war and having resolved in 1907 to obtain it in peace, we cultivated friendly relations with the United States "on the basis of mutual respect, mutual good faith, mutual good will, and mutual justice." In this relationship, we did not play a subservient role. We exerted a firm and effective influence in the shaping of America's Philippine policies and managed steadily to increase our measure of self-government. On her part, America gained respect for our political capacity and friendship for our people, respect and friendship which eventually and inevitably led to the peaceful grant of our independence, the first so granted to another by a powerful nation.

The building of a free and sovereign nation is, however, as difficult as the overthrow of a foreign rule, whether by violent or by peaceful means. Of what use is freedom and sovereignty and independence if we cannot preserve and maintain them, and if we cannot bring security, happiness, and prosperity to our people? For this reason, I urge that our party base its administration of our Republic on a continuing friendship with the United States. American friendship is a distinct advantage, not a disadvantage, to the Philippines.

Fortunately, the instruments of lasting friendship with the United States have been forged. The two countries, the Philippines and America, are today bound together by treaties of amity and assistance freely negotiated and signed by both Nations providing for mutual defense and for generous American aid to our young republic. It is part of the continuing responsibility of our party to seek the success of our republic. We can do this by maintaining—if possible by strengthening—the factors of unity in our party and of friendship with America.

This convention has been convoked to approve a platform for our party and nominate our candidates for president, vice president and senators. I hope that the platform to be finally approved will reflect the basic convictions and traditions of our party as developed and maintained by us in the past and as faithfully interpreted and implemented by our popular leader, the late President Magsaysay, and his worthy successor and our now leader, President Carlos P. Garcia. Our membership, being representative of all our people, includes names worthy of being honored as our party's candidates. I have complete confidence that the delegates will choose the best available man for each position, not only on the basis of high qualifications but also on the consideration of party unity, friendship with the United States and the ultimate success of our republic.

Unity will once more bring victory to our party, victory will enable us to discharge our responsibility to our republic, and sincere friendship with America will assure security to our nation.

I thank you.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Coordinated Water Development Plan for Texas

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. JOHNSON of Texas. Mr. President, it is of the utmost importance that Federal agencies concerned with the development of our water resources work with each other and with State and local agencies to solve the problems involved.

That is why I recently have asked the Corps of Army Engineers and the Bureau of Reclamation to collaborate on an overall water program for Texas. The San Antonio News, a great Texas newspaper, comments intelligently on the need for such a program. I ask unanimous consent that the editorial comment of the News be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Waterwise, Texas has sometimes seemed to be a sort of no man's land in a behind-the-scenes bureaucratic battle between the Interior Department's Bureau of Reclamation and the United States Corps of Engineers.

Both agencies are charged with flood-control and water-resources planning and development, and what should be coordination has often deteriorated into competition. Texas water interests have chosen up sides where the two agencies' policies and plans come into conflict, and vital projects have thus been delayed.

Senate Majority Leader LYNDON JOHNSON, noting that Texas is behind other States in sharing in Federal water project spending, has demanded that the two agencies get together on a preliminary plan for statewide water development. His deadline: April 30, 1958. Biggest problem: a uniform policy on distribution of waters impounded by Federal dams.

JOHNSON estimates that Federal-aid water projects costing around $1½ billion in Federal funds will be needed over the next quarter century in Texas. The Senator's move is timely, because the State government is now entering on a statewide program of its own with which Federal aid must be integrated.

Vessel Replacement Funds

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared regarding vessel replacement funds.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON VESSEL REPLACEMENT FUNDS

The forthright statement by Secretary of the Navy Thomas S. Gates, Jr., before the House Merchant Marine and Fisheries Committee recently as to the vital role of the merchant marine in defense planning was heartening to everyone truly interested in the welfare, and concerned for the future, of American shipping.

His official declaration of the Defense Department's attitude toward the country's privately owned merchant fleet was unmistakably clear.

It affirmed allout support by the military authorities for the national maritime policy as set forth in the Merchant Marine Act of 1936, a policy which calls for, as essential for the national defense and for development of the Nation's commerce, a merchant marine adequate to the needs of commerce and capable of serving as a naval and military auxiliary in time of war or national emergency.

This merchant fleet, the 1936 act declared, must be owned and operated under the United States flag, by United States citizens, and composed of the best equipped, safest and most suitable type of vessels, constructed in the United States and manned with a trained and efficient citizen personnel.

The 1936 act further stated it to be the policy of the United States to foster the development and encourage the maintenance of such a merchant marine.

The national maritime policy as laid down in the act of 1936 bears repetition. Sometimes there is a tendency to forget, or to ignore it. Some groups and even officials in high places have been willing, under the plea of economy, to allow our commerce to be carried in foreign ships. They forget the tragic lessons of World Wars I and II, the lives and resources sacrificed because we didn't have ships of our own, in sufficient quantities, when we were in dire need of them.

It is salutary, indeed, that the defense authorities are fully alert to the need for an adequate merchant fleet. And timely, likewise, was the official endorsement given by Secretary Gates, on behalf of the Defense Department, to the long-range vessel construction and replacement program which he described as "so painstakingly developed by the Maritime Administration."

The more ardent supporter of our merchant marine could hardly have asked for a more assuring attitude in this respect on the part of the military. Secretary Gates' testimony should lay to rest completely any fears that the Defense Department had suffered a change of heart concerning the need for a strong merchant marine.

But this stanch Defense Department support of the merchant fleet's role in future war or emergency raises some very definite and disturbing questions.

If the merchant marine is so vitally important to the commerce and security of the Nation as the Defense Department believes—and I certainly concur in their thinking—why is the merchant marine's special pleader in the administration, the Secretary of Commerce, so lacking in enthusiasm for the vessel replacement program developed, under his jurisdiction, by the Maritime Administration?

And, if the Defense Department feels—as Secretary Gates declared on July 11 before the House committee—that "a large, modern, and well-balanced merchant marine is positively vital * * * without it, in time of war, neither the military effort nor the war economy of our Nation could be supported"—why isn't the administration ready to bring pressure to bear to assure the funds necessary for Government's participation in the vessel replacement program?

The fiscal 1958 budget called for $115 million for vessel construction. However, the entire $115 million was eliminated. Of the total, $25 million was diverted to other purposes at the specific direction of the President. The remaining $90 million was slashed in the interest of economy. Needless to say, loss of these funds played havoc with the well-laid plans of the Maritime Administration to initiate the first yearly phase of the vessel replacement program so thoroughly endorsed by the Defense Department.

No effort was made by the Secretary of Commerce to impress upon the Congress the urgent need for these funds. Instead, in reply to a letter of inquiry from the president of the Shipbuilding Council of America, the Secretary merely stated that his decision not to appeal for restoration of the funds was based on the desire for economy. Rather alarmingly, his letter went to state that, for fiscal 1959, "natural economic policy may, of necessity (again) influence the size of the (vessel replacement) program."

Thus, while defense insists, on the one hand, that a modern, well-balanced merchant marine is positively vital to defense planning, the Secretary of Commerce calmly suggests that we may not be able to afford it.

Now he has told the House Merchant Marine Committee that his Department is considering requesting the Congress for funds to cover the Government's part of the construction cost of a replacement for the steamship *America*. Let us hope the matter advances beyond the consideration stage.

Billions of dollars were wasted, during World War II, on a shipbuilding emergency program that was made necessary by just such haphazard thinking as this. By not being able to afford building up the merchant marine at the proper time, we had to pay truly abnormal prices for building the needed vessels in wartime, we didn't have them when we needed them most, and the ones we built, most of them, at least, were obsolete when they came off the ways.

It was to avoid another repetition of such a blundering policy that the Maritime Administration, over the past few years, has labored to develop a long-range vessel replacement program so phased, on an annual basis, as not to overtax the Nation's shipbuilding facilities, or the financing potentialities of the vessel owners. Government, of course, was to participate in this replacement program.

Government has now withdrawn its support from the first year's program, which thus goes down largely by default. If, as the Secretary of Commerce blandly suggests, the Government's second year support funds are to be eliminated for reasons of economy, we will be definitely headed once more on a do-nothing policy of vessel replacement that will render it absolutely impossible to replace our present fleet before it becomes largely obsolescent. As a result, the Nation's ship-

ping will be increasingly unprepared to compete in international trade. And there will not be available the modern, well-balanced fleet upon which the Defense Department would have to rely in emergency.

America missed the boat—actually as well as figuratively—in World War I, because we did not have the foresight to provide adequate shipping for our needs. We couldn't afford it, and we paid through the nose for our lack of foresight.

Undaunted by this blunder, the Nation failed again, despite some small effort made to implement the Merchant Marine Act of 1936, to be prepared for World War II. This time we suffered cruelly for lack of shipping to supply our forces throughout the world in the early stages of the war. When we did finally begin to produce the ships needed, they were faulty, slow, and were fantastically costly.

Admittedly, these war-built vessels finally, by sheer weight of numbers, turned the tide of war in favor of the Allies. However, in all probability, the issue could have been decided much earlier, and losses in manpower and resources would have been much less, if we had had the foresight to strengthen the merchant marine, prewar, on the reasonable basis of the national maritime policy as set forth in the 1936 act.

We just do not seem to want to learn from experience. The questionable economy that requires curtailments of vessel replacement funds now, and that prevents the orderly, well-planned replacement of our aging, war-built fleet, could cost as dear in a future emergency.

When are we going to stop this haggling over vessel construction and operating funds, when sad experience has proven in two world wars how costly and dangerous such haggling can be?

Our shipping is in a sad state now, compared to that of the rest of the world. Most of it is old, and slow, uneconomic for today's commercial needs. It is a poor stick upon which to rely should a future emergency strike.

But that aging, slow, unsuitable fleet is all that we will have to look to for logistics support should another war come unless—unless we come to our senses, and profit by the lessons of World Wars I and II.

The only way America can procure the modern, well-balanced fleet the Department of Defense advocates, and the peacetime economy requires, is to start constructing vessels now, on a planned yearly basis. And we cannot begin or carry on that replacement program unless we discard the false economy pressures that have emasculated the first year's program, and make up our minds that vessel replacement funds belong on a defense-priority basis.

America's shipyards can't build several hundred ships all at once. They must have work now to hold their skilled forces together, and the vast replacement construction planned must be spaced over the years in orderly fashion.

The shipowners too face a vast, tremendously costly burden, running into hundreds of millions of dollars. Yet they have undertaken, most courageously, to do their part of the program on a carefully planned year-to-year basis.

The Congress, the Administration, the country must now face up to their responsibility. The funds required, several hundred million dollars annually, are so little in comparison to the Defense importance of the merchant marine, and so little compared to the costs that will have to be faced if we ever get into another emergency ship construction program, that there is only one reasonable conclusion.

Funds should and must be forthcoming on an annual basis. Only thus will it be possible to implement properly the national maritime policy, and to provide for a phased replacement program that will assure adequate shipping for the needs of war and of the Nation's ever increasing commerce.

I have had occasion previously to cite the valuable support rendered to the cause of American shipping by the National Security Commission of the American Legion. In the July 1957 issue of the Merchant Marine Bulletin, published by the Commission's National Merchant Marine Committee, there is an editorial entitled "What Price Economy?" which is right on point as to the question of congressional and administrative support to the national maritime policy. I attach hereto the editorial to which I have just referred:

"WHAT PRICE ECONOMY?

"(By Henry C. Parke)

"We would be the last to deplore the congressional economy drive, aimed at holding the Federal budget to the lowest feasible figure. But no believer in American-flag shipping can help being a little dismayed at the turn economy has taken in the matter of shipbuilding funds.

"The strange thing about this action, which wiped out virtually the entire sum requested by the President for construction-differential subsidy, is that it is hard to reconcile with national maritime policy as Congress has already established it. For one thing, the canceled funds would have permitted construction to start on a sister ship to the *United States*, to replace the *America*. Under existing legislation, the latter will be obsolete in 1960. Yet her replacement cannot now be started before late 1958, at the earliest.

"The slash also seems to overlook the fact that apart from three passenger liners, there has been no new subsidized construction since the war. In other words, the funds sought were, in a very real sense, not a year's budget but a decade's. Congress has written into law the principle that we need an adequate merchant marine. At a time when, to quote Maritime Administrator Clarence Morse, 'within a few short years, 85 percent of our dry-cargo fleet will become obsolete,' it is hard to square this principle with a denial of the funds to start a replacement program.

"This brings us to the most fundamental questions raised by the cut. Are we as a Nation sincere when we say we want and need a merchant marine? If so, have we any clear idea what it entails to maintain one? Mr. Morse put the issues squarely and clearly on National Maritime Day, when he said, 'If in the public interest we need what is termed an adequate American merchant marine, carrying at least half of our own foreign trade, one that contributes substantially to our economic well-being and to our national defense—we must pay for it. And if we agree that this expenditure is necessary to the well-being of the country, let us appropriate for it annually and on a sound, consistent basis. Deferring an appropriation this year is false economy—it means merely a doubling up next year and it means an uneven flow of new-ship construction.'"

One Hundredth Anniversary of the Birth of Lillian Nordica

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, August 6, 1957

Mr. BUSH. Mr. President, on behalf of the Senator from Maine [Mr. PAYNE], I ask unanimous consent that a statement prepared by him commenting on the 100th anniversary of the birth of Lillian Nordica be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR PAYNE ON THE 100TH ANNIVERSARY OF THE BIRTH OF LILLIAN NORDICA

This year marks the 100th anniversary of the birth of one of America's greatest sopranos and one of Maine's most famous daughters. Lillian Nordica, born December 12, 1957, at Farmington, Maine, worked diligently during the greater part of her life to achieve success in the musical world. Her perseverance and sacrifice for her career were known only to those close to her. But her operatic talents and accomplishments became known to all the world.

Lillian Nordica studied at first in the New England Conservatory and later under teachers in Italy. She made her operatic debut in Italy and subsequently sang in London, Paris, St. Petersburg, and Moscow. Acclaimed throughout Europe, she performed on several occasions for the royalty of that Continent, and one of the highlights of her life was her appearance in 1893 before Queen Victoria.

The apex of her career was her interpretation of Wagnerian roles; critics found her the greatest Isolde of them all and she met with remarkable success as Elsa in Lohengrin. Some considered her greatest role that of Marguerite in Faust. She studied for this role under Gounod, himself. In this country Madame Nordica became the first American to sing Wagnerian roles with the Metropolitan Opera Co.

For all the natural beauty of her voice, she attributed much of her success to continued practice and study. Even at the height of her career she spent many hours each day preparing herself for her concerts. She learned the necessary foreign languages so that even the shades of verbal meaning could be interpreted in the roles she sang. When once asked, "What do you consider necesary for a woman's career? she replied, "Work, work, work, and yet more work. Energy, health, indefatigable industry, loss of friends, time, pleasure, and money, and to think of nothing but work."

And yet, Lillian Nordica always remembered her birthplace; often referring to her hometown of Farmington, Maine, as the "loveliest spot on earth." She returned on several occasions to fill concert engagements in Maine and to visit her home. On one such occasion, she gave a program at Farmington State Normal School to raise funds for the purchase of kerosene lamps for street illumination.

During this Lillian Nordica centennial year many groups and organizations throughout Maine are participating in concerts and exhibits in honor of Maine's most famous contribution to the music world. Through the efforts of the Nordica Memorial Association, her home in Farmington has been turned into a memorial and the collections of memorabilia there have been of interest to the many visitors. The unstinting efforts of Ben Stinchfield and the other leaders of the Nordica Memorial Association are making this anniversary celebration a complete success. On July 23, a Lillian Nordica Memorial Concert was held in the little Damariscotta Baptist Church, where Lillian Nordica first sang in 1870. Other concerts and events are planning for the remainder of the year in Farmington and elsewhere. These, I am sure, will prove a fascinating attraction for music lovers and others to whom Lillian Nordica is still a great historical figure in the world of music.

In the centennial year of her birth I salute Lillian Nordica, famed daughter of the State of Maine.

The Civil-Rights Bill

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an editorial from the Independent, of Anderson, S. C., of Monday, August 3, 1957, entitled "White House, NAACP Schemers Beaten Back in Attack on Liberty in United States."

I think the information contained in this editorial should be of extreme interest to many people throughout the country, and for that reason I ask that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHITE HOUSE, NAACP SCHEMERS BEATEN BACK IN ATTACK ON LIBERTY IN UNITED STATES

The 51-to-42 vote by which the United States Senate amended the alleged civil-rights bill to provide trial by jury of criminal charges arising under the act represents a victory, even if only temporary, for the forces of decent constitutional government.

The Senate's refusal to bow to the whiplash of President Eisenhower's demands is a heartening sign that the educational campaign waged by southern Democrats is making an impression on those Senators not wholly blinded by White House and NAACP propaganda.

It is noteworthy that 39 Democrats and 12 Republicans voted on the side of protecting citizens against being jailed at the whim of Federal judges without right of trial by jury; and that 33 Republicans and only 9 Democrats voted to deny citizens these fundamental rights.

Let that fact be remembered when southern Eisenhowerats claim "there is no difference between the parties."

At the beginning of debate in this civil-rights scheme few outside the South would have believed that a determined but greatly outnumbered band of southern Democrats could have succeeded in so thoroughly gutting the bill as they have.

First, the iniquitous section 3—which would have enabled the President to place the South under bayonet rule—was knocked out. This section was endorsed by President Eisenhower and all the other GOP leaders until its true nature was disclosed to the Senate and to the people.

President Eisenhower likewise only Wednesday demanded that the jury-trial amendment be killed. He wanted no jury trials for victims of charges trumped by the army of Federal snoopers the GOP proposes to send into the South.

He got his answer Thursday night from a majority in the Senate.

Two skirmishes have been won, but the battle is far from over.

Still in the bill are provisions for a special Civil Rights Commission and a special assistant attorney general for civil rights. It is quite possible that these sections will remain in the bill if and when it is finally passed.

Once the gutted bill is approved in the Senate, however, it faces a rocky road. Senator KNOWLAND, the Republican leader who is racing Vice President NIXON for NAACP favor, sought to sway votes in the final moment.

He claimed that a vote for the jury trial amendment "is a vote to kill for this session of Congress an effective voting rights bill."

Why?

Because, if approved by the Senate, the bill must go back to the House where it was passed in its original form.

Since it is a political bill, it is highly doubtful if House Republicans and many northern Democrats will accept the gutted version.

The bill will go to the Senate-House conference committee for redrafting into form acceptable to both Senate and House.

That means, KNOWLAND said, that such a bill would "not likely emerge in this session and perhaps at the next."

That is precisely the fate sought for the bill by the southerners and other Senators who are more interested in the basic, fundamental rights than they are in a vote-getting phony "right to vote" law.

The real truth about the amendment, of course, was expressed by Senator O'MAHONEY when he said the issue is "whether in fancied service to the right to vote you desire to turn back the clock of time and defeat trial by jury."

Even though the right to trial by jury is preserved for the time being, let not southerners and other Americans be deceived into thinking the attack upon their liberties is ended.

Our poor-sick President, a captive of the Republican Negro-wooing party, will continue to plug for the bill under orders from the palace guard, although he knows little or nothing about it. What a pitiful spectacle.

Warning is to be taken from the attitude of Vice President NIXON, who, after the defeat, declared, "This is one of the saddest days in the history of the Senate."

Liberty is indeed in danger when a Vice President of the United States views protection of the right of an individual to jury trial as a sad event.

What else could be expected from "Post Card" NIXON?

Right of Trial by Jury

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding editorial from the Augusta (Ga.) Chronicle of August 3, 1957, entitled "Basic Right Preserved." The Chronicle is one of the South's oldest and most distinguished newspapers, and it has always stood for the preservation of the principles of constitutional government, which include the right of trial by jury.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BASIC RIGHT PRESERVED

The United States Senate, in a momentous decision, has refused to yield one of the basic rights of the American people, the right to trial by jury.

When the majority of Senators refused to heed the entreaties of President Eisenhower, and instead passed the jury-trial amendment, by a fairly substantial margin, they put a stop to a dangerous trend in this country, for the present, at least. It was a trend which was leading straight toward judicial tyranny. It was an effort to deprive American citizens of their constitutionally guaranteed right to trial by jury in every criminal case. It would have put an individual at the mercy of a judge, who could prosecute, judge, and punish him, without benefit of jury.

They keep calling the jury amendment decision a southern victory. It was a southern victory only insofar as it was the Senators from the South who were unyielding, and it was they who disected the vicious civil-rights bill, with the skill of a surgeon, and alerted the other Members of the Senate and the country at large to the inherent dangers of the bill in its original form.

It was a victory for the rights of all the American people. The southerners, under the able generalship of Senator RICHARD B. RUSSELL, simply furnished the shock troops.

The issue at stake was far more vital than that of protecting the right to vote, or of guaranteeing civil rights in any form; it did not primarily involve the racial issue, either.

It involved the constitutional—indeed the fundamental—rights of every citizen, white or Negro. We like to think that the Senate's jury-trial decision resulted from the fundamental intelligence of the majority of the Members of that great deliberative body.

The tyrannical threat inherent in section 3 of the civil-rights bill has been removed. The right to trial by jury has been preserved. Now most of the venom has been removed from this once poisonous piece of legislation. What is left is a civil-rights bill that has been emasculated almost to the point that it is innocuous.

Every thoughtful person agrees that no citizen of the United States, regardless of their color or national origin, should be deprived of the right to vote. There are laws on our statute books that protect this right; there are courts which stand ready to see to it that this right is denied no one.

But the civil-rights bill, in its original form, was conceived simply as a sop to the so-called minorities, to win their favor and their votes, and to punish the southern States which are holding out against the commingly of the races.

In the bargain, all Americans, both white and Negro, would have lost some of their most fundamental rights if the Senate had not had the wisdom and the good sense to recognize tyranny even in its most cunning disguise.

A Victory for Tolerance

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "A Victory for Tolerance," written by Hon. James H. Gray, editor and publisher of the Albany (Ga.) Herald, as it appeared on the front page of the August 2, 1957, issue of that paper.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A VICTORY FOR TOLERANCE

The vote in the Senate sustaining the right of trial by jury in civil-rights cases has more significance than just that of a political victory for the South, although this victory is to be cherished. Partisan fires were

burning fiercely, fed by old animosities and shrewd political calculation. Even President Eisenhower was prevailed upon to place the prestige and power of his administration behind a force measure the far-reaching consequences of which he had precious little understanding. Clearly, civil rights as such was hardly the issue at this time, even though the self-righteous liberals were proclaiming to the heavens their piety and their social conscientiousness. What was at stake was the Negro bloc vote, which was being wooed so desperately by the likes of WILLIAM KNOWLAND and RICHARD NIXON, who have bright visions of presidential grandeur—so bright, in fact, that they and their associates were perfectly willing to flog the racial issue daily with political whips to the point that the rights of individuals were in danger of serious abuse.

Fortunately, good sense and judgment have prevailed in a most critical situation. And the South can accord high praise to its congressional representatives who have fought for constitutional principles with consistency, astuteness and unwearying determination. In particular can Georgia say a fervent "thank you" to such as RICHARD RUSSELL, HERMAN TALMADGE, and E. L. (TIC) FORRESTER whose cogent arguments on behalf of individual rights won the respect and favor of those whose experience with the racial problem has been largely academic.

But, as we have said, this Senate victory extends beyond the sphere of sectional politics. For the racial issue, as it is being treated currently, is but one aspect of a much larger problem. That problem is always what it has been since the formation of the United States of America—the relation of the individual to governing authority, a relationship that must be constantly examined less individualism wither and die within the rigid confines of government.

History proves that governmental authority, unless it is firmly leashed, is aggressive and cumulative by nature. We must never forget that our Founding Fathers, wise and practical men all, were very much afraid of government, and the careful way in which our Constitution was framed is vivid testimony to that realization. They recognized that the best guaranty of freedom is the power and the judgment of the people, for they knew that the people themselves, acting through the ballot box on the community level, would be the best guardians of what constituted just and suitable laws.

What our southern Congressmen are fighting for today is principle, a basic principle that simply cannot be dismissed as sectional prejudice. It is primarily an opposition to the so-called liberalism of today whereby the power of the Federal Government has been enlarged on the theory that anything that benefits the general welfare is constitutional, irrespective of what was decided before as to the rights of States as well as individuals.

We can all take great pride in this fight, which is very much on the side of law and precedent and very much against expediency, intolerance and cheap politics.

Prof. Paul G. Schmidt

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. THYE. Mr. President, on August 1, there was published in the Northfield News—Northfield is my hometown, so to speak—an editorial on the late Prof. Paul G. Schmidt. The editorial was written by Ella Hjertaas Roe. Dr. Schmidt was a professor at St. Olaf College. The editorial is a beautiful tribute to a man who was a personal friend of mine. All of us regret his death.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Northfield (Minn.) News of August 1, 1957]

A COLLEAGUE'S TRIBUTE TO "P. G."

(By Ella Hjertaas Roe)

The death of Prof. Paul G. Schmidt brings to a close a rich and distinguished chapter in the history of St. Olaf College. For those who were privileged to be numbered among his colleagues—and that meant his friends—the feeling of gratitude for all that he was and all that he did somehow supplants the sense of loss we have at his going. He builded well, and the work that he did will live after him.

For all the members of the St. Olaf Choir, down through the years from its very beginning, "P. G." as he was affectionately called, set the highest standards of professional ethics and conduct. He loved the choir and the choir members loved him. They loved him for his ability, for his fine dignity, for his endearing sense of humor, for the wonders he seemed ever able to perform, for the understanding and the support he gave F. Melius, and for making together with him that remarkable team. We were proud of him.

In recounting some of these qualities once at a dinner given in his honor after one of the choir concerts in Germany in 1930, the answer was given in a poem to the query: "Who is it that does all this for us?" • • • "It's 'P. G.' Pretty Grand Schmidt."

Professor Schmidt was a pioneer. He had courage and vision, and he had imagination. Because he believed in Professor Christiansen he dared to take an unheralded a capella choir from a small college in the Middle West to sing before the critics in the music centers of the East. In 1920 this was unheard of. One of the reviewers in New York City wrote in the Times: "Last night in the Metropolitan Opera House a group of 60 young men and women from the small towns and villages of the Midwest put on immortality for 2 hours."

Besides taking the choir to every major city in the United States, he managed concert tours to Norway, Sweden, Denmark, and Germany.

In the twenties he arranged for an annual exchange concert between the Minneapolis Symphony Orchestra and the choir, an arrangement which has continued without interruption ever since.

It was my privilege to serve with Professor Schmidt for many years on the St. Olaf College concert and lecture course committee. In his memoirs there must be interesting records of his many experiences also in that field. When he retired a few years ago we were most reluctant to try to carry on without him. At one of our artist series concerts in recent years after he had retired, it so happened that other members of the committee had to be out of town. I found myself worrying about possible emergencies that might arise. So I telephoned Mr. Schmidt and asked him if he would come up to the gymnasium and just stand there in the lobby before the concert, he wouldn't have to do a thing, just be there. "Of course, I will, I'll be glad to," was his quick response.

And so, it was reassuring to have him in his usual place, standing by, as he had done for every concert, the Christmas concerts, at every public function through the years, the master craftsman of orderly arrangement, one whose high joy it was to have a part in bringing great music to his fellow men, sharing with them the spiritual message in song, things of the spirit for men to live by.

Retirement of Secretary of the Treasury George M. Humphrey

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. BUSH. Mr. President, on behalf of the Senator from Maine [Mr. PAYNE], I ask unanimous consent that a statement prepared by him on the retirement of Secretary of the Treasury George M. Humphrey be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR PAYNE ON THE RETIREMENT OF SECRETARY OF THE TREASURY GEORGE M. HUMPHREY

The recent departure of George M. Humphrey from the office of Secretary of Treasury after more than 4 years is an occasion, I feel, to reflect for a moment on the man and the office. George Humphrey was molded by private industry and his long, successful career in industry is known to all. However, at an age when most men are looking forward to retirement, he stepped forward to tackle the biggest job of his life—the task of guiding the Treasury Department and the fiscal affairs of the United States Government.

Among the goals in the area of fiscal policy set by Secretary of the Treasury Humphrey when he took office were: independence of the Federal Reserve System from Treasury regulation so that it could proceed with its assigned task of stabilizing the economy; and control of the Federal budget, thus bringing it into balance.

Signal success has been achieved in accomplishing these aims. The Federal Reserve now operates in its fields of banking and economic policy without directives from Treasury or other executive departments. Its policies, set for the general well-being of the entire economy, have occasionally even been at odds with the more limited activities of the Treasury.

The budget has been curbed and brought into balance for 2 consecutive years and a third balanced budget is in sight for this year. It has been 27 years since this Nation has seen 3 consecutive balanced budgets and for this George Humphrey deserves much of the credit. Two other historic achievements have been made under his tenure in the Treasury. One was the first major recodification and modernization of the Federal tax laws since 1876; the second, of far greater importance as far as the general public is concerned was the tax reduction of $7.5 billion.

George M. Humphrey brought to the office of the Secretary of the Treasury a new stature and soundness of policy. He was known as the strong man of the Cabinet, and the President took counsel with him on many

of the vital policy decisions of this administration. His opinions are respected by all, even those who do not agree with him. His departure from Government removes one of the great men of the Eisenhower administration. George Humphrey served his country well in an arduous position and certainly deserves the heartfelt thanks and appreciation of the American people.

Civil Rights—Tribute to Senator Douglas

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial praising the distinguished Senator from Illinois [Mr. DOUGLAS] as a defender of rights.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Daily Defender of August 1, 1957]

DOUGLAS, A DEFENDER OF RIGHTS

Out of a welter of confusion and recrimination incidental to the legislative battle over civil rights, Senator PAUL H. DOUGLAS, Democrat, of Illinois, has emerged as the outstanding and irrepressible champion of the cause of the Negro people.

He has fought and is fighting for retention of those features originally drafted into the administration's bill which gives it substance and meaning.

He has stood four-square on the controversial section III which was intended as a fulcrum for the Supreme Court's integration mandate. This is the very provision that President Eisenhower disavowed and from which a number of the so-called liberal Senators of both parties backed away.

Senator DOUGLAS has carried the battle from the floor of the Senate to public forum via television where all who could hear and see had an opportunity to be enlightened on the basic principles involved in the civil-rights proposals.

In fact, no one, among the honest supporters of the bill, has made as clear, as intelligent, and forceful a presentation of the case against the jury trial amendment on which the unwashed Dixiecrats are insisting with vehemence, as the learned Senator has done. He has asked for no quarter and has given none. His logic is impeccable, his evidence unassailable.

The liberals had all the brains in their camp, but most of them recoiled into their shells under the fire of a stubborn opposition. But not DOUGLAS. He has stood his ground with the characteristic toughness of the marines in whose ranks he once covered himself with glory by acts of conspicuous bravery on the battlefield. He has brought to the Senate the stamina of the legendary "leathernecks," and is distinguishing himself equally in the Capitol as he did in the South Pacific.

The registration data on the Negro voter in the South, which was the subject of a memorandum prepared by the research office of the Southern Regional Council and which Senator DOUGLAS introduced in the Senate as pertinent to his remarks, constitutes the most damaging evidence that has been assembled against the southern oligarchy.

The memorandum shows by State and county the number of qualified Negro voters who have been denied the right to vote and how southern courts have sustained their disqualification.

This by far the most powerful argument that has yet been advanced against the segregationist's contention for trial by jury.

Whatever may be the fate of the civil-rights legislation, whether it is enacted into law or defeated, Senator PAUL H. DOUGLAS will be long remembered for the titanic energy and intellectual might he consecrated to the noble cause of human rights.

The Great Work of the United Nations Children's Fund in Asia

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, August 6, 1957

Mr. WILEY. Mr. President, children are the hope of man's tomorrow.

I was pleased to read, therefore, in the current issue of the news review published by the World Health Organization, a fine article by one of the outstanding servants of the children of the world. The article is entitled "The Day Will Dawn." It was written by Mr. Spurgeon Milton Keeny, who, since 1950, has served as director of the Asia regional office of the United National Children's Fund.

Mr. Keeny is the author of a new book entitled "Half the World's Children." It describes how 22 million children and their mothers in Asia have been helped by UNICEF. All of the royalties on this book go to the children's fund itself. But reading the book in its own right is a treat, for it tells the inspiring story of how UNICEF milk, material, and supplies have, day in and day out, made a permanent contribution to the well-being of the children of Asia.

I send to the desk the text of Mr. Keeny's article.

As further indication, however, of the high-caliber man Mr. Keeny is himself, I precede it with the foreword and preface of the book, Half the World's Children. The foreword was written by the man most qualified to speak on this subject, Mr. Maurice Pate, the able executive director for UNICEF. The preface of the book was written by the famed comedian, Danny Kaye, who, as we know, has well been described as ambassador to the world's children, in view of his own extensive travels on behalf of UNICEF throughout the globe.

I ask unanimous consent that these three items be printed in the Appendix of the RECORD.

There being no objection, the foreword, preface, and article were ordered to be printed in the RECORD, as follows:

FOREWORD TO HALF THE WORLD'S CHILDREN

Spurgeon M. Keeny, affectionately known as Sam to his friends the world around, grew up on a York County farm in Pennsylvania, worked his way through college, and wound up his formal education as a Rhodes scholar at Oxford University. He represents an unusual versatility: philosopher, economist, a driving hard-headed accomplisher in every enterprise he has ever undertaken. All this is combined with a great humor and kindliness which has endeared him to peoples of all creeds, colors, and nations where he has worked.

One of the great strengths of Mr. Keeny is that his roots have always been firmly planted in the American country soil on which he was born and worked and grew. This has made him understand and respect the loyalties and attachments of other peoples all around the globe to country and environment. It has created in him a warm sympathy for those who toil the earth or work in villages and cities in the half of the globe in Asia where he has carried out such an outstanding task in bettering the lives of children and mothers in UNICEF-assisted programs.

Traveling around the world twice each year, because he is in New York twice a year for the semiannual UNICEF executive board meetings, penetrating to the most remote villages of the countries in Asia which he visits, Mr. Keeny sets a pace and example that all of us in UNICEF would like to emulate.

In Mr. Keeny's story, made up of his notes and experiences over a period of 7 years of service in Asia, you will find not only a great deal of firsthand, accurate, and authentic information on UNICEF, but also the revelation of the character of a man who firmly believes that underprivileged children should have a better break in this now closer-knit world in which we live.

MAURICE PATE,
Executive Director, United Nations Children's Fund.

PREFACE

Sam Keeny belongs to an army without uniform that is engaged in the great fight against sickness and malnutrition in our children. Sam is one of the members of the United Nations Children's Fund—UNICEF—whom I met on my tours around the world for this wonderful organization. He is devoting his life to see that the children of the world have a chance to grow to some kind of useful and healthy maturity.

I've met a lot of Sam Keenys—in Morocco, Nigeria, India, Burma, Korea—and they make up a group of the most wonderful, most dedicated people one could meet.

I first met Sam in Bangkok, one of the areas where he works on his job for UNICEF. Sam's responsibility might stagger many a man. All he is assigned to do is to eliminate sickness and malnutrition from the hundreds of millions of children in Asia—the region he supervises. Sam is determined to do it, too, but he has never lost his sense of humor about the vastness of his task. Nor has he lost sight of the fact that you can't bring health and happiness to a million children by signing a paper or waving a wand. It has to be done child by child—and that's the way Sam works.

Sam has the delightful habit of writing what he sees in letters to his friends. I've been on the mailing list for some time and have had many a laugh—and it's not easy to entertain an entertainer. When you read this book I think you'll often be amused. And if you occasionally find yourself wiping away a tear, don't be embarrassed. It happened to me, too.

DANNY KAYE.

THE DAY WILL DAWN

(By S. M. Keeny)

I was spending a busman's weekend on the Cambodian border, watching a yaws team at work. There in Ban Kang village in the province of Prachinburi, I met about 400 people. Among them were Mr. and Mrs. Darnchoomporn and their 2 children, Tonabal, aged 5 and Boonchan, aged 9.

They are rice farmers, who have a little less than 10 acres of land; but the land is

not very good in Prachinburi. They harvest every year only six bullock carts of rice, just enought for the family to eat. The value of their crop is about 3,000 baht—$150.

In the offseason the husband cuts wood for another 500 baht. His wife raises a few chickens, but the family do not eat the eggs. They raise more chickens, which they also sell: that brings in another 500 baht. They grow very few vegetables and have a couple of fruit trees, which just about offsets their taxes and their gifts to the Wat (Buddhist temple).

Altogether, they have the equivalent of about $200 for 4 people. They are a bit on the poor side for Thailand; the average here would be about $300.

The Darnchoomporn family are important people: they are the average family of Asia. By and large the income per person throughout Asia is $50 a year or $1 a week. To accept and understand that starkly simple fact is one of the hardest things people in the more developed parts of the world have to learn. Until we have learned it, we aren't in a position to give much useful advice.

THE HEART OF THE MATTER

The Darnchoomporn family are not beggars, and they do not ask for our pity. As the mother put it, "We'll make out somehow—if we keep well." There is the heart of the matter; they don't keep well. How to help them conserve the tiny gains made in standards of living by keeping well is the everyday concern of WHO and UNICEF.

Ten years ago there was for the most part no practical answer to this problem. Some of the traditional killers, such as smallpox, plague, and cholera were indeed being conquered. But there remained many more, the cure for which was not known or was so expensive that, for Asia, it might as well have been undiscovered.

Now, however, we can add five more diseases to the list that we can conquer if, internationally, we put our minds to it. These five are yaws, malaria, tuberculosis, trachoma and leprosy. Of these, the greatest killer by far, especially of children, is malaria. How to arrest it, however, is definitely known, as is true of yaws and trachoma. Tuberculosis and leprosy are a bit more treacherous, but enough is known already to allow the experts to say with reasonable assurance that the spread of these diseases can be stopped and that nearly all except the advanced cases can be cured.

THIS CAN BE DONE

In short, it can now be said of all five diseases, as has so often been said of malaria, that no country can any longer afford them—the poorest least of all.

I venture, not in terms of wishful thinking, but in terms of what has already been started, the following timetable for breaking the backs of these ancient enemies:

Yaws within 5 years.
Malaria within 10 years.
Trachoma within 15 years.
Tuberculosis within 25 years.
Leprosy within 25 years.

I don't mean that the diseases mentioned will have disappeared in that time, but that they will have ceased to swallow most of the money in departments of health and no longer stop those departments from getting on with their main job of getting simple public health services to the people, especially in the villages.

Now let's look at these enemies one by one, beginning with yaws.

Here is a paragraph from my diary of a trip to central Java:

"When, after threading a maze of lanes, we had finally found the yaws team, they had already examined more than 200 patients and had found 28 cases. There were, of course, many small children, and there was a great unbuttoning and untying of garments before the youngsters stood bigeyed and bare before the examiner.

"We saw every type of case, from the small single sore between the toes of a little girl, to a crater in a young man's thigh in which one could have hidden a walnut. He was 23 years old and had had the disease for 20 years. His body was almost covered with scars—and there was the great open running sore on his leg. The penicillin to treat him cost 10 cents.

"The road back to Jogjakarta was long—and so were our thoughts. Ten years ago penicillin was just being brought into use; now it was bringing health and hope into this remote village, poor even by Javanese standards, where the average annual income per person is $30."

HALFWAY HOUSE

The best news of progress is that about yaws. Here the job in Asia was to cure about 15 million cases, three-fourths of them in Indonesia. Seven years ago the first start was made; today half the job has been done.

It is proving easier to cure the disease than had been feared. A single shot of penicillin, costing about 10 cents United States currency, will cure in 9 cases out of 10; a second shot will usually cure the 10th. The total cost in Indonesia to Government, WHO, and UNICEF is now about 80 cents to examine 10 persons and to cure the 1 who, on the average, has yaws.

But penicillin creates no immunity. All the infectious cases must be sought out and treated to prevent further spread. The danger now is that, with relatively few cases left, governments may think the job done and stop too soon. Thailand, with perhaps 75 percent of the job done, has reached this point.

The second enemy is malaria, the worst of all five. The conquest of this single disease can reduce the death rate of children by as much as one-half in as little as 5 years. Malaria seriously threatens in Asia some 300 million people—almost double the population of the United States. About half that number have been suffering from the disease every year. India alone has perhaps two-thirds of the cases; the bulk of the rest are in East Pakistan and Indonesia.

The International Cooperation Administration of the United States, WHO and UNICEF are working as one team. UNICEF is spending nearly half its income in fighting this one disease. The advances are even more spectacular than in yaws. From perhaps 20 million people protected 7 years ago, the number has now risen to nearly half the 300 million.

I've set down 10 years for malaria because the attack involves not a single treatment as in yaws but repeated sprayings of every house in the areas affected.

So successful have been the control efforts that most countries, including India, are now planning for eradication of the disease. This means going after the cases, however scattered, and will bring the numbers to be protected to nearer 500 than 300 million. But this more aggressive attack will pay off because, in eradication programs, spraying can stop after 4 years; in control schemes, it must keep on indefinitely.

TRACHOMA: 100 MILLION CASES

The third enemy is trachoma—the chief cause of blindness in Asia. The cases are far more than any medical statistics show, as revealed by WHO samplings in Taiwan, Indonesia, and India.

If the experts' samples are true ones, there may be something like 100 million cases.

The best drug is one of the antibiotics—aureomycin or terramycin. Taiwan has already cured more than a million cases among some 2 million schoolchildren. The cost has been high when we think of 100 million cases—about 40 cents United States per child for the ointment. But new methods of intermittent treatment are proving successful, and we have hopes of bringing the cost for the drug down to 15 cents or even less.

The cure of trachoma, especially, is a problem of organization. In the schools, the teachers give the applications or teach the children to treat one another. In the long run, the whole family must be treated but they can treat one another. The campaigns are hard to start but thereafter go rapidly I've allowed 15 years for this job.

THE PROBLEM OF TB

The fourth enemy is tuberculosis, of which at a wild guess I should say there are at least 5 million active cases in Asia. Here we are on less sure ground because the disease is treacherous and hard to cure; it is highly communicable and we are not absolutely sure about the new drugs.

Hospitalization offers little hope for enough hospitals do not exist. There is no money to build them and, above all, to pay the patient's bills if they were built. The last figure I saw about the cost of curing TB in the United States was $20,000 a case. Even if the cost in the Asian countries is only 10 percent of that, you will see that this is no solution.

On the other hand, chemotherapy does offer a possibility, especially with the new drug isoniazid, which usually makes the patient noninfectious and which is, above all, cheap. The cost for the pills to treat a patient for a year is only about $2.25. The World Health Organization, with the aid of the British Medical Research Council, has a very large experiment underway in Madras, India, to find out how patients can be treated at home at a price their countries can afford.

The aim of this new system is, if possible, to cure the existing cases but certainly to stop the transmission of the disease. One danger, of course, is that we may have more cases continuing alive and spreading the disease than before. On the other hand, if the patient's sputum can be kept negative at a cost for drugs of $2.25 per year or less, the disease can be stamped out within the lifetime of the present patients—if the necessary organization can be achieved.

This is not really complicated; it involves only a few good supervisors and a lot of home visitors, who will see each patient at least once a month to make sure that he is taking the pills and obeying the simple instructions. There are many obstacles because the treatment will be long and it involves people changing their habits, especially that of spitting indiscriminately.

Mercifully, in Asia we have plenty of sunshine, the great killer of this bacillus. Also, the disease is mostly concentrated in cities, where the people are relatively accessible, as contrasted with yaws, which is most plentiful in the most remote places. If the present promising outlook does not worsen, this disease can be brought far down the list of important enemies in the next 25 years.

CONTROLLING LEPROSY

The fifth enemy is leprosy. Ten years ago the outlook for doing anything was bleak indeed. As was reflected in most legislation about the disease, every leprosarium might as well have had painted over its entrance gate the words that Dante placed over the gates of Hell: "Abandon hope all ye that enter here." But in the last decade all this has been changed by the discovery of sulphones.

According to The International Journal of Leprosy it can now be safely predicted that, if sulphones are given regularly, under medical supervision, the disease can definitely be arrested, although the period may be as long as 7 years, with an average of perhaps 3.

This does not mean that the crippling we associate with leprosy can be cured, but only that the cases can be made noninfectious, which is what matters in public health control.

The extent of this disease in Asia is not known. My guess for Asia, including China, would be 5 million cases. If the disease were being attacked as in the past, when

leprosy cases were rounded up more often by the police than by the Health Department, I should say the disease would never be conquered.
